Once the charge of "redelegation" is rejected, there can be little doubt about the President's authority to negotiate the administrative provisions of GATT. The Reciprocal Trade Agreements Act gave the President authority to make "foreign trade agreements." As we have seen, this included the authority to make multilateral agreements containing not simply tariff concessions but general trade rules as well. It must also have included the authority to negotiate the administrative provisions necessary to accomplish the act's objectives. No foreign trade agreement—certainly not a multilateral agreement embodying general trade rules—could operate effectively without some mechanism for interpretation and for adaptation of the general rules to changing situations. It is doubtful whether any country, including the United States, would commit itself to obey a set of trade rules unless some provision were made for release in special circumstances. To put it in another way, the

administrative provisions of GATT at which criticism is directed are precisely those which permit the United States Congress to free itself from the tariff and trade commitments which it has previously authorized the President to make.

The inclusion of administrative provisions in trade agreements made by the President without specific congressional approval is no new development. It has ample precedent in American history. An early example of a trade agreement containing such provisions is the executive agreement with France which Elihu Root signed on behalf of the United States on January 28, 1908. Article III of this agreement provided that complaints as to the application of customs regulations should be considered by two commissions of experts to be appointed by the Governments of the United States and France. The Commissions were to confer and report to their respective Governments with a view to modifying the objectionable regulations. Article I of the same agreement gave to the President of the French Republic the right to withdraw certain concessions "whenever additional duties beyond those now existing and which may be deemed by him unjust to the commerce of France shall be imposed by the United States on products of France."

In recent years, bilateral agreements negotiated under the Reciprocal Trade Agreements Act of 1934 have included administrative provisions similar to those included in GATT. The agreement with Mexico, for example, contained an escape clause authorizing the withdrawal or modification of concessions under specified circumstances. The clause provided that, before concessions could be withdrawn or modified, the country intending to act had to afford the other government an opportunity of consultation with respect to the proposed action; if agreement could not be reached, the entire trade agreement could be terminated on short notice. The clause placed no limitation on the extent of the modifications which the parties might make in tariff concessions and other obligations during their consultation in order to avoid termination of the agreement. This provision of the Trade Agreement with Mexico was accepted by implication by the House Ways and Means Committee in 1945 when it approved a statement by administration witnesses that like provisions would be included in future trade agreements.

It must be noted, of course, that the administrative provisions of GATT are embodied in a multilateral, not a bilateral, trade agreement. This fact appears to be regarded as significant by some critics. They argue that, whatever the validity of the administrative provisions in bilateral agreements may be, such provisions are inadmissible in a multilateral agreement where the United States has only 1 vote in 35. They regard the latter arrangement as a dilution of American sovereignty significantly greater than that involved in a bilateral system. Accordingly, they describe it as an unconstitutional redelegation of congressional power.

This argument rests on a fundamental misunderstanding of the operation both of bilateral agreements and of GATT itself. In a bilateral trade agreement, occasions may arise when one party undertakes a measure which the other party considers to have violated the agreement. Under customary international law, the complaining party, if it has a valid grievance which cannot be resolved by negotiation with the first party, has the right to retaliate. If the first party concedes that its action would violate the agreement, it must, if it wishes to avoid possible retaliation, secure a waiver from the other party of the other party's rights under the agreement.

Under GATT, on the other hand, the decision as to whether an American action does or does not violate treaty obligations is not made unilaterally by the one other nation directly affected; it is made by a majority vote of the contracting parties, many of them disinterested in the controversy. In the event that the United States is found to have violated its obligations, the measures of retaliation by the complaining country do not lie within its discretion alone; they are determined in accordance with recommendations of the contracting parties as a group. Finally, if the United States asks a waiver for a legislative measure clearly in conflict with its obligations, it does not have to gain approval (as it does under the bilateral system) from each country adversely affected, but only from two-thirds of the contracting parties. Thus the administrative provisions of GATT involve less restriction of United States freedom than the administrative provisions of bilateral agreements whose constitutional validity has long been accepted.

The legal objection to the inclusion of administrative provisions in a multilateral trade agreement is mainly inspired by fears about the political implications of such an arrangement. It is claimed that the United States has less bargaining power as 1 nation among 35 than in negotiating with individual trading partners. The experience with GATT and with bilateral agreements has demonstrated the unsoundness of this claim. The influence of the United States on decisions of the Contracting Parties has not simply been that of a nation having 1 vote in 35; it has fully reflected the position of the United States as the world's foremost economic power. Striking evidence of this fact was the broad waiver which the United States received from the Contracting Parties to employ quantitative restrictions, otherwise prohibited by GATT, on agricultural imports. Unfortunate indeed would have been the prospect of confronting the United States had this country been forced to secure the waiver in bilateral negotiations with 34 different trading partners.

It must be concluded, therefore, that the administrative provisions of GATT involve no surrender of American bargaining power and no dilution of American sovereignty. Clearly they involve no improper redelegation of congressional power.

Point II

Congress May Constitutionally Authorize American Participation in OTC by H. R. 5550

We have reached the conclusion that the President had authority to agree to United States participation in GATT under the powers delegated to him in the Reciprocal Trade Agreements Act of 1934. For reasons of policy, however, the administration has removed the main administrative provisions from GATT and placed them, strengthened by new administrative machinery, in an Agreement for an Organization for Trade Cooperation. Congressional authorization for OTC is now sought in the form of majority action by both Houses of Congress. There can be little doubt about the constitutional power of the Congress to authorize United States participation in OTC and to do so in this way.

A. Congress has the constitutional power to authorize American participation in OTC. The purpose of OTC is to provide permanent arrangements for the administration of GATT. The Organization would exercise the functions formerly exercised jointly by the contracting parties in their periodic meetings. It would also be empowered to sponsor international trade negotiations and serve as an intergovernmental forum for the discussion and study of other questions relating to international trade.

The OTC would have an assembly, consisting of all the states which are parties to GATT, and a 17-member executive committee, to which the assembly would delegate powers to handle questions arising between sessions of the assembly. Under the criteria for election to the executive committee, the United States would be assured of a permanent seat.

The OTC Agreement specifically provides that the Organization shall have no authority to amend the provisions of GATT or impose on any member any obligation which that member has not specifically agreed to undertake.

Two articles of OTC contain, in virtually identical form, the powers to interpret GATT and to authorize releases from its obligations which were formerly contained in the two main administrative articles of GATT. Article 13 empowers the assembly, in exceptional circumstances, to waive by two-thirds vote an obligation imposed upon a contracting party by GATT. Article 14 authorizes the Organization to investigate and rule on complaints and in serious cases to authorize a contracting party to suspend the application to any other contracting party or parties of concessions under GATT. The contracting party from whom concessions are thus withdrawn is free to withdraw from the Organization after 60 days' notice in writing.

Can the United States Congress authorize American participation in an organization which has such powers?

We concluded in our discussion of GATT itself that the provisions for interpretation and waiver involved no exercise of congressional power. The same conclusion applies to these provisions now that they have been transferred to OTC. There is, therefore, no basis for the charge that by approving OTC the Congress would be surrendering its constitutional power "To regulate commerce with foreign nations."

The constitutionality of OTC is also supported by reference to historical precedents. Congress has approved American participation in a number of international organizations having powers identical with or similar to the above-mentioned powers of OTC.

With respect to the power of interpretation, there can hardly be serious question. On numerous occasions—going back to the Jay Treaty of 1794—the Congress of the United States, either by two-thirds vote of the Senate or by majority vote of both Houses, has approved agreements containing provisions for interpretation of United States obligations by an international body. The Senate alone has approved treaties providing for 26 different arbitral tribunals.

As the result of congressional action, the United States now participates in organizations like the International Labor Organization, whose constitution provides for submission of disputes to the International Court of Justice, and adheres to international agreements like the narcotics conventions, which provide for the determination of certain questions by technical bodies.

The United States has accepted the so-called optional clause, article 36 of the Statute of the International Court of Justice, under which this country is obliged to accept the jurisdiction of the Court in certain broad categories of cases (including disputes as to the interpretation of treaties) in relation to any other state accepting the same obligations. It is true, of course, that this acceptance has been qualified by a reservation that the United States will not recognize the jurisdiction of the Court as to any matter considered by the United States to be within its domestic jurisdiction.

Virtually every international organization to which the United States belongs has power to interpret the obligations of the parties. Examples are the International Civil Aviation Convention, the Articles of Agreement of the International Monetary Fund, and the United Nations Charter itself.

There remain to be considered only the provisions empowering OTC to relieve members of their obligations in certain circumstances. There is ample precedent for such

provisions. Several examples can be found in the Articles of Agreement of the International Monetary Fund. Article VIII provides that "no member shall, without the approval of the fund, impose restrictions on the making of payments and transfers for current international transactions." Under this article the fund can, by giving the necessary approval, release a member from its obligation. The fund can release members from the same obligation under article VII, the so-called scarce-currency clause. This clause gives the executive directors of the fund the power to determine that the dollar is a scarce currency and to authorize the members of the fund to impose discriminatory restrictions against American goods.

The International Wheat Agreement also contains provisions authorizing the release of parties from their obligations. It empowers the International Wheat Council to relieve a party of its obligation to import or export a previously agreed quantity of wheat if it finds that fulfillment of the obligation would endanger the party's balance of payments or monetary reserves, in the case of an importing country, or is prevented by a short crop, in the case of an exporting country.

It should be clear from this discussion that the OTC provisions for waiver of obligations have close parallels in other international agreements. Indeed, history provides precedents of an even more striking kind. The United States Congress has approved American participation in international organizations having powers (specifically denied to OTC) to increase the international obligations of the United States.

The Inter-American Coffee Agreement of 1940 created an Inter-American Coffee Board and gave it "authority to increase or decrease the quotas for the United States market in order to adjust supplies to estimated requirements." The delegate of the United States on this Board cast only 12 of the 36 votes allotted to the delegates of all participating countries. In general, the decisions of the Board were to be taken by a simple majority of the votes. An emergency increase in the United States quota, however, could be authorized by a one-third vote. While such considerable restraints on America's freedom to set its own trade policy engendered many misgivings during the Senate debates, they produced not a single objection on constitutional grounds.

Other international agreements to which the United States is presently a party also give to international organizations the power to increase American obligations. The International Monetary Fund in certain circumstances can require a country to sell its currency to the fund for gold, or to buy its currency from the fund with gold or other currencies. The International Wheat Council can require parties to the International Wheat Agreement, in certain circumstances, to undertake exportations of wheat specified by it. The 1953 Opium Protocol empowers the Central Opium Board to impose upon countries an embargo on the import or export of opium. The United States Senate voted approval of this protocol without a dissenting vote, despite the fact that (unlike the OTC agreement) it involves a delegation of the constitutional power of Congress "to regulate commerce with foreign nations."

In view of the fact that Congress has approved American participation in an international organizations with such powers as these, it can hardly be maintained that it has not the power to authorize in OTC.

B. Congress may authorize American participation in OTC by majority vote of both Houses: The Congress has approved participation in a number of international organizations by majority action of both Houses. Among them are the International Labor Organization, the International Monetary Fund and Bank, the World Health Organization, the Food and Agriculture Organization, and the United Nations Educational, Scientific, and Cultural Organization. It is well settled that the United States Congress can approve United States entry into international organizations in this way.

CONCLUSION

The argument set out in this report leads to the following conclusions:

1. The President had the necessary authority to agree to United States adherence to and participation in GATT under the authority delegated to him in the Reciprocal Trade Agreements Act.

2. There is no constitutional impediment to congressional enactment of H. R. 5550, authorizing United States membership and participation in OTC.

Respectfully submitted.

Gardner, consultant.

MARCH 7, 1956.

Proposed North-South Student Exchange Program

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 23, 1956

Mr. NEUBERGER. Mr. President, behind the great present constitutional and legal process of spelling out the rights of every American to be free from legal segregation or other discrimination because of the color of his skin, there lies the most challenging problem of human relations to confront our Nation. The legal equality which is now being nailed down in case after case is important, and its unqualified recognition is almost a century overdue. However, these constitutional rights of our minorities of colored skin will not become truly meaningful and effective until they are recognized and understood by the majority in all our communities.

This struggle for equality and for true democracy will be fought out in the minds of the coming generation of Americans, the children who are now spending their formative years in the schools over which the central battle wages. In an editorial in the Oregon Statesman of March 21, 1956, Mrs. Marguerite Wright has made a new proposal for one step which might be taken to improve the mutual understanding and the lines of communication between our Northern and Southern communities, before the present bitterness of some members of the older generation causes a serious rift between them. Mrs. Wright takes her suggestion from the success of the student and teacher exchange programs which have established a slender but important bridge between our country and many foreign countries. She proposes an exchange program for white high school students between communities of the South and the Northern and Western States. Such a program would give northern and western students a year's experience with the life, the culture, and the problems of the South, and it would give southern teenagers a year's experience in communities in which they can see that Americans of different racial backgrounds can in fact live together, without discriminatory laws for racial segregation and discrimination, the loss of which so many adults in the South now fear so much.

Mr. President, I ask unanimous consent to have this editorial from the Oregon Statesman, entitled "North-South Exchange Students," printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NORTH-SOUTH EXCHANGE STUDENTS

One of the most universally acclaimed postwar programs to acquaint the world with the American way of life—with democracy in action day after ordinary day on Mainstreet, U. S. A.—has been the exchange of students and teachers between the United States and foreign countries. It has enabled young people and those who influence future leaders of each nation to broaden their viewpoints, gain perspective and understanding, and perhaps to modify somewhat the provincial attitude that "our way in the only way."

This writer proposes that a similarly well-planned and purposeful exchange program between northern United States high schools and colleges, where children of many races and national backgrounds attend school together without undue friction, and schools of the south where integration is feared and fought so desperately.

Both sections of the country would gain by a better recognition of each other's attitude. Enlightened southerners agree that change must come to the South, that eventual granting of equal civil rights to negroes is inevitable, but they urge a very gradual process of reeducation on grounds that the South is not yet ready for any drastic change. They warn that attempts to hasten progress or enforce race tolerance will only make matters worse and will be fought vigorously by such terrorist tactics as the revival of the Klan-like White Citizens Councils.

Since the south's feeling about negroes seems to be a sort of regional miasma that infects those born and brought up there, one way to dissipate the disease might be to bring into the south more individuals who have become immune to extreme racist emotions through exposure to non-Caucasians in a healthier atmosphere of tolerance, and bringing to the north a realization that the problem can't all be settled overnight. The student exchange would be a low-pressure method as contrasted to the high-pressure promotions of the NAACP, for instance, and it is hard to see how the south could object.

Most of the south's own proposals for a solution to their problem are either projected so far into the future as to be delusive or are clearly impractical, such as the Alabama senate's resolution calling for Federal funds to resettle southern negroes in the north and west "where they are wanted and can be assimilated."

Such schemes miss the crux of the problem; it is not the Negro, it is the white man's attitude. It is the now-dominant white man who is deciding the fate of the Negro in the United States; it is the southern whites whose minds must be won over to democratic concepts; and it is the northern whites who largely live and work peacefully with colored neighbors on an equal basis who can best show—with humility, not self-right-

eousness—that "it can be done." That is why the exchange students, of course, would all have to be white.

The unfortunate thing about this proposal is that it wasn't implemented long ago.

Bipartisanship of Slums

EXTENSION OF REMARKS
OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. RAINS. Mr. Speaker, I heard our distinguished colleague the gentlewoman from Ohio, Hon. FRANCES P. BOLTON, address the National Housing Conference at the recent meeting in Washington. It was a great speech. I commend it to your attention:

BIPARTISANSHIP OF SLUMS

You have heard from the experts this morning on the subject of urban renewal and low-rent public housing. I wish it had been possible for me to share the meeting with you.

I have been given a subject that intrigues me—Bipartisanship of Slums. It is a subject on which I feel strongly.

I have long been proud of the leadership that my city of Cleveland has brought to our State and to the Nation in the long, tough attack on slums, and in behalf of better housing for all families, for Cleveland had the very first local public housing authority, and Ohio was the first State that put a public housing law on its books. We have been blessed with the dedicated leadership of my old friend Ernest J. Bohn, who by the way, is a Republican colleague. Ernie Bohn has dealt always in human terms. This has given him the backing of community interests and leaders, business men and labor, Republicans and Democrats. Our accomplishments in Cleveland have been team victories. They must continue that way.

It hasn't all been easy going. We have met powerful opposition, but step by step we are winning this fight. We are winning it because we have a positive approach. We waste no time attacking those who attack us. We try to understand the needs and desires of our people, and we do our utmost to meet them. We have no faith in miracles. We know that our job is long and difficult, but so long as we unite our forces, and in our planning for each new day we rise above greed and the pettiness of partisan advantage, we know that our progress will one day bring us to our goal of an adequate home for every family in Cleveland and in America.

In the House of Representatives, where I have served since 1940, I have listened to some bitter debates on the subject of low-rent public housing. We have won some ringing victories and suffered some stinging defeats. But always we shall do well to remember that there is wide bipartisanship among both the proponents and opponents of public housing. Whenever we get into wrangles over public housing, I find myself wishing that I could take my colleagues by the hand and lead them through the jungles of the slums of our cities and let them feel and smell what it is we are talking about. Will you forgive me if I say that it always seems to me that you people who are today within the reach of my voice haven't done all that you could do back home, to bring understanding to Members of the Congress of the humanitarian programs to which you devote your lives.

You can bring a real knowledge and so a better understanding to the House of Representatives, if you will make it your No. 1 job this summer to see to it that your Representatives in the Congress know and understand the job that you are doing. Don't bother about the political affiliation of your Congressman, or how he has voted in the past! Think of him as just another good American who wants more than anything, to represent honestly and well all the people of his (or her) district. We Congressmen are just ordinary folk! We are your next-door neighbors. If we fail to seek your counsel, provide it freely anyway, and do it when we are at home where we can see and feel what it is of which you speak. No Member of Congress is too busy to find out how his constituents live.

I was impressed with President Eisenhower's forthright message to this, yours 25th annual meeting. Let us repeat what he said: "Our Nation's progress in the housing field must continue. To renew our cities and towns, to prevent and clear slums, and to raise the living standards of all our families, the individual citizen, the community, the State, private industry, and the Federal Government must work together. Such cooperation is exemplified in communitywide programs for urban renewal that have been generated by the Housing Act of 1954.

"I am confident that in the years ahead your Conference will continue to give strong support and encouragement to this common effort."

You are called upon by our President, for continuing support and encouragement. I have read the administration's housing proposals for 1956, as introduced by SENATOR CAPEHART in the Senate, in which he was joined by request by SENATOR SPARKMAN, and by REPRESENTATIVE WIDNALL in the House. I am aware that the National Housing Conference has taken the position that the administration recommendation of 70,000 units of low-rent public housing to be contracted for over the next 2 years, is inadequate as weighed against the housing needs of families of low income. It is not my wish to discuss statistics or housing needs, but I must say one thing with all of the force at my command:

All of us know that the task of slum elimination and the rebuilding of our cities is staggering beyond belief. Our administration has shown a willingness to attack this problem in a practical way. One cannot wave away the fact that a majority of the House of Representatives has shown itself many times to be opposed to the low-rent public housing program as it presently operates. That is an unfortunate fact with which we have to deal. Yet the administration makes it perfectly clear that it will move ahead with the gigantic task of slum clearance and urban renewal. The administration also says frankly that this job cannot be accomplished unless there is some public housing to rehouse low-income families that are displaced through slum clearance. It asks for a program that it believes it can persuade the House of Representatives to approve. That means progress, not stagnation. It means that we are headed forward, not backward, and it takes us to the place where the future rests with you.

If you are right in saying that the recommended program is too small to meet existing needs, then I feel that it is your duty to prove your point with local facts and figures. I know that the National Housing Conference prepared and presented a study of housing needs, using facts from the 1950 census and other data. That was fine as far as it went. It was an excellent statistical document presented by a national organization. It was helpful to those of us who are on your team anyway, but far more than that is required if we expect to achieve any kind of a balance between authorized programs and need.

National figures are interesting, but if I'm going to be moved to act, I need to know Cleveland's situation from the mayor, the housing officials, and from civic leaders. I need to see the actual conditions under which some of our citizens have to live. My colleagues from Georgia, Texas, California, Massachusetts, and New York need to know the same thing. How can those of us who are on the Hill really know the situation except through you? We in Congress should not be called upon to ask you, and somebody in Washington shouldn't have to do the job for you.

If, what the administration is asking is too small; if the cities of our Nation demand more in order to do a job that is essential to the welfare of our people, then tell us the facts and do it quickly, because time moves ahead relentlessly. That is my message to you. It is from a Republican Member of the Congress who is on your side. I am confident that my Democratic colleagues will tell you the same thing.

I am almost envious of the opportunity that is yours to help destroy slums, and to help create communities in which millions of American families can find a new way of life and prepare themselves to graduate as full-fledged members of our proud, self-supporting, economically free body politic. It was my great priliege to spend many years in the field of social service and education, specifically in public health nursing and in nursing education. I began right in the districts where life is hard and the light of hope is often very dim. I speak from personal experience, and from a full heart. I believe I understand your objectives and your problems. It is this that brings me here.

To me, the so-called housing problem is a composite of many things. It is complicated, because it is so personal. It is related to a vast range of intensely human problems that confront not only slum dwellers, the aging, veterans, minority groups, but all of us, every day that we live.

The housing problem cannot be explained away with easy clichés: the greedy landlord, the maniac tenant who destroys property for the fun of it, the slum dweller who would put coal in the bathtub if he had one; or the slick mortgage-foreclosing banker versus the poor widow, nor the Communist agitator versus the strong, sturdy, upright private enterpriser.

Housing is so much more than just the fact that you can't find a place to live; it is all tied up with the problem that when you do find a proper house, you may have to cut down on food to pay for it—and then lose it anyway when you are unemployed for a few months. Or it may be quite simply that you can't afford a house with a back yard when the children are young and need the space and the sun, but must wait till you get that raise and the doctor's bills are paid * * * and by that time the children have grown up. No matter how dearly you love your parents, living together in a crowded flat often stretches your patience and theirs beyond the breaking point.

Housing is doubling up and sharing the bath and cooking over a hotplate. It is why so many young people, who got married in a romantic rush during war years, couldn't turn their marriage into something solid and enduring and so took the only way out that they knew: separation-divorce. It is why colored and whites throw rocks at each other in some overcrowded cities where otherwise there seems to be a general and sincere desire to get rid of discrimination and live

peaceably with your neighbors whoever they may be.

Housing is the fire that trapped a sick woman in the old three-decker, the bowed legs and pale face of the little girl in the tenement, the epidemic that started in the shacktown with no sewerage connection, the boy gang in the alley aping the older gang in the pool room * * * and it is the cost of all of these things to taxpayers and society as a whole, against which we all rebel.

Housing is the fact that, even if there were no shortage and you had plenty of money, you would have to choose between renting a noisy apartment in a crowded neighborhood, or buying a suburban house that is pleasant and open, and an hour from your work where you can't find a place to park.

Housing is the fact that the house and the neighborhood you used to take pride in are now run down, undesirable for anything but cheap boardinghouses, funeral emporiums and quack doctors; it is finding a place with a nursery school nearby, a place where older children won't have to cross dangerous highways or pass filthy dives. It is the fact that dirt and noise and danger dreariness and high tax rates made you move to the suburbs, but that did not improve the conditions you left behind. Housing is the fact that your child in the suburb and the child in the slum or low-rent housing project tend more and more to see only their own class and kind, in a country whose historic strength is a lack of built-in class barriers. It is one reason why the farmer's wife grows old before her time and his children go to the city, where they won't have to thaw out the pump on zero mornings. It is why the big producer cannot get enough men to pick his crop before it rots. Housing is people, and all of their problems and frustrations. Housing is also their dreams, their hopes, their prayers which all too often end in anguish and despair.

You are brave people indeed to devote your lives to an effort to help solve our housing problem. You have become dedicated people. You know as few do that human problems are common problems which cannot be solved except as a completely bi-partisan task. You are dealing with all kinds of people, and with all of the emotions of the human race. May Heaven grant you ever-increasing understanding and wisdom as you continue with patience and determination toward our common goal.

It is thrilling to know that you are making progress, for you are. We, on Capitol Hill want to help. We need your guidance, your advice and the facts that only you can give. Where Federal aid is required to find the answer to this complicated problem it must and will be forthcoming. Keep your courage high. I suggest that the people are on your side.

Perhaps the Housing Act that will pass in 1956 will not be all that you desire, but I predict that one will pass and that it will mark progress toward the goal that we mutually seek. I express the hope that the National Housing Conference will continue its long fight for slum clearance and better housing. When you meet 25 years from now to celebrate not 25 but 50 years of public service, I feel certain that you will be able to look back and say: "It has been a long, steep road, but we have never ceased to climb."

Once more I venture to predict: That when most of America is properly housed because of the work that has been done by Republicans and Democrats together in true bipartisanship the deeper meaning of freedom will be brought home to all who can call themselves Americans, and our wonderful representative Republic will be the symbol of men's understanding of those basic human needs which mean growth and happiness and peace.

The Plight of Our Aging Veterans

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mrs. ST. GEORGE. Mr. Speaker, the following editorial from the Livingston Manor Times, a most excellent weekly newspaper in my district, is worthy of deep consideration by all Members of this House.

The plight of the World War I veteran is a matter we need to be reminded of, although it is a matter that we should never have forgotten.

Mr. H. Capron Battey, the author, has done well to bring to our attention the treatment received at present by this gallant and dwindling group of veterans:

THE PLIGHT OF OUR AGING VETERANS

The plight of our World War I veterans might well be compared to that of the forgotten man. Most of them today are nearing the age of 60, and some of them ar close to 70 years of age, and unless they are fortunate enough to have acquired property, they are in a country where they will find it difficult to live even under ordinary standards due to high prices. The chances of a man over 50 year of age finding himself a job, if suddenly thrown out of work, are very slim, and he is even in a far worse plight if he tried to live on the slender pension, which he may get from a "grateful" Government.

The American Legion is now working on a veterans' security bill, which it is believed would help these elderly men live like human beings if it is passed, and would cost the Nation only $77 million by the year 2,000, according to the Veterans' Administration, which is strongly opposing the bill due to its cost.

Any country that can throw $11 billion to Russia, billions more to France and England, and can give away costly battleships and planes to foreign countries can afford to take care of its veterans. There are no wails of anguish from Congress in giving many millions to the farmers, and in other large subsidies to most everyone else, but when it comes to the elderly veteran, they are strangely silent. We hear the argument that many of them are veterans also, and we do not forget that recently they raised their own salary by a comfortable margin.

Today a veteran over 65 may be paid a modest pension, provided he is virtually helpless. The amount of the pension is $78.75, and some of them are getting less than that. The Government demands certain living standards for families on relief, but Mr. Citizen, Mr. Congressman, Mr. Senator, and Mr. Top Brass in the Pentagon, how would you like to try to live on that for 1 month at today's costs.

Those elderly veterans were granted an adjusted compensation after the war. The mustering out pay was $60 and there was inflation then, so that the money went, usually before a man could land a job. The adjusted compensation went for hospital bills, and cost of living in bringing up sons, who only a few years ago served their country in France, England, the Philippines, and in Korea. That was a "subsidy" that paid back well to the country.

We hear there were abuses and some veterans received pensions who were not entitled to it. We think we can blame that on faulty examination by those doctors connected with the Veterans' Administration.

A World War I veteran in order to get needed hospitalization in a Veterans' Administration Hospital must virtually declare himself a pauper, and then is barred from receiving treatment if there are no beds in that particular hospital, and if his illness, is not service connected.

Service-connected cases of World War I are difficult to prove as wounded men were often received in such numbers that medical records were disregarded in attempts to give relief to those in suffering. Now many of their buddies who might help prove war disability, are no longer here.

Let us remember the World War I veteran was not paid after his discharge, while he was looking for a job, he "panhandled" or sold apples and took what he could get. No "grateful" Government gave him a college education and took care of his family while he was receiving instructions; no "grateful" Government helped him to purchase a home, by aiding him with a loan at a low rate of interest.

We hear some of our great Senators are in anguish over the plight of the displaced persons, tear their hair over the "poor farmer," and give away billions for aid to some Asiatic or European country, but when it comes to aid for the aging veteran, they are strangely silent.

On an Even Keel and Moving Ahead

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I wish to insert in the CONGRESSIONAL RECORD the following editorial which appeared in the April 17, 1956, issue of the Tallahassee Democrat entitled "On an Even Keel and Moving Ahead." I am very proud of the continuing progress being made by the State of Florida as outlined in this editorial:

From the State chamber of commerce comes still another set of figures to show Florida's growth.

The chamber says that during 1955:

Retail sales gained 14 percent.

Income rose 13 percent.

Population increased 4 percent.

Gross farm income was up 10 percent.

Bank debits in 7 financial centers were up 18 percent.

Department-store sales increased 15 percent, and so did sales-tax receipts.

Gasoline consumption was up 12 percent.

Electric-power production was up 10 percent.

Construction expenditures rose 17 percent.

These are good, solid figures showing sound economic growth. There is no runaway boom attached to them. It is the sort of growth that testifies to the confidence of our own people and of immigrants from other States in our State and its government.

Nothing succeeds like success, and this sort of growth plus the State's promotion efforts are largely responsible for another report in which the Manufacturer's Record magazine showed Florida led all other Southern States with establishment of 17 new industries during February.

Excerpts From the Remarks of Speaker Sam Rayburn, of Texas, at the Woodrow Wilson Centennial Dinner, Saturday, April 21, 1956

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from the remarks of Speaker SAM RAYBURN, at the Woodrow Wilson centennial dinner, Saturday, April 21, 1956:

Tonight we honor Woodrow Wilson, the first effective great liberal to occupy the White House in the 20th century. Woodrow Wilson should be with us again at this hour. We need again his great soul and his stern voice and prophetic insight into the troubled hearts of men and the tremendous affairs of nations. In his first inaugural, I was a freshman Congressman, and the words he spoke then come back to me again in this hour and are applicable to much that is happening among us today. He said:

"The great Government we love has too often been made use of for profit and selfish purposes, and those who used it have forgotten the people."

Under Wilson's leadership we Democrats determined that this should not be a nation of giant machines overshadowing men. We decided that machines were made for men, and not men for machines. He said, "We must believe the things we tell the children."

Once the Republicans had a liberal in the White House—Theodore Roosevelt—but he was not effective. He had his troubles with the old guard Congress.

The Republicans now have in the White House a man who has indicated liberal tendencies, but the old guard Republicans in Congress have done little but thwart them. As always, when they are in control of the executive branch of the Government, the Republicans are content with the status quo, nullification, and negation.

I am speaking from a position of personal knowledge. We Democrats in Congress have had a difficult time in getting the Republicans to go along with a modicum of President Eisenhower's legislative program when he advocates Democratic measures in the interest of the people.

The Republicans are boasting privately to their big-business friends that they are responsible for defeating their President's proposals while at the same time they are proclaiming to the public that we Democrats are doing nothing to put through his program.

The truth will out sooner or later. Meantime, it appears to me that the Republican President has little discipline in the rank and file of his forces.

The Republicans are not even in step with their Commander in Chief.

The Republicans have not changed in a hundred years. They still have the old Hamiltonian theory that the way to make the country prosperous is to make the rich very rich and that prosperity will trickle down to millions of workers and farmers.

Many of us have been around here for a long time and we have been waiting for the Republican trickle-down theory to trickle down to us.

Our Democratic theory is, and always has been, that the way to keep the country prosperous is to assure the working man, the working woman, and the farmer the earning power and the purchasing power to produce prosperity for all.

Our theory proved right in 20 years of Democratic administrations. We raised the national income from $39 billions in 1933, when we took over, to $290 billions in 1952.

The tremendous prosperity that the Republicans are now boasting of could not have come about if we Democrats had not laid the sound foundation for it during the 20 years we were responsible for the destiny of our people.

Certainly there has been nothing in the Eisenhower program that could have laid the basis for this prosperity. The Eisenhower administration has not originated any major change. About the only think it can claim is that it asked for and has been granted extension of programs instituted originally in the Wilson, Roosevelt and Truman administrations.

But the Republican brand of prosperity, and the Republican policies of administration, have developed certain weaknesses. The major one, of course, is the plight of the farmers. Every depression has been preceded by a drop in farm income.

And there are other indicators: The growing number of failures of small-business enterprises and the current drop in home construction, to mention only two.

Now everyone remembers that during the 1952 campaign, the Republicans went all over this country talking about Democratic programs being socialistic. They implied, at least led the people to believe, that they were going to rip our programs out of the Government by the roots.

I challenge any Republican, in any position of responsibility from the President down, to point to a single major law that we passed in 20 years, that they have even proposed to repeal.

So, I say, if the Democratic enactments were socialistic in 1952, then they are socialistic today, and that if the Democratic Party was socialistic in bringing them into effect, then the Republican Party is equally socialistic in keeping them on the statute books.

No, the Republicans have not had the temerity to attack our programs directly. But I'll grant this—they have through negation and nullification, prevented our programs from protecting small business and the farmers.

In contrast, they have done much for big business, as all Republican administrations have done in the past.

They have encouraged mergers of businesses.

They have fostered concentration of wealth into a few huge corporations, and have permitted the big ones to gobble up the little ones. This occurred not only in business but in farming. Under the Eisenhower administration, we have seen millions of small farmers leave the soil. The family farm, in contrast to the corporation-owned farm, is one of the bedrock foundations of our social system and the American way of life. The Republicans are making its survival more and more difficult. We have seen many small businesses sell out to octopuses that stretch their tentacles into the lives of communities far afield.

The Eisenhower administration has turned its back on the farmers in the face of conditions that forecast the loss of prosperity to many. It seems to ignore the fact that the net income of farmers declined from more that $14 billion in 1952 to around $11 billion last year. Furthermore, the Eisenhower administration, through Secretary Benson, has made the city populations believe that the farmer is responsible for his cost of living. That is just not so. The price spread between producers and consumers is growing under policies of this administration.

That Republican policies are bad for this country has been proven time and again. It was proved before Woodrow Wilson was elected President in 1912. I was here when that great liberal and genius of democratic government was inaugurated. The country, after many years of Republican big business, including a panic, was in dire straits. Millions were idle. Farmers were broke. Our foreign trade had fallen. Businesses were closing.

In 10 minutes, I cannot even list briefly the many peacetime accomplishments of the Wilson administration. But the Congress passed Mr. Wilson's Underwood Tariff Act, that restored export markets for our farm and industrial products. It approved the Clayton Antitrust Act, to set standards for enforcement of the Sherman Act; and took the management of the Nation's money from private individuals by establishing the Federal Reserve System, a financial agency that has stood the test of our times.

In Mr. Wilson's own words: "The control of the system of banking and of issue which our new laws are to set up, must be public and not private; must be vested in the Government itself, so that the banks may be the instruments, not the masters, of business and of individual enterprise and initiative."

Through the great wisdom and vision of Woodrow Wilson, this Nation made a transition from a primarily agricultural nation to the industrial age. He saw the need for a national highway system, of a merchant marine, aid to farmers, protection of workers through shorter hours and higher wages. These accomplishments were coupled with the 16th amendment to the Constitution, which made possible the graduated income tax based on the "ability to pay," and the 17th amendment, which made the Senate, as well as Members of the House, subject to the democratic process of direct elections.

The Federal Trade Commission, the Federal Tariff Commission, and the Federal Power Commission were instruments of good government created in the Wilson era to protect trade and the natural resources of the Nation.

Woodrow Wilson led us through World War I, and upon its successful conclusion, he went to Europe with his great conception of a league of peace.

Isolationism, emerging from Republican spawning grounds, arose to defeat this high aim of a man who gave his life for his cause.

Wilson's dream of world peace—theretofore unparalleled in the concept of man, died with his prediction that if the United States did not join with the Allied Powers, the world would again be plunged into conflagration within 25 years.

The Wilson concept resulted in the United Nations after the second great war. Our Presidents Roosevelt and Truman cemented this organization in the scheme of the world's peace plans.

No one can say that in the 20 years that our party governed this Nation, that we did not bring prosperity out of chaos; that we did not give this Nation the strength to make it the most powerful on earth.

When the Republicans took over in 1953, our foreign policy was respected throughout the world. We had prevented the Communists from taking over Europe and the Middle East, and we stopped them in Korea.

Our foreign policy was condemned in the 1952 campaign by the Republicans. Now it is not known here or abroad exactly what our foreign policy is. Under the Eisenhower administration, there is the utmost confusion, and it is evident, despite all the State Department propaganda and conflicting statements, that we are losing ground and losing friends in world affairs to a nation that harbors only ill will toward us.

I regret to say that in my opinion, the way this administration has handled our foreign affairs, the free world stands in the direst danger it has ever faced.

We Democrats must unite for the forthcoming campaign for control of our govern-

ment. In the words of Woodrow Wilson, the people will not give a divided political party the responsibility of running the Government. If among us there are different views, let us compose them among ourselves and not let our political opponents use our intra-party differences to defeat us.

I believe the Democratic Party is the best party to govern this Nation in the days ahead. Woodrow Wilson believed, as did Roosevelt and Truman, that our party was the best equipped in philosophy and character to do so, because our party has the ability and vision to see into the future and find solutionst to meet the needs of our people.

The People Must Retain Responsibility of the Government

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. ROGERS of Texas. Mr. Speaker, one of the most important battles the American people have today is to maintain a government by the people. More and more efforts are being strengthened to extend control of the Government by bureaucrats from Washington and with each step in extenting Federal control the people lose some of their rights. The following editorial from the Amarillo Globe-Times should be carefully read by all Americans:

GREAT WHITE FATHER

You, the people, are a part of the Government of the United States as government is defined by the United States Constitution.

True, there are many places in which the right of the people is defined, and there is one powerful phrase: "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people." But certain definite responsibilities are also outlined.

Is it because of the bountiful gifts poured out by the Great White Father from his multi-million-dollar tepee on the Potomac that we have seemingly forgotten that it was "We, the people," who ordained and established the Constitution and the Government that has derived thereof?

We purposely have described the Federal Government in the term used by the Indians, those vanishing first Americans who were pushed back onto reservations, deriving all rights, privileges and bounty from a Great White Father.

Sometimes we feel that the American of the mid 20th century has come to the same frame of mind—by the Great White Father's consent he lives in the several reservations called States, and he accepts his bounty of doles, subsidies, free services, pensions with the same sense of gratitude.

How far can free men fall from the high peaks of self-sufficiency and responsibility of action?

We heard a college professor say recently that no one could regard the corruption an ineffectiveness of State governments without recognizing that the minorities and individuals must turn to the Federal Government for redress and comfort.

For a piece of fuzzy, sleazy thinking, we offer the prize to that one.

If State governments, much nearer the people than that on the Potomac, are corrupt and ineffectual and cannot be cured of such cancerous growth then how in tarnation can we hope to control a Federal Government, which of course will become as corrupt and ineffectual as the State governments, if the people who ordained all government units under our Constitution refuse to carry their share of responsibility?

If citizens cannot take the trouble to clean up the Augean stables in their own backyards, why believe that they will tackle those far enough away that the stench is carried off downwind?

No. There is no escape. Under the Constitution, the people have definite responsibilities, as well as rights, and if the people will not assume these responsibilities, they produce a failure of government as sure as that which has been practiced lately by a Supreme Court which arbitrarily has assumed legislative powers.

You don't know how to assume your rightful responsibility? Tomorrow we tell you how really simple the apparent complexity of government is—and how you, the people, can have the ultimate word in government if.

The "if", too, is simple: If you prefer a paternalistic Great White Father, you are confined to the reservation; if you prefer freedom, it carries a price tag—responsibility.

The Farm Bill Vetoed

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I want to insert in the RECORD an editorial from the St. Louis Post-Dispatch of Tuesday, April 17, 1956, entitled "The Farm Bill Vetoed":

President Eisenhower's veto of the farm bill was an act of political courage founded on sound principle.

This measure, with its restoration of fixed price support at 90 percent of parity, its revival of a discriminatory dual parity formula and its other appeals to particular crop interests, may have been shrewd congressional politics, but it was bad economics.

For it would have renewed and strengthened a price-support system which encourages the diversion of manpower and soil resources to the production of crops which the Nation does not need. It would have continued a system of legislative favoritism to a few well organized farm blocs. It would have sacrified progress toward a healthy and effective farm policy to the immediate need for improvement of farm income.

So the President was justified in sending the bill back to Congress without his approval. He mingled principle with a dash of political expediency when, in doing so, he announced that price supports for the major crops will be set this year at no less than 82½ percent of parity, while the support for manufacturing milk and butterfat also will be increased. This means $2 wheat, $1.50 corn, and $4.50 rice, moderate increases over the present support levels.

By thus increasing support prices in order to improve farm income this year, the President admits what his administration has been loath to admit before—that the farm situation does call for immediate remedies. The soil bank would not have improved farm income this year. By taking land out of production at rentals amounting to half the support price for crops, it would have reduced immediate income instead, though promising a long-range improvement through curtailment of surpluses.

It was on the premise that something else was needed to bolster income now that the Democrats in Congress—with some indispensable Republican support—insisted on restoring price supports at 90 percent of parity. Now that the President has accepted their premise, his program will be subject to fair criticism if it fails to improve the farm situation. Neither the farmers nor the Democrats will overlook the fact that the administration did not offer 82½ percent of parity until after Congress had tried to legislate 90 percent.

How far short the price-support system falls of being a sound farm policy was indicated when the President remarked, in his radio-TV address, that more than half of farm income comes from livestock—which benefits from price supports only indirectly, if at all.

The truth is that neither the administration nor the advocates of high, fixed price supports have faced up to the implications of this crucial fact. If farm income is to be sustained by Government action, as nearly everybody seems to agree, what kind of action will be effective in those areas where price supports are not?

Mr. Eisenhower mentioned the possibility of purchase programs for beef, hogs, and other perishables. But Secretary Benson's pork-buying program last winter was a joke. It made no perceptible difference in the price of hogs. Something else will be needed—perhaps a food stamp plan and other ways of stimulating consumption, perhaps some form of direct payment to livestock producers, perhaps a combination of both.

Both Republicans and Democrats would do the country a favor if they started debating farm policy in these terms instead of merely debating the level of price supports.

1926–56

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Farrell Line News of February 1, 1956:

1926–56

In history's measure and life's span 30 years is but a generation. Among privately owned American-flag, offshore shipping enterprises three decades is a respectable age. Accordingly, the recent anniversary of January 27, 1926, may warrant comment and the maturity attained excuse a look both ahead and astern.

Time and fortune have favored us in all things save one. Few remain who shared the thrill of the inaugural voyage of steamship *West Isleta*. A small but faithful band, we rejoice with those who have earned their leisure in retirement. We save our fondest memories for those who have embarked for Fiddlers Green.

Looking back we recall countless causes for satisfaction. The greatest of these are not to be found in ledger balances.

Trade and service have expanded sixfold. Area served has more than tripled. Employment directly provided at sea and on shore has been multiplied by six. The present fleet—4 times larger, twice as fast and half as old—represents an investment of

more than 30 times the original capital subscribed. And this increase has come from plowed-back earnings only. We are proud of this record and of everyone who ever contributed to it. We hold that the results obtained are adequate compensation for all the effort and anxiety necessary to their accomplishment.

In all humility our greatest pride is that in war and peace we have served the best interests of our Nation, its allies and of all our friends in Africa, south of the Sahara.

Looking forward we are refreshed. If courage, imagination, and industry measure up to opportunity, the past can be rendered insignificant by the future.

What I Owe My Country

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay by Joyce Williams, Van Wert High School, Van Wert, Ohio:

WHAT I OWE MY COUNTRY

(By Joyce Williams, Van Wert, Ohio)

I was born an American, and my debt is great. With no effort at all on my part, I was born free and equal in a land where opportunities are numberless. I, a tiny baby, unable to reason, unable to think, was born with the very advantages that my ancestors fought and died for. They fought and died, leaving their mark of blood and sweat on the pages of history. I did nothing. I was born an American, and my debt is great.

Our minds can scarcely fathom the toil, the sacrifice, and the intellect that went into the building of our Nation. The Pilgrims, who sailed across the turbulent Atlantic to escape religious persecution, laid our foundation. The sincere and brilliant statesmen who framed our documents, laid our cornerstones. The men and women who dedicated themselves to the task of making America a better place to live in, shaped our destiny.

My country has given me everything. May God forgive me if I, through idleness or ignorance, fail to utilize my talents and fail to be worthy of the name "American."

My debt is great. I owe my country my utmost.

I owe her my respect and admiration:

To stand erect and sing proudly her national anthem.

To respect her flag and support her creed.

I owe her my loyalty:

To speak for her in the face of adverse criticism.

To stand up for her no matter how trying the times.

To be with her and strengthen her in times of trial and tribulation.

I owe her citizens my understanding and tolerance:

To treat them as human beings, all equal and one.

To respect their ideas and beliefs though they differ from mine.

To love them and work with them in true brotherhood.

Last but far from least I owe my service:

To perform my duties of citizenship to the best of my ability.

To keep informed of national affairs at home or abroad.

To live a clean and a decent life, striving always to do my best.

The men and women who have shaped this land have given me much.

I, in turn, owe my country much. Of course, I'll make mistakes and fail along the way, but with the help of God I'll rise again, stronger than before—stronger and abler to serve my country.

"Breathes there the man, with soul so dead,
Who never to himself hath said,
This is my own, my native land."

—*Scott.*

This is my country.

Four Million Five Hundred Thousand Dollar Investment in Tomorrow

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an article appearing in Nation's Business for April 1956 entitled "$4,500,000 Investment in Tomorrow." This article has to do with what we in South Carolina refer to as Bushy Park. I think it has the greatest promise of any site in America for modern industry. The major attraction to present-day industry is water—nothing else is so important. In my district and close to my birthplace, there is more water for modern industry than any place in America, unless Niagara Falls is an exception.

Credit for this project goes to many people. But credit for having this story on Bushy Park told to the Nation in Nation's Business must be given to Charleston's distinguished representative on the United States Chamber of Commerce, Joseph P. Riley. It was Mr. Riley who called this project to the attention of Alden H. Sypher, editor of Nation's Business. Mr. Riley, a director in the national chamber and a member of the national chamber's construction and civic development committee, prevailed upon the distinguished editor of this official organ of the United States Chamber of Commerce to send a representative to Charleston to write on this project. Mr. Speaker, I include herewith an article from the Charleston, S. C., News and Courier, along with the reproduction of the article I have heretofore referred to:

[From the Charleston (S. C.) News and Courier]

BUSHY PARK STORY IS TOLD BY MAGAZINE—NATION'S BUSINESS ARTICLE IS CREDITED TO JOSEPH P. RILEY

The story of Charleston's Bushy Park project—"$4,500,000 Investment in Tomorrow"—appears in the April issue of Nation's Business, official publication of the United States Chamber of Commerce.

The article, including a description of the most recent construction activity at Bushy Park's earthfill dam and canal, was written by Philip Gustafson who visited Charleston earlier this year for an on-the-spot survey of the project.

In this illustrated article on the vast industrial water project, author Gustafson calls Bushy Park Charleston's water triumph.

SYPHER INTERESTED

The editor of Nation's Business, Alden H. Sypher, became interested in the Bushy Park story through Joseph P. Riley, of Charleston, a director of the Chamber of Commerce of the United States and a member of the national chamber's construction and civic development committee.

Riley is also past president of the Greater Charleston Construction and Civic Development Committee.

Riley impressed editor Sypher with the na-Charleston Chamber of Commerce.

Riley impresed editor Sypher with the national significance of the Bushy Park project and in May of last year the editor agreed to a story.

RILEY IS PRAISED

Praise for the article and for Riley has come from Edward Kronsberg, president of the Greater Charleston Chamber of Commerce and Arthur M. Field, chief engineer of the Charleston Development Board.

Said Kronsberg: "We are deeply indebted to Mr. Riley and to Nation's Business for this excellent story on one of the Nation's greatest industrial sites. This information in the hands of prospective industrialists should prove a boon to greatly expanded industrial development in the Charleston area."

Engineer Field commented: "Such favorable publicity in national publications can give impetus to the project and result in much faster development. We believe that Mr. Riley has rendered a great service to our area and the entire South through his efforts to focus the national spotlight on Bushy Park."

[From Nation's Business of April 1956]

FOUR MILLION FIVE HUNDRED THOUSAND DOLLAR INVESTMENT IN TOMORROW—CHARLESTON, S. C., COMBINED THE FLOW OF TWO RIVERS TO GIVE THE CITY AN ALMOST UNLIMITED FRESH WATER SUPPLY

(By Philip Gustafson)

Industry today uses 80 billion gallons of water a day. By 1975 it will need 200 billion.

It takes 15,000 gallons of water to make a new automobile; 65,000 to produce a ton of steel; 320,000 gallons for a ton of aluminum; 600,000 gallons for a ton of synthetic rubber.

To keep pace with the country's expansion since World War II cities are reaching out with pipelines, building dams and reservoirs, and probing the earth as never before. Ohio is drilling 2,000 wells a month. Baltimore has just completed a new reservoir holding 23 billion gallons of water. Dallas will build a reservoir costing $20 million. Texas is even talking of importing water from the Mississippi River; the expansion of New York's water supply of about 500 million gallons cost more than $500 million. In other parts of the country other cities are going after water by use of measures ranging from the orthodox to the unique.

Among the most unusual of these methods are those used by Charleston, S. C. Ingredients of Charleston's water triumph include:

An unusual geographic situation.

An engineer with imagination.

A rugged, hard-hitting Scotch mayor who gets things done.

An eccentric, craggy-browed contractor with a big western hat.

A fat Chesapeake Retriever.

Charleston is a proud southern city situated on a peninsula formed by the Ashley and Cooper Rivers. It is a city of contrasts. At the south end of the peninsula are old colonial houses surrounded by gardens of azaleas and camelias; spreading out to the north is a fast-growing colony of modern, diversified industry.

Charleston prospered in World War II. Its 35-foot depth harbor was rediscovered and reequipped; it swarmed with shipping and

shipyards, its navy yard was revived, while industry was enormously expanded and population was doubled.

The city made earlier provision for its industrial potential by uniting the Cooper and Santee Rivers to form two huge lakes with more than 800,000,000 gallons capacity in a giant $56,000,000 hydroelectric project 40 miles above Charleston. It is the 10,000,000,000-gallon-a-day tailrace canal flowing from this great reservoir that feeds the Santee-Cooper River and now brings a fresh, uncontaminated water supply to Charleston's back door.

When World War II ended, the Charleston war boom died, too. With the navy yard laying off workers by the thousands and wartime activities folding, Charleston faced stagnation. In the face of the crisis, 300 firms joined to form the Charleston Industrial Development Board. They brought in a solid and slow-spoken industrial engineer named Arthur Maxwell Field to improve the city's industrial picture.

In 10 years, Charleston has added 100 diversified industries, raised its industrial capitalization 100 percent and built itself up to become the largest cotton importer as well as the hub of the southern wool industry, the leading petroleum port and the first port of call for ships from South America. Industrial payrolls have jumped from $3,000,000 to $30,000,000 and family incomes have risen 60 percent.

Though Charleston was lacking in some of the natural resources Mr. Field would have liked—such as oil, salt and sulphur—it has others—a fine harbor, good truck, rail and air transportation, labor supply, a favorable tax picture and a growing market in the Southeast.

Mr. Field showed these assets to officials of U. S. Steel in 1948. U. S. Steel had developed a new source of ore in Venezuela and wanted a new plant location as near as possible to the source. Principal requirements: Deep sea frontage and 400,000,000 gallons of water a day. Mr. Field immediately thought of the 10,000,000,000 gallons a day flowing down the Santee-Cooper.

Here was abundant water, except:

At high tide, the ocean backed up into the Santee-Cooper and made the river water unusable.

A dam across the mouth of the Santee-Cooper to keep out salt water seemed the obvious solution. But, miles of dam and extensive ship locks would be needed. This would make the venture almost impossibly expensive.

Then, flying over the area one day, Mr. Field found the answer to Charleston's water problem.

Between the forks of the Santee-Cooper and the Back River—a marsh-bordered tidal stream that rises about 2 miles west of the Santee-Cooper and flows parallel with it for about 7 miles before turning sharply east and joining is—is a high, 4,400-acre wooded tract known as Bushy Park, after one of the old plantations. Upstream from this tract, Mr. Field spotted a low place. He realized that a shallow canal, dug for about 4 miles, could connect the rivers. Thus fresh water from the upper Santee-Cooper could be diverted into the Back River. A dam at the lower end of the Back River would hold out the sea water—this one not prohibitive in cost. Thus, by reshuffling a couple of rivers, Charleston could not only get a tremendous water supply but open up Bushy Park and some 10,000 acres across the Santee-Cooper from it—all of it land hitherto inaccessible. Mr. Field told county and city officials about it.

"I convinced them we had a tremendous source of water in the Santee-Cooper reservoir and that we ought to have firm plans for its development," he says.

But to make sure, the Charleston Commission of Public Works obtained a $175,000 loan from the Federal Housing and Home Finance Agency and employed Ford, Bacon & Davis, New York engineering firm to survey the water prospects in the area. Ford, Bacon & Davis declared the Bushy Park project entirely sound and estimated the job, including the Back River canal and dam and an 8-mile tunnel to the property across the Santee-cooper would cost $5,900,000.

As the project finally crystallized, it added up to this:

The 10 billion gallons of fresh water flowing daily from the Santee-Cooper hydroelectric plant could be diverted into Back River by means of a canal. Back River could then be closed by an earth-fill dam at its lower end. This dam would serve a two-fold purpose:

First, it would serve to prevent salt-water intrusion into the fresh-water reservoir.

Second, it would carry a railroad spur connection between the heart of the Charleston industrial area and the Seaboard Air Line Railroad.

The dam would also serve as a highway, giving access to Bushy Park from the south. The Black River would serve as a reservoir from which Charleston would draw fresh water which it would discharge into the Santee-Cooper, the latter providing ocean frontage for ships from all over the world.

Sound as the project was, it languished until the middle of 1953. As Mayor William McG. Morrison of Charleston put it:

"Everybody was talking about Bushy Park but nobody was doing anything. We had managed to get Berkeley County and Charleston County—the two land areas involved—to combine forces in the joint Bushy Park Authority but the financing stumped us. Nobody had the kind of money it took to get this thing off dead center.

"So there we all were scratching our heads for a cheaper way. Then one day a character in a big western-style hat walked into my office in his shirt sleeves with a big brown dog at his heels. He introduced himself as Robert E. Lee and said he'd do our construction job for us.

"I asked 'How much?'

"He figured for a while on the back of an old envelope and came up with a number of his own.

" 'Six hundred and fifty thousand dollars in cash and $2 million in bonds.'

" 'That's fine,' I said; 'but, Mr. Lee, I don't know you from Adam.'

" 'O. K., so look me up then,' he said.

"I made some telephone calls and found that Mr. Lee, accompanied by the dog, Major, had built roads and bridges and dams all over the United States. He claimed to be a descendant of the famous Civil War general of the same name.

"According to Mr. Lee, Major is an essential member of the firm.

" 'He protects me from varmits and snakes when I walk through the swamps and there's a lot of work we just couldn't do without him.'

"Major's contribution to the Bushy Park development was to swim and test the current at critical times when the dam was building.

"I said, 'O. K., I'll tell my people about it.' "

Investigation and conferences crystallized a plan to build the project for an estimated $4,500,000 including cost of the land. But still nothing was moving.

At this point, Mayor Morrison took the bold step that got the whole project off dead center. He arranged for the Bushy Park Authority to authorize $4,500,000 worth of long-term bonds. He talked the commissioners of public works of the city of Charleston into backing $1 million worth of the Bushy Park bonds with an issue of public works bonds which had a recognized market value. These were turned into cash.

The mayor ran into public opposition to his scheme but he laid his political future on the line and stood up for his convictions. In this he had the backing of some of the local financial leaders, among them President Hugh Lene, of the Citizens Southern Bank.

"I saw that this was an ingenious system which would give Charleston an unlimited water supply at such low cost that it would always be able to sell water at a profit," Mr. Lene says. "The city's municipal water supply would be guaranteed from then on."

Engineer Lee agreed to accept $650,000 of the $1 million in cash and $2 million in Bushy Park bonds, to be paid off over a period of years from the sale of land and water. For this, he agreed to build a dam across the Back River and a canal to divert the fresh water of the Santee-Cooper millrace into the headwaters of the Back River. He also agreed to build a bridge across the canal and an 8-mile road across the dam and into the Bushy Park area, connecting with a nearby highway.

Another essential cog in this low-cost financing deal was P. O. Mead, owner of the 4,400-acre Bushy Park tract, who also gave credit to help the cause. He agreed to take $200,000 in cash and $800,000 in Bushy Park bonds to cover the $1 million purchase cost of the land.

Mr. Mead has unlimited faith in the Bushy Park development.

"God Almighty created this situation for us," he told me, "but we had to have sense enough to see opportunity knocking at our door. I predict that this thing will bring 1 million people here within the next 10 years."

When Mr. Lee got to work on the dam, it was easy to see the basic reason why the Bushy Park engineering job could be done so cheaply. That reason was Cooper marl.

Marl is an earthy substance containing clay, limestone, and sand. Ordinary marls disintegrate in water but when Cooper marl is exposed to air and water, the exposed surface case-hardens and becomes practically erosion-proof. Because of Cooper marl, which underlies most of the area, Charleston has been able to dig water-supply conduits at incredibly low prices without the necessity of laying pipe. By the same token, water tunnels dug through the marl are expected to convey Back River water economically to any new industrial developments around Bushy Park.

Mr. Lee had to dredge the Back River anyway and he used the marl he brought up from the river bottom to build the 6,000-foot dam. In spite of this, tricky tidal conditions made the job a spectacular feat of engineering. These were described by Joseph Moore, consulting engineer for the Bushy Park Authority, who is credited by Mr. Lee with putting the project over.

"The dam closure required split-second timing," Mr. Moore says. "It had a tidal flow from the ocean which mounted into the Back River. Then the water had to get out. As you made the opening smaller, you had a high head of water with a differential of 6 or 7 feet. The millrace flooded out the fresh material as fast as you could put it in. No dam I know of was built under such tidal conditions with the water flowing both ways."

The dam was completed at midnight February 15.

So the water development which Charleston has been dreaming about for 10 years, and actually planning for 5, has become a reality. The dam, the canal, and the bridge over the canal are finished. Fresh water is being diverted into that huge natural reservoir—the Back River. The tides are being held out—down below the marl dam. A natural effluent disposal agency the Santee Cooper lies ready to carry away the wastes of the industries coming to Bushy Park. A road across Bushy Park and across the dam

is under construction with a railroad spur to come.

Charleston is convinced that its big bargain—a potential 10 billion gallons of water a day for only $4,500,000—is the best buy any municipality has ever made for anything of the kind. For a while, the city will divert 2,500,000,000 gallons but minor engineering developments will allow the later use of the whole.

The expansion of Charleston has already begun. United States Steel, which started the whole thing, went to Trenton to be nearer its markets, but the United Piece Dye Works, of Lodi, N. J., is bringing in a $2 million plant to dye, print, and finish synthetic fabrics and the West Virginia Paper and Pulp Co., already one of the Charleston areas's major industries, has announced a $56 million expansion program. West Virginia came to Charleston in 1938 when the city agreed to supply it with the necessary water through new reservoirs and tunnels, this supply was later expanded to provide the 50 million gallons a day which the company now uses, but it couldn't tackle the new expansion until more water was guaranteed.

"But now they're certain there's adequate water for anything they want to do," says Mr. Field.

Charleston doesn't expect the final chapters of Bushy Park to be written for 5 or 10 years until—it hopes—industries will cover the 4,400 acres of Bushy Park proper and the 10,000-plus acreage adjacent—across the Santee-Cooper River.

What I Owe My Country

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. BOW. Mr. Speaker, today the Ohio delegation has lunched with the 12 youngsters who are winners in the American Legion essay contest in our State, and it has been a wonderful and refreshing experience.

My pleasure was enhanced by the fact that Bill Muffley, a ninth grade student from Uniontown High School, in the 16th District, is one of the statewide winners. This is the first time in several years that a boy from our district has won in the Ohio contest.

I join with his friends and members of the Howard D. Miller Post, No. 436, the American Legion, in extending congratulations to Bill Muffley for his outstanding essay. Congratulations also to Bill's family and his teachers in the Uniontown schools who have helped to give him the fine understanding of American principles that is revealed in his splendid essay. I think a word of tribute is proper also to my friend E. F. Marlowe, of Greentown, who has encouraged many youngsters, including Bill, to participate in this contest.

Under leave to extend, I include Bill's prize-winning essay, and commend it to your attention:

WHAT I OWE MY COUNTRY

(By Bill Muffley, Uniontown, Ohio)

My country offers to everyone liberty, freedom from oppressions, freedom from want, and freedom to be ourselves. It is our duty to keep this high form of democracy at any cost.

First of all I owe my country for my liberty, which is one of the most valuable blessings that heaven has bestowed upon mankind. Perhaps we rest our hopes too much upon constitutions, laws, and courts. Liberty lies in the hearts of men and women. When it dies there, no constitutions, no laws, and no courts can do much to help. Liberty is not the freedom of the ruthless or the freedom to do as one likes, because where there is no check upon it, freedom becomes the possession of a savage few. The spirit of liberty is the spirit that seeks to understand the minds of other men and women, and weighs their interests, alongside its own without prejudices. The spirit of liberty is the spirit of Him who, nearly 2,000 years ago, taught mankind that the least shall be heard and considered side by side with the greatest.

I also owe my country protection for the freedom from oppression for which our forefathers died. History records no nobler venture of freedom than the Pilgrim band, who in weariness and painfulness, who in hunger and cold laid the foundation that every man through countless ages might have freedom to worship God in his own way.

Next, I am indebted to my country for the opportunity to maintain one's own prosperity. My country is a fabulous country; it is the one place where miracles not only happen, but where they happen all the time. It is the land of opportunity. Regardless of race, creed, or color, everyone has a chance to work and obtain a higher standard of living than people of any other country. The average American today owns his home, a car, a refrigerator, and a television set, as well as other items which only a select few in any other country could enjoy. It is up to each one of us to work so this country can always be a free and prosperous one.

Last, but not least, we owe our country gratitude for the privilege to be ourselves. No man is free who is not master of himself. Today we have an equal chance to grow, to develop, and to lead the lives we choose to lead, not lives mapped out for us by some dictator. We have the choice to share and work with other men, no matter what their race, creed, or color, or economic or social level.

Since my country stands for all of these principles, it is my duty to uphold these standards so that my country shall continue to be the greatest country in the world.

Federal Taxes

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD a speech which I delivered before a Conference on Management and Taxes held by the American Management Association at the Plaza Hotel, in New York, on April 20, 1956:

Last year a subcommittee of the Joint Committee on the Economic Report conducted a study of our Federal tax policies as these policies relate to economic growth and development. There were two things unique about this study. First, the venture of a congressional committee into an area of what might be termed philosophical political science. Second, the method of conducting the study. I have used the word "study" to describe the procedure adopted by the subcommittee. It was not an "investigation" nor a "hearing" as these congressional committee procedures have come to be known. Yet it contained elements of both. In April 1955 in preparation of the studies the staff of the subcommittee prepared a list of names of some hundred students of taxation and economics, men in the academic world, in the business world, in labor and in agriculture. The subcommittee agreed upon the names of around a hundred persons chosen from this list and from additional suggestions received. Invitations were extended to these experts to come to Washington in May to go over with the subcommittee the project in mind. Around 70 of the persons did appear for a briefing with the subcommittee.

The broad topic was divided up into subtopics and each person was assigned to a subtopic within a subtopic. A great deal of attention was paid to the individual person's suggestion of proper subtopics and to his choice of subtopic he would like to develop.

Each person was asked to prepare a paper on his subtopic to be ready for printing by the first part of October. The purpose was to have all of the papers printed together and circulated among all of the 84 persons who participated in preparing papers and the members of the subcommittee. This was done, and I might say this thousand-page volume of prepared papers has become a best seller in the Government Printing Office.

In early December panel hearings open to the public were conducted on the papers by the subcommittee. The subtopics were grouped under chapter headings as appears in the printed document containing the papers. Those persons having papers covered by a subtopic heading appeared together on the same panel. Each person was given introductory time to point out the highlights of his paper and to comment upon the highlights of his fellow panelist's paper. The subcommittee members then began interrogating the panel upon their papers and invited further participation by the panel in questioning their fellow panelists.

The fact that the written papers had been available sufficiently ahead of time so that the subcommittee members and the panelists had a chance to read and to study the papers made these panel hearings vigorous and meaningful. These printed hearings, of course, are also available to the public and students of this subject.

The subcommittee reached some conclusions in a brief report it made on these studies. One of these conclusions, in my opinion, had more to do with keeping the subject of tax reduction out of the political arena this second session of the 84th Congress than any other single thing. The subcommittee concluded unanimously, as did most of the panelists who discussed the subject, that during an expanding economy, with times good and the Federal debt at the height it is, any excess of revenues over expenditures should be used to reduce the Federal debt rather than to reduce taxes.

However, it was not the conclusions that the subcommittee reached that appears to me to be the most important or the most significant thing about the subcommittee's work. The most significant thing is that a decision was made to study this area objectively through the procedures of a congressional committee. That decision proved to be practical and of tremendous value to our knowledge of this important subject. I think it is very important that this work be continued by the subcommittee and that other areas of economic-political operations be subjected to a similar technique of study.

A study of international trade or of the economics of our domestic agriculture industry along these lines would be of inestimable advantage to coming up with intelligent solutions to the problems that exist in these areas.

There is ample room for drawing up sides along political lines after an objective study has been made. In fact, after an objective study has been made the areas of proper disagreement are sharpened. But above all, the loose demagoguery that exists where ignorance exists fill be lessened considerably. The demagoguery that presently exists in the nationwide public discussion of the agricultural industry and the political programs in relation to it has its roots in ignorance. Playing upon ignorance through the emotions certainly will harm, not help, our society in solving the farm problems or any other problems.

So it could have been with tax cutting in the 2d session of the 84th Congress. We could easily have picked up where we left off in the 1st session of the 84th Congress by appealing to this group or that group in suggesting tax cuts here or tax cuts there. There is ample room for real political differences on the subject of our tax laws; I am satisfied with the studies of the subcommittee available to the Congress and the people, intelligent political lines can be drawn on the subject of the kind of tax laws we should have. It is interesting to note that the preconceived lines of political differences in this area have been to a large degree dissipated simply by casting knowledge on the subject. It will take a little time, I suggest, before we do draw up political differences.

I hope the time will be soon because I believe that through the two political parties taking positions which differ on important issues the matters best can be discussed publicly and resolved intelligently.

With this lengthy introduction I want to discuss some of the basic things that were brought out in our studies of the economic effects of Federal taxation. Neither the staff of the subcommittee nor my colleagues quite agree with the conclusions I am going to express.

I want to start the discussion by referring to the title adopted by the committee for its study, "Federal tax policy of economic stability and growth." This was not the title I suggested at the time I was urging these studies to be made and a subcommittee established to make them. The title I used and still like to use to refer to these studies is: "The economic effects of Federal taxation."

The difference in these two titles reflect a basic difference in political philosophy. The overtones in the title "Federal tax policy for economic stability and growth" imply that the Federal tax policy can be used deliberately by the political government to promote economic stability and growth in our society. Many of the papers presented by the panelists assumed without posing the question that the Federal Government deliberately should use its taxing power to promote economic stability and growth. There is another political philosophy however which says, granted that any tax or any system of taxation has economic effects and so affects economic stability and growth, nonetheless the purpose of taxation should remain solely that of raising revenue, therefore the tax or tax system which has the minimum effect on the economy is the better, to that extent.

It can be argued in these days of high Federal expenditures brought on primarily by the carried over costs of World War II and the present high cost of military preparedness in the cold war era, that the difference in approach does not effect the results. In other words, our tax take being as high as it is has a very great impact on our society whether we regard the taxing power as solely a method of collecting revenues or whether we regard it as also a proper tool for intentionally producing economic results. Granting that the tax take has this impact, under either theory it would be the proper objective to set up the tax structure to produce the maximum amount of stability and growth in our economy.

The difference lies, perhaps, in the frame of mind one has toward the amount of governmental expenditures. The person who looks upon the taxing power as an affirmative means for affecting the economy recognizes that the larger the tax take, and the higher the tax rate the stronger is the taxing power as a device for affecting the economy. Accordingly, he views the amount of governmental expenditures with equanimity. If he is a Fabian socialist he actually pursues the course of bringing about greater governmental expenditures because he pursues two concurrent courses. The more government spends, whatever the purpose, the greater control the Government has over the economy through the control of expenditures; likewise the more it spends the greater the taxes and so the more effective is this other powerful weapon of governmental control. This is not just two courses moving in the same direction; it has a built-in spiraling effect. The more functions the Government assumes, which is synonomous with the Government spending more money, the less functions private enterprise assumes. Private enterprise is the tax base, so as government expands in ratio to the overall economy, private enterprise or the tax base ratio declines. As the tax base declines, the tax rate must increase in order to maintain the same high tax take. It is essentially the tax rate which provides the energy for the control the taxing power exerts over the economy.

Let me illustrate. What would be the effect of a certificate of necessity if the corporate tax rate were 20 percent instead of 52 percent or what would its effect be if all corporations were permitted to set up their own depreciation schedules for tax purposes? The certificate of necessity is a neat, effective way of producing a direct economic result, i. e., the building of a new plant for a specified purpose. The advocates of private enterprise have not been alarmed at the use of the tax power here because they see in it a less dangerous procedure, to their way of thinking, than direct subsidies or even more dangerous of direct participation by the Government.

I used the illustration of the certificate of necessity out of the many illustrations I could have used, for a specific reason. I wanted it to be quite clear that the use of the tax power to produce economic effects has about it a great attractiveness. It is neat, quiet, easy to administer, and effective It is a constant temptation for Government officials to resort to it. Let me illustrate further. Farmers ought to build more ponds on their farms. The Government, instead of persuading through education or ordering through police powers, simply presents an attractive offer—if you do build ponds you can take a tax deduction. The attractiveness of the offer is directly in proportion to the rate of the tax from which exemption is granted.

By referring to many of the beneficial uses of the taxing power to produce economic effects we easily could come to the conclusion that the taxing power should be used deliberately to produce certain economic results including providing for more stability and growth in our economy. Of course, we could look at other economic results the taxing power has produced and begin to wonder. For example, I believe that the excess-profits tax did more to hurt and stunt the growth of small and new industries than any single economic or political thing. I believe the double taxation of the corporate form of doing business has done more to hurt the growth and stability of corporations than any single thing, by placing, as it does, a premium on financing expansion through debt or retained earnings instead of through floating new equity issues.

Much of the economic effects of our tax structure has not been planned. In fact, our subcommittee studies revealed that not only had the effects not been planned, in most instances the effects were unknown, and even with our studies the effects remain unknown and only give rise to dispute as to what they really are. However, everyone agreed that the effects are considerable and that the proportionately great tax take of today lies at the bottom of the effectiveness of the tax structure on our economy.

However, there are certainly those who would like to engage in economic planning, and for their purposes the Federal political government is the best place to do the planning. The dispute that arose over the use of a single word in the Employment Act of 1946 which created the President's Board of Economic Advisers and this Joint Committee on the Economic Report brings out this fact forcefully. The word in dispute was the adjective "full" used to modify the noun "employment." The word finally adopted in the Employment Act was "maximum." Now what is the difference between saying that the Federal Government shall do all in its power to produce full employment instead of maximum employment. The use of the word "full" imposes upon the Federal Government the responsibility for employment of its citizens rather than upon private enterprise. The adjective "maximum" means "fullest attainable" and, therefore, raises the question of what is attainable. Raising this question throws into discussion the question, How do we maintain employment of our citizens? Through the private economy regulated by the political government or through the political government? Persons like myself, who believe that the only way to continuing growth is through the trial-and-error methods, which I regard in economics as synonymous with private enterprise, maintain that private enterprise is the only way to maintain maximum employment over a period of years, and that at best all the Federal Government can do is to assist from time to time on short-term programs and help on long-range programs by preserving a system of free and true competition.

The argument over the responsibilities of private enterprise and political government for the employment of its citizens was brought out to some degree at the time the ILO set out its bill of rights among which was the so-called right to work. This is certainly a brave new world, if we have decided that we know enough about sociology, economics and psychology that we can have political governments guarantee "the right to work." Our constitutional forebears were more humble in their day when discussing the right to happiness, they limited the Governmenty guaranty to the right to pursue happiness. So I would suggest that we are only at the stage of human knowledge and development that we can talk about granting the right to pursue full employment. That means that Government's role is ancillary. That Government can set up rules of procedure for its citizenry in the economic fields which if followed would permit every one to receive his just dues from the sweat of his brow.

But to get back specifically to taxes. Aside from the implications brought to light about the use of the taxing power there were two other basic matters about taxes brought to light. Like the first factor which I have been discussing the other two require considerably more thought and study than have been given them.

The first matter is inflation. Our panelists who discussed what inflation is, under my questioning agreed that in essence inflation is a form of taxation. It takes purchasing power from the individual and transfers it to the political government. Of course, if the Government is essentially a creditor

and not a debtor this would not be the effect, but this is certainly an academic point in modern times. Perhaps in any times because political government by its nature will be always a debtor to its citizens.

But inflation also transfers purchasing power from one citizen to another. Now what has this to do with a discussion of our overall Federal tax structure and its economic effect? There are two basic things I want to point up. First, though inflation is a way of federally financing projects, it is a good way? Second, after reviewing the thousands of requests for changes in our present tax laws to bring about what is always referred to as equity and fairness I have concluded that 90 percent of these present-day inequities arise from the tax of inflation. . For example, the cry about "locked in" investments stems largely from the effects of inflation on our other tax laws. The change made in our tax laws to permit homeowners to sell an old house to buy a new one to escape the tax on the capital gain from the sale, the extra exemption given to people over 65 because after all those on retirement and other fixed incomes were the ones hit the hardest by the inflation tax, the problems of business inventories and the use of LIFO, the present problems of tax treatment of replacement of capital equipment, the general problems involved in capital depreciation are all examples of inequities brought about by the tax of inflation.

I am satisfied that if we would trace through most of the recent requests for tax relief we would find that they have their origin in the economic effects resulting from our Government's resorting to the tax of inflation to finance World War II.

When all is said and done I believe one of the most important principles that any Federal tax policy must follow is to preserve the integrity of the dollar. Just as the standards of our weights and measures used in evaluating physical lengths, widths, thickness, quantities, and bulk must be kept exact and constant so must our standards for evaluating economic events and economic trends be kept exact and constant. The dollar is the most important of all the measuring standards in the field of economics. A tax system that fails to protect the exactness and constancy of economic standards cannot promote real growth and stability in an economy.

The third matter is as basic as the question of the use of the tax power and the question of the use of inflation as a method of taxation. The third matter has to do with the taxation of two different dollars, the consumer dollar and the investment dollar. This was a matter consciously posed by many of the committee's panelists. Organized labor's panelists expressed the view that our present tax structure was hitting the consumer dollar too heavily and that it was the plentitude of the consumer dollar that lay at the base of any expanding economy. That given the consumer dollar the investment dollar would always appear. In other words, given the demand for production the capital formation necessary to provide the production would be forthcoming. Organized labor's panelists expressed the thought that obviously the tax on the investment dollar was not excessive, because we were doing all right, but that to continue to do all right we had to continue to relieve the consumer dollar from the burden of taxation.

However, labor's spokesmen failed to appreciate, it seems to me, that when consumer demand outstrips production inflationary forces are created which can become strong enough to break through any governmental system of brakes and controls to produce full-fledged inflation which is, of course, essentially a consumer's tax. The investment dollar, unfortunately, does not always flow to areas where there is a consumer demand. Even if there are plenty of investment dollars the channels may be clogged by governmental action. Furthermore, there is such a thing as clogging up the source itself. Right at the present time we have been experiencing a demand for cement, glass, steel, nickel and other metals and basic materials which is greater than the production facilities. This could be the result of tax deterrents on the investment dollar. I'm not sure that it is, but I emphasize, it could be.

Industry's spokesmen argued that the investment dollar was being too heavily hit now and that there was not sufficient capital formation to bring about the continued growth and stability we should be able to look forward to in our economy. It was pointed out that around $14,000 capital investment is needed to keep one man employed in our American society of today, and that multiplying out the increasing labor force in America from population increases the necessary capital formation to keep labor employed did not seem to be in the offing.

One factor in this discussion was not fully touched upon in my opinion. After all, what is a consumer dollar can be shifted readily to an investment dollar, and likewise what is an investment dollar can readily be shifted to a consumer dollar. The determination of what is to be a consumer dollar or an investment dollar lies in the psychological makeup of our 165 million people. Obviously as long as basic living needs must be fulfilled for a person, that person is not going to convert his dollar into an investment dollar. Equally obviously, if the Federal Government taxes the investment dollar too heavily there will be considerable incentive to convert it into "living it up" as my kids now term it.

I want to mention another factor which seems to me is basic but was only touched upon in the hearings by my line of questioning of the panel witnesses. I was disturbed to conclude from the answers I received to these questions that not very many people had been thinking about the position Government capital formation has been playing in our present-day economy. A discussion of this factor will bring me right back to the beginning of my talk. The labor economists said there was adequate investment capital available because we were doing all right. The industry economists said maybe so, but if we need $14,000 capital investment to provide a job for each person coming into the labor market in the future we had best take heed now.

Now I pose the question, has there been sufficient private capital formation in the immediate past to carry forward our economy and to build solid growth? The housing industry has grown to a large extent on the basis of Government capital formation, not private capital formation. Certainly FHA and VA guaranties and Fanny Mae and most of the other Government housing programs are indirect financing. But what industry can operate without the economic function of insurance being performed by some capital formation? In my panel questioning to bring out my point, I referred to an insurance function being performed in the private economy which is a type that Government today is constantly performing in other economic areas without much comment. This particular operation, I might add, is one of high speculation and not of conservatism as we in this country have come to view the insurance field. I referred to the commodity exchange. To illustrate, Purina Mills, located in my district, is a big buyer of grain, but Purina in its operation wants to minimize the speculation involved in the cost of the grain it must buy * * * the grain futures market, private speculators, performs this economic function—this insurance function for it.

In other words, the question is: How much capital formation required to support our present day economy in all its varied ramifications has been supplied by the Federal Government? Until we know this we are hardly in a position of commenting with any intelligence on whether or not the investment dollar has been affected adversely by our Federal tax policies.

The argument for 20 years in the congressional committees and on the floor of the House has been, private enterprise isn't doing the job, the performance of the job is a social necessity, therefore Government must move in to do the job. Whether you talk about rural electrification, housing, medical attention, building municipal food markets in Philadelphia, the pleas are all this way.

Now there can be two basic reasons why private enterprise is not doing the job: (1) Because private enterprise lacks the initiative to do it, or (2) because Government through its own policies has hampered private enterprise from doing the job. Shut off speculative capital and you can cut off private endeavor most effectively. Again, this is part of the Fabian Socialists plan. Emphasize the social need for the service (and this can be built up emotionally by the demagogues to a point where it gets beyond all control), hamper private enterprise from doing it, then cry Government must do it.

To a degree, I am a liberal Republican but I have had little chance to demonstrate it since I have been in Congress. I am perfectly willing to have the Federal Government perform certain economic needs for our society provided (1) the need is clear, (2) private enterprise is not fulfilling the need, and (the point always overlooked in these discussions) a study reveals that private enterprise cannot fill the need, (3) that Government's entry is on an emergency basis and that plans simultaneously are set up to eliminate the reasons which have prevented and do prevent private enterprise from doing the job.

I am regarded as a conservative because with my small and to date ineffective voice I continue to harp on the last point. I shall close upon it. The question is: How does our Federal tax system hamper the economic growth and stability of our economy? And how can we reduce such hampering to the minimum? The question is not how does our Federal tax policy promote economic growth and stability and how can we increase that promotion. In my judgment, herein lies the solution to our problems of providing maximum employment and maximum happiness for our people, for the answers to the attainment of both our economic and spiritual values lie in providing the maximum amount of freedom for the individual person in his society.

A Lesson in Politics

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. DEROUNIAN. Mr. Speaker, I commend for the attention of the American people the following fine article by Frank R. Kent, which appeared in the Washington Sunday Star, April 22, 1956:

THE GAME OF POLITICS

(By Frank R. Kent)

DEMOCRATS' FARM STRATEGY BACKFIRES

It is now clear that the Democratic strategists at last have found an issue upon which they can unite against President Eisenhower in the campaign this fall. It is also clear that, now they have found their issue (to wit, the one created by his veto of the so-called farm-relief bill), the most astute among them, including several presidential aspirants, are not too happy about it.

Outsmart themselves

The simple fact is that they seem to have outsmarted themselves. This frequently happens in politics as in other avenues of human endeavor, and is almost invariably due to underestimating the basic superiority of right over wrong. In this case the Democratic conspiracy—for that it is admitted to be—against Mr. Eisenhower began soon after he decided to run for a second term. That decision was as uplifting to the Republicans as it was discouraging to the Democrats. Unable to make a successful attack on Mr. Eisenhower personally, their efforts to find a campaign goat in either Vice President NIXON, now sure of renomination, or any member of the Eisenhower Cabinet, were redoubled. However, despite the raucous voices of Chairman Paul Butler, of the Democratic National Committee, and his persistent little predecessor, Stephen Mitchell, these efforts came to nought and in recent months all the Democratic leaders and all the Democratic publicity talent seemed concentrated upon exploitation of the discontent among the farmers.

On the surface this seemed a shrewd move, indeed. The troubles of the farmers were real and not imaginary. The administration, indorsing the soil-bank theory, which was widely supported by many farm leaders, had offered a program. With a majority in both House and Senate the Democrats proceeded to load the Eisenhower-Benson bill with amendments so fantastic as to make it utterly unworkable. Then, loudly shouting for 90 percent parity, they proceeded to pass the bill, thus putting it up to the President. Basing this strategy upon the fact that no President had ever dared veto a farm relief bill in an election year, they chortled over the spot onto which they had maneuvered the President. Either he had to accept a thoroughly bad and unworkable bill or he had to bear the blame for having stood in the way of relief for the farmer.

That is what they thought—but apparently it is not working out that way. It seems now that they made two fundamental mistakes. The first mistake was in regarding the American farmer as an incurable boob. This he is far from being. Already there are evidences that many farmers see through the politics which the Democrats have played and are still playing with this bill. And the biggest and most respected of all farm organizations in the country—the American Farm Bureau Federation—opposed the bill, approved the veto and indorsed the Eisenhower-Benson attitude. So have most of the influential newspapers.

The second mistake was in the assumption that this President lacked the courage to veto a farm relief bill in an election year. This President may check short in some things, but political courage—or any other kind—is not one of them. As things are working out this veto, which clearly was in national interests as well as the farmer's interest, is likely to promote the President politically rather than detract from his strength. Whatever the final outcome of the struggle in Congress, it appears now that the Democratic leaders have put themselves on the defensive instead of the President.

Fail to trap President

What they really did was to give him a beautiful opportunity again to demonstrate not only his courage and sincerity but a very real knowledge of his subject, which was inherent both in his message and in his broadcast. In addition the leading Democratic presidential aspirants—Stevenson, Kefauver, and Harriman—also ex-President Harry Truman—all find themselves committed to a legislative and economic monstrosity, enactment of which would not have relieved the farmer and in which only the foolish farmers believe.

It was an interesting and instructive political episode in which the politicians who played what seemed a very smooth game were politically bested by the politician who fearlessly stood firmly for what he believed to be right and refused to consider politics at all. The longer the Democratic leaders study this situation the worse they are going to feel. Even now the reaction is clearly unfavorable. None of the things they hoped for and planned have occurred. Their efforts to trap the President have uniformly failed. The reasons are obvious. But they keep trying.

United States Attorney Carries Through

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, a former Member of Congress, who served here with distinction, is continuing his public service by ably, fearlessly, and without discrimination performing his duty as United States attorney at St. Paul, Minn.

When a congressional committee left uncompleted a task which had been assigned to it, George MacKinnon took over the job and is well on the way in his effort to protect the honest, conscientious worker from some of those who would rob him not only of his dollars but of his constitutional rights to earn a livelihood for himself and his family, spend his earnings as he might desire.

From the Minneapolis Star, I quote a news story, which reads as follows:

GUILTY VERDICT RETURNED IN ADM-TEAMSTERS CASE—JURY FINDS AGAINST FIRM, 5 INDIVIDUALS—SENTENCING LATER FOR EXECUTIVE, 4 TEAMSTERS

The Archer-Daniels-Midland Co., 1 of its vice presidents and 4 AFL Teamsters Union officers were found guilty by a Minneapolis Federal court jury today of violating the Taft-Hartley law.

Judge Edward J. Devitt immediately referred the cases to the probation department for presentence investigation.

After deliberating less than 2 hours, the jury returned guilty verdicts against the company, James W. Moore, vice president; Sidney L. Brennan, Jack Jorgensen, Eugene J. Williams, and Gerald P. Connelly, officers in the teamsters union locals.

The verdict carries a maximum penalty of a year's imprisonment, a $1,000 fine, or both, on each of 5 counts.

Trial of the case had required nearly 3 weeks, during which time the Government produced 40 witnesses.

Essence of the case was the charge that Archer-Daniels-Midland Co. provided $5,000 to help settle a strike by the United Mine Workers of America Union against its southeast Minneapolis oil plant in May 1953.

The Government charged that the company, Moore and Connelly were guilty of a conspiracy to provide the sum.

Of the total, the Government charged Brennan, Jorgensen, and Williams each got $1,000 and Connelly $900.

Through the testimony of its witnesses, the prosecution traced the $5,000 through the firm of the Stavis Oil Co., St. Paul, to Connelly's 24-year-old son, Gerald, in Chicago, to the La Salle National Bank, Chicago, and to the union defendants.

After the Government completed its case, the defense rested without putting any witnesses on the stand or offering any evidence.

Motions to the court to order a directed verdict of acquittal failed. Closing arguments were made Monday, and the court instructed the jury this morning.

The jury got the case shortly after noon, ate lunch, and returned its verdict about 2:45 p. m.

Ohio Department of American Legion Sponsors Essay Contest

EXTENSION OF REMARKS

OF

HON. PAUL F. SCHENCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. SCHENCK. Mr. Speaker, in these days of conflicting isms and ideologies throughout the world, it is of special importance that we stop and cherish the thoughts about what this great Nation means to us. Many times we are prone to point out and discuss what is wrong with America, when we should be thinking about all the wonderful characteristics of what is right in America.

Men and women throughout the history of our Nation have fought, suffered, lived, and died that we might enjoy all those precious freedoms that, at times, many of us take for granted.

The American Legion is one of our greatest patriotic organizations that has, as one of its fundamental principles and purposes, th preservation and continuation of an America where these precious freedoms of ours will live on for generations yet unborn.

The Ohio Department of the American Legion, as a part of their program to foster these high principles, conducts an essay contest each year among the high-school students of Ohio. The subject of this essay contest is, What I Owe My Country. The winners of this contest are given a trip to Washington, the Capital of our great Nation, where they may see their Federal Government in action and where they may visit many places of great and significant interest. During their visit to Washington, these essay contest winners are entertained at a luncheon in the Speaker's dining room sponsored by all Members of Congress from both political parties in Ohio. This luncheon was held today.

Mr. Speaker, the more I have the privilege to associate with our high-school students today, the happier and more convinced I am that the future of America will be in good hands. These young

people are serious minded students and they are quick to determine when they feel that any of us are taking our obligations lightly or are permitting ourselves to base our decisions on expediency. It has been my privilege to discuss the affairs of Government with many high-school groups and I have been tremendously pleased with their knowledge of Government and its problems, and their keen analysis of the vital problems faced by their Representatives here in the Congress of the United States.

Mr. Speaker, I am particularly proud and happy that a very charming and able young lady from Dayton, Ohio, is one of the three statewide champions from the 10th grade.

She is Miss Elizabeth Richards, of 1713 Richard Street, Dayton, Ohio. Miss Richards is a 10th grade student in Dayton's Wilbur Wright High School. Her thoughtful essay shows very clearly how completely she dedicates her abilities and talents to our great Nation and reveals her determination to serve our country.

Under unanimous consent, I request that her prize-winning essay be made a part of these comments and recorded in full:

WHAT I OWE MY COUNTRY

Many years ago my ancestors came to this country. They fought, worked, and some died to help establish this great Nation. My generation is now enjoying the fruits of their labors.

With humility I say I owe my country, the United States of America:

My hands, to build and to mold a stronger nation in which to live.

My eyes, to see our natural blessings, to look upon and to appreciate all that God his given us, to help me search for and to see new and better methods that will help my community and my country.

My ears, to hear the wisdom, to hear all viewpoints so that I can better choose my path in life.

My voice, to shout the advantages of our democratic way of life, to speak out for my country, to teach others what I know to be good for our Nation, to speak against all evil and wrongdoers.

My heart, to love what is good, to sympathize with those less fortunate, to feel and understand suffering, to be a part of every worthy cause and to be strong against all evil.

My mind, to seek wisdom, to further my education, to search for truth and to judge for myself. Yes; the best from my body and my mind I owe and give to my country.

My soul belongs to God. How I use the blessings God has given me will determine what kind of a citizen I am and shall be. To be a good Christian citizen means to have faith in God.

We people today have so many blessings for which to be thankful. These are the results of hard work. Work that could not have been accomplished without the hands and hearts of our people. We must not look upon the standards of others with criticism. It took fight and work to accomplish our high standards. Let us set an example for those less fortunate. The poor will be with us always, as will the bad be among the good.

I owe my just taxes to help finance our armies, the poor, the wounded—our schools and other civic projects. I shall vote, when age permits me.

I love my country, the United States, and will try to live up to every word I have written.

A Justified Veto

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert in the Appendix of the CONGRESSIONAL RECORD, the attached editorial, A Justified Veto, which appeared in the April 18 issue of the Anderson (Ind.) Herald:

A JUSTIFIED VETO

The Democratic leadership in Congress this week accomplished exactly what it set out to accomplish.

After weeks of needless delay, the Democratic leadership finally permitted a crazy-quilt farm bill to reach President Eisenhower's desk—a bill so repugnant to the principles upon which the Eisenhower administration rests that the President had no practical alternative to a veto.

In declining to sign the bill, the Democrats already are saying, Mr. Eisenhower is demonstrating his callous disregard for the plight of the American farmer.

We agree that someone on the national political scene views the farmers' plight with callousness. But we think that guilt belongs at the doorstep of the Democratic Party and its congressional leaders, who have shown the Nation beyond any reasonable doubt that they are more interested in manufacturing some kind of issue for this election year than in taking any step that might alleviate the hardship of the farmer or soften his discontent.

Let's look for a moment at the history of this farm bill that Mr. Eisenhower vetoed Monday.

President Eisenhower indicated his concern for falling farm prices and rising farm costs during the first week the present Congress was in session. On January 9, he sent to Congress a special message on agriculture—a message containing a series of specific recommendations.

The heart of his program was a soil-bank program, designed specifically to combat farm surpluses and to strengthen the cause of soil conservation. This phase of the program alone would have put more than $1.2 billion into the hands of our farmers this year alone.

There is no reason why the soil-bank phase of the President's program would not have become law by March 1 so that its benefits could have begun accruing to the farmers immediately. Even the Democrats in Congress found no fault with the soil bank, as evidenced by the fact that they left this single item of the President's program virtually intact.

But alarmed by the prospect that Mr. Eisenhower might get credit for helping the farmer, the Democratic leaders went to work. Their one motive was to keep farm dissatisfaction alive until November, no matter how harmful it might be to the farmer or to the Nation.

Finally, after weeks of debate and delay and compromise, they let a farm bill get through. The Eisenhower soil bank was still a feature of it. But tacked on was a provision for the reinstatement of high, rigid price supports, the very price supports that have served to depress farm prices by accumulating larger and larger surpluses, the very surpluses the soil bank is designed to combat, the same sort of surpluses the American people are paying $1 million a day to store.

It is almost criminally wasteful to urge our farmers to produce what they cannot sell. Yet that is precisely what the Democratic leadership proposes.

Mr. Eisenhower made it clear Monday night that he is far more interested in serving the long-range interests of the farmers and of the American people than in winning votes in November. Once our farmers understand the facts, Mr. Eisenhower and his party will have nothing to fear.

Speech of Hon. James C. Davis, of Georgia, in Defense of Constitutional Government, State Sovereignty, and Commonsense, Delivered at West Memphis, Ark., March 31, 1956

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, the constitutional crisis forced on us by the Supreme Court's Black Monday decisions, and subsequent attacks upon States rights is the most serious threat to our form of government since the War Between the States. Almost equally important is the irreconcilable social problems created by these decisions, which threatens to destroy completely the peaceful relationships that have existed between the races for the last hundred years.

It has been virtually impossible for the South to present its side of the controversy to other parts of the country because of a biased press which deliberately suppresses the arguments of southern leaders.

Recently, in a speech at West Memphis, Ark., our distinguished colleague from Georgia, Hon. JAMES C. DAVIS, presented what I consider to be an irrefutable argument for the preservation of segregation, and the need for protecting the rights of the States against the unconstitutional usurpation of power by the Federal establishment. Under leave to extend my remarks in the RECORD, I include the text of Mr. DAVIS' address and commend it to Americans everywhere. Its thought-provoking contents should serve to open the eyes of those who have been blinded by the misleading arguments of South-hating propagandists:

SPEECH OF REPRESENTATIVE JAMES C. DAVIS DELIVERED AT WEST MEMPHIS, ARK., MARCH 31, 1956

I am glad to come from Washington to talk to you tonight. We have a common interest. The bold and brazen attack now being made upon constitutional government calls for organization, for unity of purpose and for unity of action.

Every Member of the House and Senate from Arkansas signed the Manifesto in Washington on March 12. It is necessary—it is imperative that you people back home be unanimous in your action. This fight has 2 fronts—the 1 in Washington and the 1

at home. On each front there must be organization, unity, and work.

The theme of the message which I want to bring to you tonight is this: The time has come for action.

We have been a tolerant people, tolerant to the point of gullibility. The average American, if given a choice between peace on the one hand, and strife on the other, will choose peace. He is long suffering. He will endure with patience an unbelievable amount of injustice and mistreatment.

In his spirit of tolerance your people and my people in the last 25 years have seen our constitutional rights whittled away little by little, and the whittling has been done by those whom we had a right to trust.

In our upbringing we were taught to respect our Government—to believe in the integrity of public officials.

Ingrained in us was the faith and confidence that the United States Supreme Court was a bulwark for the preservation of constitutional government; that it would always stand, as it had stood in the past, a fortress of strength, against which anyone would dash himself to destruction who sought to weaken or destroy the instrument of our liberties, the Constitution of the United States.

For nearly a century and a half the Court deserved the respect which it received. It justified the confidence of the people that it would uphold the Constitution and would proclaim its provisions as written, knowing that it was not in the province of the Court to change the Constitution by one jot or tittle, that the Court could not add anything to the Constitution or take anything from it; recognizing that if changing and modern times call for a revision of the Constitution, either great or small, then the Constitution itself declared how the change must be made.

In the structure of our Government there is no fact more certain than this; the nine justices of the Supreme Court cannot change our Constitution.

The Congress with its 531 Members of the House and Senate, cannot change it.

The President of the United States, with all his power, cannot change it.

Neither one of these alone can amend the Constitution. All three together cannot amend it.

It can be changed only by an amendment voted for by two-thirds of the House and Senate and by three-fourths of the sovereign States of the Union.

Any attempt to change our Constitution in any other manner is a gross fraud—a fraud which it is the duty of all patriotic citizens to expose and to prevent.

It was to restate, reaffirm and support this well-known doctrine that the congressional "Declaration of Constitutional Principles" also called a manifesto, was written and signed by 100 Representatives and Senators in Washington on March 12.

We prepared and signed this document in Washington because we realize that the time is here when we must, as free men, defend the constitutional Government which is ours, or, as unworthy descendants of those who fought at Bunker Hill and Yorktown, sit by in silence and in cowardice while our hard won rights of State and local self-government are struck down illegally by the would-be social reformers on the Supreme Court.

We signed it because the time is here to defend free government, or to surrender to judicial dictatorship.

The principle involved here goes far beyond our right to operate our schools, although that in itself is a valued right, and a right we do not intend to surrender because the Supreme Court undertakes to usurp power it does not possess.

But the real issue is: Shall we permit the Supreme Court, one department of Government, whose powers are defined and limited by the Constitution, to successfully assert the power to change that precious document, by reading into it language it does not contain, and which those who wrote the Constitution and its amendments, never intended it should contain.

The question is, if changing conditions require a change in the Constitution, shall it be changed as the Constitution says, by drawing an amendment with definite and specific language, which shall receive the people's stamp of approval through a vote of two-thirds of the Congress, plus three-fourth of the States? This is the legal way.

Or, shall it be amended by the arbitrary act of nine men, to whom this authority has not been given, who are not elected, and who can in no sense of the word be said to represent the will and wishes of the people regarding amendments to the Constitution. We have amended the Constitution 22 times in the past by following legal and regular procedure. The 22d amendment was proposed in 1947 and certified in 1951. What has happened that we no longer must submit amendments to the Congress for a two-thirds vote and to the States for a three-fourths vote?

We have not yet lost this right to have a voice in adopting amendments to the Constitution, or in rejecting them. But this Supreme Court decision of May 17, 1954, is a brazen effort to destroy this right.

If the Court can today strike down the accepted and declared meaning of the Constitution; if it can nullify a construction on the exact point involved, which has been followed and approved in dozen of instances, by the Supreme Court itself and courts of many other jurisdictions, and in doing so rely upon nothing but its own arbitrary will, to support the decision, then it can tomorrow or next month strike down any other provision which does not conform to its sociological beliefs. While it may be Georgia or Arkansas which suffers today from such wrongful usurpation of authority, next year it may be Oregon, Maine, or Illinois.

While the subject today is schools, its next usurpation may involve taxes, or criminal law, or the right to own property. Once the precedent is established—once we have acknowledged the right of the Supreme Court to trifle with the Constitution, there is no limit to its possibilities.

Those of us who support local self-government and States rights have been slow to believe that we could lose these precious rights. We know now that we must fight for them.

There are many conditions which must get worse before they can get better. This is true because so many of us are apathetic to danger until we come face to face with it. To most of us a condition must become an emergency before we make even the first move to meet it. It is human nature not to take medicine until we get sick, although the sickness might be avoided by following some simple precautions in advance.

The segregation problem is one of those things that had to get worse before it could get better. It has now reached the emergency stage. The problem is so urgent that even the most indifferent can no longer ignore it. We can no longer shrug this problem off with the thought that it is the problem of the Federal Government, or the State government, or the school officials. It has come much closer home than that. It is my problem. It is your problem. I must do something about it. You must do something about it.

What is it that you and I must do, and do now, to save our schools, our States rights, and our constitutional Government? We must organize. We must organize with our neighbors. We must organize on the local level. We must organize on the county level and on the State level. We must present a massive, united front against the fraudulent attempt to take away from the people and the States our constitutional rights to conduct our own affairs in the way we choose to conduct them. You will find, if you have not already found it, that your neighbors are ready to organize with you, and we will have this massive, united front, if we organize with like-minded people.

Those of us who signed the Washington manifesto represent States having a population of nearly 40 million people. Do not let any loose-tongued, radical promoter of social equality tell you that this great segment of the American people, nearly one-fourth of the total, is helpless and powerless as we demand that which rightfully belongs to us. Do not let any mealy-mouthed traitor, whatever may be his motive, tell you that we must meekly accept this brazen usurpation of power as a legal exercise of its powers by the judicial department.

We are supporting a position which is sound and correct. We are supporting a position acknowledged by one and all to be sound and correct throughout the 178 years of our country's existence from 1776 to 1954—namely that the control and operation of schools belongs to the States and not to the Federal Government. Our position on local self government has been supported by decisions of all the courts during that entire period. It has been supported by the statesmen of all the periods of our history, by Lincoln, Washington, Jefferson, their predecessors and their successors.

Franklin D. Roosevelt recognized the soundness of segregation when he, in 1928, provided in a deed to land at Warm Springs, Ga., that the land conveyed should not be sold, rented, or disposed of to any Negro or other persons of African decent, or to a corporation owned or controlled by Negroes. After he became President he executed a deed containing the same provision.

The right to be segregated goes back for thousands of years before our Government was established. That right was never challenged until this present Supreme Court decided to make new law on the subject. Yet the Court is not a law-making body. Congress alone has the right to legislate and introduce new matter into the body of our law. Congress, in the proper exercise of its function, has time and time again refused to make new law on this subject. There is no question about the fact that Congress alone can change the law and that the Court cannot.

The 100 Members of Congress in the House and Senate who signed the Washington manifesto have united in this declaration which challenges the right of the Court to change our Constitution. We are unified in this matter, and are standing solidly together. If you people at home will organize and do likewise, together we will defeat this attempted usurpation of power—this attempted judicial dictatorship.

But let me warn you that the strength of the resistance in Washington will depend upon the strength of your organization at home. You cannot expect to have a unified strong front in Washington unless you have a unified, strong front at home. The vigor and enthusiasm with which this fight is carried on in Washington will depend in great measure upon the vigor and enthusiasm which you show back home.

The separate States of this Union have not been operating their State governments under any hazy misconception of powers. State and Federal officials alike have known from the beginning their respective powers, their duties and their limitations, and have governed themselves accordingly. The right of self-government belongs to you and to

me under the Constitution. The 10th amendment reads:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Without this saving clause in the Constitution, it is doubtful that the States would have ratified the Constitution at all.

This is an all-inclusive, express reservation to the States and to the people of all the powers not delegated to the Federal Government by the Constitution or amendments to it.

There is nothing in the Constitution, or any amendment, which authorizes the Supreme Court to say that segregation is unconstitutional. When the Constitution was written in 1787, segregation was universally practiced. Its practice continued to be universal. The thought that the Constitution might prohibit segregation never occurred to those who wrote it or adopted it.

When the 14th amendment was adopted in 1868, segregation was universally practiced. It continued to be universally practiced. No one contended that the 14th amendment would make segregation unconstitutional. In Washington, D. C., the seat of the Federal Government, there were schools in operation, and they were segregated before, during, and after the adoption of all the amendments to the Constitution. The very Congress which voted the 14th amendment enacted legislation dealing with segregated schools in the Nation's Capital. Segregated schools continued in Washington down to the year, 1954, as the Supreme Court and courts of other jurisdictions in decision after decision declared them to be constitutional. It was only in 1954 that the Supreme Court, wholly without authority, arrogated unto itself the right to change the law of the land, which only the Congress has the power to do, and to amend the Constitution, which can only be legally be amended when the amendment is proposed by two-thirds of the Congress and ratified by three-fourths of the States.

For the nine men who sit upon the Supreme Court to usurp these powers which do not belong to them, but which belong exclusively to Congress and to States, is a monumental fraud which is shocking, outrageous, and reprehensible.

Such fraudulent conduct imposes no obligation upon the States to acquiesce, or upon the people to bow the neck to this new form of tyranny.

Let me say to you, as we counsel together, do not be concerned about what is said by the Communists, the pinkos, the radicals, the NAACP, the ADA, the one-worlders, and all that motley group of crackpots who are clamoring for desegregation and mongrelization. These groups of organized minorities are chanting a chorus that opposition to the fraudulent order of the Supreme Court is defiance of law. Of course that is not true. The decision of May 17, 1954, is not law. It is an attempt to make law where none existed before, by a non-law-making body. The defiance of law comes from the other side of this dispute. It is an arrogant defiance of law for the Supreme Court to usurp authority which it does not possess.

This claim that opposition to, and criticism of, the fraudulent Supreme Court decision is "defiance of law" is a sham. It is intended to draw attention away from the truth in this matter. That truth is that the Supreme Court is boldly and brazenly attempting to change the form of our Government.

The left-wing press, left-wing columnists and writers, the left-wing commentators on television, and radio, together with all of the left-wing organizations in the country beginning with the Communists and ending with organizations that are merely crackpot, are staging a massive campaign of super-brain-washing propaganda having a twofold purpose. These purposes are, first, to sell law-abiding American people the false idea that no one has the right to question a pronouncement of the Supreme Court, and second, that those who have any pride of race are bigoted, prejudiced, narrow-minded, racists, and hate-mongers. It is almost an understatement to say that this is a massive campaign of super-brain-washing propaganda. Radical newspapers and magazines from every section of the North and East have been sending writers, photographers and columnists to bring back slanted and derogatory tales Northern white people. Some of these are false; many are half-truths; most of them are slanted. The left-wing Washington newspaper, the Post and Times Herald sent such a writer named Jim Bishop on a tour through the South to write a series of articles supporting the Supreme Court's constitutional amendment. His venom and prejudice was so ill-concealed that he was unable to do the white people of Mississippi the courtesy of referring to them as white people. He consistently and repeatedly called them "red-necks." He did, for what reason I do know, capitalize the words "red-necks." To this left-winger the citizens councils are cruel and brutal; the National Association for the Advancement for Colored People is a splendid organization doing a fine work. To the left-wingers who write the slush for Look magazine, organized efforts to lawfully resist a wrongful Court decision make a pattern of defiance and bring a prediction that the back of the rebellion will be broken. Look magazine's writer of slanted material named Joe Morschauser who went to Albany, Ga. to sympathize with a Negro soldier named Joe Foster, was dumbfounded and couldn't believe his ears when Joe Foster told him he liked Albany. Morschauser, in total disregard of truth, theatrically describes the enterprising city of Albany, which would be a credit to any section of the United States as "a pretty little town cut in half by fear, ignorance, and the remains of a dead civilization." Joe Foster, Negro, said "It's my hometown, and I'm proud of it."

Morschauser expressed surprise that Joe Foster, having lived on terms of forced equality with white people in the Army, could be so dumb as to go back to segregated Albany, Ga., and enjoy living with Negroes. Undoubtedly, Morschauser in his ignorance of human relations in the South was amazed. After reading Morschauser's article, I am convinced that Joe Foster has more sense than Morschauser. And incidentally, racial integration in the Armed Forces is forced; it is not voluntary.

A lot of this slanted drivel and doctored propaganda which is being poured out upon us now has about as much sense to it as Gertrude Stein's famous masterpiece: "A rose is a rose is a rose is a rose."

A stock contention of the integrationists and mongrelizers is that a Court decision is the last word in the law, and must be accepted; that the Court's function is to expound the law.

As long as the Court sticks to the law its decisions will be accepted. When it flies in the face of the law, as the Court has done in this instance, it commits a wrong and perpetuates a fraud upon the people. It commits as grievous a wrong as a tax collector commits when he demands more than just taxes from a taxpayer. It commits a wrong as grievous as a warden of a penitentiary commits who would seek to imprison a convict beyond the limits of his legal term. It commits as grievous a wrong as any other public official who seeks to assert and use authority which he does not possess or to exceed the authority which he does possess. No right-thinking citizen can acquiesce in brazen usurpation of authority by any public official.

Free Americans are under no obligation whatever to permit any public official to take from them that which is theirs merely because that public official occupies a seat of authority, and attempts either through ignorance or malfeasance to go beyond the bounds of that authority.

We owe allegiance to the Constitution of the United States. That instrument is the bedrock upon which our structure of government is built. It is our guaranty of liberty. But the allegiance we owe is to the Constitution which was drafted by the Constitutional Convention, and ratified by the sovereign States and to such amendments thereto as have been legally proposed by two-thirds of the Congress and ratified by three-fourths of the States.

There are some who say that the Constitution means what the judges say it means. But that is not true. The Constitution itself proclaims its meaning. No court or judge possesses any authority to change the language or meaning of any phrase or word of the Constitution in the slightest degree. It is only when the wording of the Constitution is ambibuous or needs interpretation that the judicial department of the Government has authority to go into the question of what it means. And the judicial department never has had, and never will have, authority to add anything new or take anything old from the instrument. That can only be done by amendment.

So the Constitution is not, as some would have us believe, "what the judges say it is." It has no such unstable or uncertain meaning. The Constitution, and all of its amendments, is the compact of the sovereign States who consented to its operation. It is the document under which we live—which we understand, and which the courts have understood for years and generations. Its meaning has been proclaimed again and again. It is the document which every public official is sworn to uphold, and to which the loyalty of every public official is due. And let us never lose sight of this fact—that our loyalty is to the Constitution itself—not to a perverted opinion of nine men who happen for the moment to be occupying seats in the Supreme Court, and who seek because of that fact to change the true meaning, the established and accepted meaning, of our Constitution. That authority does not belong to these nine men. It belongs to two-thirds of the membership of Congress and to three-fourths of the States, joining in concurrent action.

The members of the Supreme Court have also sworn to uphold the Constitution. They owe the same loyalty to the Constitution that every other citizen does. The Constitution does not mean one thing yesterday, another thing today and something else tomorrow, and they have no right to so hold.

If the logic or reasoning employed by the Supreme Court in order to reach this decision is allowed to become standard practice; if the Constitution means one thing today and something entirely different tomorrow, then actually we have no Constitution at all.

And when anyone, whether he be President, legislator, or judge, deals with the Constitution unlawfully, it is the part of patriotism, and in keeping with loyalty to the Constitution, to protest and oppose such unwarranted action. The preservation of our Government depends upon it. Our Government cannot survive in any different climate.

George Washington, the greatest American of all time, in his wisdom and experience, anticipated that the time would come when the judicial department of the Government would chafe at its restrictions, and would become ambitious to exceed its authority.

In his Farewell Address on September 17, 1796, he warned us to be on guard against attempts to wrongfully change the Constitution by usurpation of authority. In that Farewell Address he said:

"It is important likewise, that the habits of thinking in a free country should inspire caution in those entrusted with its administration, to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism. * * *

"The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the guardian of the public weal against invasion of the others, has been evinced by experiments ancient and modern; some of them in our country and under our own eyes. To preserve them must be as necessary as to institute them. If, in the opinion of the people, the distribution or modification of the constitutional powers be, in any particular wrong, let it be corrected by an amendment, in the way which the Constitution designates. But let there be no change by unsurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil and partial or transient benefit which the use can at any time yield."

The advice and counsel of George Washington is as sound today as it was then. The time has come when the encroachment which Washington feared is being attempted.

The Supreme Court and the NAACP have created strife and turmoil where no strife and turmoil existed before. Their joint action has increased tension between the races, and has caused hatred and hostility where before there was good will and harmony. This strife is chargeable to, and responsibility for it, must rest with the Court and the radical NAACP, which has been encouraged by the Court's action to stir up hostility between the races.

A good example of the destruction of good relations between the races is the irresponsible talk of a Negro NAACP official quoted in the Memphis, Tenn., Commercial Appeal of January 30, 1956. A Negro attorney, said to be a leader in the Memphis chapter of the NAACP is quoted as having said at a meeting of that radical organization, "rock more boats and create more storms in the fight for equal citizenship. * * * If it's necessary for us to stir up more tension and more unrest to win our fight, I'm willing to do it."

I have been talking to you about the Constitution and the legal phase of this question. I want to say something now about the human side, and the moral justification we have for insisting upon segregation. The average southern white person does not intentionally say things to hurt the feelings of Negroes. White people do not ordinarily talk of the differences between the races. But this is a time to bring out the facts.

Much false propaganda has been spread within recent years, and much effort has been made to brainwash the public with the utterly false doctrine that there is no difference between whites and blacks. It is time to look behind this brainwashing propaganda, and have a straight look at the facts.

There are obvious and well-known differences between whites and blacks which no amount of glossing over and covering up by subversive so-called "anthropologists" and pseudo scientists can hide.

Let's have a look at some facts from the record which have a direct bearing upon the question of desirability or undesirability of integrated schools, aside from the legal aspect of the problem.

Among the many other reasons why the white people object to their children having this close association with Negro children are health, the Negroes' high crime rate and disrespect for law, the lower mentality level, and the high rate of illegitimacy among Negroes.

It is well-known that the crime rate among Negroes far exceeds that of whites. In Washington D. C. Negroes have every advantage they could ask for. The schools and colleges are open to them; also hotels, restaurants, theaters, parks, swimming pools, tennis courts. They buy property and live in any section they choose. The President and his appointed city commissioners apparently want to make a second Harlem out of Washington, and they boast that Washington is a model example of a nonsegregated city.

But Washington is noted for the great number of serious crimes committed in its limits. Its crimes of violence are more than twice the number of those committed in Boston, a city of comparable size, more than twice those of Milwaukee, and nearly twice as many as New Orleans, La.

Negroes are responsible for this high crime rate. Crime statistics show that throughout the years the Negroes in Washington have committed the bulk of the crimes of violence, although they have constituted about one-third of the population. In 1955 out of 11,072 crimes of violence, or part I offenses, 9,056 were by Negroes. This is 82 percent of the total, and the precentage for the last 3 months of 1955 was 88 percent of the total.

Let's look at the District of Columbia health records. A report for the year 1955 made by the District of Columbia Department of Public Health of venereal diseases, in children of school age and under, showed 834 Negro children 17 years and under treated for gonorrhea, as compared with 20 white children. Of the 834 Negro children, 10 were under 6 years of age. The total cases of gonorrhea of all ages, children and adults, for 1955 were Negro 10,243, or 97.5 percent of the total; white 271, or 2.5 percent.

These are repulsive statistics, but they show some of the impelling reasons for segregated schools, and what a tragedy it is for white children to have integration forced upon them.

From the standpoint of mentality, the Negroes have not been able to keep pace with the white children of the District of Columbia. This has resulted in lowering of educational standards.

Achievement tests were recently conducted in the Washington public schools, and revealed that this forced integration has downgraded scholastic standards below the national average.

The retarded learning ability of Negro pupils in a given class is holding the entire class back. White children are being denied the education they are capable of receiving.

One of the loud claims of the promixers has been that integrated schools would reduce costs of operation. They claimed the taxpayers would benefit from the combined schools. Experience shows exactly the opposite to be true They claimed there would be no friction, and that pupils would learn as well as in segregated schools.

In Washington experience has proven that nonsegregated schools cost more to operate; that the Negro children cannot meet the educational schedule or keep pace with the white children, and that friction exists to a greater degree than ever before.

Conditions have reached such a deplorable state in Washington that the superintendent of schools has recently requested an additional 229 "special teachers" for next year. The mentally slow learners—predominately Negroes—would fall within the province of these "special teachers." This would cause an extra burden on the taxpayers, most of whom are white.

The Washington integrated school system is asking for next year $33,740,000, plus $9,178,900 capital outlay, as against $28,130,000, plus $4,473,300 capital outlay, the appropriation for this year. This ten and a half million dollar requested increase knocks the props out from under the integrationists economy argument.

School Superintendent Hobart Corning has repeatedly denied that integration has forced scholastic standards down. But the records tell a different story. Integration has produced lower standards and poorer instruction for the white children.

And it becomes more and more evident that the integration experiment in Washington public schools is a dismal failure, its proponents, looking for something to excuse the failure, come up with the claim that segregated schools in the past have deprived Negro children of an equal opportunity. This claim will not hold water. This is the second year of nonsegregated schools in Washington.

For years Negro teachers and white teachers have been paid according to the same salary schedule. The same rules have applied to both systems. The failure of Negro children to learn under these conditions proves one of two things; either Negro teachers cannot teach as well as white teachers, or Negro children cannot learn as well as white children. No place in America offered a better opportunity than Washington, D. C., to determine whether white and Negro children could be taught successfully in the same classes.

Repeated warnings were made that Negro children could not meet the competition. The Negroes loudly denied this and claimed that Negro children only needed a chance. The white social-equality do-gooders and radicals supported them in this claim.

They were mixed in all the schools in Washington in September 1954. To such lengths was the integration craze carried out that a Negro woman was made Superintendent of the elementary schools and a white woman was made her assistant.

Thadeus Stevens in the darkest days of reconstruction never exhibited a more cruel and vengeful spirit than those now in charge of integration in the Washington public school system. They do not intend to have one school all white or one school all colored. They have therefore placed one white girl pupil with 711 Negroes in Carver school, one white boy with 326 Negroes in Langston school, one white boy with 815 Negroes in Grimke School, one white boy with 712 Negroes in Burville school. To carry out this infamous plan of mixing the races in all schools, this is the pupil arrangement in 23 other Washington schools:

HIGH SCHOOLS

Cardozo: 4 white boys, 2 white girls, 1,698 Negroes.

Dunbar: 1 white boy, 964 Negroes.

Spingarn: 1 white boy, 1,592 Negroes.

JUNIOR HIGH SCHOOLS

Randall: 2 white boys, 3 white girls, 771 Negroes.

Elliott: 1 white boy, 84 Negroes.

Langley: 1 white boy, 33 Negroes.

ELEMENTARY SCHOOLS

Bell: 3 white boys, 2 white girls, 378 Negroes.

Birney: 2 white boys, 3 white girls, 990 Negroes.

Blow: 2 white boys, 3 white girls, 337 Negroes.

Bruce: 6 white boys, 3 white girls, 614 Negroes.

Cleveland: 1 white boy, 1 white girl, 535 Negroes.

Cook: 1 white girl; 657 Negroes.

Garfield: 1 white boy, 489 Negroes.
Harrison: 9 white boys, 1 white girl, 714 Negroes.
Hayes: 2 white boys, 1 white girl, 290 Negroes.
Kenilworth: 1 white boy, 235 Negroes.
Ludlow: 3 white boys, 2 white girls, 237 Negroes.
Monroe: 1 white boy, 2 white girls, 503 Negroes.
Morgan: 1 white boy, 1 white girl, 691 Negroes.
Mott: 2 white boys, 1 white girl, 956 Negroes.
Parkview: 2 white boys, 3 white girls, 1,001 Negroes.
Perry: 2 white boys, 2 white girls, 346 Negroes.
Taylor: 3 white boys, 293 Negroes.

May Almighty God pity the poor white children who are being made the guinea pigs for this rotten experiment. I do not think Hades has a spot hot enough for those responsible for this outrageous treatment.

The integration bug bit the Baltimore officials and they abolished segregated schools about the same time Washington did. But the authorities in Baltimore at least had some consideration for the wishes of the people and permitted the children both colored and white to attend the schools of their choice. Under that plan, only 1,576 colored pupils entered formerly all white schools, while 55,488 colored entered or remained in colored schools. Sixty-one schools remained all white and 80 schools remained all colored. Forty-eight schools, formerly all white, received some colored pupils, but in most instances the number of colored was very small. The proportion of colored pupils went above 10 percent in only five schools, all of them on the elementary level. In the high schools, the largest number of Negroes in predominately white high schools was at Southern High School, which had 39 Negroes in a student body of 1,788. These figures are given in the official reports dated July 1955.

As a result of the bull-headed policy followed in Washington, the Washington public schools are now in a state of complete chaos.

Now after nearly 2 years, the governing authorities are realizing that Negroes and whites cannot be educated in the same classes on the same basis, with the same results.

Because of the confusion in Washingtons' public schools on March 10, General Thomas A. Lane, one of Washington's three city commissioners, issued a statement proposing a mass demotion next September of Washington school children who are showing "educational lags." He suggested testing all the city's 106,000 public school pupils, and reassigning them next September according to the achievement level shown by each child's tests.

Regarding the proposal to hire more teachers Commissioner Lane said that would be "only applying a poultice to a cancerous condition." He said drastic action is required by the achievement problems.

He also said that "it appears that our problem has reached unmanageable proportions," and that to hire more teachers would be "lulling our parents into an illusion that bringing in more teachers would cure our ills, when, in fact, it is not even addressed to the heart of the problem."

Apologists for the Negroes will claim that this achievement lag is the result of a segregated system in past years. But again that claim will not hold water. The lag is the result of Negro mentality.

This is substantiated by the report of the selective service system regarding soldiers drafted in World War II. The report showed that of the draftees inducted during World War II the number of Negroes rejected for educational and mental reasons ran in a smaller proportion in Georgia, where segregated schools were operated, than in New Jersey and New York City where nonsegregated schools were operated. In Georgia Negro rejections on these grounds, educational and mental, ran about 2½ to 1 over white draftees; in New Jersey about 4 to 1, and in New York City about 3 to 1. This disproves the absurd claim that Negroes learn better in nonsegregated schools.

Veneral disease showed up again unfavorably for Negroes in the selective service records. Rejections on this ground for Negroes were about 8 to 1 over whites in New York City, 4 to 1 in New Jersey and 7 to 1 in Georgia.

So far as illegitimate children are concerned, the regard which Negroes have for the sacred bonds of matrimony is indicated by the fact that of 11,905 nonwhite births in Washington 3,128, or 26 percent were illegitimate, as compared with 617 of 20,441 or 3 percent of white births. Official reports show that the relative percentage runs pretty much the same in Georgia.

These are some of the many valid reasons why white people are justified in the position taken regarding segregation.

I have given you these facts about the situation in Washington because in the wake of the Supreme Court decision to integrate schools, the President declared that Washington would be an example of how good integration would be. The present sickening conditions of the Washington schools are mute testimony to this example.

In spite of every effort to deny it—and in spite of the censorship and suppression of the facts surrounding the Washington school situation—the truth is that integration has been a complete failure.

Not only have mixed schools been a scholastic failure but as an experiment in human relations it has been a nightmare.

Last December, principals in high schools and junior high schools found it necessary to hold "shake-down" inspections of their students, in compliance with numerous complaints that students were carrying knives.

Two cases of attempted assault by Negro boys on white girls were reported in 1 day at 1 junior high school. These cases involved language and actions so vile and so sordid that it staggers the imagination.

We cannot afford to subject our children to such a malignant experiment. The same integrationists and mongrelizers have stated that they only want equal rights and opportunities for the Negro. Yet the radical NAACP, has repeatedly declared that their ultimate goal is intermarriage and complete mongeralization of the American people. The fact that this is also the identical aim of the Communist Party of the United States is more than just coincidental. If they are successful in cramming this school decision down our throats, they will follow it with a decision invalidating our marriage laws, and that will be the end.

With full knowledge of the irreconcilable harm they are doing to the people of Washington, and are trying to do to the rest of the country, the Executive Department and the Supreme Court persist in their efforts to integrate the races in our schools here in the South.

They continue to pander to and knuckle under to radical left-wing organizations like the NAACP, completely disregarding the majority of the people in this country who are white.

In a step-by-step process the Supreme Court in collusion with the Executive Department has bypassed the Legislative Department and distorted the Constitution to mean what it was never intended to mean.

Through a series of Executive orders and so-called judicial decrees they have denied the people the voice in the Government through their elected representatives, which the Constitution provides. These orders and decisions are part of a pattern.

In two Supreme Court cases in the early 1940's (*U. S.* v. *Classic*, 1941; *Smith* v. *Allwright*, 1944) the Court struck down white primaries. Suddenly private political associations were classified as agents of the State. No longer could men of common political belief band together as a political party and set the rules for its own membership. The Supreme Court had decided that only the Court could determine the rules.

Throughout this Nation, for generations, property owners have protected themselves and the value of their property by restrictive clauses in their deeds prohibiting the sale to Negroes of the real estate conveyed in the deed. In 1948 (*Hurd* v. *Hodge*) the Supreme Court struck down these protective clauses and jeopardized the value of every man's property.

In 1951 the Supreme Court, having been fully packed with New Deal politicians, handed down the absurd decision that associations were an integral part of education, and consequently Negroes were being discriminated against when not allowed to associate with white people in the professional schools. Every one should ponder the philosophy of that decision for one moment. On the one hand Negroes zealously demanded full social equality, and on the other hand maintained that association with their own people is degrading and discriminatory. This was the case of McKissick against Carmichael and it opened the door for the University of North Carolina to be invaded by Negroes.

When the United States Supreme Court rendered its opinion in the school segregation case of May 17, 1954, it departed from 86 years of judicial precedent. It absolved itself of any affiliation with legal authority, and chose instead to quote so-called modern scietific authorities as the basis on which to render its opinion. One of these so-called modern scientific authorities quoted by the Supreme Court was a book by a Swedish socialogist named Gunnar Mydral entitled "An American Dilemma." This is the book in which Mydral stated, and I quote, "the Constitution of the United States was impractical and unsuited to modern conditions" and its adoption was "nearly a plot against the common people."

Sixteen of the contributors to this book have lengthy records of pro-Communist activity in the files of the un-American Activities Committee. One of the chief contributors to this book, one W. E. B. DuBois, a Negro educator, has 72 such citations against his name in the files of the House Committee on Un-American Activities.

In Virginia the law prohibits interracial marriages which is the case in 28 of the States of this Union. The Virginia Supreme Court pursuant to that law, declared invalid a marriage between a Chinese seaman and a white woman, and annulled the marriage. The Chinaman appealed the case to the Supreme Court, and asked that Virginia's marriage laws be declared in violation of the 14th amendment.

I do not think the Federal Supreme Court would hesitate to strike down the marriage laws of Virginia and 27 other States if these experts in sociology felt that public opinion would accept such a shocking decision. They know that public opinion would not accept it, and they want to kick the case back and forth for a while between Washington and Richmond to give the Communist Daily Worker, the NAACP and other integrationists and mongrelizers some time in which to condition the public mind for a "judicial decision" striking down the last legal barrier which stands in the part of mongrelization. The Supreme Court entered an order vacating the judgment, and sending the case back to the State court, for further action, saying that it wanted additional evidence as to whether Virginia's courts had jurisdiction in the case.

In a bold and courageous stand, the Virginia Supreme Court on January 18, of this year notified the Federal Supreme Court that it refused to take further action on the case, and wound that case up. But another will come along.

The Federal Supreme Court with both ears attuned to the political drum beating of the NAACP and other radical left-wing organizations has engaged in a program of deliberate usurpation of legislation functions. This usurpation in effect is designed to dissolve the separate States and foster an all-powerful central Government under the joint-exclusive dictatorship of the Supreme Court and the executive department. It would destroy our State governments. It would destroy our county governments, city governments and school district governments. These local officials would become powerless puppets, and all our directions and instructions would come from bureaucrats in Washington.

The actions of these two agencies of the Federal Government constitute not only a threat to the laws and traditions of the South but also to the foundations of our republican form of Government, and to State and local government in all sections of the country.

The time to end this judicial usurpation is now. The time to restore the Constitution to the people is now.

Otherwise, no longer will our sacred rights and institutions and our honored way of life be protected according to commonsense, custom, and tradition. If our children are to have the same freedom we inherited from our fathers, then now is the time for every man to stand up and be counted. Now is the time for aggressive organization; organization that is wise, and unalterably determined to preserve our States rights, our individual freedom, and our personal liberty.

The only way our leadership can effectively voice our determination to resist is through organization. We must organize into one strong, unified, and determined group.

We must organize on the county level, on the Statae level, and on the National level.

We must prepare to carry our message to every section of the country. It is imperative that we mobilize our strength and take the offensive.

The fight we wage must at all times be legal and honorable. There is no place for violence or lawless acts. They will do irreparable harm to our cause and turn public opinion against us.

I have given you tonight, in brief, a picture of the deplorable situation in Washington. I have seen there the tragic results which come from the breakdown of segregation and substitution of an integrated public-school system.

This same thing can happen, and will happen here, if the people meekly accept wrongful usurpation of power, and a Supreme Court dictatorship, as they did in Washington.

It need not happen, and it will not happen, if we as free, liberty-loving Americans band together to retain our constitutional rights.

By organization at home you can give inspiration to your public officials who must lead in this fight—to your Governor, legislators, public-school officials, all those who must lead in this fight here at home, and to your Senators and Representatives in Washington. They have all signified their determination to fight this battle to a successful conclusion. But you have a most important part to play. It is your individual struggle, and your neighor's individual struggle. Let me urge you to accept your responsibility, and to do your part. Urge you neighbor to do his part. This is a time when it is true as never before, that "united we stand, divided we fall." This is a fight which can be won, and I pray that it is the will of Almighty God that it will be won. But it will not be won by default.

Plato said many years ago:

"All that is necessary for the triumph of evil is that good men do nothing."

Let us not lose sight of this truth in these critical times. Let us remember that the fight is ahead of us—not behind us.

Education: Businessmen's Business

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. KEATING. Mr. Speaker, all informed citizens today realize that there is a crisis at hand in American education. Shortages of teachers, shortages of classrooms and problems connected with the onset of the atomic age beset our Nation's educators on all sides.

To help meet this crisis President Eisenhower envisioned the idea of a White House Conference on Education. It was held last November 28 to December 1 and produced numerous substantial achievements.

So great was the success of this conference that a conference on higher education is being planned for the future. It is to be hoped that such a conference will produce similar positive results.

Neil McElroy, president of Procter & Gamble, was chairman of the White House Conference on Education. It was in large measure due to his leadership that the meetings were such a success. In the April 1956 issue of Dun's Review and Modern Industry he has written a most illuminating report of the background and conclusions of the conference. He then goes on to suggest how business can play its part in following up on these conclusions.

It is only through the work of civic-minded and far-sighted leaders such as Mr. McElroy that we will be able to utilize the White House Conference as it was intended; that is, as a springboard for solution of our school problems. The task now is to stimulate as many of our citizens as possible to take action on the local level. Mr. McElroy's article clearly indicates the path business and industry can follow.

No discussion of the White House Conference would be complete without mention of Marion B. Folsom. The Secretary of Health, Education, and Welfare brought to his office a long record of distinguished service and he has performed the duties of his new office with great distinction. Secretary Folsom worked hand in hand with President Eisenhower on the White House Conference and was the guiding genius in its progress. He is also largely responsible for the impetus given the movement for a White House conference on higher education.

It is to be hoped that the business segment of our economy, as well as large portions of the rest of our population will take up the torch lit by Secretary Folsom and his associates and go to work to improve the status of America's schools. I commend Mr. McElroy's most rewarding article to the attention of all Members:

EDUCATION: BUSINESSMEN'S BUSINESS

(By Neil McElroy, president, Procter & Gamble Co.)

(The chairman of the recent White House Conference on Education reports to business on the accomplishments so far in meeting the crisis in the schools. Here is what some companies are doing now to help themselves by helping the schools, and what still remains to be done.)

To a greater degree than ever before, business men today are turning their attention to the problem of education and seeking ways to find much-needed solutions.

Company after company is recognizing the pressing financial needs of our institutions of higher learning and working out plans to provide scholarships, fellowships, grants, or contributions in other forms. Since colleges form an important source of executive material, and since the recruiting of young graduates brings the businessman into frequent contact with colleges and universities, it is not surprising that business is increasingly recognizing the fact that these institutions need help, and finding ways of coming to their assistance financially. This interest and support is needed and commendable.

When we turn to our elementary and secondary schools, however, the businessman is not so apt to be aware of the problems and needs. Our schools seem to keep running; children go to them and are not turned away; education is always there available to all. Until recently, few business men have realized how much their interest and attention are needed if we are to have in this country the kind of schools we want to have and must have for our children.

It is easy to recognize the need for the educated men turned out by our colleges and the trained scientists graduated from our technical schools and to forget that higher education must rest on a solid basis of elementary and secondary education. The shortage of chemists, physicists, and engineers cannot be solved by our technical schools alone; it is in the secondary schools that the young mind must be stimulated and guided, and the rudimentary courses in mathematics and science taught.

But the businessman's stake in education goes much deeper and further. If we are going to ask the individual citizen up and down the street to make decisions on national policy or to select wisely leaders who will do so, we must provide all the people—not just some of them—with the means of acquiring knowledge and of understanding it. Our citizens must be able to understand the words they see and hear, and thus select the sound from the unsound. They must, in other words, be educated.

The case can be stated in terms of economics as well. It has been demonstrated that a worker's earning power matches his education almost directly. Census Bureau figures show that men with high school or college educations earn 80 percent of the incomes over $7,000—and men with only an eighth-grade education or less earn 77 percent of the incomes under $5,000. Men capable of filling the higher paid jobs, skilled labor to operate our highly industrialized economy—these men must come from the ranks of those who have had the basic education provided by good schools.

Despite the fact that the need for an educated citizenry has been an important part of our country's thinking from the very start, we as a people have allowed our schools to

become inadequate. A decade of depression followed by years of war saw the physical plant deteriorate without adequate replacements. Hundreds of thousands of teachers, siphoned off for service during the war, did not return to the classroom. After the war high wages in business and industry attracted thousands of young people who in ordinary times would have entered teaching. Rising costs in the postwar years put the squeeze on school districts where revenues seldom come close to keeping pace. And while the postwar baby crop added immeasurably to the strength and prosperity of our country, it flooded our ill-prepared classrooms.

The picture was not, of course, one of unrelieved gloom. The educational profession itself strove mightily to meet the challenge. Many civic and educational organizations like the PTA rose to the occasion with vigor. And the National Citizens' Commission for the Public Schools was chartered in 1949 for the express purpose of arousing the American public to support its schools.

In spite of the magnificent efforts of many individuals and organizations, however, not much of a dent had been made by 1953 on the enormous job to be done. The Nation was faced with an educational crisis of truly epic proportions.

To help meet this crisis in the schools President Eisenhower launched the idea of a White House Conference on Education. In his state of the Union message to Congress in January 1954, he issued the appeal for a national stocktaking of our schools:

"I hope * * * a conference on education will be held in each State, culminating in a national conference. From these conferences on education, every level of Government—from the Federal Government to each local school board—should gain the information with which to attack these serious problems."

Nearly 2 years later, from November 28 to December 1, 1955, the national conference envisioned by the President was held. Every State and Territory had already held its own conferences and had reported its conclusions to the White House Conference Committee. In addition, thousands of local communities, county school districts, and even attendance areas within school districts had held their own little White House conferences to analyze their local school problems.

These community and State conferences followed diverse patterns. Many of them were organized in small round-table discussion groups like the White House Conference itself; others followed the pattern of the town meeting. Nearly all of them sought a democratic exchange of views on the part of the participants.

The White House Conference in Washington brought together nearly 2,000 delegates from every State and Territory to sit down at round tables of 11 citizens each to seek solutions to the problems of the Nation's schools. After electing its own chairman, each table spent 1 half-day session on each of the 6 major problem areas: the goals of education, the organization of the schools, school-building needs, the teacher shortage, financing the schools, and obtaining a continuing public interest in education.

Discussion at the conference was limited to the problems of education at the elementary tnd secondary levels. The decision of the White House Conference Committee on this matter was taken not because higher education does not face major problems but because time was a limiting factor and because the problems of the public schools are so immediate and pressing. The population wave that will hit the colleges in 10 or 12 years is inundating our elementary schools right now. One conference could no consider all the major issues even of elementary and secondary education which affect most Americans directly. We may hope that other similar conferences will take up the problems of higher education in the near future.

The report of the White House Conference Committee is not yet written and the results of the Conference itself won't be clear for many months, but some conclusions are justified.

WHOSE RESPONSIBILITY?

At the simplest level, the conference provided a means for publicizing the schools—for making their problems more widely known than ever before. More importantly, perhaps, it dramatized effectively once more the responsibility of every local citizen for his own community's schools and their affairs.

Another striking result was the proof it afforded that a cross-section of America could sit down at the conference table and hammer out agreements in the heat of debate. Citizens from every part of the country, representing every educational philosophy and every political stripe, with backgrounds and personalities as diverse as the Nation itself, met, argued, and compromised their differences—not their principles—in true democratic fashion.

Finally, it introduced many hundreds of people to an effective means for tackling school problems—the round-table discussion meeting. This is not a new technique—the National Citizens' Commission for the Public Schools, for instance, has used it for years in local, State, and regional workshops, and many educational organizations have used variations of it—but it was new to many people. As Educational Trend reported:

"Many observers believe that the process of the Conference, that is, the way it operated, was as great a contribution to education as the Conference findings. For, it demonstrated that it is possible to gather together a large group of laymen and educators, and to channel their diversified approaches to the problems of education into some common agreements." And Education Summary predicted that "education's conferences—small and large—will henceforth reflect the highly successful procedures used in this Washington Conference."

Not everyone, of course, was equally happy about the results of the White House Conference. Any procedure designed to permit 2,000 persons to exchange views and reach agreements on a set of complicated questions is bound to fall short of complete satisfaction. But when the Conference was over, hundreds of people—including many who originally doubted that a Conference of 2,000 people could be organized into small discussion groups successfully—were inspired to attack their local school problems with renewed vigor.

The White House Conference was a springboard—but many thousands more citizens must take the leap into school affairs before it can really pay off. School issues aren't solved at the national level.

This is the job that remains: to stimulate citizens in every community to come together, talk over their schools' problems, and agree on workable solutions.

Executives of business and industry have a double responsibility to promote the welfare of the schools. Like other citizens they should support public education as individuals. As caretakers of American enterprise both enlightened self-interest and a sense of civic responsibility should lead management into school affairs. Either as individuals or as business executives there are few opportunities for the investment of time or money that will pay such big dividends in public welfare and private satisfaction.

But the phrase "support your schools" is often misunderstood. It does not necessarily mean the contribution of funds—although it may—nor does it mean uncritical acceptance of the schools as they are. It does mean a constructive attitude toward public education which finds expression in positive action.

As individuals you can contribute nothing more valuable than your time, intelligence, and experience. Get acquainted with your local school district and find out what problems your school board is wrestling with. If your community has a citizens' committee, find out what it's doing and what you can do to help. Become familiar with the program of your State citizens' committee and see where your talents and experience can help out. The hardest thing to give is yourself. But it is also the most valuable—and it offers the biggest potential returns.

As for a critical attitude toward the schools, all democratic institutions need constant reevaluation to keep them dynamic, flexible, and healthy. The schools are no exception. In fact, because of the special positions they occupy in our society it is possible that they need more criticism than most. But is must be informed and constructive. The taxpayer who opposes every attempt to improve his local schools, and then complains bitterly because they are not more effective, does not contribute to good education.

As representatives of business and industry you can find other effective means for working toward the same end. The National Planning Association has published a guide called The Manual of Corporate Giving which includes a chapter on the public schools. Here you will find suggestions ranging from cooperation with the United States Chamber of Commerce's Business-Industry Education days to financing the most esoteric educational research. But much of the most effective cooperation you can offer is simpler and begins closer to home.

The important thing is the determination of business management to do something. An outstanding example in this direction was set by Standard Oil of New Jersey when its board of directors in 1954 adopted a resolution clearly giving encouragement to its employees to participate in school activities. The resolution started with the statement, "The importance of our public school system to the growth, prosperity, peace, and security of our country can scarcely be overestimated at any time. * * * American business enterprise is aware of its own great debt to the public school system of this country, because it is essential to its own survival and growth." The resolution then went on as follows:

"The right and duty of the individual to support our public school system is clear. One such duty is, of course, that of paying taxes. But it seems to us clear that the obligation of each of us as an individual runs beyond mere payment of taxes.

"Over the years many Jersey Standard employees have participated actively in their local school programs. The company would like to see more of its people take an active interest in the problems and opportunities facing the public schools in their own communities. Obviously, the conditions affecting the individual's ability to participate in school activities will vary, but our company encourages its employees as good American citizens to undertake this important work."

General Electric also has for a number of years encouraged its employees to participate in local school affairs. As a result the company lists on its rolls many school-board members, PTA members, and active workers in local and State citizens' committees.

As a minor example of how a company can help, several years ago the citizens' school committee in Cincinnati held a workshop to mobilize citizen interest in the area. A Cincinnati company supplied needed secretarial help during the course of the meeting after it learned that even so small a contribution to school affairs would be welcome.

Some executives may hesitate to make certain types of corporate contributions toward better schools. However, there is one area of financial support (aside from those listed in the Manual of Corporate Giving, mentioned above) about which there can be no question—the support of citizen organizations working for the improvement of the schools. I mentioned above the need for a followup on the White House conference in order to realize the full benefits it could offer.

Many local and State citizens' committees are planning just such followup conferences during the next year. Virtually all of these committees are hampered by lack of funds. They offer an opportunity to make a small investment pay large dividends in public welfare and private good will. Some of these committees are temporary—set up to plan and hold one or more conferences. Others are permanent committees carrying on broad programs for school betterment over a period of years and they merit your continuing support.

The New York State Citizens' Committee for the Public Schools is an example of such an organization. It is more fortunate than most because it has secured a fund-raising committee of leaders in business and industry from all over the State. Unfortunately, the New York committee is almost unique in this respect, but its experience suggests that management can help greatly by contributing both funds and the technical know-how on fund raising.

Some of the committees planning conferences in the next few months—and years—will doubtless receive some financial aid from State or local governments. Most of them probably will not. Virtually all will need some help.

If business and industry get behind this program of citizen conferences and the subsequent plans for local and State school improvement there is no doubt that America's educational crisis will be met. In the process, President Eisenhower's hope for the White House Conference will be fully justified. But most important, the Nation's schools will be better able to cope with the tremendous responsibilities our society places on them. And, incidentally, business and industry will receive dividends in terms of better employees and a population with a steadily increasing capacity to consume the output of American productivity.

Some Things That Ike Hasn't Done

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. BOW. Mr. Speaker, the Cleveland Plain Dealer has combined brevity and wit in its recent editorial entitled "Some Things That Ike Hasn't Done." I include it in the RECORD for the edification and enlightenment of my colleagues:

SOME THINGS THAT IKE HASN'T DONE

Now we have heard everything, or almost everything. President Eisenhower is a "do-nothing President" and the authority for this is none other than former President Truman.

Alas, poor Ike, for Mr. Truman may have something there. It is true, and we are compelled to admit it, that there are some things Mr. Eisenhower hasn't done. For instance:

President Eisenhower did not get us into a war and then decline to win it.

He did not appoint a Secretary of State who waited for the dust to settle in China, or anywhere else. (To tell the truth, Ike's Secretary of State is on the move so much the dust never gets a chance to settle.)

Mr. Eisenhower did not promise a labor leader that he would not invoke the Taft-Hartley Act in case of a strike which imperiled the national security. To be sure, he has not had any occasion to invoke that act, but his antitrust division has been even tougher on business monopolies than preceding administrations.

Mr. Eisenhower did not illegally size the steel industry.

He did not say that the Alger Hiss case was a red herring, or that House Un-American Activities Committee should be abolished.

He did not say it was "asinine" when men in his administration were accused of improprieties. Instead he got rid of them.

And the President did not rob the people of their savings, or depreciate the value of their insurance policies, bonds and pensions by espousing fiscal policies which accelerated inflation.

No, Mr. Eisenhower has done none of these things, so he must be a "do-nothing" President. And Mr. Truman did all of them, so he must be quite a guy.

Cross-Florida Barge Canal Seen as Needed Defense Measure as General Spaatz Says Red Submarines Are Rising Peril

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BENNETT of Florida. Mr. Speaker, I call the attention of the House to a report in the Evening Star, Washington, D. C., April 20, which clearly shows again that there is an urgent need for this country making a more adequate defense against Soviet submarine warfare. As has been previously pointed out, the massive submarine strength of the Soviet is obviously established for aggressive, not defense purposes. Submarines are not defensive weapons. Our experience in World War II with a much smaller German submarine fleet shows that we should not delay any longer the beginning of construction of the cross-Florida barge canal. The canal would justify its construction costs many times from the savings which might be made against submarine-incurred shipping losses should we ever have another war. It is foolhardy to delay this project, and I sincerely hope that actual construction of this Congress-approved project can begin at the earliest possible moment. The report above referred to is as follows:

RED SUBMARINES POSE RISING PERIL, SPAATZ SAYS

(By Cecil Holland)

Gen. Carl Spaatz said today the Navy should stop spending money on supercarriers and concentrate on meeting the threat of a submarine attack on the United States.

The retired Air Force Chief of Staff described Russia's growing submarine power—he estimated the Soviets have 400 submarines and is a serious menace to this country.

General Spaatz and Adm. Robert B. Carney, retired Chief of Naval Operations, testified before the Senate Armed Services Subcommittee investigating this country's air and missile programs.

Before they testified, Senator SYMINGTON, Democrat, of Missouri, subcommittee chairman, said the inquiry was being broadened to include naval aviation.

HUNDREDS FEWER IN UNITED STATES

No specific figure was given on the number of American submarines but Senator SYMINGTON said it was hundreds less than the Soviets have.

General Spaatz added that he would rather have "a few too many than a few too few" planes. He also suggested that work on developing an intercontinental ballistic missile be given the highest priority.

Admiral Carney, who left his naval post last summer, did not specifically discuss the Russian submarine menace. However, he said that the Soviets possess a navy "of such strength that it cannot be ignored" and one strong enough now to challenge the supremacy of the seas."

The admiral said an atomic stalemate may result so that there will be no general atomic war. He emphasized the importance of maintaining balanced forces to meet any threat.

FEARS LOSS OF UNITY

Admiral Carney also suggested that new Russian tactics may soften up Western unity. On this point General Spaats said "Russian leaders Bulganin and Khrushchev may soft soap the western powers to the point that they think no attack will come." Then, the general said, the surprise attack will follow.

Both General Spaatz and Admiral Carney agree that Russia has narrowed or closed a gap with the United States in weapons and technological advantages.

General Spaatz indicated the Soviets are ahead of this country in submarine forces and declared:

"I still don't believe we are adequately prepared to meet the threat of a combined air power and submarine attack."

RECALLS U-BOAT HAVOC

He recalled the devastation brought by 30 or 40 German submarines along the American coast during World War II and emphasized the seriousness of the Soviet submarine threat by saying this number could be multiplied 10 fold with undersea craft armed with guided missiles carrying atomic warheads.

The testimony of General spaatz, who retired in 1948, recalled the bitter service controversy after World War II between the Air Force and Navy over long-range bombers versus aircraft carriers.

General Spaatz also assailed the military setup and suggested a new defense chief of staff and a general staff to direct the country's military effort. He testified that not enough money is being spent for defense under the present setup, but said it would be adequate if the Defense Establishment were overhauled.

The general said he does not believe Soviet Russia has developed guided missiles with atomic war hears so far. But he emphasized that this does not mean that they will not have it by the time the aircraft and missiles for which money is being appropriated now are in operation.

For what the country may need 5 or 6 years from now, Genearl Spaatz said he did not believe defense spending is large enough. He recommended:

1. More air bases for greater dispersion of aircraft.

2. More money for research and development.

3. Speeding up the building of long-range bombers.

Senator JACKSON, Democrat, of Washington, asked General Spaatz why it took the Defense Department 11 months to increase the production of the B–52 long-range bomber.

"I'd say the Defense Department is pretty unwieldy," he said.

Another 50,000 Farmers Polled on Benson, Soil Bank, Politics

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Farm Management magazine for April 1956:

ANOTHER 50,000 FARMERS POLLED ON BENSON, SOIL BANK, POLITICS

If substantial farmers of the West could sit down with Ezra Taft Benson for an old-fashioned crackerbarrel visit they'd apparently bombard the Secretary with some pretty convincing arguments against price supports.

Farm Management's widely-quoted poll has now reached out to 100,000 western farmers, and a continuing flood of farm policy comment, suggestion, and criticism is pouring in. It's considered one of the Nation's most significant surveys of farmer opinion on the vital issues of price supports, the soil bank, and politics. News service released nationwide stories on the results as published in Farm Management last month, and editors across the country commented and quoted from the poll.

Free markets are still favored over supports, Benson was endorsed by 64 percent, and restriction of payments under the soil-bank plan was favored by 50 percent of the voters. Opinion among the other half was divided. Republicans were far ahead, with 66 percent balloting for the GOP, against 34 percent for the Democrats.

Political opinion was surprisingly restrained; however, a few caustic comments were penned on ballots by party enthusiasts.

"I would guess that you have (Republican) Chairman Leonard Hall conducting this poll," wrote F. L. Gaffrey, from Sprague, Wash.

Countered J. E. Storm, Gridley, Calif.: "I feel that the Republican Party will do the best job for agriculture over a long period, and make a better agriculture for my sons and future generations."

NOT POLITICAL

But it definitely was not conducted as a political survey—and was recognized by most participants as an objective job of ascertaining exactly how the majority of the West's commercial farmers feel about the vital agricultural issues facing the Nation today.

Summed up Fredde John of San Luis Obispo: "No one person nor one party can adjust our present price problem. It is simply a problem that an expanding nation must face."

"The problems facing agriculture are of an economic nature," agreed Dick Markarian of Fresno, Calif. "The solution to our problems cannot be found by either electing Democrats or Republicans, but rather in getting representatives who realize no political solution can be very sound."

And 38 percent of the voters thought the problems could best be solved through free markets for all farm production, with 26 percent favoring flexible supports, 21 percent asking for 90-percent supports and 15 percent desiring the 2-price plan.

"None of the present price supports are of use to the small farmer," said C. M. Bright of Rigby, Idaho. "In our area the only crop that is supported is wheat. On my farm of 120 acres I am allotted 6 acres of wheat. Of what use is that to me? I don't grow cotton, tobacco, corn, or peanuts. Why should some crops be supported and others not?"

This opinion was shared by Cecil Sturgill of Baker, Oreg., who said, "If they can't find a way to help all classes of farming, then don't help any. All farmers have just as much right to help as a favored few."

BENSON CONTROVERSIAL

The controversial question, "Is Benson doing a good job?" provoked more comment than any other portion of the poll, with 64 percent giving the Secretary of Agriculture a vote of confidence, 36 percent turning thumbs down.

Typical of pro-Benson was Keith Masterson, Almira, Wash., who asked farmer support for Benson with, "Let's everyone give this man support instead of opposition—work with him instead of trying to cut him down."

Many felt Benson was struggling to do his best in the face of big obstacles.

"I respect and admire him," said Thomas E. Barker, Tollefson, Ariz. "I think he is a great man and has served the Nation to the very best of his ability at all times. However, I feel that he has let the farmer down."

Barker felt Benson had succumbed to pressure groups in Washington.

"I believe he has a job that is impossible," said Frank Bensel of Hermiston, Oreg.

"Benson is doing a pretty good job under a lot of pressure," said Robert Gill, Dixon, Calif. "He did not cause the mess and is doing the best he can."

"Benson could never be a good Secretary of Agriculture because he does not know anything about farming," wrote Douglas Rose, of Weston, Idaho. "He had a farm 10 miles from Weston and could not make a go of it. Then he was county agent of Franklin County, Idaho. When he makes a survey of the farms, he does not visit the family-size farm."

OPINION DIVIDED

Only 7 percent of those polled opposed the soil bank; but opinion was divided as to how it should be administered and regulated. Restriction of payments obtained a 50-percent vote; 13 percent favored Government payments for land taken out of cultivation and 30 percent wanted free choice by farmers as to what use is made of diverted land.

"The soil-bank proposition is stupid," said William A. Bartholomae, of Fullerton, Calif. "It can only result in bureaucracy and cheating."

Not so, said a reader from Wagon Mound, N. Mex. "The soil bank is a wonderful step toward soil conservation and good farm management."

"Most sensible idea of Government help ever proposed," chimed J. McKissack, of Merced, Calif.

On the issue of restricting Federal payments according to the income of the recipient, 34 percent favored making such payments to all without income restrictions. Restricting payments to those with an income of less than $15,000 received a 32-percent vote; less than $25,000, 20 percent; less than $50,000, 14 percent.

The question of income set off heated debate over the family farm versus the big operator.

Said George W. Stedman, of Sonoma, Calif., "If so-called farmers cannot make a living farming, let them find a job or start some other business. Why should the taxpayers support a lot of inefficient people?"

DOING THEIR BEST

"We have done our best to operate efficiently, carefully, intelligently," replied Mrs. Charles Chowen, Manson, Wash., "but we have been hard hit by low prices. We're small farmers, practically moneyless. We are going to have to start borrowing soon. If we lose all we have gained from scratch in the last 12 years, whom do you think will get the bulk of the blame? But don't think for 1 minute that we will give up easily and go on the labor market. We will fight to the last ditch, to hang on.

"We live in the most wonderful country in the world," concluded Mrs. Chowen. "And have utmost faith in the most wonderful Government in the world."

Her Government was concerned, too. From the floor of the House of Representatives Congressman J. ARTHUR YOUNGER, introduced the full text of last month's Farm Management report into the United States CONGRESSIONAL RECORD; and Congressmen throughout the West read the report, requested additional information and tabulations on the final returns.

At Farm Management's office these returns were being carefully compiled. Editors, impressed with the many sound ideas set forth, were carefully reading every letter and penciled notation. Unfortunately, only a small portion of the comment can be published; however, all communications are being studied, some will be passed on to our lawmakers, others used in future Farm Management presentations.

HOW WESTERN FARMERS VOTED

This questionnaire has been mailed to 100,000 farmers throughout the West in Farm Management's survey to determine how farmers feel about national farm policy.

	Percent
Farm price supports:	
90 percent supports on all major farm products	21
Flexible price supports	26
Two price plan	15
Free market, no supports	38
Soil bank:	
Government payments for land taken out of cultivation	13
Restricting such payments to those who do not graze livestock on diverted land	50
Free choice by farmers as to what use is made of diverted acres	30
No soil bank at all	7
Restrictions on Federal payments:	
Restrictions governing price support or land diversion payments to farmers with annual incomes of less than:	
$50,000	14
Less than $25,000	20
Less than $15,000	32
Making such payments to all without income restrictions	34
Political party preference:	
Democrat	34
Republican	66
Third party	
Secretary Benson:	
Is doing a good job	64
Is not doing a good job	36

Los Angeles Needs Passport Office

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HILLINGS. Mr. Speaker, for a number of years, efforts have been made to establish a passport office in the Los Angeles area. San Francisco, Boston, New Orleans, New York, Chicago, and Washington have such offices at the present time. The number of passport applications in Los Angeles has increased by huge percentages in recent years. These applications must still be processed in Washington, 3,000 miles away, which results in considerable delay, difficulty, and confusion for more than 5 million residents of the Los Angeles area.

It is my hope that favorable action will be taken by the State Department in this matter.

I am enclosing two recent editorials from the Los Angeles newspapers which discuss this problem. The editorials follow:

[From the Los Angeles Examiner of April 16, 1956]

PASSPORT JAM

No better proof could be offered that the State Department and its passport division should establish in Los Angeles a branch empowered to issue passports, than the current flood of applications that has overtaxed the local clerk's office.

Under the antiquated system now in force, the applications normally are routed to Washington, and only when emergency needs are recognized, routed to San Francisco for approval—a procedure that wastes time and causes inconvenience if not hardship.

Yet more than half of all passports granted in the entire Western area are issued to residents of Los Angeles and neighboring cities.

For years Washington has closed its eyes and ears to requests for a Los Angeles passport office.

The pleas of city and county officials, chambers of commerce, California's congressional delegation and even Federal judges of the northern district have been in vain.

Apparently, neither the State Department nor its passport division is yet aware of some things: That Los Angeles is the hub of constantly increasing foreign travel originating here; that the Southland is now a vast metropolitan area and no longer a corner of the great American desert, and that public conenvience and necessity are being badly served locally in passport matters.

We repeat these palpable facts in the hope that Washington's passport authorities will soon realize the obligation to render proper service where it is most needed.

[From the Los Angeles Mirror-News of April 19, 1956]

LOS ANGELES NEEDS PASSPORT OFFICE

The State Department should establish a Los Angeles passport office which could handle directly and quickly all passport applications originating here.

Instead we have just a transmittal office. All applications have to be sent on to Washington or—and this is in cases of emergency only—to the nearest passport agent who is in San Francisco.

This results in long delays and inconvenience and in many cases added expense, due to long-distance telephone calls that must be made to hurry up the proceedings.

The situation is definitely unfair to a city which originates more foreign travel than any other in the West.

Some 200 passport applications are processed here every day.

For 1955 the number was 22,448, an increase of more than 70 percent over 1951 when the total was 13,064.

Foreign travel from here is zooming sharply this year and will continue to increase in the foreseeable future.

Public officials and civic organizations have frequently urged establishment of a passport office here to serve one of America's foremost metropolitan areas.

The next move is up to Washington and it should come promptly.

The Battle of the Classrooms

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. KEATING. Mr. Speaker, in recent months we have been receiving an increasing amount of information that Russia is rapidly overtaking us in the so-called battle of the classrooms. Not long ago, for example, the Joint Committee on Atomic Energy issued a report indicating that our past superiority in scientists and engineers—the very superiority upon which our preeminent position among the world's powers rests—is quickly disappearing.

In view of these facts it is extremely gratifying to hear that President Eisenhower has chosen to meet the problem head-on by appointing a National Committee for the Development of Scientists and Engineers. This distinguished and varied group will be under the leadership of Dr. Howard L. Bevis, president of Ohio State University, and it will attempt to find a solution to our dilemma.

This is a most laudable and positive undertaking. We wish the committee godspeed as they embark on an inquiry into a siuation which holds great importance for each and every one of us.

Under leave to extend my remarks in the RECORD, I am inserting the following editorial from the Washington Star of April 12, which delineates the whole situation in clear, concise terms:

A WAR WE'RE LOSING

President Eisenhower has taken a good and timely step in appointing a committee of distinguished citizens to deal with the problem of our country's serious and potentially grave shortage of scientific and technological manpower.

The new group is the National Committee for the Development of Scientists and Engineers. Headed by Dr. Howard L. Bevis, president of Ohio State University, it is made up of 19 outstanding individuals representing all the key segments of our American community, including education, industrial management, labor, and local and State governments. Its primary responsibility, as Mr. Eisenhower has declared in a letter to Dr. Bevis, is to promote an imaginative and vigorous effort by both governmental and citizens organizations to "maintain for us the technological superiority upon which our economy and our national security so critically depend."

This superiority—which is especially vital, militarily and economically, in a superscientific age when our population is increasing at a rate of almost 25 million every decade—has made us unique among nations in the 20th century. But the distinction is fast slipping from us. In the President's words, "as a result of our continuing shortages of highly qualified scientists and engineers, we are running the danger of losing the position of technological preeminence we have long held in the world," and the power that threatens to supplant us in that respect is the Soviet Union—a country which up to now has dedicated itself to using science chiefly for purposes of aggression and global conquest.

The seriousness of the situation has been effectively demonstrated in numerous authoritative studies, including a particularly sobering one released recently by the Joint Congressional Atomic Committee. The studies leave no room for doubt that the United States and its Western allies—although they may at the moment enjoy a superiority in the number of scientists and engineers available to them—are rapidly falling behind in what has been called the cold war of the classrooms. This is so because the Soviet Union is turning out a much bigger annual crop of scientific and engineering graduates than are our own country and free Europe combined.

A problem of this sort, of course, cannot be ended merely by appointing a committee. But the group named by the President is an impressive one, and if it works hard at its job, it can point the way toward a sound solution. If it achieves only that much, it will be rendering fine service to the Nation.

After 8 Years

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Paterson Evening News of April 21, 1956:

AFTER 8 YEARS

The people of Israel temporarily laid aside their troubles to celebrate their independence day. There was folk dancing in floodlit squares throughout the country. National leaders spoke of permanent survival despite the threat of another war. Generally it was an occasion for rejoicing over Israel's 8 years of successful struggle against heavy odds.

Eight years ago, this little republic was established under United Nations sponsorship in face of bitter opposition from hostile Arab States. It actually owes its existence to the United States, Britain, and France, and, especially to the United States which used its power and influence to assure the creation of this new democracy in the Middle East.

It has been no easy task for the hardy, pioneering zealots to transform the wastelands of Bibical Palestine into a fertile, productive nation patterned after the western parliamentary system. There Jews find a homeland for the first time since the Hebrews in 1000 B. C. established a monarchy in what to them then seemed a land of milk and honey, only to be overrun time and again by aggressors, and after conquest by the Byzantine Empire, falling into Egypt's

hand in another conquest in around 634 B. C.

As in olden times, the Israeli people were compelled to fight their way to newly won freedom and independence against ancient enemies. Free people everywhere admired their courage in that war and their dedicated efforts in building a modern, progressive, high-spirited nation in the heart of one of the world's most backward areas.

Now, Israel is alarmed, but undaunted, by gathering storm clouds. It has made remarkable advances in 8 short years, in spite of economic boycott, blockade, and border raids by enemies who refuse to recognize its existence. As the Israelis celebrate their anniversary, with hopes for a permanent peace that will allow them to live and prosper in freedom from these dangerous harrassments, the good wishes of all free people go with them.

Never in the world's history has 8 years done so much for any country. The British, whose mandate began it; the United Nations, whose assumption of responsibility followed; and American Jewry, whose funds have made development possible; these have combined with the Israeli spirit of devotion and sacrifice to bring Israel very far in 8 years, creating an oasis of progress in the barren deserts of north Africa.

Have They Died in Vain?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Belleville (Ill.) News-Democrat of April 11, 1956. The editorial entitled "Have They Died in Vain?" follows:

The Defense Department can't fathom why soldiers and sailors, airmen and marines refuse to reenlist when their hitch is up. This situation keeps top brass in a dither, vainly shaking the bushes to turn up ways and means of making military life more attractive so that trained officers and enlisted men can be enticed to sign up for more of the same. The turnover, which has reached alarming proportions, has turned out to be an item of astronomic expense to our Nation.

The tragic incident at the United States Marine Corps base at Parris Island, S. C., should clew out the Pentagon's worriers as to why so many Americans loathe military servitude and get out of it at their first opportunity.

Sunday night, six trainees were taken out and drowned as punishment for some alleged (and probably imaginary) infraction of corps discipline. The judge, jury, and executioner in this case turned out to be a sadistic drill sergeant, drunk with power, who routed out his whole company in the middle of night and forced it to wallow for hours in the Carolina muck.

No doubt this psychopathic noncom will be crucified. We hold no brief for him. But the guilt in the death of the six young Marines is not his alone. It belongs as much to the booby, who vested life-and-death control over a company of 80 raw recruits in this individual—demonstably incompetent to be in charge of anybody. And it extends all up the chain of command to the top martinets who countenanced, if not cultivated, this outrageous system of chicanry which apparently prevails in all basic training camps. We hold no brief for them, either.

The distorted magnification of insignificance which culminated in disaster at Parris Island might have happened at almost any basic training camp operated the auspices of the Defense Department. For the same radically un-American principle is diligently pursued by the Navy, the Army, the Air Force, and the Coast Guard.

Theoretically, basic training is intended to separate the men from the boys. In practice, however, this initial phase of military service is conducted to transform recruits into docile sheep, but inevitably the grueling process makes goats of many.

It is this crucial period when the civilian is being introduced to the frustrations of the "Army way" that sows the seeds of disgust with the military in general and everything connected with it. From the start the taste is bad, with all the wanton brutalizing, inhumanities and indignities the new hands are subjected to. After that they never can develop a zestful appetite for this dish.

It has become abundantly clear that basic training procedure is long overdue for drastic overhauling. The unforgivable shame of it all is that six fine, robust, young Americans were drowned before their countrymen woke up to the deplorable conditions which prevail throughout our country's Military Establishment.

Our National Defense

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to include the speech delivered by Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, before the 65th Continental Congress of the National Society Daughters of the American Revolution in Washington, D. C., on April 17, 1956. I feel this address will be of interest to all Members of Congress:

NATIONAL DEFENSE OUR GREATEST TASK

Tonight I want to limit my remarks to our one greatest task. The task is national defense—the defense of our freedoms and our way of life. No other problem is as important or as decisive as this one.

This task of which I speak involves more than military defense. It is more than organizing, equipping, and training Armed Forces for prompt and sustained combat operations.

For the task is also one of supporting the broad purposes of our Government and the United Nations in working for freedom, justice, and peace. It is one of strengthening our national fiber and reestablishing contact in our daily lives with proven fundamentals. And, it is one of making ourselves better able to live our lives, educate our young, and pray our prayers, all in freedom and self-respect.

Our great task is all these and more besides. In essence, our task is to strengthen our freedoms and safeguard them for the generations to follow.

Now some of us may feel that we are able to isolate ourselves or escape responsibility for this task. But none of us really do—we only think we do. It would never be enough for only a relatively few to be responsible for the defense of these United States. It never could be.

The reason is simple and clear. If many Americans were to isolate themselves from responsibility for the well-being of this Nation, we probably would fall into the doldrums of apathy, complacency and self-satisfaction. We would be inclined to look at communism and then write it off the books in the belief: "It cannot happen here." Unconsciously, our guard would be lowered, and our vulnerabilities increased.

Ladies and Gentlemen: We "can" be destroyed by a lack of active patriotism. Liberty is always in danger. History is filled with instances proving that nations who take liberty for granted are apt to fall prey to tyrannical forces from within as well as from without.

Any serious deficiency or lack of active patriotism should be regarded as a menace to national security. We simply cannot afford to take freedom for granted. Complacency and smugness are completely out of place at a time when nearly a billion people from the Baltic to the Pacific are under Communist control.

In this regard, we should remember that freedom is not solely American. Love of liberty is not something unique to us alone. Out of that billion people now behind the Iron and Bamboo Curtains, there probably are many who long for liberty and who try to keep alive the flame of faith. I feel sure that for those who have lost freedom, there is no reparation or sacrifice that can even faintly reflect its true value.

Communism is not only a powerful organization militarily and industrially, but it is also an extremely skillful and unscrupulous ideological opponent who is at work every day selling his goods around the world. Its base, its head, and its heart are in Moscow; but its objectives are worldwide. Its successes are achieved in part by the subversive appeal of an artful logic effectively spread by organized zealots.

As a result, people of satellite states are either persuaded or regimented to accept a set of principles and values based on the individual's subservience to the state.

Let's face it. Communist leadership can recruit people who will risk their lives, live in one suit of clothes and on one meal a day—all in order to spread Communist doctrine.

In answer to their ideology, we who are free are sometimes outmaneuvered. Too often we seemingly lack the understanding conviction with which to defend our way of life. Sometimes we overemphasize material things in life, and talk too much about our aircraft, automobiles, highways, refrigerators, television, gadgetry and money—the products of our way of life, and not its foundations.

Are these what we value most? I say "No," though at times some of us may think we do. These are the fashionable surface desires. Possess them all, and you still would not have satisfied your life.

The real answer is found in the heart, the mind, and in the spirit of America. What people want is the pride which springs from the freedom and dignity of the individual. They want to establish and identify themselves with liberty, an achievement which fundamentally is very much up to the individual.

As I see it, our responsibility is unmistakable. Freedom is the personal responsibility and action of an individual. It is comparatively easy to legislate freedoms, and almost impossible to legislate individual actions and responsibilities. Yet one's value to oneself and to society varies in direct proportion to the extent he or she assumes responsibilities toward others.

For women, this is indeed an important mission, and it is traditional. It is traditional for women to help conserve the best elements of our heritage. Especially is it

traditional for you Daughters of our American heritage.

By your influence in the home, church, and school, you shape the character of our youth, who in their day will be called upon to assume their share of responsibility. By your influence in the home and Government, you provide the balance which so often helps us hold fast to the right course.

On that analogy is another hope for raising the moral and spiritual fiber of the home and of the Nation. It always will be your role to give consideration to world problems, and at the same time, strengthen the place of families in building a secure Nation.

Tonight, I congratulate the Daughters of the American Revolution for their outstanding service to the cause of freedom. You have advanced the vital hopes of freedom for the future.

I congratulate you on being the recipient of Freedoms Foundation special award for 1955 in recognition of your active work to maintain our historic heritage. It was my good fortune to present this coveted award to your first vice president, Mrs. Kenneth T. Trewhella, in ceremonies at Valley Forge, Pa., on the 22d of February this year.

It may interest you to know that your citation contained only four sentences, but each sentence contained some world of action—words like "dedication," "efforts," "intensely," "work," and "results." The act of doing something was inherent in every part of that citation, as though action in the service of your country is implicit with each of you.

So it is with us in the Armed Forces. Liberty is our heritage, too. It is one national asset that is irreplaceable; and like any possession of value, it must be protected and made secure.

All Americans, in or out of uniform, have a stake in the spiritual, moral, and cultural well-being of our Nation. We in the Armed Forces join with you Daughters of the American Revolution in serving in the forces which guard our country and our way of life. Your efforts and ours are part of the strategy in defense of our liberty. Together, let us always be actively and patriotically militant about our liberty.

Vice President Urges Firmness

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HILLINGS. Mr. Speaker, I wish to call to your attention an interesting editorial which appeared in the Whittier (Calif.) News on April 14, 1956. It points up the necessity of our giving particular attention to the Far East and the importance of our diplomacy in that area.

The editorial refers to an address by Mr. Virgil Pinkley, publisher of the Los Angeles Mirror. Mr. Pinkley is well equipped to discuss this problem and has made an important contribution to our country by bringing first-hand information to the leaders of our Government concerning this vital area.

The editorial follows:

WHY MUST WE WAVER?

Is it the difference between shirt-sleeved and silk-stockinged diplomacy? Is it saying one thing out of one corner of our diplomatic mouths and meaning still another thing out of the other corner?

What is the elusive something that makes our foreign policy so ineffective at times?

Why do most Americans ultimately come to the conclusion that, regardless of the political party in the White House or in Congress at the time, we are forever pulling boners in dealing with both friends and foes in foreign countries?

Los Angeles editor Pinkley, who addressed the annual Whittier Chamber of Commerce dinner, may have supplied the answer. He was relating a conversation he had with the Japanese Foreign Minister, Mamoru Shigemitsu.

The Minister told him in reply to a question that so far as Japan is concerned the United States needs to do but one thing: be firm and stay that way.

Shigemitsu listed as an example our plans for using Pacific islands to test future atomic weapons, as we have in the past. His recommendation, said Pinkley, is that the United States say exactly and specifically what it proposes to do with such testing, and then stand by what it says. Instead of veering with every whim of diplomacy that occurs to our representatives abroad, said the Japanese (who certainly must be a friend of ours to be so candid), we ought to take our position and then stick unwaveringly to it.

Such a policy may be exactly what we need in the Far East, together with one other method suggested by the editor.

He thinks our diplomats ought to do more like the Nixons did when they visited the Orient—get out and shake hands and mix with the people themselves, not the governmental leaders only. This, too, makes sense because it is practical. We know that it works in our hometowns here in America; otherwise, none of us would have many personal friends.

It can work all around the world because a majority of people everywhere are friendly and want to be accepted as friends. Why our diplomats have not sensed this is a mystery, except possibly because they have been held to the old British diplomatic customs and traditions that have been falling like tenpins in the death throes of colonialism in recent years.

Ike's Veto of the Farm Bill Indicates He Has Written Off the Farm Vote for 1956

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert in the RECORD a recent editorial from the Capital Times of Madison, Wis.

Following is the full text of the editorial:

President Eisenhower's veto of the farm bill providing for 90-percent support prices indicates that the Republicans are confident that they can lose the farm vote and still get elected next November.

In 1952, when the President didn't have this confidence, he was talking a different language about 90-percent supports. At Brookings, S. Dak., on October 4, Candidate Eisenhower had this to say about price supports:

"The Republican Party is pledged to the sustaining of the 90-percent parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100-percent parity, with the guaranty in price supports of 90."

The President's veto adds substance to the report that the Republican high command believes that it can ignore the economic plight of agriculture and look to the urban areas, where conditions are good, to pull them through the election. While they may be right in their political analysis, as it appears from some of the presidential primaries, they are taking a reckless gamble with the future of the economy.

It is nonsense to pretend, as the President seems to be doing, that the soil-bank plan, which he endorses, will do anything substantial for the farmers, whose incomes have dropped $1 billion a year since the advent of the Eisenhower administration. The danger is that this gathering depression on the farms will soon be felt in the cities, where consumer credit has already reach a precarious height. The result will be total depression.

The Eisenhower-Benson argument is that 90-percent supports produce unmanageable surpluses. They argue that flexible-price supports will reduce production and cut down on the accumulation of surpluses.

This is one of the biggest frauds put over on the American people. The Bensonites argue that they inherited huge surpluses from the Democrats which piled up under the rigid price-support program. Actually, there is a grave question of whether the surpluses then in existence were excessive.

As for cutting back production under the flexible program, the President need only look at the figures supplied by his own Department of Agriculture. Between 1952 and 1955 support prices on milk dropped 17 percent but production went up 9 percent. The disparity is even more pronounced in other farm commodities, except on those where production controls were imposed. The production of sorghum grain, for example, rose 173 percent in the same period while its support prices fell 24 percent.

If Secretary Benson understood the farmers end, instead of the processors, who have been making unprecedented profits, he would know that when a farmer's income falls he immediately moves to produce more.

The blunt truth is that Secretary Benson represents the philosophy of the big industrialized farm interests, who are out to make American agriculture a more efficient operation. This is going to be done by forcing the small inefficient farmers off the farm and into the factory. If there are some economic pains that go with this, so be it.

Some of Benson's advisers have frankly and publicly espoused this philosophy, seemingly unaware that they are creating a social and economic upheaval that could bring economic chaos. By his veto, the President is playing their game, though he is probably no more aware of its implications than he has been of some of the other things done in his administration.

Pulaski League of Nassau County, N. Y.

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. DEROUNIAN. Mr. Speaker, due to previous commitments, I was unable to speak before the Pulaski League of Nassau County at New Hyde Park, on April 22, 1956. My friend, Mr. Louis S.

Backiel, an outstanding American of Polish ancestry, appeared in my stead and delivered my address, which is as follows:

As you know, this is the first annual banquet of the Pulaski League of Nassau County. I want to welcome you to it in the hope that this banquet is the first of a long series of get-togethers.

This social and fraternal organization, is performing a very much needed service. It is helping and encouraging Americans of Polish descent to get acquainted with their local and State leaders. To know their local and State leaders is the duty of every voter, because it is at the local level that political campaigns are won and American Presidents elected.

Your State and local leaders are as important to you as the national representatives that you send to Washington. I congratulate Americans of Polish descent for supporting so strongly such an organization as the Pulaski League of Nassau County.

Many, perhaps all of you people here tonight, have relatives and friends in Poland. And I know that you will want to hear how President Eisenhower and his supporters feel about that unhappy country, especially now that the Soviet leaders are trying to sell their "new look" to the free world.

In the first place, no matter what you read in the papers, or hear from opposition sources, President Eisenhower is not fooled by the smiling faces which Khrushchev and Bulganin are now showing the world.

And he is not going to believe that they have had a change of heart until they free all the satellite nations, and most especially Poland.

You know, of course, under whose administration Poland was first sold to the slavery of the Iron Curtain.

But one thing is certain, if Polish history—a history of incredible heroism and fortitude—means anything, it means that Poland will be free again.

The Polish will to be free surpasses any love of liberty shown by any other European nation in world history.

Those famous words, "liberty or death," well might have been spoken by the combined voice of the Polish people.

And I say this to Messrs. Bulganin and Khrushchev, "As long as the Polish nation is kept in slavery behind the Iron Curtain, you are holding to your bosoms a dagger that will eventually destroy you. You cannot enslave the unconquerable Polish spirit. You cannot make henchmen of souls whose longing for freedom transcends their passion for life itself."

President Eisenhower and his administration inherited the present Polish tragedy. They cannot undo this dreadful wrong overnight. But, they are not fooled by the honeyed words now coming out of Russia. They are not fooled by the current destruction of the myth of Stalin. They have known all along that Stalin was the bloody murderer he is now proclaimed to be.

They know that the present leaders of Russia were his followers while he lived and so are as guilty as he was.

They will not weaken in their stand against Russia until the Iron Curtain is destroyed and Poland a free nation once again.

President Eisenhower is the first President in over 20 years to face Russia boldly. His Cabinet members reflect in their speeches and actions that strong bold policy.

Secretary of State Dulles proclaimed that for aggressors, we had up our sleeve the ace card of massive retaliation. He proclaimed for all the world to hear, that in the event of aggression anywhere in the world, we meant to use massive retaliation.

As a result, the Korean war was ended and Russian aggression brought to a halt. For the first time in over 20 years, communism was stopped dead in its tracks. History has shown that all dictatorships hold the seeds of their destruction. The moment they stop growing, they start to decay. We are determined to stop the growth of the Communist evil—we are determined that bit by bit, the Iron Curtain shall be rolled back. We are determined that 1 day Poland shall be free. To that end I pledge my labors in your behalf.

The Highway Bill

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief summary of contents of H. R. 10660, new highway bill.

The highway bill, to be reported on the floor of the House shortly is H. R. 10660. This is a combination of H. R. 8836, the Fallon bill, which is the highway authorization bill reported by the Public Works Committee, and H. R. 9075, the revenue raising bill, the Boggs bill which was reported by the Ways and Means Committee. The first title of H. R. 10660 relates to the authorization as contained in the Fallon bill as amended.

PRIMARY, SECONDARY, URBAN

Sections 101 through 107 of the bill are approximately the same as the 1954 Highway Act which deals with the primary, secondary, and urban systems of roads as now in effect, with the exception that the funds involved are increased in the new legislation. The amount authorized for the primary, secondary, and urban systems, in addition to the $700 million already authorized for 1957 by the 1954 act is increased by $25 million.

It is established as the intent of Congress that starting in 1957 and continuing through 1969 the total amounts intended for the primary, secondary, and urban systems be progressively increased in the amount of $25 million per year. Thus the total Federal funds involved for these systems during this period is $11,375,000,000.

CONGRESSIONAL REVIEW

It was the opinion of the committee that the Congress should review every 2 years the authorization on the primary, secondary, and urban systems.

Included in the sections up to 107 are increases for forest highway roads, trails, national parks, and so forth, and also some clarifying amendments relative to Indian land and other Federal domain roads. These sections also include a $30 million authorization for an emergency fund for highway repairs in disaster areas.

INTERSTATE SYSTEM

Section 108 to section 201 deals with the interstate system as set forth in H. R. 8836, the Fallon measure as amended. The authorizations of this section establishes a Federal expenditure, over the 13-year period 1957 up to and including 1969, for the Interstate system of $24,825,000,000. The matching as it deals with the interstate system is 90 percent Federal funds and 10 percent State funds. In reality the total expenditure of the two programs as far as Federal funds are concerned is approximately $36,500,000,000.

MAXIMUM AXLE WEIGHT LIMITATIONS

In the bill will be found new subject matter relating to Federal axle weight limitations on vehicles using the highways. From available information, and taking into consideration the sponsor of the amendment, it would be my opinion that it was submitted upon the recommendation, and with the approval of, the trucking industry. This section would deny Federal funds to the interstate system in any State which permits single axle loads in excess of 18,000 pounds or tandem-axle loads in excess of 32,000, or which exceeds present State statutory regulations in effect July 1, 1956, whichever is the greater. The enactment of this provision will not deprive any vehicle of any legal right it presently enjoys. It is an effort on the part of the Federal Government to insure that the highway facilities to be constructed with this large sum of Federal money shall serve out their economic life and not be prematurely destroyed by excessive loads and the question of safety for the traveling public shall be properly recognized. The bill takes into consideration the research that is now going on, the results of which will be known to Congress not later than March 1, 1959, and instructs the Secretary of Commerce to make recommendations to the Congress not later than March 1, 1959, with respect to maximum desirable dimensions and weights of vehicles using the public highways.

REIMBURSEMENT FOR CERTAIN HIGHWAYS

The bill contains a section instructing the Secretary of Commerce to do necessary research regarding reimbursement of funds by the Federal Government to those States that have completed sections of the interstate system whether toll or free, subsequent to August 2, 1947, and meeting standards required on the interstate system and to report to the Congress his findings not later than January 2, 1958. It was recognized by the Committee that possibly there was equity in the reimbursement feature but sufficient factual data was not available to permit the establishment of a fair formula either in dollars or miles credited.

PREVAILING RATE OF WAGE

The bill contains a provision for bringing under the provisions of the Davis-Bacon Act contract work performed on the interstate system. This provision requires that the Secretary of Labor determine the prevailing wages to be paid on all contracts involving interstate sections of the program.

RELOCATION OF UTILITY FACILITIES

The bill as written sets forth that whenever a State shall pay for the relocation of utility facilities necessitated by the construction of a project in the Federal-aid primary or secondary system, or on a national system, Federal funds may be used to reimburse the State for such costs in the same proportion as Federal funds are expended on the proj-

ect. The term utility includes, publicly, privately, cooperatively owned utilities, which, of course, includes sewer systems, water systems, gas, telephone including REA, light and power. This leaves the determining power entirely in the hands of the States.

FREE COMPETITION

Other provisions relate to the filing of periodic reports on the progress of the interstate system; the use of rights-of-way incident to the interstate system and provisions which will insure that the users of the interstate system will receive the benefits of free competition in purchasing supplies and services at, or adjacent to, highways in such system;

CHECK BY CONGRESS

The bill provides that departments and agencies of any State and the executive branch of the Government shall furnish to the Committee on Public Works of the Senate or the House, or a subcommittee of each, such information as may be requested relating to the construction of the new interstate system.

TITLE II—REVENUE FEATURES

In corporates the recommendations of the House Ways and Means Committee as contained in H. R. 9075 by Congressman Boggs. This revenue section, which in all probability will come to the floor of the House under a closed rule, contains provision for a 1-cent gas tax increase; a 1-cent diesel and special fuels increase; a 3-cent increase on all rubber used by highway vehicles; 2-percent ad valorem tax increase on trucks, buses, and trailers—which makes a total of 10 percent as now being paid by automobiles.

The bill places a new tax of 3 cents a pound on camelback or retreading material and a new permit fee of $1.50 per thousand pounds on vehicles in excess of 26,000 pounds.

The total yield anticipated from the revenue measure over a 15 year period is approximately $38 billion. It is to be noted that nonhighway users on all of the above taxes are exempt.

This revenue section recognizes the withdrawal from general revenues after July 1, 1957, of one-half of the total yield of the 10 percent ad valorem tax on trucks, buses, and trailers and the total yield of the rubber tax on tires and the assignment of these revenues to the highway program. Prior to July 1, 1957, the revenue measure recognizes the dedication of only the 2 percent increase in ad valorem tax on trucks, buses, and trailers and the 3 percent increase in rubber taxes.

This means, in a general statement, that a large amount of money that is now going to the general revenue fund will be designated to the highway trust fund after 1957.

PAY AS YOU GO

After study and attempting to analyze whether or not the revenue raising feature will meet the authorization, it is the considered judgment that in the overall program we will be short about $3.5 billion. However, it is the belief that possibly this amount can be collected by increased sales and use of the highways so I think, in all fairness, it should be said that the revenue bill as submitted by the Ways and Means Committee and incorporated in title II of this bill will meet the authorization and expenditures as set forth in title I.

In summary, the proposed legislation has the merit of providing for review by the Congress and the correction of any inequities that may develop as the program progresses. The bill is not perfect, but I think the general public wants a highway bill and, in my opinion, the controversial features contained in this legislation are the results of various segments of our society compromising to obtain that which the people are asking, namely, better roads.

Wheat Farmers Want the Domestic Parity Plan

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I have today introduced a bill that would incorporate in our farm program one of the desirable features of the conference report on H. R. 12 which, among others, prompted me to vote for that measure. In so doing, I am joining with our distinguished colleague, the Honorable CLIFFORD HOPE, of Kansas, who was chairman of the House Agriculture Committee in the 83d Congress. This bill has the support of the National Grange, and the National Wheat Growers' Association. I am confident that it would meet with the approval of our administration.

Wheat is one of the basic crops grown in western Nebraska, and it is the only crop readily and profitably adaptable to the soil and climate of large areas of my State. If other crops could be grown economically, I can assure you they would be grown because the farmers in my district would like nothing better than to rid themselves of Government controls.

Existing wheat programs are unrealistic and unacceptable to the farmers in western Nebraska. Their land is highly susceptible to wind erosion, and moisture is scant. It is absolutely necessary to maintain a cover on the land to prevent blowing and to catch and hold every bit of snow and rainfall; as a result, nearly every farmer follows summer-fallowing practices whereby one-half of his land must lie idle each year. The prudent farmer is severely penalized by the present wheat program because his acreage allotment has been established on the basis of the number of acres he plants, and the 2 or 3 acreage cuts decreed in past years have reduced his wheat base to such an extent that he is able to use scarcely more than 30 percent of his farmland. In the case of the small farmer this has been disastrous. This is his dilemma: If he stays in the program, his wheat base is too small to permit him to operate profitably; if he chooses to overplant, he cannot afford to pay the penalty imposed.

The domestic parity bill I have today introduced is a desirable improvement.

First, it will eventually remove the hand of the Federal Government from control of the wheat farm. The farmer would not be penalized if he plants more than the Government permits, because the Government will not be able to tell him how much he can plant.

Second, since the support program applies only to the wheat used for domestic food purposes and marketing quotas are based on annual consumption of wheat as food, the multifarious problems and the $350 million annual expense connected with storage will be sharply reduced and eventually wiped out.

Third, the supported wheat will be produced primarily for the domestic market, and not for sale to the Government. The Government will be eliminated in due time as the world's largest wheat warehousing and marketing establishment.

Fourth, the cost of operating this program will be considerably lower than the present catchall operation.

The mechanics of the domestic parity program are quite simple. On the basis of the information available to him, the Secretary of Agriculture determines the number of bushels of wheat that will be consumed in the domestic food markets in this country during the coming year. Using this figure as the base, he then establishes bushel quotas for each of the wheat-producing States in terms of their history in the preceding 10 years. County and farm unit quotas are than established by appropriate State and local organizations, using as criteria the past wheat acreages, the normal yield, crop-rotation practices, type of soil, and topography. The wheat farmer subsequently receives a marketing certificate which will assure him 100 percent of parity for this bushel quota. If he chooses to produce more wheat, it is his privilege to do so but the wheat must be sold at the market price, consumed, or fed on the farm, or stored back against future crops.

The cost of this program to the consumer of wheat products would be negligible. Prices now paid for good milling wheat traditionally exceed parity, and the wheat content of many of our staple foods contributes little to its retail cost. For example, the cost of the wheat in a loaf of bread is about 10 percent of the total. Wheat produced for sale in excess of the domestic quotas would receive no support and would have to seek their own level on the market.

This plan for wheat would dovetail nicely with the administration's soil bank; it would work exceedingly well with the bill I have introduced emphasizing the industrial use of agricultural commodities. It would serve the best interests of the wheat farmer and the general public. Surplus crops can be converted into alcohol, rubber, and other industrial items. This legislation should be adopted this year.

Three-Star Extra Specialist Reports on Political Situation in Midwest

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD at this point a three-star extra report by Mr. Fred Morrison, outstanding news analyst and commentator on Wisconsin, Iowa, and Minnesota. The conclusions and observations made by Mr. Morrison are strictly his own. His forthright reporting, however, might serve as a tonic to those Republicans in the Midwest who are complacent:

FRED MORRISON, FROM MADISON, WIS., APRIL 9, 1956

The Republican political organization, here in the State of Wisconsin, is moving into this year's election campaign with two strikes already counted against it.

In the first place, when the campaign gets rolling, it will be facing the most powerful Democratic combine this State has seen in a long time. The Democratic Party, allied with the CIO, the Farmers Union, and various cooperative groups, already is plastering the State with an anti-Republican barrage.

Wisconsin farmers wake up in the morning to a CIO radio program which is carried on a State network of stations. The program hammers on the theme that the farmer is being victimized by the Republican farm policies. The Farmers Union has a companion broadcast which is carried on a different network of radio stations, and which hammers on the same theme. In addition to that, they blanket the State with various publications, all supporting the Democrats and opposing the policies of the Eisenhower administration.

To try to counter this Democratic combine, the Republicans will put into the field here an organization which is tottering from low morale, split by factions, and short of money.

Republican leaders here, who are willing to speak frankly, say the blame for their present difficult plight must fall on the White House in Washington. They don't blame President Eisenhower directly, but they say he must take part of the blame because he has permitted the situation to develop.

Their chief complaint is against those around the President who consider politics something which must not be talked about. Those advisers, these Republican leaders say, have screened away from the President all of the political workers who need his support.

Their recommendations for job appointments have been ignored, and in many cases the appointments have gone to persons who never had any connection with the Republican party. They have received almost no support from Washington in their efforts to counteract the farmer dissatisfaction over the farm program. They are left almost completely on their own without recognition from the administration they helped elect.

The result is that the morale of the party workers is shot. Their prestige has been damaged, and they now are having difficulty collecting the money they need for their local operations.

That's the situation inside the Republican party here in Wisconsin as the new campaign begins. They don't doubt that President Eisenhower will be able to carry the State this fall. But they very much doubt they can recover any of their badly needed seats in Congress.

This is Fred Morrison in Madison, Wis.

FRED MORRISON, FROM DES MOINES, APRIL 10, 1956

The Republican Party has muffed the ball on the biggest, if not the only, election campaign issue here in the Middle West. That is the opinion of many Republican workers and leaders I have talked with both in Wisconsin and here in Iowa—workers and leaders, incidentally, who will be called upon to deliver the farm vote for the Republicans this fall.

They say the Republican organization has stood by and permitted the Democratic Party and its allied groups, such as the CIO and the Farmers Union, to create a political furor over the farm situation. They say that not only is the furor not justified by the facts, but that it could have been stopped had the Republican organization and the administration in Washington taken any effective, organized steps to stop it.

These party leaders do not minimize the present difficulties of the farmers. They say there is no question many of them are caught in a serious price squeeze. But they take the position the farmer is a reasonable fellow who understands the problems and will listen to a logical explanation.

They say that if the administration and the national Republican organization had made a determined effort to show the farmers that their program is the only sound program, the political effects of the farm problem would not be what they are today.

Instead of doing that, however, they complain that the Republican Party split on the issue, with some Republicans joining the opposition and criticizing their own administration's policy. The result has been to add fuel to the opposition's drive to build the farm situation into a big campaign issue. These local Republican leaders are far from happy with some of Secretary Benson's public statements, but they say there is no serious opposition to his program.

What the farmers want, they say, is to be assured that their interests are being protected to the best of the Government's ability. But when they see the Republican Party split on its own policies, they begin to have their doubts.

Most of the persons I have talked with contend that the farm problem has been greatly exaggerated. The price squeeze is on, of course, but the farmers are far from being in a disastrous state. I am told that the big majority of them are in a position to wait the situation out if they are convinced the problem is being solved.

To check that, I went over to the local offices of the United States Treasury here in Des Moines to see how Government bond sales are going in this area. Iowa has been described as one of the States hardest hit by the drop in farm prices. I found that in spite of that, Iowa farmers are investing in Government bonds at a record rate. They bought more bonds in 1955 than in any other peacetime year and sales for the first 2 months of this year are at about the same level.

Iowa, with its 2¼ million people, is seventh among the States in bond sales. It is topped only by such popular States as New York, Illinois, Pennsylvania, and California. The farmers of Iowa, with all their problems, buy more bonds than the entire State of Texas. That may indicate that they are not facing bankruptcy and are in a position to wait for a solution of their problems if they can be convinced that a solution is on its way.

This is Fred Morrison in Des Moines.

FRED MORRISON, FROM MINNEAPOLIS, APRIL 11, 1956

A battle royal is shaping up inside the Republican Party, here in Minnesota, on the issue of the administration farm program. It will be a test of strength between the local party leaders and the veteran Republican Members of Congress from this State, who have refused to go along with the farm policies of Secretary Benson.

The local Republican leaders here are irate over the position taken by all their Republican Congressmen, with the exception of Representative WALTER JUDD. All of them, including Senator THYE, have consistently opposed the Benson farm program, and have joined the Democrats in voting and speaking against it.

The Republican leaders here take the position that the Benson program is a good program, and that it would have the support of Minnesota farmers if there were any candidates willing to support it and explain it to them. They are now making the issue very clear—that either the present Republican Members of Congress change their position and support the administration or they will be opposed by their own organization leaders in the September primaries.

These leaders say that is the only position they can take if they hope to win the election in Minnesota this fall and win back some of the congressional seats they have lost to Democrats in past elections. They say that, under present conditions, every time one of their own Members of Congress makes a speech in this State it is a speech against the administration, and a speech for the policies advocated by the Democrats. They say it is very clear that the Democrats here, under the leadership of Senator HUMPHREY and Governor Freeman, are trying to destroy the administration program, and, as the situation now stands, the Republican Congressmen are helping them do it.

These local Minnesota leaders are very unhappy with Washington's leadership of the party. They say that no effective steps have been taken by the White House, the leaders in Congress, or the national leaders of the party, to make the Republicans in Congress work as a team, and what they are trying to do now is to force some teamwork, at least in their own State.

Both State and county leaders with whom I have talked feel that Secretary Benson could win the confidence of the farmers if he were given a chance. But, they say, he has been fighting a lone battle. He is being smeared by the Democrats, the CIO, and the Farmers Union in this State, and even the Republicans refuse to support him. In spite of that, they say, every time he has come into the State in recent months, he has greatly impressed the farmers who heard him.

Minnesota's Republican Congressmen have one last chance this week to avoid the continued wrath of their own State leaders. But, if they fail to support Benson in the final congressional action on the farm bill, they will be marked men.

This is Fred Morrison in Minneapolis.

FRED MORRISON, FROM MINNEAPOLIS, APRIL 12, 1956

The great farm depression which is being built up as the overriding election-year issue, here in the Middle West, comes dangerously close to being an outright political hoax.

It is a hoax to the extent that it is being magnified far out of proportion to its true seriousness. Farm income is down. There is no question about that. Some farmers are in financial trouble, and all of them are having to watch their expenditures more closely.

But nowhere can you find support for the disaster statements made by the political critics of the administration in this area.

Minnesota's Democratic Governor Freeman said recently that the Eisenhower farm program has resulted in "misery and terror among the farmers of the Middle West." The left-wing Farmers Union, which blankets this area with its propaganda, has been telling the farmers that they are facing disaster and that the administration's farm program is the reason.

Actually the farm cash income in the Minnesota-Dakota-Montana area was down only 2 percent in 1955. And that covers all farmers, whether their operation is efficient or not.

On the whole, the well established, efficiently run farms are in pretty good shape. It is the smaller, marginal farms, and the farmers who have gone into the business recently and have heavy debt burdens, that are in trouble.

One farmer gave me his version of the situation. He said that during the past 15 years, all farmers made money. He said a lot of inefficient ones got into the business during that time, and were able to make a go of it because of good conditions. Now with the squeeze on, he said, they are in trouble.

All of these facts are used by the Farmers Union and the politicians to support their charges that the Benson farm program is ruining the area.

One farmer told me that he, personally, was getting along all right. But he said that when you are told day after day that you are being victimized and that everybody has prosperity but you, you might begin to believe it after a while.

The Farmers Union's answer to the farm problem—and they hammer away at it day after day—is a return to rigid price supports. They blanket Minnesota with propaganda of that kind. Yet more than 70 percent of Minnesota's farm income is from livestock products, which have no Government supports. The Minnesota farmer gets only 2 percent of his income from wheat and only 10 percent from corn, both of which are supported by the Government.

There is a farm problem in the Middle West. The farmers do need something to boost their income. But the situation is nowhere near as bad as it is pictured by the politicians * * * and with many of the Republican Congressmen in the area joining the Democrats in their barrage against Secretary Benson, there are very few on hand to give the other side of the picture.

This is Fred Morrison in Minneapolis.

FRED MORRISON, FROM MINNEAPOLIS, APRIL 13, 1956

Most of the steam behind the opposition, here in the Middle West, to the farm program of President Eisenhower and Secretary Benson is generated by the Farmers Union.

This leftwing farm organization sprawls across Montana, the Dakotas, Minnesota, and Wisconsin. Its political line on farm legislation is the same as that followed by the Democrats in this area. It is against the administration farm program, and it's bitterly anti-Benson.

The Farmers Union membership in this area is comparatively small—not more than 125,000. But its power is tremendous, due to a huge business combine which operates within it.

The largest of these business organizations are the Farmers Union Grain Terminal Association and the Farmers Union Central Exchange. They do millions upon millions of dollars worth of business with the farmers annually. They buy and sell grain, livestock, feed, fertilizer, tractors, and almost all other farm supplies. They even are in the oil business with their own refineries.

A very considerable part of their operation is what they call advertising and education. But much of it takes the form of outright political campaigning. They operate their own radio network and publish newspapers and magazines. They hold meetings all over the area. They are for high price supports and they minimize the importance of the huge farm surpluses which Mr. Benson contends are caused by the high supports.

All of those operations are carried on as a part of their business expense. In addition, the two big organizations give out to the State organizations of the Farmers Union 5 percent of their total earnings of $10 million a year. This money is used by the State groups to carry on the same campaign in the same way.

Some Republicans here charge that the Farmers Union Grain Terminal Association has a special interest in farm surpluses—that they are in the grain storage business and collect huge storage fees from the Government.

I asked the officials of the Grain Terminal Association about that charge. They said they are for high price supports because they are best for the farmer. Their own figures show, however, that they do carry on a large Government storage business and they collect fees for storing crop surpluses of about $2 million a year.

This is Fred Morrison in Minneapolis.

Israel's Eighth Anniversary

SPEECH
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. FRIEDEL. Mr. Speaker, it is a privilege for me to extend my most heartfelt and sincere felicitations to the gallant people of Israel on this the occasion of the eighth anniversary of the State of Israel as a free and independent nation.

The tremendous social, political and cultural accomplishments that have transpired in Israel since its independence was declared in 1948 are an inspiration to every democratic form of government in the world as an example of what free men can do under the flag of democracy.

Today the State of Israel stands as the bulwark of democracy in the Middle East.

Yet, in the face of all these accomplishments, this tiny democracy is confronted with an alarming situation which affects not only the peace and tranquility of the Middle East, but the peace and tranquility of the entire free world. This crisis in the Middle East has been brought about by the steadfast refusal of the Arab states to recognize Israel as a democracy, recently aided and abetted by the creeping shadow of international communism.

We cannot permit this nation to fail at the hands of the Communist conspirators. We in the West are faced with the necessity of taking decisive steps to prevent an all-out war in this area. This can be done quickly and effectively if the Arab countries can only be made to realize that Israel herself is interested only in peace. If the Arab leaders can be convinced of this, and be persuaded to make peace with Israel, the economic, spiritual and social benefits reaped by all the countries in the areas will be overwhelming.

Statement of George J. Burger, Vice President, National Federation of Independent Business, Washington, D. C., Before Subcommittee No. 5, House Judiciary Committee, April 18, 1956, Subject: H. R. 11

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. DODD. Mr. Speaker, may I have the privilege of inserting in the RECORD the remarks made by Mr. George J. Burger, vice president of the National Federation of Independent Business, before the House Judiciary on April 18 on the subject of H. R. 11. Mr. Burger is the recognized spokesman for small businessmen in the Nation's Capital, and joins wholeheartedly in every effort to get this bill passed.

The statement is as follows:

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote.

Our members desire enactment of H. R. 11. We take this position because of their vote, in mandate No. 193, on S. 1357, 82d Congress. Eighty-two percent of our members who voted on that issue favored it. The bill is substantially the same as H. R. 11 which you are now considering.

As you know, H. R. 11 is intended to reverse the 1950 decision of the United States Supreme Court in the Indiana Standard case. There, the Court ruled that a supplier may defend himself completely and finally against charges of unfair price discrimination, springing from the grant of special low prices to one but not all his customers, if he can show that he offered the special low price in good faith to meet an equally low offer by a competitor. This defense would hold regardless of injury created among his customers denied the special low prices.

We do believe there is need for this bill to become law. Here's why:

For instance, let's consider the following situation which could easily arise: a large supplier is selling through both a giant, mass-merchandiser and a large number of smaller, independent retailers competing with the mass-merchandiser. Due to certain economies, the supplier is extending a lower price to the mass-merchandiser than to his independent outlets. But the differential does not give the mass-merchandiser unfair advantage over his independent business competitors, and is defensible under the antitrust laws.

Fine and good.

Then a second large supplier decides to cut in on this mass-merchandiser and offers a much lower price than the merchandiser is receiving. The first supplier has the choice of either holding his price and losing the account, or of cutting the price to meet competition. Quite humanly, he decides to do the latter.

But for one reason or another he decides against cutting prices proportionateley to his other outlets, the independents who are competing with the mass merchandiser. The differential between them and the mass merchandiser has become so big they can't cope with it, and are squeezed profitwise and forced out.

This would be the situation: A large supplier cutting his prices in good faith to meet the competition of another supplier, a giant mass merchandiser customer receiving the benefits of the price cut and reflecting them in its selling, many smaller, independent business competitors not receiving any reductions are being pinned to the wall.

Under the law as it now stands, these independents would have no recourse, no protection at all—theirs would be put to stand and die. And after they had died, perhaps, the law could be used to break up a full-blown monopoly.

H. R. 11 would change this situation, would give such independent businessmen the protection they need. As we see it, the bill offers no doctrinnaire approach to or solution of the problem. It recognizes that there are real and honest needs for meeting competition. To this end, it allows the "good faith" meeting of competition to remain a full and complete defense to unfair pricing charges were one, or a few unfavored firms are injured. It attempts only to cope with widespread injury such as is described above.

And make no mistake, gentlemen, such monopoly damage has occurred due to unfair pricing. With my own eyes I have seen it in the tire industry. Others have seen it in the grocery and yet other fields. What has happened before can happen again.

That is basically why our members favor this bill and urge it be enacted into law.

Now we realize it may be argued that by preventing such meeting of competition in good faith the interests of the firm involved may be injured. We are not happy about this, for we wish no one damaged. But we think that such firm has an obligation to maintain such efficiency that it can meet competition, and when lowering prices to one customer lower them to all. Within the past year one large firm testified before Congress that, as a matter of policy, when it cuts prices for one customer it cuts them for all. What it can do others should be able equally to do.

It may be argued, too, that perhaps the firm trying to take this business away may itself be discriminating among its customers in offering the lower prices and confronting the first firm with an unfair situation. Our only observation here is that to guard against such contingency Congress should equip the antitrust agencies with ability to meet and curb such an occurrence.

But even if this is not done, if it is not practical, then we think basically what you gentlemen of this committee are confronted with is a problem involving the weighing of damage to one against damage to the other, of benefits and protections to one against benefits and protections to the other.

Frankly our members believe that our small, independent business structure is the real backbone of our country, and moreover, is one of the main economic underpinnings of our very liberties.

For this reason we believe that when any balancing is done, if this is considered necessary, the scales should definitely tip in the direction of independent, smaller businessmen.

I have watched patiently the operations of the Robinson-Patman Act these past 20 years. In the first instance, when it became a law I held to the premise the Magna Carta for small business had arrived for the first time in our Nation's economy. It is my belief that thousands upon thousands of small businesses held to the same view, and I must confess, after observing the scene for 20 years, that small business of this Nation has been disappointed in the resuluts obtained under the law as a result of (1) the many interpretations placed on the act by the courts and (2) what can be commonly called a 50–50 decision action in the Federal Trade Commission.

Big business interests have consistently fought against this law. It is self-evident from their action they realize that for the first time efficient small business would be placed on parity with others so they could fairly compete.

So it behooves members of your committee, if they are desirous of maintaining the free enterprise system and the millions of small businesses of all descriptions, to take every action to protect the overall good of the Robinson-Patman Act, and that no attempt, direct or indirect, be made to weaken or nullify this major law.

In view of this we urge your favorable action on H. R. 11.

Who's Out of Step?

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of April 23, 1956:

WHO'S OUT OF STEP?

President Eisenhower talks about cold war victories. He insists the new Soviet economic and political challenge in the Middle East, Africa, and Asia is a Kremlin confession of failure of old policies.

But Adlai Stevenson says we are losing the cold war. He insists the administration is bankrupt of ideas in foreign policy and is misleading the public with claims that everything is dandy.

If such a black-and-white difference were widespread, the remarks of these two candidates for the Presidency could be dismissed as campaign oratory. But it is not. Most expressions of informed opinion, unhappily, more nearly agree with the grimmer appraisal of Mr. Stevenson.

Our allies, our own ambassadors abroad, American correspondents in foreign countries, returning businessmen—these and many others irrespective of political labels warn daily that the United States has lost the initiative to the Kremlin's traveling clowns. The members of the American Society of Newspaper Editors, before whom the President and Mr. Stevenson spoke, thought, by a 2-to-1 vote, that the United States was losing the cold war.

The contrast between the Eisenhower and the Stevenson speeches makes it appropriate to examine the broad picture of foreign policy.

Without agreeing with all the proposals Mr. Stevenson made, we do not hesitate to say—as we have been saying in effect for a long time—that Mr. Stevenson's appraisal of the state of the world makes a lot more sense than President Eisenhower's.

Any cursory study of foreign affairs shows that the Soviet Union has made vast gains in the last year or so.

The Soviets have leapfrogged into the Middle East—fulfilling a 350-year-old czarist-Communist dream. Is that a victory for us?

The Soviets are successfully stirring up trouble all the way from Morocco to Indonesia, embarrassing us with the challenge to our colonial allies. Is that a victory for us?

The Soviet New Look is more and more appealing to neutralists and uncommitted countries. Ceylon and Cambodia have jumped in that direction. Is that a victory for us?

All the time the Soviet dictatorship—collective but still dictating—maintains an economy geared to war production * * * increases its armaments * * * woos friends by buying their surpluses and promising aid * * * prods and subverts * * * challenges even the United States in the scientific, technological, and industrial fields. Are those our victories?

The exact score in the cold war may be debatable—and not necessarily important in itself. What is important, however, is the basis of our foreign policy.

If American foreign policy is being conducted upon the belief—as the President says—that the recent successful Soviet actions are the result of past Soviet policies failing, a rude awakening is due.

The time has come for the Eisenhower administration to get out of its complacent mood, to throw away its rose-tinted glasses, to tell the American people the real facts, however unpleasant, to warm the world that the new men and the new policies of the Kremlin are far more subtle and dangerous than the bluster of Uncle Joe.

Stop all this nonsense about the Soviets failing. We are failing.

Enough of patching up old programs and rejuggling old, obsolete policies.

The United States needs new policies to fit the new facts.

President Eisenhower and his Secretary of State need to get in step with these facts.

Transportation of Alcoholic Beverage Advertising in Interstate Commerce

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. METCALF. Mr. Speaker, I have received the following letter on behalf of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air:

HELENA, MONT., *April 11, 1956.*
The Honorable LEE METCALF,
House Office Building,
Washington, D. C.

Re Alcoholic beverage advertising

DEAR SIR: You are respectfully requested to consider the attached petition, and then kindly insert it in the CONGRESSIONAL RECORD.

Yours very truly,
DOROTHY J. KINDRICK.

Enclosed with this letter was the following petition, signed by 15 residents of Helena:

We, the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air, a practice which nullifies the rights of the State under the 21st amendment to control the sale of such beverages.

At a time when 1 out of 10 drinkers is becoming an alcoholic there should be no en-

couragement to increasing the use of such beverages. Children and youth are being misled to consider them harmless, especially by the audio and visual suggestion of radio and television.

What I Owe My Country

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay by Judy Weber, Gorham-Fayette School, Fayette, Ohio:

WHAT I OWE MY COUNTRY
(By Judy Weber)

"Thank God I—I also am an American," the words of Daniel Webster, should ring from the heart of every youth in our country. Because I am an American, it is my duty to my country to love it, to support the Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

I must love my country. This is America where I can play, where I need not fear, where I can find both self-respect and peace of mind, where I know no hate, where at its worst America is far better than any other nation on earth. For these I give my undying devotion.

I must support the Constitution. By it, many rights and privileges are mine: I may think as I please; I may speak or write as I please; by my right to vote, I may choose public servants; I have the right to a prompt trial by jury; I may attend a free public school; I may worship in whatever church I choose. As an American, I have the right to "life, liberty, and the pursuit of happiness." For these I thank God who guided the authors of this great document; for these I shall do my utmost to support and uphold the Constitution of the United States of America.

It is my duty to obey my country's laws. To accomplish this I must fully understand how our Government operates and what its laws mean. I must exercise my right to vote, for it enables me to help elect capable men to formulate these laws. In obeying these laws, I protect myself and fellow citizens, I help insure peace, I strengthen the power of our democracy. Therefore, for my own good and that of my country I abide by its laws.

It is my duty to respect the flag. It is said that red stands for valor, white for purity, and blue for justice. These represent the characteristics of our Nation's birth and life. By the valor of our ancestors, the purity of our democracy, and the justice of our laws, America answers the cry of every human being for freedom. The red, the white, the blue wave o'er us as a symbol of the freedom and opportunity no other land has ever known. With pride I salute the Stars and Stripes, with sincerity I pledge allegiance to the flag of the United States of America.

If need should arise, it is not only my duty but my privilege to defend America. A million or more of my countrymen have died for freedom, have died that "government of the people, by the people, for the people shall not perish from the earth," have died that I might enjoy the peace and liberty of the greatest Nation on earth. The youth of America are the torchbearers of liberty, so I am proud that, in peace or war, I can take my place in the defense of my country.

America has given me a heritage that I must carry on. It is for the future generations that I must love my country, uphold the Constitution, obey my country's laws, respect the flag, defend America. In doing these things I know I can become the best possible citizen. I am glad to be free to work and play and love and pray as I believe. I thank God I can say as Daniel Webster did, "I shall know but one country—I was born an American; I live an American; I shall die an American."

Outline of Thoughts on the 165th Anniversary of Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. DODD. Mr. Speaker, on May 3, freemen everywhere will salute the Polish people on the 165th anniversary of their constitution day. They do so in honor of Poland's early recognition and adherence to the principle of the equality of man.

Since that day in 1791, constitution day has been commemorated by the Polish people. It has unified the people into a nation dedicated to freedom and democracy.

It is no surprise therefore, that when the Kremlin's puppets came to power in Poland, they abolished constitution day. Moscow's puppets felt they had to destroy this proud memory so that they could trample underfoot everything it stood for.

Today, there are no constitution day celebrations in captive Poland. The equality proclaimed by the constitution in 1791, has been replaced by a police state, where Communist terror divides the people into the rulers and the ruled.

Fat Communist functionaries live in luxury, while the oppressed population lives in squalor.

The dictatorship of the proletariat, supported by slave labor camps run by the Bespitzka, knows only blind obedience to the party and its functionaries.

Nowhere in the world is there less equality, greater class distinction, than in the Communist-controlled countries.

Maybe the Communist have a point when they call for a relentless class struggle. People everywhere sooner or later will join in the struggle against the most oppressive class in the world, the Communist bosses, who represent the climax of reaction.

One hundred and sixty-five years ago, the Polish constitution called for the transformation of tenant farmers into peasants owning their own land. Today, Communist reactionaries disposses the peasants by forcing them into collective farms.

The 1791 constitution abolished the peasant's obligation to work for his landlord. Today, the Communist state is a worse landlord, imposing compulsory delivery quotas.

This is what the Communist call progress, when they deny the people the very freedom, those rights, which they won over a century ago.

Although the Communists suppressed thet celebration of constitution day, they can never suppress its spirit which lives on in the hearts and minds of the people.

Poles never bowed to foreign rule or oppression. They always stood in the front ranks of those who fight for freedom and the right of man. They fought Hitler hordes, while the Communist Red Army twice stabbed them in the back; first by invading their country, and later during the Warsaw uprising. Today, they are engaged in an equally uncompromising struggle against communism. Their resistance to the regime takes many forms and is adjusted to the ability of the individual to do his best under most difficult circumstances.

This resistance is manifest in a few overcrowded churches; in those brave escapees who cross the minefield and barbed-wire fences to reach freedom; in the parents who will not let their children forget the proud history of their country; in the millions who withstand Communist pressure and coercion in their daily life.

To all of them we here pledge that we shall support them to the best of our ability in their unceasing struggle to retain that freedom, that equality, which their own constitution proclaimed so long ago.

Plans Completed for 1956 Congressional Tour of New York City and West Point, May 11, 12, and 13

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. VAN ZANDT. Mr. Speaker, plans have been completed for the annual congressional tour of New York City and West Point for May 11, 12, and 13 for Members of both branches of Congress and their families. The annual tour provides for 3 glorious days in New York at a cost of $37.50 for adults and $32.50 each for children between the ages of 5 and 12 years.

So that the membership may have some idea of the schedule of events for the tour, the following itinerary will be of interest:

SCHEDULE OF EVENTS

Friday, May 11: 9:45 a. m. daylight time we leave Washington via Pennsylvania Railroad (please note change in leaving time). Luncheon will be served in dining car. We arrive New York Penn Station at 1:45 p. m. daylight time and immediately board motor coach for tour of lower New York, including a stop at city hall for reception by the mayor, Hon. Robert F. Wagner. We also stop at the United Nations for a 1-hour tour. We arrive at the Paramount Hotel at about 5:30 p. m. daylight time. At 6 p. m., cocktails and buffet dinner will be served in the Oceanic Room off the lobby to the left of the

elevator. The evening will be open for Members to attend the theater or enjoy the bright lights of Broadway.

Saturday, May 12: 8 a. m., motor coaches will leave for La Guardia Airport where the American Airlines will serve us breakfast in the air—plus an enjoyable air trip over the city of New York, the Hudson River Valley, the State of Connecticut, Long Island Sound, and other points of interest. Eleven a. m., motor coach will take us to the Brooklyn Navy Yard where we will see the largest aircraft crrier in the world—U. S. S. *Saratoga*. Then we step aboard the New York Port Authority steamer for trip around Manhattan with a descriptive tour of New York Harbor docks and facilities. Luncheon and refreshments will be served aboard ship. Four p. m., motor coaches will transfer our party from dock to the Paramount Hotel. At 6 p. m. cocktails and buffet dinner will be served at Hotel Pierre, overlooking Central Park. Motor coaches will transfer our party from the Paramount to the Hotel Pierre. The evening will be open for members of our party to attend the theater and other places of amusement.

Sunday, May 13: Don't forget it's Mother's Day. Nine a. m., motor coaches will take us for our visit to United States Military Academy, West Point on the Hudson. We visit the information center, the museum, Washington Hall, tour kitchens, meet cadet escorts, luncheon, USMA Library, dress parade on the Plain (weather permitting), tour of post, Trophy Point, Cullum Hall, and cadet chapel, including brief organ recital. Motor coaches to Penn Station where we meet at east gate No. 13 to await train departure at 5:30 p. m. daylight time.

I should like to emphasize that this tour is for Members of the Senate and House and their families, and reservations should be made immediately by calling Miss Patricia Bryan, extension 366 or 1830.

Secretary Folsom Gets Blame for Eisenhower Opposition to Social Security Improvements

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, the following editorial from the Capital Times of Madison, Wis., explains very well on one matter how President Eisenhower escapes responsibility of the administration's actions.

The full text of the editorial follows:

One of the mysteries of modern politics is immunity President Eisenhower has from criticism for the mistakes of his administration. It has been most noticeable where the farm problem is concerned.

It was the President who promised the farmers of this country 90 percent of parity in his campaign speeches in Kasson, Minn., and Brookings, S. Dak., in 1952. But when the 90 percent support program was junked, it was Secretary of Agriculture Benson who got the blame from the farmers, although Benson could not possibly have made the decision without Eisenhower's approval.

Another example of this occurred recently when Secretary of Welfare Marion Folsom appeared before a congressional committee to testify against a program to change the Social Security Act to allow women to retire and receive benefits at the age of 62 rather than 65 and allow totally and permanently disabled people to collect social security at the age of 50.

Obviously, Folsom was speaking for the President, who keeps urging liberalization of the social-security laws but who never seems to get around to doing anything about it. Folsom couldn't have been speaking for himself. In the past he has taken a very strong position in favor of these improvements to the act.

As a matter of fact, Folsom, as a member of the social-security advisory board, has pushed for a program that would allow working women to retire and receive benefits at the age of 60, 2 years lower than the present bill provides.

As chairman of the social security committee of the United States Chamber of Commerce, Folsom supported a move to pay benefits to all totally disabled persons.

But now he is Eisenhower's Secretary of Welfare and must represent the President's views. It has, therefore, been necessary for him to reverse his own position on social-security improvements and to speak for the Eisenhower administration against them.

What is remarkable about this situation is that Folsom, in private life, is an executive in one of the biggest banking institutions in the country, National City Bank of New York. It appears that this banker has to tone down his liberal views when he takes a spot in the Eisenhower administration.

The baffling part of it all is that Folsom, like Benson, is getting the blame, while the President seems to be beyond the responsibilities of his office.

Russian Communism Versus Human Freedom

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. FEIGHAN. Mr. Speaker, under leave granted, I wish to insert in the RECORD an address I delivered in Cleveland, Saturday evening, April 21, at the State of Ohio Catholic War Veterans' 11th Annual Convention, held at the Hotel Carter, on "Russian Communism Versus Human Freedom":

It is a great pleasure for me to be with you this evening. I know how each one of you is guided by an unswerving love of God and country. By the very nature of your organization, it is immediately apparent that you are concerned with the preservation of Christian civilization and the American way of life.

I know too that the hardships of life which so many of you have endured in support of those noble ends have taught you the necessity of understanding the forces of evil at work in the world and the folly of looking at the world arena through rose-colored glasses. All of this, of course, gives me assurance that you expect me to talk right from the shoulder and put before you the facts as I know them with respect to the status of Christian civilization and the American way of life, together with an estimate of the prospects for the future.

As a starting point, we might ask ourselves—what is the greatest, the fundamental issue facing all mankind today, and then we should ask ourselves—is this issue the greatest one which confronts all the American people? The need to maintain a healthy and prosperous agricultural economy is certainly an important issue. So also is it important to have an adequate housing and health program throughout the country. No one can deny that we must assure a strong and healthy climate for the growth of organized labor and the free-enterprise system. Most people recognize the need for us to forge ahead in the development of peaceful uses of atomic energy in order that our people may fully benefit from the great scientific advances and the bounties of nature of our generation. Important as each and every one of these issues are, I believe that none of them is the basic or fundamental issue facing our civilization. I believe that the gravest issue of our times is summed up in the case of Russian communism versus human freedom. This issue is all the more fundamental to the American people because the ominous threat of further Communist aggression has caused us to drain from our national resources each year, upwards of $40 billion to keep us in a state of preparedness and to provide our allies the wherewithall to defend themselves against the predatory Russians. If this issue could be resolved beyond any doubt and human freedom would emerge as the sturdy victor, much of these public funds which now go to national defense could be directed at the happy resolution of the other important issues which I have cited. Moreover, the taxpayer could be given a long overdue relief because it is a fact that over 60 percent of the tax dollar must now go for national defense.

I believe on the basis of this logic, that the central issue of our times is the case of Russian communism versus human freedom.

We Americans have been hoping and praying that communism with all its evils and threats to the peace could be banished from the face of the earth. Communism carries with it the seeds of its own destruction, but it appears that the small, tightly organized regime which controls the lives of the people who inhabit one-third of the earth's surface, is well cemented in the Kremlin. Moreover, that group of criminals is now embarking upon a new type of warfare against all civilization. I speak of the Communist claims to "peaceful coexistence" with free nations and people of the world.

On the one hand the Kremlin, through its vast network of propaganda organs, is seeking to convince people everywhere that it seeks peaceful coexistence as a means of relieving world tensions. The Russians hint that they believe in a policy of live and let live. The late Communist Dictator Stalin is now being defamed and undeified by the very men who, for several decades, were his eyes, ears, and willing accessories in carrying out a long list of crimes against humanity. It seems there is no extreme to which the present directorate of world communism will not go to gain acceptance of their proposal of peaceful coexistence.

There are people in our midst today who unfortunately are willing to accept the Communist overtures for peaceful coexistence. Such people attempt to deceive us into believing that the conspiracy of world communism has undergone fundamental changes since the death of Stain. They say that the day of the one-man dictator has ended and that a new day has dawned over the empire of communism in which collective rule will reduce the outrageous inhumanities of the past. These people hold the unfounded conviction that changes can be effected in the basic nature of communism by the process of evolution. Some are so imbued with this false notion that they predict that within 25 years communism and human freedom will fuse and then evolve into a utopia here on earth.

There are others who hold that so fundamental are the changes now taking place within the Russian Communist empire, as to give hope that the tyrannical rule of communism may be superseded by some new

type of government. This new type of government might be similar to the court of the czars, and the likelihood is presented that the so-called military career men will occupy the throne. It is in these circumstances that Marshal Zhukov is now being presented to the American people as the hope for the future, the key to peace, or the balance wheel against those elements in the Communist conspiracy which have been responsible for armed aggression and open war.

We must also recognize that the Russian leaders are quick to take advantage of any opening in the armor of the free world to advance their nefarious cause just as we must be willing to recognize that certain Western leaders have been made unwitting helpers in the present Kremlin offensive of peaceful coexistence.

You will recall the story that was prevalent immediately before the so-called Geneva Conference to the effect that Anthony Eden had to commit himself to such a meeting in order to assure victory at the polls in the British elections. As a result of that Geneva Conference the Russian leaders, Krushchev and Bulganin, are now in Great Britain where they are certain to do great harm to the free world alliances and to further delude the unsuspecting into believing that they are not the arch criminals who were in fact associated with Stalin in his reign of terror over the preceding 20-odd years. I cannot constrain myself from saying that there are some politicians and pseudo statesmen who consider no price too great to pay, either by them or by their native land, in order to win an election.

The evidence as to whether or not the Russian Communists have undergone any fundamental changes following the death of the Dictator Stalin is overwhelmingly conclusive that no change whatever has taken place as to policy or worldwide objectives. The goal to communize the world and to make abject Russian colonies out of every nation of the world remains unchanged.

The Communist determination to use any and all means to destroy civilization and to replace it with the rule of the jungle remains unchanged. There has been a slight shift in Communist tactics calling for louder talk about peace, disarmament, coexistence, and open competition with free governments. The noisy little Russians have proven themselves experts in this field.

The Communist doctrine of peaceful coexistence was originated by the first Communist dictator, Lenin. Twenty-five years ago the official line on peaceful coexistence was laid down by a disciple of Lenin, Dimetry A. Manuilsky. Here is what he said:

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concessions. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fists."

That Communist doctrine has not been altered one iota since the day it was uttered. Communist Party boss, Khrushchev, in a speech before the so-called 20th Congress of the Communist Party during February of this year, restated and confirmed that basic doctrine when he called for a greatly stepped up propaganda, economic, political, and cultural offensive against the free world. He clearly stated that the usual methods of violence would be used only in those countries where the resistance to communism is strong and that the Communist take-over of the neutralist nations could be easily accomplished by what he described as "parliamentary methods" and the deception of the popular-front type of government. For countries well informed on the truth about communism, he ordered an increase in internal subversion through the Communist Party Cadres already organized for that purpose, in order to bring about conditions of extreme violence and lawlessness. It is apparent, therefore, that the United States is marked for violent treatment by the conspiracy of communism rather than the conciliatory and friendly approach the Kremlin leaders have been claiming so loudly of late. Khrushchev, speaking for world communism, removed any hopes there may have been for an end to the cold war and made it clear beyond any reasonable doubt that the Communists are convinced they are moving into an advanced stage of their blueprint for world conquest. To accomplish these objectives all Communist organizations, agents, and fronts have been ordered by Communist Party boss, Khrushchev, to "intensify our efforts in Communist education of the masses and in eliminating the survival of capitalism in the minds of men, make fuller and more active use, to this end, of all the ideological media—propaganda, agitation, the press, radio, cultural and educational organizations and institutions, science, literature, and art."

Amidst the high degree of organized confusion which has descended upon our Nation and other free nations as a result of the campaign for so-called peaceful coexistence being carried on by the noisy little Russians, and the subterranean efforts on the part of some American to secure peace at any price, the true nature and the hideous record of communism seems almost obliterated. The public mind is diverted from the cruel facts and directed toward an illusion of peace. The outstanding accomplishment of the Geneva Conference in my opinion was to humanize the evil little despots who reside in the Moscow Kremlin. Through the Geneva Conference the blood of millions of martyrs was wiped from the guilty hands of Khrushchev, Bulganin and company. The vast benefits which derived from the campaign of truth in which the United States engaged for so many years were brushed aside in one sweep of a hand, grasping a martini cocktail and raised up in a display of comradeship with communism. Bulganin has since reminded the world that the spirit of Geneva gave birth to the martini road—the road to a life worse than death.

I should like to make it clear that I believe President Eisenhower sought the opposite results in Geneva. I am reasonably certain he is as unhappy about the results of the so-called summit as you and I are. But the fact remains that the advisers around him, who should have known better than to lead him into an impossible situation with the Russians, cannot escape responsibility for the terrible setback to the free world and the cause of a just and lasting peace.

Despite the Russian camouflage and the barrage of words supporting the allusion of peace, the record of communism stands as an indelible mark on the conscience of all mankind. This record cannot be brushed aside by pleas for peaceful coexistence or by the clinking of martini glasses, even if those martini glasses are held by the chiefs of state of the western powers.

The evil record of communism must be righted else all mankind will pay a frightening price.

The ugly earmarks of communism are many, and the record of its inhumanities over these past 38 years, if put side by side, would overflow the largest archives in this country.

I believe it will be useful to discuss what I consider to be the outstanding characteristics of communism in practice.

The first is that communism, in order to survive, must destroy whatever civilization it occupies. Communism cannot afford honest and open competition of any type.

Communism still holds to the goal of a utopia on earth, and that utopia is the graveyard of nations. To the communists, all sense of nation and nationhood must disappear and be replaced with a faceless society in which the Russians will be the elite and all else will be hapless slaves.

Man is considered nothing more than an animal, to be used by the state as the state alone sees fit. To the Communist, man has neither dignity, destiny, nor a hereafter.

Man-made famines in which millions of people are caused to die are considered a necessary step toward communization of the world. This accounts for the man-made famine in the Ukraine in 1932–1933 and in Turkestan in 1934, which brought about the death of over 5 million human beings.

The crime of genocide was born and perfected under communism. This is the crime of liquidating an entire nation by the process of forced deportation and dissemination to the four winds. This accounts for the destruction of the Crimean Tatars, the Chechen-Inguish, and the Kalmuk nations, in the course of 24 hours by the cruel process of forced deportation of these people to the barren reaches of Russian Siberia.

Mass murder is a standard practice of communism. In cases where towns, villages, or large areas openly resist communism, mass murder generally follows. For example, the Vinnitzia massacre in Ukraine in which the leaders of a whole region were all executed and buried in mass graves.

The deportation and murder of leadership elements in the nations occupied by communism is standard practice. It is a known fact that whenever Russian communism occupies a country, the first step undertaken by the tyrants is to round up the leaders in all walks of life. These leaders are then deported to slave labor camps in Russia under circumstances in which husband is separated from wife, and children are separated from parents. Specific evidence to this point is provided in captured secret Russian MVD Order No. 001223, signed by General Serov, and carried out in 1941, which sets forth detailed instructions on who was to be rounded up in the Baltic States and how their cruel deportation was to be carried out in the darkness of the night. This is the same General Serov who only several weeks ago was sent by Khrushchev and Bulganin as their trusted friend, to make advance security arrangements for their visit to Great Britain. Another case in point is the infamous Katyn Forest massacre, in which over 10,000 Polish officers, the cream of Polish manhood, were murdered by the Russians and buried in mass graves. These are only two examples of Russian methods used to destroy leadership elements of the nations they occupy or intend to occupy. There are hundreds of others. As a member of a congressional investigating committee, I heard, here and abroad, sworn testimony by eyewitnesses to the inhumanities of communism.

Brainwashing is a new and evil science developed by the Russian Communists as a means of advancing their objective of world empire. This technique has been applied both to individuals and to entire nations. It is standard operating procedure with Communists everywhere. The Russians taught it to their stooges in China, who then applied it to American prisoners of war, missionaries, and other American civilians living in Red China. The Russians also taught this evil technique to their stooges in Hungary, and other captive nations as evidenced by the farcical trial of the beloved Hungarian patriot, Cardinal Mindzenty.

Still another example of brainwashing on a mass scale is evidenced by the techniques of the Russian Communists of calling for peace one day and engaging in threats of armed aggression the next day. By the constant pounding of the slogans of peace and war, peace and war, and peace and war, they hope to break down the resistance of the free people and utterly confuse the nations of the free world.

To me, the standard symbols of communism are, on the one hand, a murder victim with a bullet hole in the back of his head, hands tied by wire behind his back, dumped into a mass grave; and the other is the statue which stands in Moscow of a Russian teen-age boy, who was made a Soviet hero because he betrayed his father to the secret police for withholding grain from the farm collective and for attempting to interest his son in religion.

For the next several weeks our press will likely carry feature stories about the visit of Communist Party boss Khrushchev and "Charlie McCarthy" Bulganin in their tour of the British Isles. No doubt considerable space will be given to the statements made by both these jolly conspirators as they make pleas for a lessening of international tensions, the need for immediate disarmament, and devious pleas for peace—Russian style. We may be certain that the two Russian circus performers will get their deceptive message across to vast numbers of the people of Great Britain and other countries of the free world despite efforts of the British Government to prevent this tour from becoming an overt propaganda campaign.

That is the way the free press works and that is the calculated plan of the Kremlin leaders to use the free press to carry their false message to unsuspecting millions throughout the world.

The British once proudly claimed that the sun never sets on the British Empire. I believe it would be most appropriate at this time for the British to point out that the only real colonial empire left in the world is that of the Russian Communists and the sun never rises over any part of it.

An effort has been under way for some time here in the United States to smooth the way for a visit by Marshal Zhukov. The Red Army has been described as a new force emerging within the power struggle in Moscow. The false notion has been advanced that somehow the Red army is to be distinguished from the criminal conspirators in the Kremlin, and that the Red army leaders are free from the many sins of the elite class of communism. Zhukov himself has been built up in this country as the one likely to emerge as the strong man of the Soviet Union. By a strange process of reasoning, he has also been built up as a hoped for guardian of the peace. Neither one of these assumptions can be supported by facts. To begin with, the Red army and its commanders are as integral a part of the international Communist conspiracy as is the MVD, the MGB, the Russian diplomatic corps, and the Communist Party in the United States. All of them are dedicated to the singular goal of communizing the world. None of them have differences as to how this goal shall be accomplished. They all subscribe to the belief that any and all means must be used to attain the goal of world empire. Zhukov has no more freedom of individual action than Molotov, Molotov has no more freedom of action than Mikoyan, and so it is with any and all of the Communist oligarchy.

Yet, with all of this, there are disturbing signs that Zhukov may be invited to visit our beloved country sometime in the late summer or early fall to be given the welcome of a comrade in arms. His visit may even be scheduled as a personal one, and the fulfillment of a hope that he expressed in the flush days of victory shortly after the fall of Berlin. Whatever the reason or the climate engineered for this visit, in the background will be draped the illusion of peace.

I am sure the American people do not want peace at any price. I am certain that the building of false illusions of peace can lead us nowhere except to a cruel and devastating war. I remain convinced that we can only prevent war and find the way to just peace by adopting a course of action which excludes the use of rose-colored glasses in charting that course.

I believe that we must maintain a completely adequate and battle-ready national-defense force. That force must be buttressed by the maximum utilization of all the scientific advances which will give us assurance that we can quickly and completely defeat any enemy who attempts aggression or, indeed, the destruction of the United States. I believe that it is imperative that we stand by our proven allies, that we extend to them necessary military and economic assistance so that they will be strong allies when needed. I believe equally that we must not squander our great natural resources upon nations whose reliability is questionable and who have yet to prove their friendship for the United States springs from allegiance to those great moral and political truths which have inspired mankind down through the ages.. I believe it is flirting with disaster to engage in any trade whatever with the Russian Communist Empire, which, in my judgment, includes Communist occupied China. I also believe that the United States Government must undertake an all-out campaign to accomplish these two objectives on a worldwide basis—

1. To inform all the people of the world concerning United States hopes and aspirations for them and our desire to bring about a genuine world peace and to restore the family of nations into which every nation, large and small, has en equal sovereignty.

2. To reawaken the conscience of all civilization to the cruel record of inhumanities which stand as the earmarks of communism everywhere it has festered and taken root. It it our moral duty as good neighbors and brothers to other people of the world to alert them to the true facts of communism and what it does to all religions, all cultures, all languages, all traditions, and every nation.

It has long been my belief that we are losing the worldwide struggle for the minds of men. This has not been the fault of any administration or any individual. It has, in my judgment, resulted from the fact that we, as a Nation, have not yet come to realize the full power of ideals and ideas when they are applied to the many medias of mass communication. We should make an honest evaluation of what the Russian Communists have done in this regard. I believe it is fair to say, in the case of communism, that never have so many people been fooled and misled by an appeal which has so little to claim or hold adherents.

For these reasons I introduced in the last session of Congress a resolution calling for the establishment of a joint committee of Congress on United States international information programs. That resolution makes clear that the time has come for us to make maximum use of an international information program in the struggle for the minds of men. I believe that Congress, through such a joint committee, can make an ever increasing contribution in the direction of a just and lasting peace and the prevention of war. I am hopeful that Congress will establish such a joint committee and that we can go forward with a winning program against the latest Communist propaganda offensive which they are carrying out under the slogan of "Peaceful coexistence."

This is a cause in which we must not hesitate. The survival of Christian civilization and the American way of life hangs in the balance. The hour is already late. I am confident that despite the organized confusion which has descended upon us, we will soon awaken to the grave danger of the latest Russian propaganda offensive and go on to win victory in this worldwide struggle of ideals and ideas.

Selling America Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1956

Mr. HILLINGS. Mr. Speaker, my recent visit to the Soviet Union impressed upon me the need for supplying our representatives behind the Iron Curtain with the very latest in American automobiles and technical equipment in order to give an outward indication of our advanced standard of living in America.

The Communists have a modernistic society. They are impressed by the latest American technical equipment because it shows them what actually can be done under the capitalistic system which they have been taught to hate and ridicule. I was amazed during my visit to the Soviet Union and five satellite countries to find that our Foreign Service and personnel were driving antiquated automobiles while diplomats from other western countries had later and more efficient cars. A modern day automobile driving through the streets of Moscow can do much more than most westerners can imagine to make the Russian people realize that the standard of living under our capitalistic society is far better than the Russians have been taught.

Fortunately, action was taken recently to provide a better automobile for the American Ambassador in Moscow, and I hope that consideration will be given to further improvements in this field.

Mr. Wayne W. Parrish has written a thought-provoking article in the April 9 issue of American Aviation which discusses this situation.

The article follows:

PERSONAL VIEW

(By Wayne W. Parrish)

IT'S THE SEASON FOR GOING OFF ROCKERS

What in the world has happened to the perspective of newspaper reporters, columnists, and radio-TV commentators, to go so far off the beam in reporting the arrival in London of a Russian-modified jet bomber?

Give full credit to the Soviets for everything they've been trying to do in the air world, but the Tu-104 transport isn't quite the millennium which the British reporters hailed it to be.

For grown-up, supposedly experienced and alleged mature writers and commentators to go so extravagantly overboard as to say that the Russians have moved ahead of the aircraft builders of the West is the greatest sort of nonsense.

Have the British reporters forgotten completely the commendable advances made by their own country in jets? And have the

American commentators decided to overlook all of the enormous progress made in this country?

The hysteria and panic surrounding every Russian air advance in childish. It seems particularly so ever since we visited the Soviet Union a few months ago.

We remember vividly an incident in San Francisco a few years ago. A Norwegian airline friend who had visited Russia in 1946 was on the west coast and in a few hours we undertook to give him a quickie tour of one of the world's most spectacular cities. Naturally the tour led to the Top of the Mark, the cocktail lounge on top of the Mark Hopkins Hotel.

My Norwegian friend walked slowly around the four sides overlooking San Francisco Bay and the city. It was dusk and the lights were coming on everywhere. He didn't say a word until he had taken in the entire view. Then he stopped, thought a moment, and said: "And America is afraid of Russia."

There was a lot of impact in that one sentence. Europeans especially cannot understand why the great and powerful United States cringes every time the Soviets make some particular advancement, because the gap between the two economies is enormous. Certainly the Russians are trying hard; certainly they've made strides in nuclear and military aircraft fields. It would be strange if they didn't. But for British and American reporters—and such superficial commentators as TV's Dave Garroway—to imply and state that the Russians have forged ahead of the West is both juvenile and dangerous.

All of this points up the stupid approach this country has made in its relations with the world, especially toward Soviet Russia. It is now clear that the rivalry has moved over more to the economic and political realm rather than military. And how are we acting? As usual, behind the times.

Take a simple matter like automobiles. The United States is deservedly proud of its enormous automobile production and all of the glitter, appeal, and power of the new models. But what sort of automobiles do you think are operated by Americans in Moscow? Our American Ambassador has an old black Chrysler. Most of the other cars are old, dark Chevrolets. But even these old cars attract attention in a Russia which has lagged decades behind in automobile development.

Wouldn't you think that one of the most dramatic demonstrations of this country's economic power would be to place at the disposal of the American diplomatic force in Moscow one each of our latest models? They would be sensational. Crowds would surround each one of these cars wherever they stopped in the city. The only—repeat only—reasonably up-to-date American car in Moscow is a blue-gray Ford owned by a Canadian.

What a showcase we could have behind the Iron Curtain. But has any American automobile manufacturer stepped up to offer one each of his models as demonstrations of American free enterprise behind the Curtain? Has a single bird-brain of the State Department made a move to cut through redtape and get some modern cars where they can do some good? No indeed. It is very difficult to penetrate the Iron Curtain with any sort of information about America. Automobiles would be one of the most effective.

And here is another demonstration which would cause a terrific sensation behind the Iron Curtain. Fly those automobiles to Moscow in Globemasters. The Russians have never seen an airplane like the big Globemaster. Under diplomatic license, the Soviets could scarcely refuse a request by the United States to deliver supplies to its own people in Moscow. (Believe it or not, but C–47's now do the job.)

A Globemaster flying to Moscow airport with 2 or 3 cars plus other supplies, would be one of the most dramatic and effective bits of public relations propaganda this country could do. Word of such a feat—unheard of in Russian airpower—would be passed along all over the country. Why hasn't it been done?

And for a final point, on the basis of our own trip to Russia, we would recommend inviting Messrs. Bulganin and Khrushchev to visit the United States. We would like to have them see the tremendously great city of New York, then quickie visits to Washington (by air over the vast industrial complex en route), then over Pittsburgh to Cleveland and Detroit, then Chicago and hopping to Denver, San Francisco, Los Angeles, Dallas, and Fort Worth, then a drive 20 miles up Collins Avenue in Miami Beach in daytime and return at night.

Ignorance is one of the most dangerous things in this world. If the top Russian leaders ever got a good first-hand glimpse of this great country, a lot of nonsense would cease. Or at least they would know whereof they talked. Contrariwise, we recommend for every British and American writer and commentator who praised the Tu–104 into heavenly extravagance a 2-weeks trip to Russia. It's time a little sanity and reality came into the loose talk going on about the Soviets against the West. When Russia completes paving the only highway between its two biggest cities, then there will be ample time to start making a few comparisons.

Disposition of Land Utilization Project

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to present herewith a resolution unanimously adopted by the Claiborne Parish School Board at its meeting of April 2, 1956. I feel this resolution is important to my congressional district and I commend it to the attention of the Members of Congress:

The Claiborne Parish School Board met in regular session at its office in the town of Homer on the 2d day of April 1956, a quorum being present, and at which meeting the following resolution was unanimously adopted:

"RESOLUTION

"Whereas it is reliably reported that the Interior Department of the United States Government has under consideration the release of the Cornie Lake project in the State of Louisiana, Parish of Claiborne, better known as LA–LU2, to either a private concern or a State body; and

"Whereas this property originally belonged to the citizenship of those communities therein involved; and

"Whereas the people sold this property to the Federal Government with the understanding that it would be developed for the betterment of the adjoining communities; and

"Whereas it is the understanding of the Claiborne Parish School Board that the Claiborne Parish police jury has applied to the Interior Department as a Claiborne Parish agency to obtain through gift or purchase the entire LA–LU2 project, better known locally as the Cornie Lake project; and

"Whereas it is the belief of the Claiborne Parish School Board that this land should be returned to a local government agency where it can receive more personal interest and better administration: Now, therefore, be it

"*Resolved*, That the Claiborne Parish School Board pledges its support and efforts in close cooperation with the Claiborne Parish police jury and all other civic organizations in their efforts to obtain this project in the name of the Claiborne Parish police jury; be it further

"*Resolved*, That copies of this resolution be sent to Secretary of the Interior Douglas McKay, Congressman Overton Brooks, Senator Russell Long, Senator Allen J. Ellender, Representatives Hale Boggs, F. Edward Hébert, Edwin E. Willis, Otto E. Passman, James H. Morrison, T. A. Thompson, and George S. Long."

Motion for adoption of the foregoing resolution was made by E. I. Buckner, seconded by Otis Welch, and unanimously adopted on roll call.

I hereby certify that the above and foregoing is a true, correct, and exact copy of a resolution adopted by the Claiborne Parish School Board, Claiborne Parish, La., on the 2d day of April 1956 at a regular meeting of that body.

This the 16th day of April 1956.

F. C. HALE,
Secretary, Claiborne Parish School Board.

Mom and Dad and the Tax Season

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. REUSS. Mr. Speaker, 2 years ago when Congress advanced to April 15 the deadline for filing income-tax returns, I think we may have overlooked one very unhappy result of this postponement. The following letter from a 14-year-old constituent of mine seems to me worthy of serious consideration:

MILWAUKEE, WIS., *April 16, 1956.*

DEAR MR. REUSS: Lately mom and I have been discussing my father and the Government. Mom has been confined to the house during the past few days and so was unable to work with dad down at the office. Dad is an accountant. Lately I have thought a lot about taxes. I suppose everybody comes in contact with them, whether it be through paying them or by jokes and cartoons about them. Then there are the kids of lawyers and accountants who know tax season as a time when dad or dad and mom (as in my case) work 7 days and 6 nights a week. Always, however, there was a time when it would end, usually March 15.

As I got older (about 11 or 12 years—I'm 14), I began to take on the responsibility of making supper for my sister and brother so mom and dad could work longer. Then about 2 years ago an announcement was made. Now us kids of lawyers and accountants must wait another month before we can see and get acquainted with our parents.

I'm not kidding when I say "get acquainted" with them. I hardly know my father because he is gone nearly all the time. On rare occasions he'll come home for dinner (this is only during tax season). When he does come home, what do I see? I see a man with bags under his eyes that would have rivaled Fred Allen's. His face is lined with worry and fatigue. He's beat. The first

thing he does when he gets home is go upstairs to sleep before supper. Then he takes his stomach medicine (so he doesn't get ulcers), and all during supper he talks of tax returns. After supper (every night except Sunday) mom would go to the office with him until 12 midnight, leaving me to take care of the house.

Being the oldest of three children, I think I notice more than the others. I don't like what I see. It seems that since the change the years have gotten worse. Dad finds less and less time to be with his family and relax. This year was the worst.

Now that the date was moved up, dad has no time to relax because after the season ends everybody's payroll must be figured. After that is through something else comes up. He doesn't get a chance for a vacation until late June or July, sometimes not even until August or September. (Before the change dad took a vacation right after March 15.) I'm terribly worried that this sort of schedule is going to ruin his health, both mentally and physically.

Often I've thought of writing to you for help, but I just never got around to it. When mom injured her eye, thus making herself unable to help dad, I felt that something must be done.

You've probably guessed what I have been leading up to: "Couldn't you do something to change the date back to March 15?"

I hope you will give my plea more than just a passing glance and try to do something. I guess I'm not just asking for myself, but for all the worried kids of lawyers and accountants who would like to get acquainted with their moms and dads (during tax season).

Sincerely,

KAREN WEINER.

Earn Anew Our Heritage

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. SHORT. Mr. Speaker, George E. Stringfellow, a native of Virginia, and a director and senior vice president of Thomas A. Edison, Inc., was for many years a daily business associate of Thomas Alva Edison.

No one, of course, could associate with Thomas A. Edison for long without becoming a bigger and a better person, but George Stringfellow was born with certain elements of greatness in him. He was endowed with a good mind, a healthy body, a searching conscience, and untiring industry. I can truthfully say that he is one of the sweetest characters and noblest men I have ever met.

Because of his innate sterling qualities he has become a member of the board of directors of some of our largest American corporations, and has unselfishly devoted his time to the building of good American citizenship. Many institutions of culture and of learning have bestowed upon him great honors and he has freely given of his time and substance to the building of a stronger and better America.

Under leave to extend my remarks I include the following address which George E. Stringfellow recently delivered before a distinguished group of fellow countrymen:

EARN ANEW OUR HERITAGE

(Remarks by George E. Stringfellow, senior vice president, Thomas A. Edison, Inc., West Orange, N. J., and imperial assistant rabban, AAONMS, before the 20th annual Masonic communion breakfast, Millbrook, N. Y., April 8, 1956)

Brother Charles W. Tripp, chairman, 20th annual Masonic communion breakfast of the Masonic fraterny of Dutchess County, N. Y., distinguished guests, and brother Masons:

I am highly complimented by Brother Tripp's introduction, by your reception, and by your invitation to address this large gathering of topflight citizens of Dutchess County.

May I at the outset pay my respect to Capt. Maurice M. Witherspoon, grand lodge officer of the Grand Lodge of Free and Accepted Masons of the Empire State. Brother Witherspoon is one of the most effective citizens I have ever known. It is an inspiration to be associated with him in any endeavor.

Now a word about my genial host, Brother Hugh G. Collins, one of your outstanding citizens at whose home I enjoyed the rare privilege of spending last night. Brother Collins and his charming counterpart possess the rare ability of making one feel at home, away from home. I appreciate their hospitality no end.

I have selected as my text the 28th verse of the 22d chapter of Proverbs: "Remove not the ancient landmark, which thy fathers have set."

Amid the hills and valleys of rugged New Hampshire a visiting minister, scanning the time-worn inscription on the old tombstones of a cemetery, read these impressive words: "My son, that which thy father hath bequeathed, you must earn anew if you would keep."

Would that this truth, carved in old New England granite, were etched today in the minds and hearts of every American.

No people in history have enjoyed as great a physical heritage as we. Resources of mine and soil, water, field and forest, have been given to us in prodigal abundance. The power and wealth which have arisen from the use of these resources are beyond comprehension, unrivaled by any empire, past or present. Every American has a material heritage whose equal is to be found nowhere in the world. Truly, God has been good to us.

We are, however, the possesors of spiritual heritage, which transcends our physical heritage as the sun surpasses in all its splendor the faintest star.

The Mayflower Compact was the first of the notable documents marking the birth of our Republic. Its opening sentence: "In the name of God, Amen," is followed by these spiritual and significant words: "We have undertaken for the glory of God and the advancement of the Christian faith."

In the stormy days of 1620, haunted by privations and tortured by anxieties, God was the refuge and the everlasting hope of our Pilgrim Fathers and so He is today. It is difficult for us, in our comparative comfort and prosperity, to appreciate the hardships endured by those first settlers.

They established here the right to worship God according to the dictates of our conscience. Moral conviction motivated their decisions as it should ours. They built here a society which would reverence and serve God. He, therefore, supplied life and strength to their activity.

A century and a half following the landing of the Pilgrim Fathers, the signers of our Declaration of Independence (many of whom were members of our craft) held that moral laws are beyond the power of Government to alter or override. In the opening sentence of that passport to freedom, our forefathers grounded their purpose and faith in the conviction that the laws of nature and nature's God must prevail. In the final paragraph it appeals to the Supreme Judge of the world for the rectitude of their intentions. In its closing sentence, their trust in God was revealed in words which will ring through the corridors of time, or as long as men cherish liberty: "We mutually pledge to each other our lives, our fortunes, and our sacred honor."

George Washington while presiding at the Constitutional Convention debates rose at a critical moment and exclaimed: "Let us raise a standard to which the wise and honest can repair; the event is in the hand of God."

God had a hand in the development of the Constitution which made us a free and prosperous people. Gladstone described our Constitution as the most wonderful work ever struck off at a given time by the brain and purpose of man.

In his Farewell Address, almost a decade later, Washington reminded his fellow countrymen that religion and morality lead to political prosperity. This is an admonition we should never forget—religion and morality lead to political prosperity.

Our fair land was born and nurtured as a religious community and dedicated to human liberty and the dignity of man. Our Founding Fathers were brave because they were God-fearing men and men of intellectual integrity. They had iron in their backbone and granite in their character. They prayed to God and their prayers and efforts brought forth a form of government that wise and free men hold dear.

We are the possessors of a great spiritual heritage. If it is to endure, it must be earned anew by each succeeding generation.

Have we earned anew that which was bequeathed to us?

There is disquieting evidence that many of us have drifted from the principles that made ours a great country.

For example, when flagrant political abuses were called to the attention of a high public official, he remarked, "We have violated no law."

One assumes that he meant man-made law. I would remind him that there are moral laws which have traditionally transcended man-made laws.

We Masons understand that as citizens we are bound to obey the laws of God as well as those made by man, and that when man-made laws conflict with those of God, His laws must prevail.

George Mason, distinguished author and leading lawyer of his generation, said, "The laws of nature are the laws of God, whose authority can be superseded by no power on earth. A legislature must not obstruct our obedience to Him from whose punishments they cannot protect us."

We must be ever mindful that our Nation is a gift from God, and that we are His people.

"People who are not governed by God," said William Penn, past grand master of Masons of the Keystone State, "will be ruled by tyrants." The grim proof of this statement stretches from Herod to Hitler.

Our forefathers built on this continent a nation which, for prestige, wealth, and power has never had an equal. But our material success has brought with it major hazards.

In our material gains we have suffered grave spiritual losses. We have too often placed temporal things above spiritual values. In a large measure, we have lost the sacred convictions which were powerful factors in the lives of those who laid the foundation of America.

However, there are hopeful signs of better life for our country. The Scouts and "Y" groups continue to grow. Public schools now stress moral values. Church attendance is increasing. In the period from 1945 to 1955 the number of church members in the United States increased from 72 million to 97½

million—an increase of 36 percent, as compared with an 18½-percent increase in the Nation's population. Today, 59 percent of the population of the United States are church members, as compared with 16 percent in 1850, when the record was first available.

During the last 10 years, the Masonic population has increased from 2,868,000 to 3,965,000—an increase of 38 percent. There is significance in the fact that growth of Masonic membership is in direct ratio to the increase in church membership.

If we are to retain and be worthy of our spiritual heritage, there is much for each of us to do. We must place God first in our lives. We must obey the laws of God and man, and when the latter conflicts with the former, work for their repeal. We must give our churches our time—our talent—our treasure. Incidentally, this will help increase the membership of our fraternity.

We must be stewards of the precious gifts God has given us. We must discharge our duties as citizens, voting faithfully and intelligently. We must always place the welfare of the people ahead of that of any political party. We must concern ourselves with what is right, rather than with who is right.

If we would save the world for democracy and decency, we must emulate St. Paul, who, crying that the days were evil, labored to improve them. We must not follow Hamlet who cried that the days were evil and cursed them.

"With God all things are possible." Apathy can be changed to action. We Masons can help make ours a better country and a better world for our children and their posterity.

Let us remember the everlasting words of that great Chinese philosopher, Confucius, who 2,400 years ago said:

"With righteousness in the heart, there will be beauty in the character;

"With beauty in the character, there will be harmony in the home;

"With harmony in the home, there will be order in the nation;

"And with order in the nation, there will be peace in the world."

If we earn anew our spiritual heritage, we need not fear the future.

Broadly speaking there are three kinds of minds in the world which we might generally classify as follows:

1. Little minds that think in terms of people, personalities, and pettiness.

2. Medium minds that think in terms of the immediate past and current events, and

3. Big minds that think in terms of principles and ideals.

Our fraternity and our way of life were conceived and implemented by men of big minds. Let us as Masons emulate them.

Skilled Manpower and National Strategy

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a study made by Dr. Harry H. Ransom, professor of defense studies at Harvard University, entitled "Skilled Manpower and National Strategy":

SKILLED MANPOWER AND NATIONAL STRATEGY—THE RACE FOR SUPERIORITY IN A VITAL SECRET WEAPON

(By Dr. Harry H. Ransom, Harvard University)

On a blustery day in late March (1956) a sleek, twin-jet Tupolev-104 [1] passenger plane came down through the rain clouds to land at the London Airport. Its main cargo was "Ivan the Terrible" Serov, chief of Russia's security services, who had been transported to England in a 3½-hour, 1,564-mile flight from Moscow.[2]

The TU-104 plane excited more attention than the appearance of General Serov, in England to supervise security arrangements for the visit by Khrushchev and Bulganin. Aeroflot's [3] jet airliner was "new evidence of the remarkable advances in aircraft design made by Russia during the last few years," according to a leading American aviation publication.[4] It is powered by two of the largest turbo-jet engines operating in the world today. Its design is said to be similar to that of the standard Russian medium jet bomber—the "Badger."

Some months earlier, in a seemingly unrelated and far less publicized activity, an admiral of the United States Navy made a speech to an East Orange, N. J., conference, sponsored by the Edison Foundation Institute. In this speech, Rear Adm. Frederick R. Furth, Chief, Office of Naval Research, warned that Russia had begun to outgain the United States in the training of scientists, engineers, and technicians. He noted a specific symptom of the problem when he said that in the fall of 1955 only 125 new college-trained physics teachers were available for the 28,000 high schools in the United States.[5]

While there is obviously no direct connection between the Soviet achievement of producing the TU-104 jet transport and last fall's shortage in the United States of high-school physics teachers, there is, however, a relationship here of crucial importance to the Nation's long-range strategic plans for security.

WINNING THE TECHNOLOGICAL RACE

United States Armed Forces today are engaged in a technological race with the Soviets. The outcome may affect national survival. America's defense-policy-makers, both civilian and military, now are showing increasing awareness that this race may be won or lost in the field of research and development, and ultimately in the nation's classrooms. This awareness is evidenced by a considerable amount of publicly expressed alarm not only about Soviet weapons systems achievements but also over the long-range implications of an impending United States shortage of high-quality scientific and engineering manpower.

Any projected strategic plan to contain Soviet expansionism or to deter aggressive war by the Communists obviously must be based on a careful calculation of Soviet military potential. And plans to win a war we cannot deter must be the result of the most precise estimates possible of national strategic capabilities.

Students of strategy know that a nation's economic potential is one of the most relevant indicators of strategic capability. Competent analyses of the foundations of national power have always taken into account scientific and technological skills—a basic ingredient of national economic strength and military potential. These skills now must be accorded an even greater importance in estimates of the future strategic capability of a nation.

NEED FOR AN ACTION POLICY

An essential ingredient in an action policy for national survival thus must include the building of an educational framework which will assure the required amount of skilled manpower. The increasing shortage of this essential element of national strength now must be given a very high priority as the Nation begins to implement its strategic plan for the long haul.

The many immediate specific scientific problems involved in the development of complex weapons today tend to obscure the long-range consequences of our increasing skilled manpower disadvantage vis-a-vis the Soviet Union. Current problems with strategic implications include how to put successfully a man-made satellite in an encircling orbit around the earth; how to develop missiles with intercontinental range and accuracy; how to build atomic reactors to power ships and planes, or economically to heat, air condition, and light future cities; and how to solve the problem of the Nation's dwindling natural resources.

Our success in these and other projects will constitute an important variable in long-range strategic calculations. The strategic doctrines, composition, size, and missions of our Navy, Army, and Air Force of the future also will be profoundly affected by our achievements in these projects and by other unpredictable technological breakthroughs. Whatever develops, it can be predicted with confidence that the need for well-trained scientists and engineers, both in and outside the military services, will increase constantly.

This resource will become increasingly important as a measure of our own military capability, as well as that of the potential enemy. But the alarming fact is that we are not insuring the supply of this vital human resource in the future.

And the published facts of the growing scientific and engineering capability of the Soviet Union are equally disturbing. Some encouragement may be found, however, in the increasing, if belated, attention now given this problem by United States policymakers.

SOME SIGNIFICANT FACTS

Here are a few of the more significant cold facts, made public in recent months by Government officials:

Universities and technical institutions in Soviet Russia are graduating engineers in numbers some 2½ times greater than are similar institutions in the United States.

The United States is now training only one-half its required number of engineers and scientists.

A recent report of the congressional Joint Atomic Committee (March 1956) reveals that the combined total of engineers and scientists of the United States and 15 Western European nations is about 1,150,000. The Soviet Union total is 890,000 scientists and engineers, not including the satellites and Red China. The Soviet total exceeds that of the United States, and is more than three-fourths the number available in the free nations of Europe combined with the United States.

Most experts seem to feel that Russian scientists and engineers in most fields cannot be considered inferior to our own.

In the decade 1950–60, the Soviet Union is expected to produce 1,200,000 trained engineers and scientists compared to our 900,000.

Even the combined advantage in this regard which the United States and countries of Western Europe has held is being seriously threatened by the Soviet Union.

Half of our high schools teach no chemistry or physics. And much of the mathematics and science is being taught by teachers untrained in these fields.

The number of qualified science teachers in the United States high schools has fallen off 53 percent in the past 5 years, while high school students have increased by 16 percent.

In 1890, 2 generations ago, 1 in every 5 high school stndents in the United States studied physics. Today the figure is about 1 in every 22.

Footnotes at end of speech.

In the category of engineers alone, the Soviet have multiplied the numbers tenfold since 1930, when records show they had 41,000 engineers.

The following chart gives a graphic indication of how United States production of scientists and engineers compares with Soviet Russia. The most disturbing aspect of this picture, of course, is the trend line beyond 1956.

(Chart omitted.)

The absolute accuracy of figures on Soviet technical manpower cannot, of course, be assured. Not only do Soviet statistics sometimes have a questionable validity, but there is also the problem of measuring quality. One might normally discount the kind of chest thumping evident at the recent Soviet 20th Party Congress in Moscow (February 1956) over their claimed superiority in scientific personnel. Premier Nikoli Bulganin referred to technical experts as the Soviet Union's gold reserve. The current 5-year plan calls for 4 million new specialists by 1956. This would exceed the Soviet combined output of the two previous plans.

Yet obviously we do not have to look to Communist propaganda to discover cause for concern. The words of our own Government officials—both civilian and military—and the unclassified facts, such as those above, are alarming enough.

THE CATFISH AND THE HERRING

The British historian Arnold J. Toynbee tells the story, in the context of discussions of the free world-Soviet struggle, of the catfish and the herring. It is the tale of the fisherman who continually returned to port with a catch of herring far fresher than that of his colleagues. Thus his fish brought a higher price. Eventually the other fishermen learned the secret. The cagey fisherman always dropped a live and hungry catfish into the tank containing his homebound load of herring. The herring were thus kept active on the voyage to market by attempting to avoid the jaws of the catfish. A few herring was lost en route, but most of them arrived in port alive, fresh, and highly marketable.

The Soviet "catfish" has brought critical self-examination to the West in many fields. These include our sea power, the missile program, and airpower. None the least of these in long-range importance, however, is the need for more trained scientific and engineering personnel than are now being produced or projected for the future. This has become a crucial national security problem. This need is more often discussed today in terms of development of weapons in the armament race with the Soviet Union. And weapons, of course, constitute an urgent consideration in view of notable Soviet achievements in this field. But this is only one side of the coin.

Recently such officials as Secretary of State John Foster Dulles and Atomic Energy Commission Chairman Lewis L. Strauss have been explaining that the long-range security of the United States, and perhaps even the outcome of the cold war, may be acutely affected by a continuing shortage of scientists, engineers, and other technicians.

EXPORTABLE TECHNICIANS AND THE COLD WAR

The armaments race implications of this shortage are obvious, but there is an equally important factor less recognized. That is the prospect, as expressed by Secretary Dulles and others, that the Soviet Union's ability may surpass ours to raise and disperse a force of technical assistants all over Asia and Africa. Looking ahead 10 years, Secretary Dulles has voiced concern, not that the Soviets will have a true, exportable surplus of capital or goods, but an exportable surplus of technicians. And note, also, that these will not be just qualified scientists and engineers but the same individuals will be well-trained in the art of political subversion.

The United States, already running short of scientists and engineers, under present trends may not be able to compete effectively with Soviet offers of this kind of technical aid to those so-called uncommitted areas. The solution to this grave national security problem demands attention in the highest councils of Government.

Those concerned with the implications of scientific and engineering manpower to national strategy will do well to consult two important and easily available recent publications relating to this problem. These are the report of Congressman MELVIN PRICE's Subcommittee on Research and Development, Congressional Joint Committee on Atomic Energy, Engineering and Scientific Manpower in the United States, Western Europe, and Soviet Russia (March 1956); and Dr. Nicholas DeWitt's (Russian Research Center, Harvard University) Soviet Professional Manpower: Its Education, Training, and Supply (National Science Foundation, Washington 1955).

Even in the unlikely event that "peace breaks out" as a result of feasible East-West disarmament agreements, it should be added that the need for more scientists and engineers would then possibly be greater even than in the present partial-war economy.

STOCKPILING A VITAL HUMAN RESOURCE

The Soviet "catfish" is incentive enough, nonetheless, to justify a program of stockpiling scientists and engineers with at least the same degree of national urgency, and with the same generosity of funds, brought to bear in recent years on stockpiling critical war materials. The precious human resources needed to fill future national security needs cannot, of course, be ersatz or jerry-built.

The future security of the nations of the free world will depend to a certain extent upon their educational equipment for engineering and scientific training. This, in turn, depends upon the number and quality of educational institutions, their teaching staffs, curriculum, and student enrollment, and their financial support. These are the vital secret weapons for which those responsible for national strategy must develop an urgent action policy.

TOWARD A SOLUTION

An action program, although urgently needed, must be based on the most careful examination and diagnosis of the causes of the present and impending shortages of skilled manpower. No crash program can magically produce the numbers and quality of trained personnel needed for the Nation's future prosperity and military security. These can be produced only as the result of carefully prepared plans for readjustment of our total educational system. But such an alteration must come only after a collection and full analysis of all relevant information. This can best be done by a Presidential commission or a congressional committee.[6]

There is a mass of information now available, however, which offers clues toward a solution to the problem. It is well known that millions of American youth have been denied adequate educational opportunities. Millions of words have been written, and hundreds of pages of testimony taken, about the urgent need for more schoolteachers, more school construction, and improved curriculums. Because of complex political, social, and economic factors, however, these needs are being met only with agonizing slowness. The matrix of federalism, intergovernmental competition for the tax dollar, unhealthy condition of many State and local financial structures, and disagreement on solutions both among professional educators and among politicians, seem at first glance to be insurmountable obstacles. Yet these significant elements in the problem must be faced before adequate solutions can be found.

There is information already available indicating one important area where weakness exists. It is known that in the United States only half of the high-school graduates who are potential science and engineering students enter college. And less than half of these who embark on science and enginering studies actually complete their work for a college degree in these fields. There is obviously a high degree of loss, then, in high school, between high school and college, and in college. This amounts, in fact, to an 80 percent wastage of potential enginering and science talent, for of every 10 high-school students with theoretical capacity for potential careers in science and engineering, only 2 actually earn the college degree.[7]

A major factor in this attrition is an economic one. College education is becoming increasingly expensive. Although the availability of scholarship money has increased, the education "buying power" of scholarships has decreased. It is clear that this aspect of the problem can only be solved with increased financial aid from private corporations, the educational foundations, individual donors, and the Federal and State governments. Surely, the Federal Government's role will have to be a major one in the provision of scholarships, teacher training and physical plant. Attention must not be directed, however, at the college level alone, for the problem also has roots in the secondary, and even elementary, school systems.

There is a long and disturbing history of decreasing interest at the high school level in subjects basic to college study of engineering and science, such as mathematics, chemistry and physics. What seems to be a decreasing interest, however, may only be the result of two major factors: a shortage of competent teachers and an overemphasis, in planning the curriculum, on "generalized" education.

For many complex reasons the number of college-trained scientists and engineers also is steadily declining. Graduates in engineering and science who received degrees with the class of 1950 comprised nearly 25 percent of the entire class. In 1954, these represented about 18 percent. According to predictions, those of the class of 1960 will comprise a bare 15 percent of the total number of college graduates.[8]

REPAIRING THE EDUCATIONAL FABRIC

It is abundantly clear that the total fabric of our educational system needs repair. It is somewhat surprising that in an age of technology this Nation, whose technology surpasses all, should find itself facing serious shortages in such a vital resource as skilled manpower. This argument, parenthetically, should not be taken as one for deemphasing liberal arts education, particularly the social sciences. To the contrary, it should be noted that the increasing complexity of our technological society demands extra attention by social scientists. This developing "cold war of the classroom" obviously cannot be won without effective action on the basic ingredients of victory: students, teachers, the curriculum, adequate finance and educational facilities.

It is all too clear that our chief competitor, Soviet Russia, has long since faced this problem with a dogged determination not to be caught short in these vital resources. Russian technological achievements—such as that TU-104 which landed in London last March—are an indirect result of an intensive kindergarten to graduate school program over the past several decades to assure an adequate supply of scientists and technicians. If they surpass us in this human resource, they have gained a crucial long-

Footnotes at end of speech.

Footnotes at end of speech.

range advantage in a primary element of military and industrial strength.

THREAT COMPARABLE TO HYDROGEN BOMB

We may take some comfort in the faith that our spirit of academic freedom, which does not exist in Russia, is a built-in guaranty of superior quality. But this gives us no excuse for complacency. For Russia's classrooms, laboratories, and ambitious and currently effective plans for mass education pose a threat to our future security comparable to her hydrogen bomb and delivery systems.

Address by National Commander of the American Legion, J. Addington Wagner, Before Canton Post No. 44, Department of Ohio, Canton, Ohio, April 19, 1956

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. BOW. Mr. Speaker, my home city and Canton Post No. 44, the American Legion, were honored last week to have the national commander of the American Legion, Mr. J. Addington Wagner of Michigan, as our guest.

Appropriately, Commander Wagner recognized the interest of Canton legionnaires in the injustices that are being done to our servicemen under the NATO Status of Forces Agreement, and delivered a forceful and brillian discussion of that subject.

Commander Wagner's address again called attention to the urgent need for revision or modification of this treaty, and I again call attention to the fact that House Joint Resolution 309, which is still pending in the Foreign Affairs Committee, is a proper and appropriate vehicle to bring about such revision.

Under leave to extend, I include Commander Wagner's Canton speech:

It is a real pleasure being with you Canton Post Legionnaires and auxiliary unit members tonight. I feel right at home because of your wonderful hospitality. It is everything and more than I have been told it was.

Canton Post No. 44 is known throughout the American Legion. The distinguished leaders whom you have furnished to the American Legion have helped to spread the fame of this post. Crete Anderson is one. For I can assure you that Crete and your other members who have given so unselfishly of their time and efforts in the service of your national organization have not been bashful when it comes to talking about this post.

But the principal reason for your renown has been your steadfast dedication in carrying out the American Legion's programs of service for God and country. You have not only supported our basic programs of veterans rehabilitation, child welfare, national security and Americanism, you have also taken the lead in formulating and crystalizing the American Legion's position on such important issues as the Status of Forces Agreement.

I would like to talk to you tonight about this agreement which denies basic citizenship rights to America's fighting men stationed overseas in all but one of the North Atlantic Treaty Organization countries. You are no strangers to this issue. You and your fellow legionnaires here in Canton originated the resolution on the Status of Forces Agreement that was adopted by our 1954 national convention and reiterated by our 1955 convention as the official policy of the American Legion.

Incidentally, I would like to point out that your action in originating this resolution has a significance quite apart from the issue involved * * * the issue of whether there is any basis for the arbitrary denial to our military personnel of rights guaranteed by the Constitution of the United States. It illustrates perfectly how an idea initiated on the post level can and does become the national policy of the American Legion. It shows exactly how American Legion policy is established and directed by the blue-cap legionnaire in Hown Town Post, United States of America.

July 15, 1953 is a tragic date in American history. It was on this date that the Senate of the United States ratified the Status of Forces Agreement. This agreement established a new status for certain members of our Armed Forces. It placed American Armed Forces personnel unfortunate enough to be stationed overseas in the NATO countries in the status of second-class citizens.

Since then the United States has entered into similar agreements with Japan and other countries, until today we have bargained away the citizenship rights of American military personnel in 49 foreign nations throughout the world. But I would like to limit my remarks this evening to the Status of Forces Agreement because this is the blueprint for all other arrangements. It is the granddaddy of all giveaways of constitutionally guaranteed United States citizenship rights.

The Status of Forces Agreement was negotiated and has since been defended on the grounds that the United States had no alternative. Apologists for this agreement argue that we had to grant NATO countries the right to prosecute and punish American servicemen for criminal offenses committed in their countries, because they demanded this right, and we had to give in to them in return for the privilege of basing American military personnel in their countries.

You and I need not be told how the presence of American troops in NATO countries does, in fact, contribute to our own security. The American Legion has always supported NATO and similar collective-security arrangements. But we do not agree with the architects and apologists of the Status of Forces Agreement who seem to believe that the presence of our troops overseas is solely in our own self-interest.

American troops, along with vast quantities of material and dollars have gone overseas for one dominant purpose: to strengthen the free world's frontline defense against Communist aggression. We see nothing in that fact for which to apologize or make amends. Nor do we agree with those responsible for conducting American foreign policy who seem to think that they should be more concerned about the reaction of foreign governments than about the rights of American citizens.

The American Legion firmly believes that the Status of Forces Agreement in its present form would never have come about if the United States had insisted on the right to try and punish American military personnel for any criminal offenses committed by our troops. We believe that the NATO nations would have been willing to trust the United States to see that justice was done in every case involving our forces if we had not surrendered on this vital issue.

Most important, we believe that there is still time to revise the Status of Forces Agreement and similar treaties and agreements as provided in House Joint Resolution 309, introduced in the Congress last year by your own distinguished Representative, FRANK T. BOW.

As I am sure you know, this resolution provides for the revision of the Status of Forces Agreement and similar treaties or international agreements, or the withdrawal of the United States from such treaties and agreements, so that foreign countries will not have criminal jurisdiction over American Armed Forces personnel stationed within their boundaries.

Too many of our Government officials appear to be obsessed by the fear that we will be asked to withdraw our troops from the NATO countries if we insist that they grant us jurisdiction over our Armed Forces personnel stationed within their borders. We submit that these nations might well do as Greece has done, if we are firm in our request.

Greece, a member nation of the North Atlantic Treaty Organization, has waived the rights granted under the Status of Forces Agreement and has returned to the United States Army complete criminal jurisdiction over our troops stationed there.

What has happened in Greece can happen in other NATO countries. But it can only happen if our Government stands up for the rights of American citizens serving in our Armed Forces in the NATO countries. It can only happen if those responsible for the conduct of our foreign policy recognize that our men in uniform are the victims of a bad bargain.

To date, no such recognition has been evidenced by official spokesmen of the State, Defense and Justice Departments.

In their last appearances before a committee of the Congress, these officials protested that the Status of Forces Agreement meets the civilized standards of justice. They virtually ignored the fact that it violates the United States Constitution which grants to all of our citizens, including Armed Forces personnel through the uniform code of military justice, the right to a trial by their peers, and to protection against double jeopardy and self-incrimination. It denies our soldier-citizens the right of appeal. It does not prohibit excessive fines

or cruel or inhuman punishments, as does our Constitution. Under the Status of Forces Agreement there are no guaranties protecting the accused by a presumption of innocence. He can be found guilty by less than a preponderance of the evidence. A confession procured by any means, however irregular, including force and duress, may be used against him. And, of course, the writ of habeas corpus is unknown.

I don't care how many so-called standards of justice the Status of Forces Agreement meets. It is indefensible as far as the American Legion is concerned, as long as it fails to insure for American military personnel the rights guaranteed them by the Constitution of the United States.

The Constitution of the United States where American citizens are concerned, is the first and dominant standard. It's about time that our Government officials let their own thinking be influenced by this greatest guarantee of freedom in the history of man.

Those who defend the Status of Forces Agreement also argue that without it the Communists could score a great propaganda victory by accusing us of colonialism. Aside from the fact that the mere presence of our troops overseas has been interpreted by the Communists as an act of imperialism, since when does Communist propaganda, real or potential, justify the denial of citizenship rights guaranteed by the Constitution?

If the Status of Forces Agreement is allowed to remain in force for this reason, then we have reached the point where the end does justify the means * * * where freedom can be denied in the name of freedom.

The argument that few American soldiers have actually been tried and punished under this agreement has also been advanced as a justification for its continuance. This argument is just as ridiculous as maintaining that it is perfectly all right to jail a man without charges, to convict him without a jury trial, or to use a forced confession or other illegal evidence against him because such miscarriages of justice are few and far between.

The fact that the agreement provides that we shall retain jurisdiction over our personnel in crimes committed while on duty or in the performance of duty is meaningless. Who is to say that the man was on duty? How can this provision be enforced if, in fact, local police authorities have arrested and hold in custody an American soldier for a crime committed in their jurisdiction? We have the right to request that they release him. But suppose they refuse? What can we do? Nothing. Absolutely nothing.

To argue that American military personnel often get off with a lighter sentence under this agreement than they would for the same offense under our military courts is to admit that essential discipline and authority within our Armed Forces is jeopardized and compromised by the Status of Forces Agreement.

I could go on citing the arguments advanced by the architects and apologists of the Status of Forces Agreement. But they all add up to the fact that this agreement cannot be justified on any grounds.

It denies to American military personnel stationed in the NATO countries, with the exception of Greece, and incidentally, to their dependents as well, rights guaranteed them by the United States Constitution.

It flies in the face of history and of monumental decisions in International Law by such outstanding authorities as Chief Justice Marshall of the Supreme Court, who said the armed forces of a friendly nation stationed within the territory of another, with the latter's permission, are not subject to the local laws of the host country, but are subject only to the laws of their own country.

It compels our military personnel and their dependents to stand trial in courts where they cannot understand a single word of the language used.

And it penalizes the soldier unfortunate enough to be stationed overseas in the NATO countries or in other countries with which we have similar agreements. He doesn't enjoy even the same protection of his fellow soldier stationed in the United States.

On every count the Status of Forces Agreement is indefensible. It must be repealed. It can be if we Legionnaires stand firm * * * if we retain the courage of our convictions.

Let's make certain that our national convention resolution * * * the resolution originated in this post * * * becomes the law of the land. It must if the freedoms guaranteed by the United States Constitution are to be returned to America's fighting men now manning the frontline bastions of freedom throughout the world.

Thank you.

Ned Brooks, Three-Star-Extra Commentator, Reports on Political Situation in the Midwest

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Ned Brooks is one of the foremost commentators and newsmen in the Washington area. Recently, he and his colleague, Mr. Fred Morrison, went to the Midwestern States under the auspices of three-star-extra news-report program.

Mr. Brooks reports from Detroit, Chicago, and Indianapolis on the political situation in Michigan, Illinois, and Indiana. The observations by Mr. Brooks are timely, and Republican leaders in those States are now on notice as to the political situations there:

NED BROOKS, FROM DETROIT, APRIL 9, 1956

The biggest handicap facing the Republicans here in this pivotal State of Michigan is the highly effective political operation of organized labor.

The Republicans have been outgeneraled, outmanned, and outfinanced in their struggle to counteract the round-the-clock propaganda campaign waged under the leadership of the United Auto Workers Union.

On top of this the Republicans have been plagued by internal differences and feuds in the State organization. As a result, campaign contributions fell off. Only recently have these factional difficulties been overcome by a new campaign setup.

Because of the concentration of union members in the automobile centers, Michigan has become the No. 1 testing ground of labor activity in politics.

The Democratic Party, not only in Detroit but in the State, has been taken over by labor's political leaders.

The President of the Michigan Labor Council is on record as saying that the unions never will support Republican candidates.

The union members are under a constant barrage of shop newspapers and pamphlets attacking the administration in Washington and Republican leaders in Michigan.

Outlays for radio and television, using the same type of material, runs into hundreds of thousands of dollars.

The Republicans have nothing comparable with which to fight back and don't have the money to undertake a full-scale counteroffensive.

Right now the Republicans are having difficulties finding a suitable candidate for Governor to oppose Democrat G. Mennen Williams, who has a record of 4 victories in a row and is now out for No. 5.

Each time, he has been elected by the labor machine and potential opponents have developed a healthy respect for his past performance.

Republican leaders would like to have as their candidate the popular, nonpartisan Mayor of Detroit, Albert Cobo, but so far he has declined.

Two Congressmen are possibilities in the Governor race—GERALD FORD and ALVIN BENTLEY.

Even with President Eisenhower heading the ticket, Republican leaders here are not at all sure about gaining any Congressional seats in the November election.

There appears to be an outside chance of upsetting Democrats in two districts, but there's also a chance that from 1 to 3 Republican seats will be lost.

It would be a mistake to count on Michigan to help upset the present control of the Democrats in the National House of Representatives.

This is Ned Brooks, reporting from Detroit.

NED BROOKS, FROM DETROIT, APRIL 10, 1956

Workers entering the automobile plants here in Detroit are being handed small cards bearing the heading "Employee Record."

At first glance they appear to be some kind of a company record. But a closer inspection shows that the employee is Dwight D. Eisenhower and the employer the United States Government.

His job classification is listed as "retired general," and the card shows what purports to be his record of days absent, days on vacation, and days on sick leave.

At the bottom is a mark indicating "do not reemploy" and the reason given, chronic absentee.

It's another one of the ingenious campaign gimmicks cooked up by the political wing of the AFL-CIO; a sample of the antiadministration propaganda that is being circulated around the clock here in this key State of Michigan. This is the laboratory for labor activity in politics and the Republicans are finding themselves hard pressed.

On a limited scale they're beginning to fight back, but they have neither the manpower nor the financial resources to combat the continuous barrage of words being injected into the campaign in printed material and over the air waves.

The Republican State chairman, John Feikens, is now setting up labor committees led by workers who object to having money they pay in membership dues spent to promote candidates whom they oppose.

Feikens says union members are being compelled to contribute to the campaign fund of the Democrats as a condition of employment.

In order to hold his job, a man must belong to the union and pay dues. Since the union supports only Democrats, the member kicks into their campaign whether he wants to or not.

Feikens says he isn't trying to prevent unions from taking part in politics, but he is trying to protect the freedom of the individual.

These membership dues pay the bill for some 60 shop newspapers and other publications filled with articles berating the administration in Washington and Republicans in general.

For those who don't read these papers there's plenty of the same material on radio and television.

The star performer is Commentator Guy Nunn, well known in this area. His two daily broadcasts on some twenty-odd Michigan radio stations are paid for by the Auto Workers Union.

He's on the air at 6:15 in the morning, when the men are going to work; again at 7:15 in the evening; Sundays on television.

The Republicans are talking of having some broadcasts of their own if they can raise the money. But as of today, Mr. Nunn has the field to himself.

This is Ned Brooks, reporting from Detroit.

NED BROOKS, FROM DETROIT, APRIL 11, 1956

Much of the difficulty under which the Republicans are laboring in this key State of Michigan can be summed up in one word, money.

They never seem to have enough of it.

But the Democrats, leaning heavily on contributions from organized labor, enter this year's campaign with the promise of a well-filled treasury.

Labor is the tail that wags the dog here in Michigan. The nominal Democratic leaders take the back seat while Walter Reuther's organization calls the shots and provides most of the money.

The so-called voluntary contributions—$1 per head from the union members—represent only a part of the funds available for political spending.

The remainder comes directly from the dues of the union members and it is spent to help candidates whom the individual member may, or may not, wish to support.

The member may be a Republican, but his money is used to promote Democrats.

This procedure was what led to an indictment of the United Auto Workers Union by a Federal grand jury. A Detroit judge later dismissed the case, but his decision is now being appealed by the Department of Justice.

The union carries on its political operations through a very curious system of bookkeeping.

In 1954—in the election in which Republican Senator Homer Ferguson was defeated—the State Democratic Party reported spending only $88,000 against $450,000 by the Republicans.

But if you look at the records of the auto workers union you find that it spent more than $2½ million on activities which were almost entirely political.

For example, $1,100,000 for what is called the "citizenship" fund.

Now the UAW defines this as chiefly an activity for getting out the vote. But, since the union supports no Republicans, it's to be assumed that the drive was concentrated on getting out the Democratic vote.

Other expenditures: Educational fund, including radio broadcasts, $678,000; research, $160,000; editorial (that would be newspapers and magazines), $590,000.

For one series of broadcasts featuring Commentator Guy Nunn, the UAW bought time on some 20 Michigan stations at an annual cost of $227,000.

The Republicans have had trouble raising money just to monitor the broadcasts to keep track of what Mr. Nunn was saying about them twice a day.

The figures show that in the 1952 campaign, more than 5 times as much money was spent to elect Democrats as was spent for Republicans.

Money isn't everything in a campaign, but the Republicans say it's a mighty big factor here in Michigan.

This is Ned Brooks, reporting from Detroit.

NED BROOKS, FROM CHICAGO, APRIL 12, 1956

Republican leaders here in Illinois would have little else to worry about in the November election if they could be sure that the farm vote will stay with them.

The industrial centers are booming, giving political meaning to the GOP claim of prosperity.

It's the small, marginal farmers, mostly in southern Illinois, who give the Republicans the most concern.

There has been some grumbling among them over the administration's farm program, and over the absence of effective salesmanship by Secretary Benson.

But much of the uneasiness over the farm vote was removed by the results of this week's primary election.

The returns showed no evidence of revolt among the farmers, in spite of efforts by the Democrats to stir up trouble.

Percentagewise, President Eisenhower ran a stronger race against Adlai Stevenson in the farm counties downstate, than he did in the general election in 1952.

There is other evidence that discontent among the farmers has been overmagnified.

In Congress yesterday, only 2 out of 12 Illinois Republicans voted to set aside the administration's program of flexible price supports.

What Republican leaders are afraid of is a weakness on the part of the administration in defending its program in the days ahead. A hard-hitting drive by the Democrats could make inroads in the farm sections.

Leading Republicans tell me President Eisenhower retains a high degree of popularity, and there is strong sentiment for Vice President NIXON.

Four years ago, Illinois was solidly behind the late Senator Taft for the Presidential nomination. And the lingering bitterness over Taft's defeat was perhaps stronger in this State than anywhere in the Nation.

Today—due largely to the efforts of Governor Stratton, Senator Everett Dirksen, and former Senator C. Wayland Brooks, the national committeeman—the Republican high command has been transformed into a solidly Eisenhower organization.

It has made inroads on what has been a strong Democratic source of strength, the Negro wards of Chicago.

In the industrial centers there's the usual close alliance between the Democrats and the political wings of the labor organization.

As I found earlier in Michigan, the Republicans are far behind in matching the missionary work being done on behalf of the Democrats by labor broadcasters.

Two daily programs sponsored by labor are carried on the radio station which specializes in reaching the farmers.

And, no opportunity is overlooked to exploit whatever discontent can be found among the farmers.

This is Ned Brooks, reporting from Chicago.

NED BROOKS, FROM INDIANAPOLIS, APRIL 13, 1956

Hoosiers have way of reducing their political problems to simple terms.

When you ask why the Republicans seem to be losing ground in sections of this normally Republican State, the answer comes back, blame it on corn and hogs.

Which means that the farm vote is the uncertain quantity.

The more prosperous farmers, those who have their land paid for, can be counted on to stay with the Republicans.

But among those who are in debt and hardest hit by lower prices there are signs of gains by the Democrats.

Some Republican leaders tell you privately they're not certain, as of today, that President Eisenhower will carry Indiana.

Gov. George Craig, a strong Eisenhower supporter says this talk is nonsense.

He tells me his prediction is that the President will win by nearly as large a margin as he did 4 years ago, which was 335,000.

Governor Craig acknowledges that farm relief is the critical ieeues, especially among farmers with small acreage and thin soil.

But he says farmers are not blaming the Eisenhower administration for their troubles; rather, they feel that the former administration did not have the fortitude to deal with their problems.

I found other Republican leaders less confident. This week 6 out of 11 Indiana Republicans in Congress voted against the administration's position on the farm bill.

One of them was Senator HOMER CAPEHART who faces a rugged battle in November against the former Democratic Secretary of Agriculture, Claude Wickart.

Republicans have not forgotten the surprising setback they suffered last year when Democrats won the elections for mayor in 83 out of 105 cities.

Governor Craig says local issues caused the upsets. Other Republican leaders say the trend was too definite to be lightly dismissed.

Along with other worries Indiana Republicans are disturbed over the continuing battle for control between Governor Craig and United States Senator WILLIAM JENNER.

JENNER has frequency disagreed with the Eisenhower administration.

The Governor says JENNER is enjoying a dwindling popularity.

But he says their differences won't affect the November vote. He told me, "We Republicans always patch up our troubles by election day."

That's the story from Indianapolis. This is Ned Brooks reporting.

Farmers O. K. Farm-Bill Veto

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I desire to include in the RECORD an article from the Wayne County Press, of Fairfield, Ill., which is published in the heart of the farming area of my district.

The editor of this newspaper, Mr. Tom Matthews, sent his reporter out to make a random survey, calling on the farmers direct, the day after President Eisenhower vetoed the farm bill, in order to get the true sentiment of real farmers with reference to the President's veto. I believe the brief opinions expressed by many farmers should be of interest to the Members of Congress. You will note that the great majority of them praised the President for having the courage to veto what these farmers branded a bad bill.

FARMERS HERE O. K. FARM BILL VETO—PRAISE EISENHOWER FOR HIS COURAGE; MANY AGAINST THE 90 PERCENT PARITY PLAN

Farmers in Wayne County think President Eisenhower acted wisely in entering his veto of the farm bill.

At least such is the indication following a random survey of farmers in this area by press reporters Wednesday.

Of those interviewed only two thought the President acted unwisely.

Many expressed views against the 90 percent parity program while others said they do not think the proposed soil-bank plan is the answer to the small farmer's problem.

The question asked was: "What do you think about President Eisenhower vetoing the farm bill * * * was a good or bad thing?"

EXPRESS VIEWS

Here are the answers:

Mrs. Darrell Blessing, route 1: "I think President Eisenhower's action was for the best. It seems to me there were two parts of that farm bill and they were working directly against each other. Certainly that would accomplish little."

John Bayler, route 4: "I admire President Eisenhower for having the courage to veto the farm bill in an election year. It seemed the bill wouldn't serve the purpose of the average size farmer. It was designed to help the big farmer. I think we need a farm law that sticks more toward conservation practices."

Clifford Hubble, Enterprise: I've talk to quite a few about this and from all I hear it seems it was the best thing to do."

Ralph Finley, route 1: "I was mighty sorry to see the President veto that farm bill. I think it was a bad thing when he didn't sign it. Certainly it would have meant more money for the farmer and we all know he needs help. Yes, I favor the 90 percent of parity program * * * matter of fact I'm for 100 percent of parity for the farmer. We all know that every other group is doing better today than the farmer. It can't go on that way."

Emory Dickey, route 6: "I was glad President Eisenhower vetoed the farm bill. Truly it was a bad bill, designed by the Democrats to help the big shots who would have got the money and done little for the small farmer who really needs the help. Look how Ike ran in the primary last week. That many people wouldn't have voted for him if they didn't have respect and confidence in him and now the way he vetoed this bad farm bill makes us realize more than ever what a man of courage and character we have in the White House."

Hylman Vanway, route 4: "I'm in favor of the President doing just what he did, veto that farm bill. I'll back him 100 percent on that. A wise move. I can't say I'd back him 100 percent on the soil bank plan. It's for the bigger farmer, in my opinion. I say a farmer with less than 200 acres ought to be exempt from any soil bank plan."

Ivan Feller, route 2: "It was a good thing. Any guy who will do something against his better judgment just because it's politically expedient is not fit to be President. And right there is where Ike stood up. He vetoed that bill knowing it might cost him votes. Heaven knows we farmers are paying right now for 2 or 3 bad farm bills and we don't want another one on the law books. Anybody who thinks can understand exactly what they were trying to put across. It's these acres they've taken out of wheat and cotton and put back in corn that is hurting us Illinois farmers today. No, I say I'd rather have 50 cent corn on this side of the ocean than $2 corn and be over there in a war. Hurrah for Ike."

Jesse Rush, route 4: "I think the President was right in vetoing the bill. We just can't keep piling surplus up on top of surplus and that's what the bill would have continued. We've got to adjust to the situation sometime. No, I don't think the soil bank plan which has been presented so far is any solution either. It would help mostly the big farmer and there's an awful lot of small farmers who need help more."

Ford Harris, route 1: "That farm bill had little in it to help the small farmer. I think a veto was the only logical action the President could take."

Floyd Templeman, route 1: "I'm a bit ashamed to admit but I've been so busy with other things I haven't had time to follow all the debate over the farm bill which was passed by Congress and then vetoed by Mr. Eisenhower. I've read a little about the soil bank plan and I think basically it is a good idea. I'm a little doubtful, however, on getting it into practical realization."

James R. Taylor, route 3: "There are important men on both sides of the fence who have given the farm problem a lot of study and they think they're right as to a solution. I'm sure President Eisenhower gave the matter very serious consideration before he vetoed the bill. Sure, maybe even 100 percent of parity would be good for me right now but somebody along the line's going to have to pay for it all. You can't expect something for nothing. As to the soil bank plan, I don't know. We may have to try it out before we know what it can do."

Chester Witter, route 2: "I think the President was right in vetoing the bill. I'm not much in favor of parity payments. We've had them a long time and we've still got our farm problem, haven't we? I'm doubtful about the soil bank plan as a solution either."

Frank Mason, route 2: "I'm not sure that I understood all the details about the farm bill which the President vetoed, so I would rather not express opinion. I think that the soil-bank plan is sound. Don't know that it's important for this part of the country, so I don't believe we contribute so much to the surplus ourselves."

Mrs. Glen Liston, route 3: "My husband isn't here right now but I feel sure that it's his opinion that the President knows what he's doing in vetoing the farm bill."

Raymond Lyons, route 1: "I'm not sure what I think about the President's veto of the farm bill. It rather looks like to me he's stalling on the farm problem. I haven't any opinion on the soil-bank proposal, not being too familiar with details of it."

Roy Fearn, Cisne: "Personally, I think the President did the right thing in vetoing the bill. As to the Farm Bureau's position on the bill, here's American Farm Bureau President Charles Shuman's verdict on the bill, 'Utterly bad farm legislation.' The bill contained a three price wheat structure which would have dumped wheat on the feed market and the 90 percent of parity requirement is what's got us in dutch up to the present. Most people I've talked to are in support of the Presidents position. As the soil-bank bill has been proposed, with all its attached features, it doesn't stand up as a good bill either."

Francis Troyer, route 2: "I really don't do much farming anymore, so I haven't given too much thought to the matter. Generally, however, I'd go along with the President on his veto of the bill as a pretty good idea. I'm not very informed on the soil-bank plan, so I'd better not comment on that."

Fred Clark, route 4: "I think what the President did was a good thing."

Miss Margaret Cline: "Marshall Sork farms our ground now and I don't keep up on these things much anymore, but I do know the farmer needs some help and they should pass some law that would do the job."

Lowell Cline, route 3: "They've been trying to get a farm bill for 10 or 12 years that would be workable and still they haven't done it. This one Ike vetoed would have helped the big farmer and done little for the small farmer. I'd like to see them pass a law that would help the poor man as well as the rich."

H. H. Glick: "I respect President Eisenhower more now that I see he had the intestinal fortitude to veto the farm bill."

Tell It Not in Gath

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Time magazine of April 23, 1956:

TELL IT NOT IN GATH

When northern newsmen covering the Negro boycott of Montgomery buses swarmed into the city room of Alabama's Montgomery Advertiser (circulation 60,144), Editor in Chief Grover Cleveland Hall Jr., 41, did his best to answer their questions. He also asked questions—and decided from the answers that the North's own racial sins were being covered by its press in a conspiracy of silence. To prove his point, Hall launched a daily series on northern discrimination. Said he: "Whatever we reveal will not solve any problem Alabama has. Our purpose is to point out to the self-righteous North that it's not doing so damn well either in solving the race problem."

To get the series, Reporter Tom Johnson and other staffers telephoned northern editors and public officials to ask about discrimination in their areas. They found plenty, and Hall let the stories sprawl over his editorial page under the standing rebuking headline: "Tell It Not in Gath, Publish It Not in the Streets of Askelon."[1] When the Advertiser questions screwball Mayor Orville Hubbard (Time, March 5, 1951) of Dearborn, Mich., he bragged that not a single Negro could get a place to live in his city of 114,000, though 15,000 of them worked there. Said the mayor: "I am for complete segregation 1 million percent, on all levels."

DIRTY WASH

The Advertiser's series also reported that Chicago had assigned 150 police to the Trumbull Park development (Time, May 17, 1954) to prevent violence over an influx of Negro residents. Hall's wry comment noted that Chicago race relations "seem incredibly violent to a southerner," since "in all the Confederacy, there's not a single Negro family I know of that needs police protection."

Last week Hall angrily charged the Detroit press with burying news of the Rouse case (Time, April 16), in which a part American Indian family was forced to move out of a Detroit neighborhood after a mob rioted around the house in the belief that they were Negroes. Commented Hall: "One paper ran it on page 3, one on page 16, and one on page 60. One story was only three paragraphs long. Anything like that happening in Montgomery would have made the lead story in all of those papers. Yet they ignore their own dirty wash. It makes me mad."

Both in Detroit and Chicago, Hall found, editors deliberately play down racial troubles in their own cities. The papers feel that full coverage of racial outbreaks might make them worse. By common consent, newspapers, and radio stations in Chicago publish nothing about a tense race situation during its incipient stage; if a riot actually

[1] Thus David voiced the wish (II Samuel 1:20) that the slaying of King Saul and his son Jonathan in battle with the Philistines could be kept from the Philistines themselves lest they rejoice.

breaks out, they report it, but in the past tense as if it had already blown over, even if it should still be raging. Concludes Hall: "The race issue is not a southern dilemma but a national problem. Discrimination is discrimination everywhere, not just when it happens under a southern magnolia."

MIDDLE GROUND

Editor Hall's father, editor of the Advertiser before him, won a 1928 Pulitzer prize for editorials attacking the Ku Klux Klan. Young Hall worked as a police reporter, capital correspondent, and columnist before he took over the editor's chair in 1947. He was soon running one of the Nation's liveliest editorial pages. He has editorialized wittily, and sometimes savagely, on everything from post-office pens to international policy—with plenty of attention in between to blasting Alabama's Gov. James ("Kissin' Jim") Folsom. ("This untaught knave * * * lacks the grace and prudence to keep zippered his flapping mandible to conceal his void.")

On integration, Hall has taken a middle-ground position; he thinks it unfeasible for years to come in the Deep South, but he avoids preaching resistance. He has rapped the White Citizens' Councils as "manicured Kluxers," and given the Negro bus boycotters a fair shake in his news columns. But his latest campaign is drawing praise from southern extremists, and it won a laudatory resolution from the Alabama Legislature. Admits Hall: "I am, unhappily, comforting a lot of people I don't want to comfort."

Yet Hall's series is also turning the North's eyes on its own vulnerability. In an exchange of open letters, Hall prompted Editor James Wechsler of the New York Post to assign Reporter Ted Poston to do a series on anti-Negro discrimination in New York. This week, describing how it feels to be a Negro up North, Reporter Poston, a Kentucky-born Negro, agreed that there is no real Mason-Dixon line to American race prejudice. But he also made an important distinction that has slipped past Hall in his series thus far. Wrote Poston: "Prejudice up here is often a reflection of individual bias and ignorance. But it has neither the backing of the State nor the power of public opinion behind it."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

SENATORS WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: Senate Office Building, Washington, D. C.

[Streets northwest unless otherwise stated]

Vice President, Richard Nixon

Aiken, George D., *Vt*——Carroll Arms.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Barkley, Anderson, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Bible, Neuberger, Laird, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

American-Canadian Relations

EXTENSION OF REMARKS
OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 24, 1956

Mrs. SMITH of Maine. Mr. President, coming from the State that has the greatest tie with our good neighbor to the north—Canada—I have been quite interested in, and have devoted much of my time and thoughts to, American-Canadian relations. We of the State of Maine know what wonderful people the Canadians are. The blood of Canada flows heavily in the veins of Maine.

Because of this, I was much interested in a recent speech made by a very prominent American who has reached the pinnacle within his own industry—or, more accurately put in the plural, within his own industries—Cyrus Eaton, originally a native of Canada, whose first paying job was as waterboy for a railroad construction crew in his native Nova Scotia.

What Mr. Eaton has to say on American-Canadian relations bears considerable study not only by Members of this legislative body and Americans generally, but also by members of the Canadian Parliament and Canadians generally. I invite close attention and consideration of his observations; and I ask unanimous consent that his speech of April 10, 1956, to the Canadian Institute of Mining and Metallurgy, in Quebec City, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Canada's vast unoccupied continent to the north constitutes both the fiercest challenge and the brightest promise that have ever fallen to one nation's lot in recorded history.

To occupy this now empty northern empire, master its rough terrain, conquer its stubborn climate, wrest its rich mineral resources, harness its mighty water powers, call for dynamic new pioneering. The leaders of this northward trek must not only be men of courage and vision, like the explorers and settlers of old, but must also command a broad knowledge of the miracles of modern science and a profound understanding of their practical applications.

TWENTIETH CENTURY BELONGS TO SCIENTISTS AND ENGINEERS

Truly, the 20th century is the age of the scientist and the engineer. And I am keenly aware that, in addressing this distinguished meeting of the Canadian Institute of Mining and Metallurgy, I have the privilege of speaking to a highly select group of the technical experts whose thought and action are exercising a profound influence on the course of Canadian and world history.

Let us examine the role of men of science in these exciting times in which we are living. On the constructive side, I like this tribute that one of the large mining companies recently paid your profession:

"An engineer is a trained, productive scientist who works with his hands, head, and heart to combine resources, materials, and techniques for human well-being. The mining, metallurgical, and geological engineers have pitted their skills, imagination, and perseverance against the challenges of resources locked in the earth."

On the somber side, the scientists, pure and applied, have invented the instruments of total annihilation. Science has, in fact, reached the advanced point where we may use it to lay civilization in ruins or to enter into an era of unprecedented plenty.

MODERN SCIENTIFIC MIRACLES DEMAND NEW NATIONAL AND INTERNATIONAL CONCEPTS

The scientist is trained to be objective in his work, and to seek and accept the truth, however it may conflict with preconceived hypotheses. In his dedication to his specialty, he perhaps holds himself more aloof than he should from the broader consequences and implications of his findings. I should like to see the physicist, the engineer, the metallurgist, the geologist, the astronomer, the biologist and the chemist also devote themselves, with their trained detachment, to discovering how we can overcome international and racial hatreds and move on to the life of peace and plenty for which all mankind yearns. While science has given us increasing power over our natural resources, we have made little progress in the arts of government and diplomacy. But the scientific miracles and technical advances of our times necessitate new thinking to arrive at new relationships between nations and within nations. The scientist should play a full part in the shaping of these fresh national and international concepts.

You can readily see from the broad responsibility I am suggesting you assume that I do not subscribe to the limited view that a witty Frenchman took when he described the main items of equipment of a geologist, for instance, as industry and a pair of legs. Scientific and technical training does not preclude knowledge and appreciation of art, literature, music, philosophy, religion, and nature, any more than it closes the door to the practice of politics and diplomacy. The scientists bid fair to become the aristocrats of the future, in fact, if they so choose.

In a world where most nations are plagued by pressure of population and scarcity of basic raw materials, Canada presents a happy paradox. Her area of 3,800,000 square miles, extending from the Atlantic to the Pacific and from the Great Lakes to the North Pole, ranks her second only to Soviet Russia in continental size. Long a world leader in mining, she has barely scratched the surface of her limitless mineral resources. Her manufacturing industries are growing by leaps and bounds. Her electric power industry, upon which mining and manufacturing depend for their energy requirements, is capable of almost infinite expansion. The spirit of venture enterprise is increasingly capturing the imagination of her 15,500,000 able and vigorous people.

CANADA COMES INTO HER OWN

As Canada comes into her own, opportunities galore beckon to everyone willing to work. No longer is it necessary, as was so commonly the case in my Canadian boyhood, for young men to go to the United States for gainful employment. No longer is it necessary, moreover, for Canadians who have made their mark in business and industry to go to England to accept a title in order to belong to the artistocracy. In some quarters, I realize, there is a smoldering aversion to any concept of Canadians as "hewers of wood and drawers of water." I have always considered these and kindred occupations as stepping stones to higher places. In fact, I am proud to profess that my first paying job was as water boy for a construction crew when the old Inter-Colonial Railroad first pushed into our part of Nova Scotia, while my second employment for money was in the lumber woods of my native province.

A man's first moral obligation is to earn his living, and his second is to be intelligent. If, while he puts his back into his work, he keeps his mind alive and learns everything he can about the industry with which he is associated, he can almost certainly count on steady advancement to a well-paying position of importance and responsibility. The curse of today's big corporations, and big government bureaus as well, is the intellectual indolence that lets most employes content themselves with confining their perception to only what immediately concerns their own small department. Lack of broad knowledge of the business is often defended on the ground that a man does not want to encroach on a fellow worker's department, but this is merely a lame excuse for mental laziness.

CANADIAN NORTH OFFERS RICHEST REWARDS

For men who love to work, and who take supreme satisfaction in meeting and overcoming formidable obstacles, the Canadian North offers the richest rewards, spiritual, and material. This is no playground for the easygoing and fun-loving folk who find their greatest happiness in the sultry pleasures of southern climes. But neither is it the barren and inaccessible wasteland, unfit for human habitation, that unimaginative and effete observers from a distance stamp it.

I have been fascinated by the northern tip of Quebec known by the romantic name of Ungava, with its mighty rivers and great mineral resources, especially its large tonnages of iron ore that roll right down to tidewater. Ungava means far away, and the Ungava country is tough as well as distant. The iron ore undertaking there will be a prodigious task. But I have been greatly encouraged by the forward-looking attitude of the government of Quebec, by the cooperation of its department of mines and of the geologists, engineers, and metallurgists of its great Laval and McGill Universities, and by the cordiality of the press.

STEEP ROCK SETS PACE FOR NORTHERN DEVELOPMENT

Let me illustrate the unlimited possibilities of the north by recalling the history of our Steep Rock Iron Mines. Steep Rock, of course, is not north in the same sense as the Yukon, the Northwest Territories, Ungava, and Labrador, but, topographically and cli-

matically, it provides a close parallel. Fifteen years ago Steep Rock was still a remote wilderness lake surrounded by moose pasture. Informed opinion in both Canada and the United States held it an engineering impossibility to uncover whatever iron ore lay buried deep beneath the bed of the lake. Jules Cross, the late Joe Errington, the late General Hogarth, Pop Fotheringham, and I took a different view, for which, I might add, we were branded as impractical visionaries.

It is an old and forgotten legend, now that Steep Rock has become one of the world's major iron-ore producers, possessing high-grade reserves recognized as ranking among the most extensive and valuable that are known. The success story started when Jules Cross supervised a handful of Indians in staking the original claims. Then Pop Fotheringham, a youthful graduate engineer with 7 years' experience in the Canadian gold-mining industry, took his young and pretty bride, also a university graduate, to live in a one-room log cabin on the shores of Steep Rock Lake. Snowshoes were their customary wintertime mode of transportation, and hungry bears and wolves were more frequent visitors than human beings. A dedicated all-Canadian team of geologists, engineers, chemists, metallurgists, and miners was gradually gathered at Steep Rock and they, with their wives and children, have made of nearby Atikokan a bustling, modern residential and business community. Such essentials as schools, water, sanitation, hospital, library, and recreation facilities have been evolved as joint projects of the community and the Steep Rock Co.

RECREATION AS WELL AS WORK STRESSED AT STEEP ROCK

Let me say a particular word about recreation, which I believe is almost as important as work. For the manner in which people spend their spare time has an important bearing on the freshness and enthusiasm with which they tackle their work. Reading is a pastime that can be pursued with pleasure and profit year around regardless of the weather. Real winter weather, such as we enjoy at Steep Rock, brings ideal conditions for invigorating diversions like skating, curling, hockey, and skiing. Fishing, hunting, baseball and swimming are among the popular sports of the warmer seasons.

Community growth and improvement have been substantially fostered, I believe, by my insistence that the headquarters of the Steep Rock Co. be located at the mines. There were those who advanced persuasive arguments in favor of Toronto or Montreal, or, indeed, Cleveland, which is the iron ore capital of the world. The location of top management at the scene of operations makes for greater efficiency and responsiveness and, at the same time, gives assurance of intelligent and sympathetic participation by these men and their families in community affairs. The telephone and the airplane have largely nullified distance, so that it is possible to keep in close and constant touch with metropolitan centers. Steep Rock's policy of on-the-job management can be adopted advantageously to create splendid new towns in the Canadian North.

AID TO STEEP ROCK HAS PAID OFF FOR FEDERAL AND PROVINCIAL GOVERNMENTS

The Federal Government played a necessary part in the Steep Rock development by building a spur from the Canadian National Railways' main line to the mines and erecting an ore dock at the head of Lake Superior, and the CNR realizes a lucrative return from these facilities. The Ontario government made its first major contribution to Steep Rock's beginnings by bringing in electric power, on which the Ontario Hydro Electric Power Commission now makes a handsome profit. More recently the provincial government has linked the once isolated area to the lakehead by highway; and automobiles now abound in Atikokan.

CANADA NEEDS OUTSIDE CAPITAL FOR DEVELOPMENT AND EXPANSION

One serious limitation on Canada's material progress lies in the finding of the tremendous capital funds required to finance new and expanding mining and manufacturing projects, as well as provide the electric power and transportation facilities to serve these new ventures. Money is simply not available in adequate amounts from private and public sources in Canada to meet the gargantuan demands of the many mines to open, factories to erect, oil wells to drill, roads to build, railroads to extend, airports to construct, harbors to improve, rivers to make navigable, telephone lines to string, and water power to harness. Certainly Canadian investors should be encouraged to put their funds in Canadian enterprises, and Canadian wage earners should be educated to the advantages of stock ownership in the companies in whose success they play a vital role. The Federal and Provincial Governments must also meet their full share of the cost of economic expansion. But outside capital will still be urgently needed to get the job done.

In the case of Steep Rock, the responsibility for financing not only the first mine but also most of the subsequent expansion has largely devolved upon American capital. A strict condition of the Canadian Government's initial cooperation with the Steep Rock project, in fact, prohibited the raising of any funds by the sale of securities to Canadian investors. Later, when this restriction no longer obtained, Canadian investors for some time displayed considerable reluctance to support the lusty Steep Rock infant.

COMPETITION FOR NEW CAPITAL IS KEEN IN UNITED STATES

Money from across the border may not be so easy to come by in the years immediately ahead, unless it continues to receive a cordial welcome from Canada. American industry has its own ambitious plans for expansion, at a cost running well into the billions within the next 5 years. Take railroads, electric power, and steel, three of the industries with which I am associated. The class I railroads of the United States are contemplating capital expenditures and material purchases totaling nearly $13 billion in the years 1956 through 1960. My own Chesapeake & Ohio Railway alone anticipate an outlay of $561 million during this 5-year period. The United States electric power industry estimates its capital requirements for the next 5 years at more than $22,500,000,000. The American steel industry must raise $3,500,000,000 in the same years to provide added annual capacity of 18,500,000 tons. Where will all the money come from for these and the many other growing industries of the United States, and for their Canadian counterparts? Obviously, in this tremendous competition for capital, Canada will find it in her own interest to maintain a friendly attitude toward would-be American investors.

FOREIGN CAPITAL AN IMPORTANT FACTOR IN UNITED STATES ECONOMIC GROWTH

When the United States was in its earlier days of economic growth, foreign capital was essential, and flowed in generous amounts from Great Britain, Holland, France, Germany, and Switzerland. Then London was the financial capital of the world. The sponsors of a new or large enterprise, whether located in North or South America, Africa or Asia, automatically looked to London for money. Two world wars have practically impoverished England, weakened her capitalistic system and shifted the banking leadership of the world to America. Fortunate it was for the free nations that the new world had attained sufficient financial strength to be able to carry on where the old world was forced to leave off. Now that America has assumed the mantle, there is this significant difference that deserves to be weighed with care: However much American money pours into Canadian enterprises, the United States has neither the desire nor the power to reduce Canada to the status of a small and dependent crown colony that she unhappily occupied at the turn of the century.

CANADIAN-UNITED STATES RELATIONS CHARACTERIZED BY COMMERCE, NOT CONQUEST

Canada and the United States have for more than a hundred years enjoyed the unique distinction, among neighbor nations of the world, of peacefully sharing an unfortified boundary of almost 4,000 miles. What they need from each other in raw materials or finished products, they obtain by commerce, not conquest. The two countries are the chief custodians of democracy and capitalism. In the postwar world, they stand out as the young and rapidly growing economic and political giants of the free world.

On the other side of the curtain, Soviet Russia has also emerged as a modern economic and political colossus determined to drive forward as rapidly as her 216 million people can be inspired and persuaded to develop and utilize the immense and varied resources of her 8,500,000 square miles stretching across two continents from the North Pacific Ocean to the Gulf of Finland, and from the Arctic to the Black Sea. Though the quickest and biggest economic effort in human history, under the communistic system of complete state ownership, Russia has reached the status of a major industrial power in a remarkably short time. Now she is relentlessly continuing to raise her production sights with the obvious intention of outstripping the rest of the world.

By 1960, Russia aims to increase her 1955 coal output of 390 million tons by better than 50 percent to 593 million tons, her 1955 steel output of 45 million tons by better than 50 percent to 68 million tons and her 1955 electricity output of 170 billion kilowatt-hours almost 90 percent to 320 billion kilowatt-hours. To grasp the full significance of these figures, compare them with 1955 American production of 470 million tons of coal, 117 million tons of steel and 546 billion kilowatt-hours of electricity. The Russians are also engaged in a concerted effort to educate and train industrial and technical experts. By 1960, the goal is 1 million graduates from universities and secondary technical schools. Russia now has 890,000 engineers and scientists compared with 760,000 in the United States. While the United States graduated 53,500 of them in 1954, Russia graduated 104,000.

RUSSIA'S MAMMOTH INDUSTRIAL EXPANSION MUST BE VIEWED DISPASSIONATELY

My purpose in citing these statistics is not to arouse hostility toward Russia, because I fervently believe that the most dangerous of sentiments is international hatred. War has never provided a satisfactory solution for international problems. The almost 40 years that have passed since World War I have given us sufficient perspective to appreciate the utter folly and futility of armed conflict among nations. The United States, believe it or not, entered into World War I on the side of France and Great Britain with high idealism. In the words of Woodrow Wilson, America felt that this was "a war to end wars" and fought "to make the world safe for democracy." The Allies were completely victorious in 1918. Yet, within a short time, there arose three of the most conspicuous dictatorships the world has ever known—Hitler, Mussolini and Stalin, and within 21 years, the world was plunged into another war more destructive and devastating than any catastrophe that had previously occurred in history. Again the Allies were victorious, and again the world is experiencing uneasy semi-peace, punctuated constantly by small "hot" wars here and big "cold" wars there.

The nations of the world, and the peoples within them, have always differed widely in

their economic, political and religious beliefs. We know from bitter experience that the irrationality of war cannot settle these differences. We must further recognize that, in this atomic age, warfare will more likely than not lead to the annihilation of both aggressor and defender. Mankind's survival rests upon the frank exchange of ideas and the sincere respect for one another's convictions.

CANADA BEST QUALIFIED NATION TO PROMOTE WORLD PEACE

Canada is probably in a better position than any other nation to exercise a profound influence for constructive world peace. She is admired and well liked throughout the world. With the United States, she has given a century-long demonstration that two nations can live side by side in amity. Within her own borders, she has long peacefully embraced two major races, representing two languages and two religions—both, of course, accidents of birth. This Canadian example of living in admiration and respect at home and abroad holds tremendous hope for the whole family of mankind, whose choice has narrowed down to coexistence or extinction.

Wait a Minute, Ave

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. CURTIS of Missouri. Mr. Speaker, I want to call to the attention of the House an editorial which appeared in the St. Louis Globe-Democrat on Sunday, April 22, 1956, entitled "Wait a Minute, Ave" as follows:

WAIT A MINUTE, AVE

Gov. Averell (Honest Ave) Harriman gave a New York audience the lowdown the other day on what is wrong with the White House's foreign policy. One of its shortcomings, he explained, was the way that President Eisenhower went to Geneva to talk over the issues of war and peace with the leaders of the Soviet Union.

Thinking it over, here's how this strikes the New York governor now:

"Nothing could have served the purposes of Khrushchev more than that. Neutralist and pro-Communist elements were strengthened throughout the world. Free nations relaxed their efforts to build strength against communism. The Soviets scored a psychological break through that they have been exploiting ever since with economic and political penetration of the Middle East, south Asia, and the Far East."

His analysis must have been kind of a surprise to his audience. At least to those whose memory span is long enough to recall the events that led up to the Geneva conference last summer.

When the Kremlin began throwing out hints that it was eager to meet the Western leaders and "ease East-West tensions," the administration was castigated by Democratic spokesmen in Congress. They were critical because the White House wasn't leaping at the chance.

Some rather acid remarks were aired about the "rightwing" GOP warmongers who would rather plunge the Nation into war with the Russians than talk with them peacefully over the conference table.

In this Democratic version of then current events, Secretary of State Dulles was dragging his heels when he should be encouraging the plan to parley with Khrushchev and company.

In fact, it was the elder statesman of the Democratic Party in the Senate, Senator WALTER GEORGE, of Georgia, who made headlines by urging strongly that the administration meet with the Soviet leaders—to see if the threat of war couldn't be eased by talking things over. Shortly after, the White House agreed to do just that.

Whether the Geneva parley turned out well or not, let's don't brainwash the public, and rewrite history, to rearrange the facts to suit the political purposes of an election year.

The Air Pollution Control Association

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. RADWAN. Mr. Speaker, it is my pleasure to announce to the Congress that the annual meeting of the Air Pollution Control Association will be held in Buffalo, May 20–24. Buffalo looks forward with eager anticipation to being host to over 700 scientists, engineers, and other representatives of industry and of the Federal, State, and local governments who will participate in the important meetings scheduled during the convention. Buffalo also invites the visitors to bring their wives and other members of their families, for there is no finer vacation spot in all the land—particularly in the spring of the year.

Members of the Air Pollution Control Association are largely responsible for the monumental progress that has been made in cleaning up the air in and around industrial communities. They have worked with industry, with government, and with individual citizens in an effort to obtain the closest cooperation in dealing with the air pollution problem. While there is still a long way to go, particularly because of the constantly increasing industrial activity in our country, the efforts of this association are reflected in improved conditions in scores of American communities.

Members of the APCA have helped to develop new and improved methods of checking air pollution. They have worked closely with public-spirited business leaders who were willing to invest millions upon millions of dollars in new equipment in the job of combatting the air pollution nuisance. The APCA has taught the public that, regardless of what type of fuel is used, unnecessary pollution can be eliminated when proper combustion methods are employed in the right kind of equipment. Among the many accomplishments of the air purification engineers is their successful attack on fly ash. Modern design and combustion methods provide for capturing these minute particles before they get out of the stacks. Furthermore, the fly ash itself is now being put to good use, particularly as a reinforcing agent in cement. In all, the APCA has made remarkable progress through the years and is determined to continue its outstanding work toward eliminating so far as possible the man-made pollutants in our atmosphere.

The Buffalo convention will attract representatives of industry and government from every section of our Nation and from Canada, for air pollution is not confined to any single area. The convention will feature papers by outstanding engineers and scientists, displays by manufacturers of air pollution control equipment, and plant tours in Buffalo, Niagara Falls, Lackawanna, and Tonawanda. As a lake front city with a population of 600,000 persons, Buffalo itself will offer an interesting study for the APCA visitors. We are an important railroad center and a lumber market, and we produce flour and grain mill products, plastics, steel, and chemicals. We also have manufacturers of busses, electric equipment, and rubber products. Buffalo has foundries, machine shops, meat-packing houses, refineries, and a variety of other manufacturers.

A local committee, whose honorary chairmen are the mayors of Buffalo and Niagara Falls, has been set up to provide the necessary arrangements for the 1956 APCA convention. Buffalo is proud to be the site of this event, and I am certain that the association will be happy that it has chosen this city for this convention.

Reaction to the Farm Bill Controversy

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mrs. HARDEN. Mr. Speaker, now that President Eisenhower has vetoed the farm bill passed by this body over my opposition and over the opposition of a great many other Members from the midwestern Corn Belt, it might be well to assess public reaction to the farm bill controversy. Personally, I believe reaction to the President's courageous action was very good, for the American people admire an honest man and the President certainly proved that he fits that description when he vetoed what he and many of us knew to be a bad farm bill.

I have clipped 4 editorial viewpoints on the veto from 4 of the leading newspapers in the district I represent—the Sixth Indiana District. Only one of these newspapers, the Terre Haute Star, represents a major metropolitan area. Plainfield, Noblesville, and Clinton are not large cities but they are trading centers for the rich agricultural counties of central Indiana. The editors of these papers, Mrs. Ellen Curtis of Plainfield, Jim Neal of Noblesville, and George Carey of Clinton, know farming and they know their farmers. These are their views:

[From the Plainfield (Ind.) Messenger of April 19, 1956]

THE PRESIDENT'S VETO

(By Mrs. Ellen C. Curtis, editor)

Whether or not you argee with the decision made by President Dwight D. Eisenhower to veto the farm bill (H. R. 12, designated as the Agricultural Act of 1956), every-

one will have to admit that he did not hesitate to do what he honestly believed was best for the country; that he did not hesitate because it was an election year; that in no sense of the word, did he make a political football out of the bill, and that his words of explanation rang with sincerity and honesty.

We can remember no President who has been more honest with the people of the country or who has always placed the welfare of the entire country above personal gains and above the welfare of minority groups. He explained carefully the parts of the bill which he felt would prove detrimental to both the farmer and the country and he expressed his keen disappointment in the failure of Congress to pass the soil-bank legislation without the additions and subtractions which made it impractical.

The President told Congress in his veto message and the people in his radio and television explanation later that his decision had been reached only after "thorough consideration and searching my mind and conscience." He made some bold and decisive statements but even his critics can never say that he did not make himself clear as to the reason for the veto.

The commonsense and somewhat old-fashioned law of supply and demand, a plan as old as time, can still be applied in the realm of economy with more degree of success than any other yet found. The big problem facing the agricultural world today is research and the Agriculture Department has allotted approximately $100 million for the purpose of finding new uses for the farmer's products so that industry will absorb any surpluses which result after the food and feed demand has been supplied.

If all governemntal appointess, elected officers, and men and women in authority would follow the example of President Eisenhower before making decisions, the country would be better served and in the long run much, much better satisfied.

The President has set an example in all his decisions that might well be emulated in every branch of Government and by every person, who in any way, is indebted to the people of the United States for his high position of trust.

[From the Noblesville (Ind.) Daily Ledger of April 18, 1956]

THE COUNTY LINE

(By Jim Neal)

IN THE BEST INTEREST

In November of 1952, when the American people elected Dwight D. Eisenhower President of the United States by the greatest vote in history, they felt that they had finally found a man who could rise above partisan politics and serve as the leader of all the people, not merely the Party he represented.

Yesterday he proved, as he has time after time in the intervening months, that he could not govern by "political expediency." This Nation has been governed that way so long that most Americans have come to accept it as a replacement for truly democratic processes.

Signing the farm bill, a poor compromise of a serious problem, would have been "politically expedient." But the bill was not the answer. The President knew this and, despite the inability of the Democratic majority in Congress and many Republican leaders to see beyond political advantage, he vetoed the bill.

He vetoed the bill because it resumes the very same system which created the problem in the first place. Although the bill established the President's requested soil bank, it defeated its purpose by reestablishing high, rigid price supports on basic crops.

It's a simple economical enigma. You attempt to reduce production by taking land out of cultivation and at the same time encourage the farmer to produce more by guaranteeing him a subsidy for his production. You pay him for "banking" his land, but is there any farmer who would not intensify his cultivation through fertilization and produce as much, if not more, on the land he has left—if he is subsidized?

The farmer may pocket a few more dollars temporarily, but has anything been solved? The taxpayers have spent millions of dollars, but the situation is just as critical as it ever was.

No one seems to agree, including the farmers themselves, on exactly what should be done. But the President has presented a substitute program offering up to a billion dollars to be used this crop year. This program offers not only emergency relief for the distressed farmer, it also offers a solution to the problem. In challenging Congress either to override his veto or to pass a better bill, the President has made it clear that he will not stoop to partisan politics even at the expense of losing farm votes.

There is every reason to believe that new uses for agricultural crops and an expanding population will eventually solve this problem of supply and demand—a basic principle in the free enterprise system. But it is essential that the Government preserve the family farm in the interim. The Eisenhower administration is dedicated to that end.

Unfortunately, others are dedicated to gain political victory and party control. This would seem to be the sole criteria on which partisan politics functions in an election year.

[From the Daily Clintonian, Clinton, Ind., of April 17, 1956]

(By George L. Carey, editor and publisher)

If the American people needed any further proof that President Eisenhower places his duty to his country above his own personal welfare or that of his party, they have it now. Probably never before in the history of the Nation has a President been forced into such a clear choice as was Ike when he decided to veto the hybrid mess that was presented to him under the guise of a farm bill.

It would have been the easiest thing on earth for the President to give Congress a verbal dressing down for passing such a bill * * * and then to have signed it. It would have been the politically correct thing to submit to the pressure of cheap politics and legislative cowardice and to have signed the bill. Almost any other man in political office in the United States would have done so * * * but not Ike.

The bill was had and he knew it. It would undo some of the advances toward sanity in agricultural relief already made, his economic advisers told him * * * but to sign it would be good politics.

Many of us wondered what the President would do. Would he have the nerve to do what he knew to be right, even in the face of the certainty that his action would be widely misunderstood and would be used as ammunition by the opposition, which had almost nothing worth anything to throw at him in the coming campaign?

Could any of us have withstood similar pressure? We can answer that for ourselves, but the President wrote his own answer in bold strokes and without any apology.

He expressed only his intense disappointment and regret that a good farm bill could not have been passed.

"Our farm families are suffering reduced incomes. They had a right to expect legislation to help solve their problems," he told the Nation "This bill does not meet their needs."

That was the only consideration that was worth anything to Ike. It was not whether signing or not signing would add to his political popularity and help him be reelected next fall. It was a bad bill, "contradictory and self-defeating. It would lead to such serious consequences in additional surpluses and production controls as to further threaten the income and welfare of our farm people."

So the bill in Ike's opinion had to be vetoed for the best interests of the Nation. He did just that.

Cheap politicians now have the campaign material they have wanted so long. They have something * * * however thin and distorted it may be * * * that they can throw at Eisenhower. They had hoped to use his health as a campaign issue * * * but his health was never better. They had hoped to find some taint of dishonesty among his associates, but anything they could dig up was so slight in the light of what appeared almost every day under the Truman administration, as to be worthless.

But they have their issue now, for Ike has vetoed the farm bill. They maneuvered and worked to get him into the spot where he was, hoping he would have the old-fashioned guts to do just what he did. Now they can make the best of it and it might work * * * except for two little things.

In the first place the American farmer isn't as dumb and as greedy as some politicians think he is. He wants to find his way back to economic soundness and he knows that he will never find it as long as artificial subsidies create additional surpluses to plague him. The modern American farmer is a businessman with a surprising knowledge of what is good business. By and large the American farmers have recognized the economic soundness of what Ike and his administration have been trying to do for them.

The second thing the boys who sacrificed the farmers' welfare in order to force the President to veto a bad bill forgot is that Americans admire sincerity * * * and they know it when they see it.

Every American farmer, no matter how much he wants or deserves a better break economically than he has been getting of recent years, knew that Ike was 100 percent sincere when he said he had vetoed that farm bill "only after thorough consideration and searching my mind and my conscience." It takes a wise man, a conscientious man and a strong man to do what Ike has chosen to do. It takes the kind of a man the American farmer can look to for a permanent solution to the farm problem.

We all know that Ike was right. We know that it was foolish to attempt to set up a soil-bank plan to remove land from production and attempt to cut down surplus while, on the other hand, we shot parity payments up so high as to furnish an incentive for more overproduction and spell defeat for the soil-bank plan. We all know that there can be no solution of the farm problem as long as surpluses are encouraged and stored to hang as a threat over the market.

In the not-too-distant future the farm problem will solve itself when population has grown to such an extent that food consumption will balance production in this country. That time is not more than a decade away. In the meantime, the only solution is either to cut down on production or to find new uses and markets for the farmers' products. The so-called farm relief bill that President Eisenhower had the personal bravery to veto would have done neither. It would only have gone back toward ways and means that have been tried and found wanting.

It was a political measure * * * a hybrid monstrosity, for which many Members of Congress would not have voted had they not been pretty sure Ike would have the intestinal fortitude to veto it. They'll never override his veto. You can be sure of that.

[From the Terre Haute (Ind.) Star of April 17 1956]

THE FARM BILL VETO

(By Mr. James Benham, editor)

The nation—and that includes the farmers—can be thankful that President Eisenhower possessed the intelligence and courage to veto the so-called farm bill concocted by Congress in an election-year spell of jitters.

The bill was not a farm bill in the first place. It was a concoction of compromises stirred up by scared Congressmen who were afraid not to throw some kind of political sop to the farmers on the eve of an election. It made no difference that at least a very large percentage of farmers wanted nothing of the kind offered.

The farmers who have given any study to the problem have long since realized that the answer to whatever problems they have lies not in the Government paying a subsidy for the accumulation of more surpluses with every increase in surpluses standing as an increase in the threat against gearing farm income to the trend of the remainder of the national economy.

Many Republicans were shedding tears in their beer last night over the imagined repercussions of the Presidential veto. As this is written, we have not heard the President's own comment on the veto but certainly he has many avenues of defense for his action. His action was not a gesture of throwing the farmer to the economic wolves, nor was it a demonstration of narrow egotism—my way or none.

The truth is that the President still has a chance to get his personal nine-point program adopted. There was only one point of his program incorporated in the bill which he vetoed—the soil bank. Competent legal opinion holds that this plan may be started by the Secretary of Agriculture under existing authority.

Congressional Quarterly to which the Star subscribes and which keeps a very accurate and close watch on all matters relating to Congress, gives us the following review of the status of the eight other points in the President's program as of last weekend.

Stepped-up surplus disposal: No action.

Strengthened commodity programs, 9 separate provisions: Two enacted (school-milk program, extension, easing acreage restrictions for durum wheatgrowers); 1 passed by both Chambers and in conference (Sugar Act extension); 2 in the farm bill passed by the Senate, but deleted in conference (exemption from wheat-marketing quotas where entire production is used on the farm, and a requirement that parity prices for cotton be computed on the average quality of the crop); 1 deleted by a Senate amendment (expansion of the noncommercial wheat area); 3 unacted upon (quantity allotments to replace acreage allotments for cotton, authority to sell low-grade Government wheat for feed, elimination of a minimum national acreage allotment for peanuts).

Dollar limit on price-support loans to individual farmers: Approved by the Senate, but deleted by the conference committee.

Rural-development program for low-income farmers: No action.

Great Plains program: No action.

Increased funds for research: No action.

Reorganization of the Farm Credit Administration: No action.

Exemption of farmers from the Federal tax on gasoline used on the farm; signed into law.

Spearheading the argument that Benson could set up a soil bank right now without further congressional approval is Senator ARTHUR V. WATKINS, Republican, of Utah. He filed a statement January 24 with the Senate Agriculture and Forestry Committee prepared by the American Law Division of the Library of Congress Legislative Reference Service.

WATKINS said the two competent legal opinions he got from the Service convinced him Benson could go ahead with a soil bank under authority granted in the Soil Conservation and Domestic Allotment Act of 1936 and the Commodity Credit Corporation Charter Act of 1948.

So a veto, along with a promise to salvage what little he likes in the farm bill by pressing for separate legislation may well boost President Eisenhower's chances with farmers instead of making political hay for the Democrats.

And, of course, the veto does not just leave a void. It allows continuance of the flexible farm-price supports enacted in 1954.

Our Home and God

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 24, 1956

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which I was requested to write earlier this year for the National Sunday School Association for National Family Week.

The editorial has been printed in a number of church and Sunday school publications.

There are three institutions that are basic in the fundamental growth and strength of our great Nation, namely, the home, the church, and the school. It is essential that we protect and preserve the family life in order that we may have strong churches that will care for the spiritual needs of our people and good schools that will continue to provide for us an intelligent citizenry.

The family life is also most important in the upbringing of our youth, who will be not only the future citizens of this Nation but in the immediate future will take over the preservation and protection of this great Nation of ours.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"Blessed are they who build families
For they are the builders of the world."
—*Leland Foster Wood.*

The home is the basic unit of our society and someone has truly said, "as goes the home, so goes the Nation."

Far too often parents have left the responsibility of the early training of their children to the church, the public school, and the community.

While the above-mentioned institutions and agencies are important in the life of our children, the childhood training in a home determines largely the adult life of the individual.

The fundamental responsibility of every father and mother is the nurture of the religious life in the home. Fortunate indeed is the child that is nurtured in a home where the family altar is preserved in the worship of their Heavenly Father. As these children grow and reach adolescent age, they will have a knowledge of their Creator and an abiding faith in their Lord and Saviour. These will serve as an anchor and be of inestimable value when trials and temptations beset them—as they most certainly will.

Some years ago a very prominent man told me how important he felt the early home training and Sunday school had been in helping his own son through the age period of 14 to 18 years. This man stated if our young people have the background to get through this period, we can feel that their future is secure. This has been my personal observation.

Not only that, I am deeply indebted to my parents, who have gone to their heavenly reward, for the early training in a Christian home—for the hours my mother spent in giving me instruction in the Scriptures—for their parental prayers and for a home where the atmosphere was conducive to the development of Christian character.

While it is true that there have been many changes in our home life within the last 50 years, the fact remains that the stability of our economic, social, and religious life still depends on the family affections and a devotion to spiritual ideals.

If we are to continue to enjoy the heritage left us by those who have given us this great Nation, we must again restore the family altars in the home and give our children and their children the same sound, fundamental Christian training for which we are indebted to those who have gone before. We break faith with them and with God if we do less.

Youth Looks at the Constitution of the United States of America

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an oration, one of the finest I have ever heard, delivered by Edmund C. Toomey in the American Legion oratorical contest of 1956.

At a luncheon given by Mayor John B. Hynes, of Boston, on March 17, 1956, at which luncheon I was the guest of honor, this young man delivered the oration. It electrified the several hundred persons who were present. It is very evident that, as long as we have young men like Edmund Toomey, the State is secure and the preservation of our Nation is assured.

This young man, Edmund C. Toomey, is 16 years of age; he is an honor student in the senior class of the Gate of Heaven High School, in Boston. This school, under its pastor, Rev. John T. Powers, is staffed by the Sisters of St. Joseph. Last year, as a junior, Edmund was judged the winner in the intermediate division of the Archdiocesan Catholic Youth oratorical contest, the first one he ever entered. This year, he was selected as the city and State winner in that national Voice of Democracy contest.

Sponsored by the Michael Perkins Post, South Boston, Mass., Edmund has gladly entered the National American Legion oratorical contest to tell as many as possible how he, a youth of this wonderful country of ours, felt about the Constitution of the United States.

Edmund C. Toomey, son of Mr. and Mrs. Joseph F. Toomey, 41 M Street,

South Boston, Mass., is an American youth we can well be proud of.

The oration delivered by this fine young man is as follows:

YOUTH LOOKS AT THE CONSTITUTION OF THE UNITED STATES OF AMERICA

"The torch you threw to us we caught,
Ten million hands will hold it high."

These memorable words of R. W. Lillard in his answer to the challenge of Flanders Field have a very deep meaning for Americans. For indeed, we have as our heritage something which not only should be held high but must be held high. And yet, when we consider it, we sometimes disagree on just who are the "we" who must hold aloft the light of our treasure.

As a youth of America, as a son of liberty, and as a lover of freedom, I claim the right of recognition in that number, I claim the privilege of shouting to the world, "Yes; it is mine and it can be yours—it is—the Constitution of America." Oh, yes; today as never before in all history the United States Constitution stands steadfast as a brilliant beacon of hope to the downtrodden masses of the world. It is a blessing from God for which we are both humbly grateful and justly proud. It is perhaps our most precious possession and yet it is not ours. Rather, the Constitution is something we must share more and more of and, at the same time, increase its benefits one hundredfold.

Ah, yes; it is a strange thing—this Constitution. But then it was founded by strange men. Men who left prosperous jobs, good homes, and came to a land inhabited by savages. You ask, what could they expect to find here which they did not already possess? They hoped to find God—and they found God—and in return for their faith and love, He gave them through their leaders, this magnificent thing of which we speak.

But just what is this Constitution and what specific connection has it with America's youth?

As you consider the Bible to religion, you may consider the Constitution to material living. It is the cornerstone of democracy, the essence of liberty. The Constitution is our citizenship. It guarantees to us the full exercise of our divinely granted personal rights. This magnificent document is both tangible and abstract. It is tangible in that it is a written document insuring for us the right to petition and assembly, free speech, free press, and worship. It is abstract in that it is the invisible characteristic which separates America and its individualism from certain other types of government and their slavery. It is the smile on an American's face, the twinkle in his eye, the laugh in his heart.

And as youths of America—yes, as youths—indeed, there are numerous things brought about by the Constitution, for which we, as young Americans are to be infinitely thankful—little things and big things, insignificant and essential—our very lives—for not one of us can deny that the Constitution guards us from undue war and unjust oppression, the right to go to the corner drugstore for a coke, or to the empty lot to play baseball, or to go to school. Ah, to go to school. What other country in the world offers such educational facilities to her youth? What other country offers such reward for studious endeavor? To worship in whatever manner of our choice, to show allegiance to our parents and our friends, instead of being the absolute servant of the state. These things seem common, everyday things to us. But stop a while, lift your eyes to our brothers across the seas. Do these things belong to each and every one of them? Is their life a book of happiness or is it an endless story of misery? Only by doing this, by comparing ourselves with those less fortunate, can we appreciate what our life under the American Flag is and will be. Only by doing this, can we realize how much in need of prayer are our poor brothers bonded in lifelong servitude.

Yes, all of these things from beginning to end are our precious heritage from our beloved Constitution.

To us—the youth of America—falls the joyful task, burdened with the sweet toils of love, of living and understanding the Constitution in our young lives now, so that should it ever become necessary to defend it with our lives, they, being a very part of it, will leap at the chance to drench the world with the blood of freedom. Optimism, the special attribute of youth makes us well fit for this job, for, with light hearts and high ideals we set out on the road of life armed with the Constitution, the banner of justice and smiled upon by the source of all justice.

It is indeed a heavy burden placed on our young shoulders. For, as children of today and leaders of tomorrow, there rests with us the fate of the world. Yes; we youth need encouragement and we need courage, but above all, youth must fight. You may have heard the saying, "With every privilege comes a responsibility." And so it is with youth and the Constitution; we enjoy its advantages and it is our responsibility to preserve these advantages. It is for this that we must fight.

Unfortunately, there are powers in the world today which would destroy our beloved Constitution. They are ever envious of the fact that for over 150 years this mere piece of paper, as it were, has governed a people justly, and paved the road for the universal acceptance of the dignity of man.

And we who are not yet accounted men, who can offer neither expert skills nor brilliantly trained minds for the furtherance of the Constitution, have, what I consider, a far more precious gift to offer—the eagerness and enthusiasm of youth qualify us as front rank soldiers. It may well be said that the motto of youth could be, "Ours is not to reason why." Our complete trust in and undying love for the Constitution make us ideal defenders of it. Armed with unselfishness, our one desire is to spread the doctrine of democracy, as written in the Constitution, throughout the whole world. Oh, not as a conqueror who brings new ways and new customs but as a loving brother who shows by his good example the joy of virtue and the bliss of goodness.

This, yes, this, is the work of youth in behalf of the Constitution. This is what millions of voices cry out day by day, "Come, and see it. Come, and partake of it. Come, and learn to love it. It is freedom. It is America and its Constitution."

Oh, yes; may it ever rule. May it ever reign. The very essence of patriotism.

God save the Constitution of the United States of America.

In Memoriam of Carl J. Trauerman, Secretary-Manager, Mining Association of Montana

---

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 24, 1956

Mr. MURRAY. Mr. President, the mining industry of the West, as well as that of Montana, will miss the guiding hand of Carl J. Trauerman, secretary-manager of the Mining Association of Montana, who passed away in Butte December 17, 1955. Known to thousands of mining men throughout the country, Mr. Trauerman always was in there pitching whenever work was to be done and policies to be formulated at meetings and conferences for the benefit of the domestic mining industry.

I ask unanimous consent to have printed in the Appendix of the RECORD a memorial to this outstanding citizen of Montana.

There being no objection, the memorial was ordered to be printed in the RECORD, as follows:

IN MEMORIAM, CARL JOSEPH TRAUERMAN, 1885–1955

Carl J. Trauerman, for many years the secretary-manager and guiding spirit of the Mining Association of Montana, died at his home in Butte on Saturday, December 17, 1955, following a heart attack a week earlier. The mining industry, the State of Montana, and the Association in particular, have lost an able engineer, a highy respected citizen, and a devoted worker and leader.

Mr. Trauerman was born in Pittsburgh, Pa., on October 5, 1885, the son of Mr. and Mrs. Bernard S. Trauerman. He was educated at the Pittsburgh Central High School and at the Massachusetts Institute of Technology where he studied mining and metallurgy. After 2 years of engineering experience in Pittsburgh, he was drawn to western mining and came to Butte in 1906 as an assayer for F. Augustus Heinze. In the next few years he gathered valuable experience by working in mining and metallurgical ventures throughout the West, including periods in Montana, Idaho, Colorado, Utah, Nevada, California, Arizona, and New Mexico. In these years he was always close to the problems of the mine developer and operator, covering practically every phase of mining from the sampling of a prospect through mine development and management to the design and operation of mills and smelters. In this period he made a number of contributions to mineral technology, notably in the Rothwell-Trauerman designs for thickeners and drum filters. During World War I he was a manganese and tungsten producer and is credited with being the first to concentrate pink manganese successfully for the steel industry.

In 1920 Mr. Trauerman extended his interests to include the oil and gas business in Montana, and in 1923 he became editor of the Montant Natural Resource Bulletin, a service which provided mineral information to hundreds of newspapers and business publications. In 1926, he opened a brokerage firm in Butte and maintained his interest in this firm until 1938. Meanwhile he still had active interests in mining, and in 1935 purchased control, for himself and a group of associates of the Ruby Gulch Mining Co.

In the midtwenties Mr. Trauerman turned his attention more and more to problems of mining, finance, management, taxation, and law. These activities soon drew him into publicity work, and he became a familiar figure and public speaker on the economic aspects of mining. Out of this background he and others saw the need for a new and active association of mining men and companies in Montana, and thus was born the present Mining Association of Montana. Mr. Trauerman served seven terms as its president before becoming secretary-manager, a position which he held until his death. His experience in the Association made him an influential adviser on mining legislation. He appeared before many legislative and congressional committees, and he served for many years on the resolutions committee of the American Mining Congress. He joined the American Institute of Mining and Metallurgical Engineers in 1912, and also held

membership in the Northwest Mining Association, Idaho Mining Association, Colorado Mining Association, Last Chance Gulch Mining Association, Madison County Mining Association, Beaverhead County Mining Association, Montana Society of Engineers, and about a dozen public-service groups such as the YMCA and the American Red Cross.

In the late 1930's and the 1940's Mr. Trauerman became associated with the Montana Bureau of Mines and Geology in Butte supervising the Bureau's Mineral Resource Inventory of Montana. The results of this work were published by the Bureau in three volumes: A directory of Montana mining properties, published in 1940 and revised in 1949; and a similar directory of oil and gas industries, published by the Bureau in 1943; and a bibliography of Montana geology and mineral resources. After he completed this work he discontinued his official connection with the Bureau, but to the day of his death he was one of the Bureau's strongest and most loyal supporters.

His writing was extensive. In addition to the Bureau publications just mentioned, he founded this newsletter of the association in 1945, and for many years served as Montana correspondent of the Wall Street Journal and some 30 other papers.

In 1944 he was appointed chairman of the committee on mine finance of the Western Governors' Conference, and in 1953 he became one of the original delegates to the newly formed Western Governors' Mining Advisory Council. In November 1955 he attended the Minerals Policy Conference sponsored by the council in Sacramento, and was instrumental in drafting certain parts of the report, especially those relating to public relations. Three weeks later, though not yet rested from the strain of the Sacramento meeting, he felt that he should not miss the business meetings of the Northwest Mining Association in Spokane. He stood the pressure for a few days after the Spokane meeting, and in that time he checked the draft of recommendations written at the Sacramento meeting, and transacted other association business. But the strain began to tell, and his heart, weakened a few years earlier, suffered another attack from which he rallied temporarily, only to come finally to rest on December 17, 1955. Thus ended a life which was given with single-minded devotion to the support and improvement of the basic industry of mining.

Mr. Trauerman is survived by his wife, Mrs. Frances Sullivan Trauerman, to whom he was married in Missoula on April 28, 1913; by a sister, Mrs. Nathan Rothschild of Fort Wayne, Ind.; by a niece, Miss Madeline Rothschild, also of Fort Wayne; by a nephew and niece, Mr. and Mrs. Everett Griffin of San Francisco; and by a brother-in-law and sister-in-law, Mr. and Mrs. John A. Sullivan of Oakland, Calif.

Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 24, 1956

Mr. MUNDT. Mr. President, a growing problem in our country is the increasing amount of crime and delinquency among our young people. Professional studies have been made by many persons and groups, and National and State legislatures have struggled with solutions to this problem. I would like to call the attention of all those interested in solving the problem of juvenile delinquency to an article written by Joseph Paul Bitzer of the high-school faculty in Lemmon, S. Dak. Mr. Bitzer wrote this report after careful study and it has commanded much attention in educational circles. I hope the ideas he has presented will serve to stimulate action in other areas.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUVENILE DELINQUENCY

(By Joseph Paul Bitzer)

Juvenile delinquency is considered to be one of the big social problems throughout the United States today. Cooperation and understanding are needed to solve it, and just as soon as the day comes when young people will know that they can no longer get by in doing things which are considered to be wrong, delinquency for the juvenile will no longer be the serious problem it is today.

DEFINITION

Today, juvenile delinquency includes the young people or teen-agers who do not live according to the mores or the customs of those persons living in their particular neighborhood, area, and in many situations the entire United States. It used to be that juvenile delinquents were only concerned with misdemeanors but today they are also very active with felonies.

CAUSES

It isn't that young people do not know right from wrong, but the trouble is that most of these teen-agers realize that if they do violate some rule or custom that in many situations little or nothing will be done about it. At this time it should be made clear that juvenile delinquents when caught and when they are punished, they are usually poor sports.

Older persons who are to bring up and train the young people properly often do not take an interest in this very important task—giving the child an opportunity to live a good life by being raised properly from the time born until ready to assume mature responsibility. Many persons who have the responsibility of raising children properly are not qualified to do so and in such situations the children are often an improvement over the parents or guardians.

CORRECTION

Have a responsible person or organization take charge of the delinquent and with proper management of the boy or girl, it is surprising how quickly the person involved will no longer be a delinquent. Correction can only be effective if patience and understanding are included in the qualifications of the person or the group doing the correcting. Often persons who should know the answers haven't the slightest idea of what is going on and in such situations the delinquent becomes worse rather than better.

Good home life is very important but it isn't always the answer. There are many factors which enter such as the school, places of entertainment, other environments, and a natural desire on the part of many to copy from others in doing things which will gain recognition of some sort. Society as a whole is responsible for juvenile delinquency. Every human being today can do something to prevent delinquency and every human being can do something to help correct it. And when correcting or preventing, everyone concerned must be very sincere. Again as mentioned before, too many delinquents know only too well that many parents and other responsible persons or should be responsible persons do not care. And many delinquents also realize that many supposed to be parents, etc., who are supposed to be shining examples of what is good and proper are only a "bunch of phonies" and know it is ridiculous to even pay attention to them. The effective way to correct a bad situation is to correct it now—do something about it.

PREVENTION

Prevention should be considered even before correction. It may appear to be more expensive in the beginning but it will be more economical for everyone concerned in the long run. "An ounce of prevention is still worth a pound of cure." People are more conscious of juvenile delinquency today because of the different environments or the "conditions of life." Things are different from what they were years ago and today we notice these things much more. We probably had some bad offenders years ago the same as today, but the world was still smaller at that time—we didn't have the rapid means of communication and the swift means of transportation we have today. Again the conditions of life, today, are making this social problem, delinquency, more noticeable than ever before. Young people are more aware of what other young people are doing and they are going in for big activities the same as the country is going in for big business, etc. If each of us would do his part in preventing delinquency, it is surprising how few teenagers would even think of doing something they should not be doing.

THE SCHOOL PROBLEM

We hear a great deal about the school and juvenile delinquency. We also realize that there is a school problem throughout the Nation. Delinquency gets a good beginning in the school because here is a center where many students are forced to assemble for supposed-to-be-learning purposes. Many types of personalities and ideas are represented in the school and students have learned one thing for sure and this is that school authorities in most cases are more afraid of the students than the students are of the school authorities. These students are not born bad but when they are together they realize, by cooperation, they can really go to town and have a good time and worry little about getting caught and being punished.

It is surprising how successful adults could be if they would practice some of the splendid cooperation for the good which the delinquents carry on for the supposed-to-be bad. Young people are quick to notice that in many situations adults who are to be playing the game fair are just as rotten if not more so than they themselves are.

Students are usually very honest in explaining what they are up to and why. A group of students told me the other day that they realized that they were not acting properly but why worry when they will win out anyway. These same students told me how they saw to it that every year new teachers would come to the school and they also explained how they got rid of the teachers they didn't care for. The interesting thing is that the students knew what they were talking about and they had confidence in themselves.

Here is a typical pattern. Certain students do not care to study or perhaps they just do not care for a certain teacher. Rather than come to school and give the teacher a chance and perhaps learn something from the teacher, the students go home, make up a story of some sort which will shock the parents and then the parents go to the school board, and the school board doesn't care for any trouble, so the superintendent is questioned and he and the other administrators feel it best to avoid trouble so the teacher is fired—does not get a contract for the next year and then the teacher is given sugar-coated explanations which are to build up his ego rather than have him feel that the students don't want him, and the school board and administrators do not care to back him up, even if the teacher could be right and the students wrong.

Students are not always entirely to blame for things they shouldn't do but do. At times teachers who are jealous of administrators and other teachers actually encourage the students to do things which should not be done. It is not unusual to find school people who "double-cross one another" and then put the blame on the students. In this way the public feels that it is the students—bad boys and girls—and not much is said about it. Again, the students have little to worry, if any at all, because they know how things have gone in the past.

Here is a typical situation. A teacher was stabbed with a knife by a student. This is terrible. If the teacher would have stabbed the student instead of the way it was, public opinion would have formed a lynching party or would have at least had thoughts of one. The student admits that he killed the teacher, any now the wheels of justice start moving. The result, the student got one-tenth of the penalty a person usually would get for murder, and in many cases the student would receive no punishment whatsoever, and the student is made a hero in any situation.

Another problem in school is that students are supposed to live a certain life in school and while in school they are to be trained for good citizenship when their time comes to be responsible citizens and leaders of the community and the Nation and the world. These young people are almost forced to live two lives. They know what life is like on the outside and when they spend 6 hours or so under artificial school conditions they become confused and ask themselves why worry or take the just don't care attitude.

Schools could and should be practical and often teachers and administrators could learn a few lessons from the students, but generally speaking the school should be operated so students go to school to learn to do what they are told, know what is meant by responsibility, and by this procedure the students will be able to "give and take" much better when it is their turn—when they are in charge of things themselves.

Many persons put all of the blame on the school board. School board members, in many situations, are not supposed to be professional educators. And if the administrators would do their part and the teachers would cooperate, and the students would be trained to do their part, our schools would then be functioning in such a way that the school problems of today would be a thing of the past and students could actually say it is a privilege to go to school and they would also learn something and then they would qualify for their important role in life when the time came. Cooperation and understanding are needed.

CONCLUSION

Juvenile delinquency is one of the major social problems in the United States today. The only way we can remedy this evil is to let the offenders know that they can no longer get by with the things they have been doing and are doing. The evil is recognized and now it is time to do something about it—put a stop to it now.

Mandatory Inspection of Poultry

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 24, 1956

Mr. MURRAY. Mr. President, one of the most vital pieces of proposed health legislation before Congress today is a measure to provide mandatory inspection of poultry for wholesomeness and cleanliness. Such legislation is long overdue. It is important for the welfare of consumers, the poultry workers, and the poultry industry.

The General Federation Clubwoman, the official publication of the General Federation of Women's Clubs, carried an excellent article on the need for this legislation in its March issue. Under the title "Is the Poultry You Buy Good Enough To Eat" the magazine described in vivid terms the flow of filthy and diseased poultry to market. I believe the article, written by Earl W. Jimerson, president of the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL–CIO, provides an excellent summary of the conditions existing in a part of the poultry industry and the consequences of these conditions to the consumer.

The article advocates the enactment of S. 3176 as the means for coping with the problem of diseased and contaminated poultry. I am happy to be the sponsor of this measure.

I ask unanimous consent to have the article from the General Federation Clubwoman printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The legislative fight to drive filthy and diseased poultry from the market is on.

Activity in both the House of Representatives and the Senate of the United States is numbering the days when refuse-littered and rodent-infested processing plants can send contaminated and adulterated poultry into interstate commerce.

Because poultry, unlike most major foods, need not be inspected for wholesomeness, chickens and turkeys with sores, swellings and other signs of disease are allowed to be sold. Dust, dirt and fecal matter, which are on the bird, or become attached to it in unsanitary processing, may remain.

These conditions are absent in the majority of the industry. Many processors attempt to maintain high standards. However, the mushrooming poultry-processing industry unfortunately, does contain men whose only value is the fast buck. These are the men who are responsible for the health hazards and make legislation extremely necessary.

Part of the problem is due to the new buying habits of Mrs. Housewife. Years ago, she would get her poultry from the farmer, or dealer, and almost invariably saw it alive before her purchase. Although she had no guaranty against its being diseased, she could get some inkling from the chicken's or turkey's looks. Further, she generally watched while her poultry was cleaned or processed in the market or she cleaned it herself in her home.

Today, however, Mrs. Housewife buys her poultry virtually ready for the oven. It is completely processed and perhaps cut up. She has no idea whatsoever about the poultry's wholesomeness or cleanliness. She knows nothing of what went on during the processing. Visible signs of filth and disease have been removed, but danger may still lurk.

Therefore, Mrs. Housewife often unwittingly buys what is truly garbage and serious consequences develop. Following are a few results:

The Public Health Service has found that an average of one-third of the reported cases of foodborne poisoning are traceable to poultry or poultry dishes. In 1953, this number was as high as 44 percent.

Some 26 diseases are transmissible from poultry to man. These includes the pneumonialike and sometimes deadly psittacosis or ornithosis, the infection, salmonellosis and the viral Newcastle disease.

Some of the diseases, especially psittacosis-ornithosis, cause dangerous outbreaks cyclically. Thus, in 1954, turkey flocks in Texas came down with ornithosis in epidemic proportions. Nearly 200 cases of human illness, mostly among poultry workers, and 1 or 2 deaths, resulted.

Poultry processed in unsanitary conditions can become the carriers of some eight serious diseases. These include paratyphoid fever, dysentery and chemical poisoning.

The moral of this situation is obvious. Inspection by trained men and women is needed during poultry processing to guarantee the consumer a wholesome and clean product.

The General Federation of Women's Clubs is in the forefront of the drive to gain this inspection, as it has always been in battles to improve food and drug legislation. It is of extreme satisfaction to us, of the Amalgamated Meat Cutters and Butcher Workmen (AFL–CIO) that our organization and the General Federation are allied in this most worthy campaign.

The current state of poultry inspection is indeed shockingly sad. A voluntary Federal program does exist, but it covers only a fraction of the processing plants, even in interstate commerce. To make matters worse, it is thoroughly ineffective, because of conflicts of interests and other reasons, in even the parts of the industry it does cover.

Obviously, the job is an immediate one for Congress. Happily, a number of Senators and Congressmen have taken up the task.

Representative J. PERCY PRIEST, of Tennessee, chairman of the Interstate and Foreign Commerce Committee of the House of Representatives, has introduced H. R. 8599 and Representative DON HAYWORTH, of Michigan, H. R. 6009, to cope with the problem. Other Congressmen plan similar action.

In the Senate, Senator JAMES MURRAY, of Montana and seven other Senators have introduced S. 3176. Early hearings are already being planned in the Senate Labor and Public Welfare Committee.

These measures are excellent. They provide that the Food and Drug Administration establish a Poultry Service which would inspect poultry both before and after slaughter. This type of inspection, according to health authorities, is the only means of guaranteeing wholesomeness to the consumer.

In addition, the bills would have the Secretary of Health, Education, and Welfare establish rules for sanitary standards and practices in poultry plants. An inspector would refuse to mark a firm's poultry as wholesome if the plant failed to abide by these standards of sanitation. The poultry, therefore, could not be shipped in interstate commerce.

The bills absolutely bar the shipment, sale, or receipt of any poultry in interstate commerce, other than that marked as wholesome by inspectors of the FDA Poultry Service. Injunction proceedings and penalties are established against this and other punishable acts.

This Federal legislation is vital to the health of the Nation. It would solve many of the poultry health problems which now scourge Americans. Its enactment would be one of the most significant steps in public health in decades.

These bills, therefore, truly deserve the active support of every woman who is concerned with the health of her family, neighbors, and Nation.

America and the Free-Enterprise System

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 24, 1956

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the Omaha World-Herald under date of April 15, 1956, entitled "The President's Prof." I believe this fine and thought-provoking article will be of interest to my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PRESIDENT'S PROF

A side remarks by Mr. Eisenhower at a press conference last month has made Massimo Salvadori just about the most famous college professor in the country. He's going on TV, writing for Reader's Digest, and being widely quoted in the papers.

The President said that he liked the way this foreign-born professor—he's British and Italian—described America and the enterprise system. It turns out that Professor Salvadori thinks the American way is pretty fine, as it is—that all it needs is proper appreciation from Americans who share its blessings.

Europeans, he says in effect, don't know straight up about the American system. They believe the United States is prosperous solely because of its natural resources; that it is controlled by a few rich people who let the poor have enough crumbs to stave off revolution, and that foreign aid is tribute to stave off foreign revolution.

Professor Salvadori says the resources argument is bunk. Australia has great resources and a stagnant economy. Canada is vastly rich but hasn't taken full advantage of its resources. The same applies to Latin America. But America blooms. Why?

Because, says the professor, of the peculiar determination, energy, and capability of the American people.

Foreign critics say the American economy is inefficient and wasteful. Professor Salvadori says it is very likely the most efficient in the world—several times more efficient than Russia's.

Foreigners say the few rich dominate through profits. Professor Salvadori says there are many millions of American capitalists, and that profits are the spur that makes people do more than is necessary to survive.

As for outlook, he says the European attitude is, "Why change; we're doing all right." But the American view toward something new is, "This appears to be a good thing; let's try it."

The result, says Professor Salvadori, is not only marvelous prosperity but the world's best school system, a true separation of church and state without a loss of religion, a great diffusion of reading matter and general knowledge.

But, he goes on, too many foreigners don't know these things. Or if they have heard them, they often discount them as propaganda. What can be done?

This Smith College professor says foreigners are interested in facts and figures about America, rather than general claims. He says graphs and charts showing the rise in family income, the widening distribution of wealth, and the like are not wasted on the people who influence policy in foreign lands.

He believes in personal exchange of information—a group of touring labor leaders from abroad getting information firsthand in Detroit and Pittsburgh. And the thousands of Americans who go abroad every year can do their country some good by having facts and figures at hand. They should know something about their country and not be bashful in talking about it.

Professor Salvadori's views carry a lot of weight. "The President's professor," as he is called, talks good sense and rephrases a lot of sound advice in new terms. We hope he gets a wide hearing.

The Textile Industry in Peril

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 24, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New Hampshire Sunday News entitled "Textiles in Peril," concerning the very vital textile industry in this country, but with particular reference to New Hampshire and New England, and their economic future.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New Hampshire Sunday News of April 22, 1956]

TEXTILES IN PERIL

A communication in an adjoining column, written by the able and respected operating head of Manchester's Chicopee textile mills, Mr. Charles S. Parsons, deserves the study of everyone concerned in the economic future of New Hampshire and New England.

That includes, by all means, the congressional delegations of our six-State area.

The principal point to be noted is the enormous increase last year in Japanese textiles. We were not ourselves aware, until Mr. Parsons called attention to it, that these exports jumped 72 percent in 1955, and in some important areas of textile manufacture are now equal to some 40 percent of United States domestic production.

While textile wages in this area are certainly not high in comparison to postwar increases in the cost of living, it is worth noting that they are higher than some of the vaunted hard-goods industries with which we are constantly urged to replace them. (As though it were a simple matter to replace an industry accounting for no less than one-third of our total manufacturing employment.)

The disturbing wage comparison is the one Mr. Parson makes between Manchester and Japan, where textile workers get as little as 10 cents an hour.

Not even our southern textile mills can stand this kind of competition. So serious is the situation in the South that—we learn elsewhere than from Mr. Parsons' letter—at least three States have recently adopted legislation requiring mercantile establishments to post signs saying "Japanese textiles sold here." This horrifies the one-worlding New York Times, which condemns South Caroline, Alabama, and Mississippi for "clear contravention of the spirit of our treaty of amity and commerce with Japan." We sympathize somewhat with the Times' fear of driving Japan into the arms of the Reds by restricting her foreign markets, but we don't think the American textile workers should be made the sole sacrificial goat of a foreign policy designed to keep the Japs friendly. The United States is not, and has never been, Japan's natural textile market. The people who cut off Japan's natural outlets were the same people who sold Chiang Kai-shek down the river and turned China over to the Communists. Japan will never be more than a beggarly dependency until we develop a foreign policy which succeeds in restoring her Asiatic markets.

Meanwhile, however, the congressional delegations of the textile States should unite to pressure the administration into retreat from a present low tariff policy which threatens imminent ruin to millions of Americans. If Japan must be artificially propped up and carried on our backs for a generation, let the burden be distributed over all American industry and all workers and taxpayers, not just the textile industry. The tariff has never had any validity other than as a means of encouraging domestic manufacture, and, especially, protecting the livelihood of American workers. Both these principles are at stake here, and both are being suicidally violated by, of all people, an allegedly Republican gang in Washington.

What I Owe My Country

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks at this point in the RECORD, I wish to include an inspiring essay written by Mr. Martin Berkins, of Beachwood, Ohio, which won high honors in the recent American Legion essay contest.

The essay follows:

WHAT I OWE MY COUNTRY

As a young American, I feel I am entrusted with the responsibility of being a good citizen. Good citizenship must originate in the individual. A country can only be as good as its citizens, for it will be the individuals who will shape the destiny of our country.

I must be loyal to myself by trying to be an honorable person with a keen sense of right and wrong. I must keep myself physically fit and morally straight and live up to the Golden Rule.

I must be loyal to my parents and family; to do my part in making our home a place of peace and refuge, for a happy home is the basis of a peaceful world.

I must be loyal to my community by voting to put the best person in public office and to take an active part in as many civic duties as possible.

I must be loyal to my country and be willing to fight to uphold the principles that make it great, the Declaration of Independence, the Constitution, and the Bill of Rights. These things must be protected and fought for if we are going to continue to live in freedom in this great country of ours and not to let it become poverty stricken and communistic like some of the countries in Europe have become. This great country is our heritage and we must be proud of it and be willing to uphold it for the cause of freedom.

I also feel that each individual person must contribute his skill to help in furthering the progress of the country. Each one should accomplish this in whatever manner he is best qualified, whether it is farming, education, medicine, engineering or in the field of atomic energy. Each person should develop his own particular ability to the farthest reach of his talents. Only then

will our country become as great as it can be made to be. If everyone works together doing this, our country will benefit all mankind and make great strides toward world peace.

I owe my country the promise that I will be a good American; that I will be a benefit to my country in every possible way; I will uphold all the principles for which my country stands; I shall try to better my country in every possible way that I can to make my country greater, if possible, than it already is and to be proud that I am an American. These things are what I feel I owe my country.

With Whose Money?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from the April 20 issue of U. S. News & World Report, by David Lawrence, entitled "With Whose Money?":

WITH WHOSE MONEY?

(By David Lawrence)

Every now and then a curious sort of propaganda line criticizing American foreign policy comes back from abroad in the form of anonymous interviews, impressions, suggestions, and findings derived in good faith from persons who profess to be thinking only of the good of the United States—some of them our own officials stationed in foreign countries.

The substance of it all is a complaint that America isn't spending enough abroad in economic aid. It is apparent that the persons who feed such views to American newspapermen are absorbing the ideas of foreign officials who realize that the "gravy train" is running down and needs to be greased up again.

The propaganda is too palpable to be deceiving. It starts out usually with the criticism that America is putting too much emphasis on military alliances, that America is attaching strings to its grants of aid, and that America is trying somehow to destroy or impair the hard-won independence of the newly created states—now known as "uncommitted" and "neutralist."

On top of this is the curious allegation that Americans are talking too much about war and too little about peace, and that our foreign policies are too rigid or too inflexible.

Boiled down to hard realism, it means that Uncle Sam's pocketbook has become too inelastic and rigid. They are beginning abroad to suspect that there will be difficulty this time in getting billions out of the United States.

This is the right moment, incidentally, to talk about the American people's money. The American taxpayer this very week is making his quarterly payment of income taxes and finds he is giving up a huge proportion of his earnings. The taxpayer in the past has been told it's necessary to furnish aid so as to resist communism and strengthen our overseas defenses.

But now the new propaganda line from Europe and Asia says that America puts too much stress on resisting communism and that this isn't a menace after all. Even the Socialist Premier of France minimizes it.

Our official spokesmen have for a long time now been talking about peace and the renunciation of force, and decrying bad colonialism, but evidently the Asians haven't heard us talking. Their ears are stopped up with glowing tales of Communist virtue.

It's strange in all these surveys, too, how little mention there is of Communist colonialism and Communist-imposed slavery in the satellite countries, which once enjoyed their independence. Yet Soviet policies in Asia are praised as exemplary.

The unnamed spokesmen in Asia hint that we should scrap our Southeast Asia treaties, discard the 1 million troops on our side in Formosa and in South Korea, and recognize Red China. What a military coup for the Communists that would be.

We are reminded in these new surveys that Asians have lived in poverty for a long time and have been exploited by Europeans. We are warned that, while Asian peoples like help, they are very proud and don't want any conditions attached to gifts.

Somehow, it is asserted, Russia does the thing better—she gives no gifts, she just participates in trade arrangements. But she does manage to exchange her rubles for concrete things. The first condition that Russia makes usually is that she get something worthwhile in return. But, ah, America, she must not think of such things—America must give away her money quietly, anonymously, and ask no questions. As for Mr. Dulles, he is referred to in the surveys as a bad Secretary of State—probably because he's a good American.

It is easy to read between the lines of what these supposedly informed observers say, there's nothing wrong with the American policies abroad which a few billions of financial aid wouldn't cure. If only there were more Marshall plans, more economic agencies, more give-aways, everything would be rosy.

There is one question we might venture in all candor to ask: How do these so-called observers who have the temerity to give such pointed advice to America, expect to carry on new and enlarged programs of economic penetration? With whose money? Certainly not with the American taxpayers' money.

If underdeveloped countries are so blinded by pride that they don't know the difference between Communist tyranny and American generosity, it's time to stop injuring their pride any longer with gifts of American dollars.

If the Communist menace is, after all, a myth, then let the countries which feel that way protect themselves as best they can.

America should continue, of course, to help faithful and appreciative allies in Europe and Asia. There is, however, no obligation which requires the taxpayers of the United States to become paternalistic guardians of the neutralist world. If there is no military reason for American aid to certain countries who now scorn it, then America's billions might better be expended within this country for more schools, for aid to farmers, for relief of the taxpayers' burdens.

The Farm-Bill Veto

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. ARENDS. Mr. Speaker, it is my privilege to represent an agricultural district, consisting of seven counties, where corn is the principal product. To my people the existing farm problem is all important.

My people recognize that the farm problem is not something that developed overnight. It is indeed the result of surpluses that have been accumulating over the years and failure to deal realistically with the situation.

My people know that there is no panacea that can meet the problem. And they are not being deceived by the attempts that have been made to concoct a panacea. They recognize the farm bill that was sent to the President for exactly what it was—nothing more than a political maneuver.

Under leave to extend my remarks, I am inserting in the RECORD editorials which appeared in the three leading daily newspapers in my district: The Bloomington Daily Pantagraph, the Danville Commercial-News, and the Kankakee Daily Journal.

These papers serve a farm area, and each of them condemns the farm bill sent the President and commend him for his veto. I am proud that I voted against the bill and proud that I voted to sustain the veto, believing as President Eisenhower that this is not a time for politics but a time for courageous statesmanship.

The editorials follow:

[From the Bloomington Daily Pantagraph of April 19, 1956]

SOIL BANK PLAN STILL NEEDED

Persons really interested in the well-being of the Nation and a strengthened agricultural economy will applaud President Eisenhower's courageous action in vetoing the farm bill. It was a hodgepodge which would ultimately do more harm than good. It would hurt farmers of the Corn Belt.

While veto of the bill in this politjcal year took moral courage, we believe it will ultimately work to Mr. Eisenhower's advantage. The veto message brings the real farm issue into focus. Clear thinking farmers are not going to be "taken in" by the cry that the administration isn't ready to help the farmer.

They can hope that the Democratic controlled Congress will now speedily pass the soil-bank plan, which Mr. Eisenhower asks. True, it was included in the farm bill but was nullified by a hodgepodge of amendments aimed at votes rather than the benefit of our farm economy.

High, rigid price support has produced unmanageable farm surpluses and has depressed farm prices. The soil-bank plan, which the President asks, would reduce these price-depressing surpluses by temporarily retiring land from production. Other undesirable provisions of the vetoed bill were dual parity, two-price plans for wheat and rice, and higher price supports for dairy products and other commodities.

It is perhaps wishful thinking to hope Congress will give the President what he asks. They have played political football with the farm problem for months. Yet their decision to make the farm problem a major campaign issue may prove a boomerang. The farmer can see who his friend really is.

[From the Danville Commercial-News of April 18, 1956]

THE PRESIDENT SHOWS COURAGE

Risking the embarrassment the Democrats obviously wanted him to face, President Eisenhower has vetoed the fraudulent and fuzzy farm bill put over in both Houses of Congress. For that we cheer him and pay tribute to his integrity.

This something-for-everybody-without-regard-to-the-effect bill had to be vetoed. Apparently many Democrats misjudged the President. Adhering to principles rather

than political expediency, the Chief Executive did what all his admirers thought he would do.

The measure favored large wheat, corn, and cotton producers at the expense of the consumers and dairy farmers. The Democrats believe they now have Mr. Eisenhower at a political disadvantage. In control of Congress, they will not permit enactment of any other measure, especially one incorporating the wanted soil bank but excluding rigid 90 percent price supports.

There are 15 Republicans in the Senate and 48 in the House who deserted the party on this issue. They are also guilty of putting the welfare of agriculture and of the Nation secondary to the demagoguery to lure farm votes.

The vetoed bill, distorted by crude political conniving in an election year, would have sacrificed the urban worker, consumer, and taxpayer. It would have created only the tenuous illusion of helping the farmer.

It is a sad commentary on the moral and intellectual caliber of the majority in Congress. It should make the voters wonder whom purported representative government represents, while making them happy. Mr. Eisenhower with his courage and honesty is the final authority.

[From the Kankakee Daily Journal]

FARM BILL BOOMERANG

(Chicago Sun-Times)

Democrats thought they had put President Eisenhower on a political spot when they presented him with a bill that was an outright effort to buy the farm vote. If he vetoed it, they figured, his stock would go down in rural areas. If he did not, Democrats would take credit with farmers for putting more money in their pockets.

Today we have a hunch that the Democrats played it too smart and that their political trick is boomeranging against them. For in vetoing the monstrous farm bill Mr. Eisenhower showed such courage, statesmanship, and good sense in his arguments against it that he has risen to a new high stature in the minds and hearts of his countrymen—and we believe that must include many farmers, too.

The President did what he thought was right. He refused to be swayed by panicky warnings from some Middle West Republican politicians that the GOP would lose the farm vote unless it went along with the Democratic grab-bag bill.

We have a firm conviction that when the President does what he believes is right, regardless of political consequences, the mass of the people, farmers included, approve. Americans are a moral people. They believe in doing "what's right." In the words of Daniel O'Connell, nothing is politically right that is morally wrong. We believe the President, in his message to the people, made a convincing argument that the overt effort to bribe the Nations farmers was morally wrong.

The bill, for example, pretended to go along with President Eisenhower's program to eliminate the huge mountain of surplus food and fiber that depresses the market and costs farmers and taxpayers millions of dollars a year. But the bill actually included a return to the very farm program that created the surplus in the first place. The President nailed this gross breach of public trust by describing the bill as a hodgepodge in which bad provisions more than canceled out the good.

In the long run, the bill would have hurt all farmers, even though for a short time it would give them the illusion of more income. Moreover, the bill was an anticonsumer bill because it would have perpetuated artificially higher food prices by the use of taxes without getting to the heart of the basic farm problem.

The problem at the moment, as the President said, is the fact that farmers are not sharing proportionately in the Nation's record-breaking prosperity.

The soil bank plan, to reduce the $8 billion mountain of surplus that costs $1 million a day just for storage rental alone, would have bolstered farmers' income. But Congress dillydallied on the farm bill until it probably is too late now to fully put the soil bank plan into operation this year, even if Congress should pass an acceptable bill. So, to take some of the sting out of the veto and help distressed farmers, the President upped support prices on several products. Corn, for example, will be supported at $1.50 a bushel instead of the present $1.30. (Under the vetoed bill the support would have been $1.64.)

Of course, it is true that this compromise may tend to increase surpluses, but as the President said, the failure of Congress to enact the soil-bank plan makes it necessary for the administration to use what tools it has at hand to help the farmers. Moreover, if Congress will come to its senses and hastily pass an acceptable soil-bank plan, it would be possible for the administration to make payments to some farmers on the conservation of acreage reserve program shortly after July 1.

We shall now see how good friends of the farmer the Capitol Hill politicians really are. They should get on the ball and pass an acceptable farm bill. The farmers would rather have that than a lot of speeches blaming Ike for the farmers' plight.

As for the political aspects of the veto, to get back to our original premise, we believe the Democrats should worry about their standing with consumers and urban citizens as well as with farmers. The great source of Republican strength in the House lies in small and medium-sized cities, not in rural areas as is generally assumed. According to a study by Congressional Quarterly, a private Washington news analysis, medium and large cities will determine the makeup of the 85th Congress. The President did not hurt himself in those areas by the veto, and when farmers study his arguments, we are confident those who were not irretrievably lost to him before the veto will remain in his corner.

Addresses by Governor McKeldin, of Maryland, and Mrs. D. Ray Murdock, of Pennsylvania, at Maine Republican State Convention

---

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 24, 1956

Mrs. SMITH of Maine. Mr. President, it was the good fortune of Maine Republicans at their State convention on April 13, 1956, to hear two excellent convention addresses. These addresses keynoted an enthusiasm and spirit together with truly constructive attitudes that make for real Americanism regardless of party affiliation.

One address was delivered by Maryland's outstanding statesman, who surely someday will become a Member of this body—Gov. Theodore McKeldin. The other address was given by one of America's foremost women—Mrs. D. Ray Murdock, of Pennsylvania.

I ask unanimous consent that their addressees be printed in the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

KEYNOTE ADDRESS BY THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND, AT STATE CONVENTION OF THE REPUBLICAN PARTY IN MAINE, PORTLAND, MAINE, APRIL 13, 1956

Good afternoon, fellow Republicans and friends of the Republican Party.

I am very happy to be here in this great maritime State, with interests so similar to those of my own State of Maryland, and with the same good concern for the promotion of trade among the nations of the world, and for the progress of business, industry, and agriculture.

I am glad to be here because the invitation came to me from your neighbor, my good friend, Fred Scribner, who has been assisting me so capably and so extensively in my chairmanship of the rules committee for the national convention of our great party. I am very grateful to Fred.

It pleases me to be among you now because I sense the fighting determination that is yours to recover the governorship for the Republican Party and again place the State government of Maine on the side of domestic progress and international enlightenment, as represented so magnificently in the distinguished person of one of the truly great men of all time—the President of the United States—Dwight David Eisenhower.

But I am most grateful for this opportunity to contribute what I can to the arousing of our people everywhere to the importance of the great decisions to be made in this important election year—one of the most important in the history of our Nation.

I entertain no doubt that the electoral votes of Maine will be recorded for Dwight Eisenhower.

But, because of the proud place Maine holds among the States and Commonwealths, in being the first to give voice to its sovereignty each even year, it is of extraordinary importance that that voice be loud and decisive.

While the fumbling opposition concocts counterfeit comfort from various versions of significance in primary elections, it is important that all America be made aware in September of the sound thinking of a whole people in a great State.

Yours is a voice that will be heard around a waiting world, because it is important, too, that the peoples of all nations be advised that the United States of America is not wavering in its leadership toward a better, saner world.

What are the issues that make the elections of 1956 so significant to the people of the Nation?

What are those that give our decisions such urgency to the people of the earth?

Agriculture? Business? Government finance? Rate of employment? Highways? Waterpower? Flood control? Internal security? Integrity in Government?

Certainly, all of these in a Nation as diversified as ours. Certainly, they demand public and official interest—and certainly the Eisenhower administration will stand with pride on its record and its proposals on each of them.

Foreign relations? Foreign trade? Progress of depressed nations toward economic recovery? Immigration?

Why, of course, all of these must figure extensively in the sphere of our Government's activities—and, of course, the administration of Dwight D. Eisenhower is the beneficiary by far in any comparison of the records.

But paramount to all of these and, indeed, encompassing them within its mighty breadth is the greatest issue of our times—the progress of civilization.

No; I am not about to say that those who cling so tenaciously to control of the opposition party are uncivilized men. They are, indeed, civilized within their individual selves.

I am not about to say that they are opposed to civilization. They are not savages.

But I will say that in the long years of their power that is past, they demonstrated a most discouraging ineptitude in the advancement of civilization.

They geared the economy of the Nation to war—and could see no hope for prosperity without war.

They vacillated—to use the more gentle term—in their dealings with the uncivilized, would-be conquerers of the world.

They condemned themselves by taking the cynical view toward the promise of the Republican candidate for President in 1952—Dwight Eisenhower—to go in person to Korea on a mission of peace—to accomplish the cessation of the slaughter there.

They showed their ineptitude toward establising peace and maintaining a strong America when they chose to disregard the disloyalty which was so obvious within the Government.

They showed it when they tried in vain to make political issue out of the brink of war article—they who never knew how to avoid plunging over the brink and into the bloody drink.

They show it in the present posing of their political hatchetmen as experts in the field of guided missiles.

Even now in the bitterness and the bickering among their candidates for their presidential nomination—their neglect of the bigger issues and the welfare of the country in the pursuit of their personal ambitions—they show their unfitness for the highest office in this land and for a place of leadership among the nations of the world.

Yes civilization retrogressed in the years of their reign—for war is retrogression—and the constant threat of war was a wall which stymied progress.

But the world called for a man to master the crisis, and the American people answered the call with the election of Dwight David Eisenhower.

Here was the great soldier, experienced in the horrors and heartbreaks of war who brought an end to the war in Korea.

Here was the man whom friendly nations could trust and whom dictators had to respect.

Here was the man who bolstered collective security in Europe by obtaining German sovereignty and the Austrian peace treaty.

Here was the man who closed the gaps in our defense wall through the Southeast Asia Treaty Organization, the Korean Treaty, the Free China Treaty and others.

Here was the man who directed the maintenance of peace at Formosa, Trieste, and Iran.

Here was the man who abolished Communist influence in the Government by the United States.

Here was the man who saw and used the advantage of peace conferences in times of peace—for the maintenance of peace—not just to end another war.

Here, today, at the head of the world's most powerful nation is the man who led great armies to victory over tyranny—the man who commands the greatest military potential and the most powerful weapons the world ever has known—but here is a man who glories not in the prospect of crushing a foe, not in the contemplation of conquest in battle, but in the consistent pursuit of a lasting peace, in the relegation of war and its barbarism to the pages of history, in the advancement, if you please, of a true and enlightened civilization.

Yes; here is a man, who while not neglecting our stockpiles of defensive force, is the spearhead and recognized leader of the whole magnificent movement to apply atomic power to peaceful uses—for industry, for transportation, for medicine, and for all purposes to better the living and add to the welfare and happiness of humanity.

Here is a man whose wise policies on foreign and international trade have spurred the economic recovery of all nations, dispersing much of that gloom and despair which too long had fertilized the fields where wars were grown.

Compare the widespread despondency of a few short years ago with the international economic optimism that exists today.

Look at the prospects for that unfailing index of prosperity the production of steel—the confident estimates that the output will rise, within the next 4 years from some 297 million tons a year to more than 384 million tons. Consider the fact that the preparation for this production is worldwide. Take into account that the primary motivating force is the rising demand by growing populations for more consumer goods—automobiles, refrigerators, small appliances, and general household items.

This is a story of growing abundance and popular contentment—the stuff of which peace is made—the stuff that discourages the would-be makers of war.

And for those who fear the industrial rise and economic progress of other lands, let it be known that about 17 million tons of the increased steel production will be in the United States—added to the 128 millions tons of our annual production now.

With the economic progress of Europe and Asia, the threats of a shooting war have dwindled, and the pattern of the cold war with communism has become one of economy.

Because weak spots still exist in the international picture and because the maintenance of the new economic strength of friendly nations still depends on our help, the new circumstances call for increased foreign aid—not less as some of the President's opponents now advocate.

With this increased aid, we need administrative flexibility in its use—not tighter long-range controls.

We must use available foreign aid funds in this gentler type of war—this economic war—as we would use armies in the old-fashioned shooting war—stationing some of it on a more or less permanent basis at persistent spots of danger—keeping more of it for quick and strategic deployment where trouble areas appear.

Can we afford it?

We could not afford to stop it.

The financial cost could never be as great as the cost we would bear in sending our sons to war.

And even if we consider the whole project in fiscal coldness, it is a good investment. It helps our American economy by increasing our foreign trade.

Sometimes, perhaps in a rather distant future, the foreign aid phase of the economic war can be brought to an end—but not the phase of competition for trade. The competition is good for the world, good for the economy of nations, and good for the prosperity of the people.

The long-existing problems of American agriculture appear to bring some comfort to the opposition because they can find nothing else.

They offer no solution, but they insult the farmers by attempting to buy their votes with handouts.

The Eisenhower administration, aware of the farmer's pride and dignity, has refused to look upon him as a mendicant. The Eisenhower administration recognizes the farmer as a businessman in a business which needs help, not charity, to meet the changed and changing conditions of our entire economy.

The farmer's problem, stated in its simplest form, is this: He gets too little for the things he produces and pays too much for the things he buys.

Government cannot and should not force a reduction in the cost of the machinery, equipment, clothing and other articles that are bought for the farms and the people who live on farms. Those prices are regulated by the wages and other costs that contribute so much to our generally sound economy. The farmer, whose best market still is urban America, would not want this healthy outside economy diminished.

The solution, therefore, lies in seeing that the farmer derives an adequate income from his produce.

Large surpluses in storage are the greatest drawback to adequate farm prices.

The most logical first step would be to stop adding to those surpluses. This never could be accomplished by the high, rigid price supports insisted upon by opponents of the President's farm plan.

It could be accomplished to a considerable extent by the President's soil bank proposal, through the adjustment of crops both to accumulated stocks and to potential markets.

The soil bank would have the additional value of temporarily removing from cultivation or pasture use lands that now are poorly suited to tillage—lands which thus could be conserved and built up for use at some future time when our growing population may require their fruits.

The rest of the President's farm program is designed, too, for the long-range cure of farm ills—not for the buying of farm votes in an election year. It includes methods for disposing of existing farm surpluses, strengthening of commodity programs, rural development programs for low-income farm families, and a stepped-up program of research that emphasizes ways and means of reducing production costs, the finding of new uses for farm products, the development of new crops, the expansion of markets, and price supports that are adjustable to the needs of a given time.

This then is no ward-healing program such as has, from time to time in the past two administrations, been foisted upon the men and women in the business of producing our food and the raw materials for some of our clothing.

It is a program largely designed along those lines which have given American industry its leadership in the world—modern sales methods, avoidance of excessive inventory, development of markets, alertness for new products and constant research.

It is a program that would not tear down one part of the economy to help another. It is a program that looks to this and future generations of the land—not just to the next election.

I urge that when you go from this convention of republicanism to your towns, your cities, your counties, and your districts, you go with a high sense of pride in the accomplishments of which you are a part—with an even greater determination to see that Maine speaks with resounding emphasis on election day—to see that the first electoral votes recorded in this decisive year are recorded for Dwight David Eisenhower.

See to it, too, that a governor is elected in Maine with the philosophy of an Eisenhower—and that you send to the Congress those with the vision and the foresight to join Dwight Eisenhower in his great crusade for a strong economy and a lasting peace.

Indeed the Nation will be watching and the world will be watching for your vote—the significant vote of Maine—for every office on your ballot. Leave no doubt on any issue or any office.

Remember the high honor that is yours—the raising of the first banner of 1956—the sounding of the first glad cry of forward march in the advance of civilization with a leader second to none in the temporal history of the world—Dwight David Eisenhower.

EXCERPTS FROM THE ADDRESS BY MRS. D. RAY MURDOCK, REPUBLICAN NATIONAL COMMITTEEWOMAN FOR PENNSYLVANIA, MAINE REPUBLICAN STATE CONVENTION IN PORTLAND

Just to join with you here in your Maine Republican convention is, indeed, a real pleasure, and to share the platform with your distinguished statesmen and women and our celebrated keynote speaker gives me a feeling of great warmth that only Republican Party members can generate.

People in every land today know and respect our great President Eisenhower. They trust him because he is an honest man. There is no power on earth that can surpass honesty.

Now let's look at the President's record and take one promise that he made to the people of America—in fact, to the whole world—that he would go to Korea in order to bring an end to the shooting. The mothers and fathers and families and the military men fighting in the Korean war learned to know a true leader and will remember President Eisenhower always for this one act alone.

The women were firmly back of the President in 1952, and in 1956 we are convinced that we need him more than ever in the White House.

The President promised the women that they would receive recognition on all levels of Government, and according to figures of February 1956, we have 109 top women appointments. Just to name a few of the top posts held by women today, Ambassadors; Treasurer of the United States; superintendents of the United States mints; representatives to the United Nations in various capacities; Director of the Passport Division, Department of State; members of National Advisory Boards and Commissions; assistants to department secretaries; collectors of customs, etc. A number of these appointments are firsts to be made to women. "We like Ike."

Today we have facts and figures indicating a notable increase in the number of women now in Government service, both elective and appointive positions.

First, I want to pay the highest respect to your own United States Senator MARGARET CHASE SMITH. It is a recognized fact that women in the 48 States bask in the reflected glory of Senator SMITH's brilliant and courageous statesmanship. The women of Pennsylvania are devoted to Senator SMITH and have followed her scintillating and inspiring career very closely. As time marches on she can depend on the Pennsylvania women to be in there pitching for her for President—maybe in 1960.

Serving in the 84th Congress we have 16 women which tops by 2 the previous high in the 83d Congress, but this score squares 8 to 8 only because the Republicans have Senator SMITH. We hope to increase our average this year because there are more women congressional candidates than ever before. Women throughout the 48 States have held every State elective office down through the years.

In the State of Vermont Consueleo Bailey is their lieutenant governor. Where we see our greatest gains is in county office. Pennsylvania elected a well-qualified county commissioner; of course, in our State we have many women in row offices. Many women are elected to municipal office, even to the office of mayor.

The State of Maine and Pennsylvania have much in common with our Democratic Governors. Our general assembly has chalked up the longest drawn-out session in the history of our State. The controversy has been over a State-tax program. The Governor was elected on his campaign promise that there would be no sale tax nor any new taxes. He was not wise in the business of government—if the pople do not pay for their government just who will pay the bills when they become due? The National Democrat Party has been using the Pennsylvania Governor for campaign cannon fodder. You know in the State of Pennsylvania a governor cannot succeed himself.

Now for some campaign facts. Our 84th Democrat-controlled Congress has put the Democrat Party on record as having a "do nothing" Congress. The Democrats are the chairmen of all congressional committees. The Democrats are in control of all legislative bills under consideration and this being an election year the Democrats want to make doubly sure that the Democratic Party gets full credit for any legislation that may be adopted.

The Eisenhower program calls for more schools, more highways, more hospitals, more child-welfare services, better working conditions, higher wage standards, more homes, but with this "do nothing" Democrat-controlled 84th Congress the people of the United States will not reap the benefits they so richly deserve during this session.

The Republican Party can point with pride to the record on security. Do you know $1,000 put into the bank in 1953 is worth $1,000 today. Under inflationary policies of the Democrats $1,000 deposited in 1939 was worth only $522 in 1952.

The work of the Republican Party is clearly defined in this campaign. The Eisenhower program can only be accomplished by reelecting President Eisenhower and a Republican Congress. With the tremendous popularity of the President it is still up to the party workers to get busy in their own voting district. It is true you are never any better in your political party than you are in your own voting district. Registration is paramount, you can't vote if you are not registered. Many people only get the urge to vote on election day and then find they cannot vote because they are not registered. Now is the time to put on that door-to-door campaign and get the stay-at-home voter active.

Only through you can we tell the story of what the Republican program means. This is the time to use your supersalesmanship and make it count, on election day votes. Let's show our devotion and our dedication by winning victory in November for President Eisenhower and his team. You can do it and will do it. Best of luck to you all.

Aid to Israel

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I enclose copy of the resolution introduced in the Massachusetts State Senate by the Honorable Daniel Rudsten, State senator from the Sixth Suffolk District of Massachusetts, and recently adopted by the Massachusetts State Senate upon motion of the Democratic leader, Hon. John E. Powers, who ably represents my senatorial district in the Massachusetts State Senate. The resolution adopted by the State Senate of the Commonwealth of Massachusetts is a most timely one and I congratulate Senator Rudsten upon introducing it, Senator Powers upon moving its adoption, and the members of the Massachusetts State Senate in adopting the same.

The record of the State Senate of Massachusetts, March 26, 1956, and the resolution adopted follows:

JOURNAL OF THE SENATE

RESOLUTIONS

Congress—Aid to Israel, etc.

Resolutions memorializing the Congress of the United States to grant certain aid to Israel and to implement the joint declaration of the United States, Great Britain, and France guaranteeing the peace and security of Israel (Senate, No. 575); and, under the rule, they were referred to the Committee on Rules.

Subsequently, the same Senator, for the said committee, reported that the resolutions ought to be adopted, and they were considered forthwith, under a suspension of the rule, moved by Mr. POWERS, and adopted.

The resolutions were as follows:

"Whereas the Governments of the United States, Great Britain, and France by a tripartite declaration, have guaranteed the territorial integrity of the State of Israel; and

"Whereas certain Arabian countries by the acceptance of arms from Communist countries have provided the Soviet Union with the opportunities to advance Communist influence in the Middle East; and

"Whereas the influx of arms into Arabian countries disturbs the military balance of power in the Middle East, and thereby threatens the peace of the world; and

"Whereas the United States has recently shipped tanks to Saudi Arabia in direct violation of the declared United States policy of discouraging an arms race in the Middle East; and

"Whereas the State of Israel has requested from the State Department of the United States permission to purchase certain arms and supplies in order to meet the threat of certain Arabic countries, which request has not been acted upon, after a period of 4 months from the time of such request: Therefore, be it

"*Resolved*, That the Massachusetts Senate respectfully urges the Congress of the United States to take immediate action to insure the discouragement of a potential arms race in the Middle East; that the United States authorize the sale of arms and supplies to Israel in order to provide for the security of Israel and to establish a balance of military power between Israel and the Arab nations; that further shipment of arms to Arab nations be prohibited; and that steps be taken to enforce the provisions of the tri-partite declaration of the United States, Great Britain, and France thereby insuring the territorial integrity of the State of Israel, and that such action be taken as may best promote peace between Israel and the Arab countries and throughout the Middle East; and be it further

"*Resolved*, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the President of the United States, to the United States Secretary of State, to the presiding officer of each branch of the Congress of the United States and to each Member thereof from this Commonwealth."

The Foreign Service

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. O'BRIEN of New York. Mr. Speaker, in view of the current economic course of the cold war and the need for

training young Americans for a part in these tests of economic strength, I should like to insert in the RECORD a very fine letter received by me today from the Honorable Robert C. Hill, Assistant Secretary of State:

APRIL 23, 1956.

The Honorable LEO W. O'BRIEN,
House of Representatives.

DEAR MR. O'BRIEN: I have read with care your address to the House of Representatives on April 17, 1956, concerning recruitment to our Foreign Service. As a former member of the Service, with experience as consul in India and Ambassador to Costa Rica and El Salvador, and presently an official in the Department, I want to express my deep appreciation for your interest in this vitally important subject and for the valuable time which you have devoted to it for many years. I am confident that, to a greater extent than ever before, the fate of our own national future and the future of most of the free world rests upon the Foreign Service of the United States.

I heartily agree with your position that the success of our Foreign Service system depends in large part on our ability to stimulate interest among the most promising young people in our country. The Department of State has been engaged over the past 19 months in a comprehensive program to improve the effectiveness of the administration of the Department and the Foreign Service, based upon recommendations of the Secretary's public committee on personnel composed of distinguished American citizens selected on a nonpartisan basis from various walks of life. A vital part of the overall program is the program for recruiting, at the bottom of the Foreign Service, the most able young men and women in the country who we hope will, through training and experience, hold top diplomatic, consular, and departmental positions in the future. This recruitment program entails extensive college-relations activities. When I inquired into the effectiveness of this system, I was gratified by the information I received. During the calendar year 1955, 60 officers of the Department made 435 visits to colleges and universities in every State of the Union and Hawaii. I find that a total of 9,898 persons applied for the two examinations given in 1955, whereas 1,261 applied for the examination in 1954.

Greater emphasis is also being placed upon the training of the Foreign Service by strengthening the Foreign Service Institute and providing for the training of departmental and Foreign Service personnel while on duty at their posts. We are striving to effect, so far as possible and practicable, an integration of the various categories of officers in the Department and the Foreign Service into a single Foreign Service Officer Corps. This should provide a group of Foreign Service officers experienced both at home and abroad in the conduct of foreign affairs and prepared to serve at any place in the world.

The Department's efforts in this direction have been supported by both Houses of the Congress, and have been greatly facilitated by the legislation enacted last year in the form of amendments to the Foreign Service Act of 1946. There is now pending before the Committee on Foreign Affairs the bill (S. 3481) recently passed by the Senate, which embodies further improvements considered to be essential to the security of the United States and to our effective representation abroad.

I have mentioned, of course, but a few aspects of the program to improve the Foreign Service and the Department. The Director General of the Foreign Service, Mr. Raymond A. Hare, has expressed his gratification at your interest in the Service and requested that I inform you that he would be very glad to discuss the subject with you in more detail at your convenience. His telephone extension is 4131.

I am taking the liberty of sending a copy of this letter to Representative Bow, in view of his interest in the subject.

I recently took Thruston Morton's job in the Department, and I should welcome the opportunity to be of service to you.

With kindest personal regards,

Sincerely yours,

ROBERT C. HILL.

Against Servicing Alcoholic Beverages to Passengers Aloft

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my address before the Subcommittee on Transportation and and Communications of the House Committee on Interstate and Foreign Commerce on Friday, April 20, 1956, in connection with my bill, H. R. 7922, which would prohibit the serving of alcoholic beverages to passengers in flight.

The address follows:

AIRLINES JOB IS TO FLY, NOT TO MAKE PASSENGERS SKY "HIGH"

Mr. Chairman, the practice of selling alcoholic beverages, in addition to the complimentary cocktails offered to passengers aboard commercial airliners, has aroused much public opposition.

On August 21, 1955, I asked the airlines to discontinue this dangerous custom by voluntary actions, serving notice that I would introduce a bill in Congress "to prohibit the serving of alcoholic beverages to passengers on aircraft in flight" if they failed to cooperate.

Previously the people whose immediate responsibility is to insure the safety and comfort of airborne passengers, namely, the members of the Airline Stewards and Stewardesses' Association and the Airline Pilots' Association, had called for an end to the risky policy of serving alcoholic beverages aboard commercial airliners.

Subsequent to my request the Civil Aeronautics Board failed to issue an administrative order that would correct this situation.

And the airline officials refused to adopt the minimum code of regulation that was recommended by the Air Transport Association.

In defiance of the mounting evidence, of which the following quote from an editorial in the Air Line Employee of September 1955 is a sample:

"To illustrate our point, we quote one recent incident experienced by a major carrier involved in this liquor problem. At the original station the captain canceled the flight because he felt that 18 of the passengers were so drunk as to constitute a menace to safe operation of the flight. Twenty minutes later the flight was reoriginated and 10 of the 18 were taken off. Two hours later it was necessary to make an unscheduled stop to put off the other 8. No passenger need to fear that he will be refused passage if he can crawl aboard. Once in the air, he can get refueled, either on the house or for a dollar a shot. The airlines are not stingy with their liquor, either. Every drink is a double shot, which has a potent punch at high altitude. A $5 bill will produce a proper jet-age wingding in the average air traveler."

Again, as one pilot reported concerning a December 18, 1955, flight:

"This flight could have had a disastrous ending. I feel that it is time to keep drunks and alcohol off from all aircraft. This practice should be stopped immediately."

Or must we wait for the inevitable, and avoidable, tragedy to happen before thinking of protecting passengers from the irresponsible and belligerent actions of those who become intoxicated as a result of "flying saloon" service that is more interested in profits than in safety?

One company tries to lure this type of patronage by advertising "champagne flights."

Seven American commercial airlines serve alcoholic beverages in flight on domestic routes. They are:

	Flights
Eastern Airlines	61
Northwest Airlines	38
Trans-World Airlines	18
National Airlines	16
American Airlines	11
Western Airlines	2
United Airlines	12

These airlines make the feeble defense that they try to observe State liquor laws. But who knows, at 25,000 feet where 1 State end, and the other begins? And what authority is there to enforce compliance?

The commercial airliner, as a public carrier, is faced with unique responsibilities, that do not pertain to ships or trains.

Passengers must travel in close and confined accommodations, with no support but the thin air, where one wandering and drunken passenger can jeopardize all.

Is it necessary for the airlines to defer to the wishes of the few who insist on getting alcoholic beverages to drink while the plane is in flight, in complete disregard for the many women, children, and men who should not have to endure the profanity, molestation, and scatterbrained conduct of the drunks?

I believe that the sober majority are entitled to protection.

The fact that one airline is reluctant to discontinue the practice for fear that its competitors won't, means that few of them will.

The answer to this is Federal legislation (constitutional under the powers to regulate interstate commerce) providing that: "No air carrier shall sell or otherwise furnish to its passengers any alcoholic beverage (including beer and wine) for consumption while in flight within the United States."

Polls of public opinion registered overwhelming opposition to the serving of liquor on commercial airliners, up to 1950, when such sampling of public opinion was discontinued because it ran so strongly against the policy of the airlines.

However, the unsolicited response my Washington office has received since I served notice last August that I would seek corrective legislation, has been almost unanimous in favor of such a bill.

The score:

Thousands of letters for my bill.

One letter and one telephone call against.

The lives of millions of passengers on our domestic airlines must be protected from the dizzy, disgusting, and dangerous conduct of those who become a public nuisance as long as the airlines run flying saloons.

The airlines have been given the opportunity to clean up their planes and have refused to do so.

The only solution is to enact H. R. 7922 into a nationwide law that will eliminate the menace of flying saloons.

America and Asia

EXTENSION OF REMARKS
OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. WIGGLESWORTH. Mr. Speaker, having in mind the problems confronting the United States of America and the free world under present tactics in the cold war, I include at this point in the RECORD under leave to extend my remarks, a thoughtful and powerful address entitled "America's Stake in Asia," made in Springfield, Mass., on February 8, 1956, by our distinguished and eloquent former colleague, the present Ambassador to the United States from the Philippine Islands, Gen. Carlos P. Romulo:

AMERICA'S STAKE IN ASIA

(Address by Gen. Carlos P. Romulo)

Mr. Chairman, ladies and gentlemen, and friends; I must apologize to you for the delay tonight. Five days ago, I received an invitation from the White House for lunch today and, as you know, an invitation from the White House is an order. I thought I could make the 2:25 plane from Washington, but the President was so gracious as to make a speech, and so I had to take instead the 4:40 plane. It was late, and that is why I am here late, and I apologize to you all for having to wait for me.

Looking at our chairman, quite a tall fellow, I am reminded of the day we went back to reconquer the Philippines from the enemy. The American newspaper correspondents with us wired back to their respective newspaper offices here to inform them that General MacArthur, with General Romulo behind him, waded in water waist deep when he landed in Leyte.

One of the newspaper editors here in New York who knows me, upon reading that dispatch, called his foreign news editor and said to him, "Let's wire our correspondent in Leyte, because I am somewhat concerned. If General MacArthur, with General Romulo behind him, waded in water waist deep, Romulo must have drowned." [Laughter.]

I thank you, Mr. Chairman, for your very kind and generous words of introduction—undeserved. But every time I am introduced, I am reminded of the day I was in Peoria, Ill. I was in the hotel lobby trying to buy a newspaper, when I noticed that somebody was watching me very attentively. Finally, overcome by his curiosity, he approached me and said, "You are General Romulo; aren't you?"

I said, "Yes, I am." This was in 1950.

He said, "You are Foreign Minister for the Philippines?"

I said, "Yes, I am."

"You are President of the United Nations General Assembly?"

I answered, "Yes, I am."

"And you were military aide to General MacArthur?"

I replied, "Yes, I was."

He looked at me from head to foot—and that didn't take much time. [Laughter.] Scratching his head, he said, "I'll be dog-gone." [Laughter.]

So every time I want to be deflated, I think of that incident.

Well, my friends, 'way back in 1942 I came to the United States in the performance of a mission. At that time we were fighting in the Pacific and we were going from defeat to defeat. Those of us who were fighting there thought—erroneously, perhaps, but we thought—that we were not getting the men nor, at the time, the material and the planes we needed to step up the tempo of our offensive, because all of America's attention was being concentrated on Europe.

That was how the thought was born that perhaps a Filipino voice heard here then, across the length and breadth of this country, would help to bring home to the American people the dangers of the Pacific war. And so I came.

In the performance of that mission, I spoke in 466 different American cities, in every State of the Union. I didn't miss a single one—I even spoke in Alaska—at the same time selling war bonds, alerting the American people to the fact democracy was in danger, and freedom gravely menaced in Asia. That was 'way back in 1942.

Tonight, I come to you in Springfield no longer in the uniform of an officer of the Army of the United States, as I was then in 1942; but I come with exactly the same mission—to tell you that as of tonight democracy is seriously threatened in Asia and that freedom, as you Americans know freedom, is gravely menaced. And I come to tell you also certain other truths that need to be told.

So, if you came tonight expecting to listen to an ordinary lecture that would please you, amuse or entertain you, I am afraid you will be disappointed, for such is not my mission. If I had merely to say things to delight your ears, I did not have to leave my urgent duties in Washington and travel all this distance to your place this evening.

You are engaged these days in a life-and-death struggle in which your stakes are very high, and being a Filipino, I cannot be indifferent to your side of that struggle. My own country's territorial security, and the freedom itself of the Filipino people are inseparably intertwined with your cause. You have land, air, and naval military installations in the Philippines, and the experience of the last war has taught us Filipinos that in any emergency in which you are involved the Philippines might again be the first to suffer.

It is therefore imperative that I should tell you some truths that need telling and I will, to begin with, permit myself to take you back to the days immediately following the Second World War, when your Government was demobilizing your armies—rather very fast, in the opinion of some; too fast, in the opinion of others.

Whichever way that was—whether too fast or only very fast—it remains a fact of history that, while the United States went seriously into the business of demilitarizing itself and sending its troops to their homes, Soviet Russia stubbornly refused to discharge a single Russian soldier. That was the first clear evidence that the Stalinist dictatorship in Moscow found only one thing wrong with the Nazi war of conquest—namely, that it was Hitler who waged it, and not Stalin. From then on there has been no doubt about the Kremlin's intention to dominate the world with greater determination than the madman of Berlin.

I must emphasize to you this truth: whatever the zigs or the zags in the Kremlin's foreign policy, whatever the tactics it may pursue, frowning or smiling, communism's basic philosophy remains inalterable—the dictatorship of the proletariat—and its permanent objective is the conquest of the world. Let us make no mistake about that philosophy and that objective.

That was how the Soviet Union saw its opportunity, and quickly grabbed it, immediately after the war ended. England was in utter exhaustion, and France had been bled white. The only nation which could stop Russian designs at that time was clearly the United States—and the United States was disarming. Imagine the advantage that situation offered for the standing armies and military implements of Soviet Russia.

And so, what followed was all brutally logical. One by one, Albania, Latvia, Lithuania, Bulgaria, Rumania, Czechoslovakia, Poland fell under the sinister shadow of the hammer and sickle. Millions of once free men were turned into robots of the Kremlin. The Iron Curtain was run down, the cold war started, and Soviet Russia embarked on its course of empire. You all remember that.

But there was one country in Europe which Soviet Russia particularly wanted, and that was Greece. Being a landlocked country, Soviet Russia had always coveted an outlet into the Mediterranean and that outlet was offered by Greece. And so, following the usual Communist pattern of subversion, so-called guerrillas from Albania, Bulgaria and other Communist satellite countries were ordered to infiltrate into Greece for the purpose of weakening the Greek Government, soften up its defenses, and finally overthrow it, thus gaining the badly needed outlet into the Mediterranean.

And why did Soviet Russia want that outlet into the Mediterranean so very badly? So as to cut the lifeline of the Western World in two and ultimately deprive you of the use of the Suez Canal. This was the plain purpose of the Soviet adventure in Greece, the country which offered the way out of Russia's containment on land.

It was fortunate that the United States was not asleep, that Washington saw clearly what Soviet Russia was aiming at. That was how you decided to send one of your greatest soldiers—Gen. James Van Fleet—to Greece. With him went a corps of civilian and military experts and together they trained the Greek troops and established Greek strategy.

American economic aid and military material began to flow into Greece, and the Greeks, seeing your genuine concern for their plight, gathered courage and stood up to the challenge to their national survival. They fought back and, with your help, succeeded in defeating the Kremlin's attempt to make their country another puppet state. Thus did American assistance frustrate Soviet Russia's plan to push itself into the Mediterranean, and thus was the first victory for the free world won in the cold war.

But in France, in Italy, in Belgium communism was way ahead and advancing. In 1946 and 1947 and 1948 those three countries lay devastated and helpless. There was widespread poverty and suffering, communism's most effective allies. We happened to be in Europe in 1948, my wife and I, when the General Assembly of the United Nations met in Paris, and we saw the electric effect which American aid produced on the European masses. American economic help came just in time to save millions from complete engulfment by communism. Yes; we saw it exactly as you saw it; American statesmanship and leadership, and American material assistance—all coming when they were most needed—produced their instantaneous effect on the morale of Europe and the Continent was saved.

That had to be, because of your common ancestry and common civilization with the peoples of Europe. But while all that was going on you were neglecting other things. Your sympathy for the Europeans made you forget the peoples of other parts of the earth, until one sad day you were stunned by the report from your radio commentators and in screaming headlines on the front pages of your newspapers, to the effect that on the other side of the globe a catastrophe had befallen democracy—China had fallen to communism. Six hundred and fifty million Chinese conquered by Moscow and lost to democracy—lost to you—before you knew it;

650 million human beings whom Soviet Russia could use to advance its nefarious ends.

This is no mere conjecture. We all saw how Soviet Russia fought the Korean war to the last Chinese soldier. Not one Soviet Russian soldier was engaged in Korea. Not one drop of Russian blood was shed in Korea, only Chinese blood. For, remember, Soviet Russia has 650 million Chinese now she can use as proxy for her wars. And sure enough, they will be used in compliance with what Nicolai Lenin wrote in black and white as part of the Russian strategy for achieving world conquest. Lenin wrote for all eyes to see, and for all ages, the following words: "The road to London and Paris is through Peking and Calcutta." By that he clearly meant that for Soviet Russia to achieve its objective of world conquest, it must first conquer Asia, not Europe.

In terms of 1956, in terms of the present ideological war, and in order to bring it nearer home to you, what Nicolai Lenin really meant is this: In order that Soviet Russia may eliminate the United States and thus be in a position to conquer the world, it must first conquer Asia. Hence the subject of my lecture this evening, America's Stake in Asia.

America's stake in Asia is nothing more or less than your national security, the safety of your lives and of your dear ones; the survival of the American way ol life. We are engaged today, as I said at the beginning, in a life-and-death struggle of global implications the like of which may not be found in recorded history.

Let us take a hard look at the balance sheet of democracy in Asia and see where and how we stand. We have lost China, 650 million Chinese—let us hope and pray, only temporarily. But as of tonight, we have lost that many—650 million Chinese.

Next to China, the most populous country in Asia is India—400 million Indians. And those 400 millions proudly proclaim that they are uncommitted neutrals, which means that they are not with us in our fight against Soviet imperialism.

Next to India comes Indonesia—100 million Indonesians. And they too, like the Indians, call themselves uncommitted neutrals. It simply means that we cannot count with us tonight the 100 million Indonesians and the 400 million Indians in our fight against Soviet imperialism.

Next to Indonesia, we have Burma, and Burma also says she is an uncommitted neutral. So the 18 million Burmese, like the 400 million Indians and the 100 million Indonesians, cannot be ranged with us tonight against international communism. So then, you have a total of 518 million Asians not with us and, added to the 650 million Chinese against us, you have more than 1 billion Asians not with you in this global struggle in which you are engaged.

What do you have left in Asia? Of course, the Philippines; your friends through fair weather and foul, 21 million Filipinos. Pakistan, yes; another friend and ally—80 million Pakistanis. Thailand, yes, another friend and ally; 18 million Thailanders.

So you have 18 million Thailanders, 80 million Pakistanis, 21 million Filipinos on your side of the fence, ready to stand up and be counted for democracy against Soviet imperialism; a total of 119 million Asians against at least a billion Asians not with you. That is not a pretty picture.

What do we have left in Asia? French Indochina is being nibbled away from us daily. British Malaya is in trouble. Korea is fighting for its life. Japan?

Now, we say that Japan has been democratized after 7 years of American military rule. Do we really believe that? Let me pose to you a hypothetical case which I hope will drive home another truth which you must know. Let us suppose in the Second World War you were defeated and Japan was victorious, so that the roles were reversed. Instead of our General MacArthur going to Tokyo, it was General Tojo who went to Washington; instead of an American army of occupation sent to Japan, a Japanese army of occupation was sent here.

Now, do you believe that after 7 years of Japanese military rule over your country, with General Tojo issuing decrees from Washington; do you believe that after 7 years of Japanese military rule here, you would be wearing kimonas and wooden clogs? Our chairman would look cute in a kimona. [Laughter.]

That your American women would be walking 3 feet behind their men? I know American women will never allow that. [Laughter.] That you would be worshipping at Shinto shrines, eating with chopsticks, bowing toward the west at sunset because you think your emperor is there?

Well, of course, you laugh and shake your heads and say that is impossible. Why, of course, I agree with you that is impossible. Then why do you think the reverse possible with the Japanese, a people much, much, much older than you are as a people. Long before Jamestown Colony was even thought of to be organized, there was already a cohesive, united Japanese people with their own culture and with their own civilization. No people is prouder of its country and its civilization than the Japanese, and none more arrogant. So what you think is impossible with you, how could you think possible with the Japanese? There is food for thought for you.

Before the Second World War, it was an ingrained belief in the Asian mind that the West was invincible—invulnerable in the use of arms. And perhaps, because of that, Asia was quiescent, meek perhaps. But after the Second World War, after Japan had you practically on the run for almost 2 years; after Japan held back the combined armies and navies of the United States, the United Kingdom, France, the Netherlands, and Belgium almost 3 years; after the so-called impregnable fortresses of the West in Singapore, Hong Kong, Batavia, Bataan, and Corregidor fell like a pack of cards before the Japanese onslaught; after Americans and Britishers and Dutchmen, Frenchmen, and Belgians were captured, imprisoned and tortured and humiliated and insulted by the Japanese; after the stalemate in Korea which, however, Peking radio continually dinned on the ears of the people of Asia as the victory of the Chinese troops over what it called the pick of the armies of 17 nations; after the fall of Dienbienphu, which Moscow and Peking continually proclaimed as the victory of the Vietnamese troops over the flower of the French Army—after all that, the once ingrained belief in the Asian mind in the invincibility and invulnerability of the West is gone, finished, forgotten. And much of what is happening in Asia today, springs from that fact. That, too, is a truth that you must know, and that is food for thought for you.

Why, then, do I say that America's stake in Asia is its national security, the safety of your lives and your dear ones, the survival of the American way of life?

To answer that question, I must ask you to look at your geography and see from the north, the Aleutians up north, the string of islands—Japan, Okinawa, Formosa, Korea, Guam, and the Philippines. That, in military parlance, is the American perimeter of defense. More commenly, it is called your Pacific chain of defense.

That is the chain that has been decided by your Pentagon, by your Congress, by your White House, by your State Department, as your defense. And that chain can only be as strong as its weakest link. If any of the links in that chain is destroyed or taken, by communism, your national security in Springfield, Mass., is seriously threatened.

You are spending on that chain of defense, now, billions of American dollars, your taxpayers' money, for the maintenance of vital naval, air, and land military installations. And that, my friends, is why President Eisenhower had to announce to the world sometime ago that America was ready and willing to defend Formosa to the last ditch—because Formosa is a link in that chain and you can't allow the link to go to Communist hands and the whole chain to fall to pieces that way.

That's why you fought in Korea, because Korea, too, is a link in that chain. And how well do we know this in the Philippines, we who were in the path of Communist aggression. In 1949 and 1950, the clear strategy of Soviet Russia was to conquer China the first; after that, the objective became Korea. If the Reds had succeeded in Korea, they would have swept on to Japan, Formosa, Okinawa, Guam, and the Philippines.

I say how well we were aware of all that in the Philippines where, as far back as 1948 and 1949, the so-called Huks, who were Communists, were there acting under orders from Moscow. Soviet Russia wanted to follow in the Philippines exactly the same pattern that she followed in Greece, where guerrillas tried to overthrow the government. The Huks were getting ready for the day when Soviet Russia was to win in Korea and then sweep southward, and Soviet Russia would have found in the Philippines its advance guards, the Huks, and my country would have been then a ripe fruit for their plucking.

How well, indeed, do we know in the Philippines, the Communist menace, we who fought the Communists with our lives. Our hospitals in Manila are still full of those wounded in the fight. We didn't fight communism with the radio or with newspaper editorials—we fought communism with blood, with our lives. That is how we know what danger communism is.

We are fortunate in having a President in the person of Ramon Magsaysay who has had the vision and the courage to face communism firmly. As you already know, he has stopped the Communists in the Philippines. In fact, the only man so far to have defeated communism in Asia is President Ramon Magsaysay.

And yet there were many who questioned America's role in Korea. Little did they know that the American boy who fought and died in Korea really fought and died for the safety of his sweetheart in Springfield, Mass. The American boy who fought and died in Korea really fought and died for the security of his relatives in Tallahassee, Fla. The American boy who fought and died in Korea fought and died for the safety of his dear ones in Boston, Mass. That, too, is a truth you must know, for if Korea had fallen, that whole chain would have snapped, and once your American perimeter of defense in Asia falls under communism, it is curtains for democracy.

That is why I must state with all emphasis your national security is at stake in Asia. Because, don't forget, the Pacific Ocean no longer affords you the protection that it did 10 years ago. Modern technology has annihilated the Pacific Ocean. Guided missiles, intercontinental ballistics, supersonic planes, snorkel submarines, the atom bomb—these have reduced the Pacific to the size of a pond.

So that, while in terms of mileage, the American perimeter of defense that extends from the Aleutians to the Philippines may be 10,000 miles away from Springfield, in terms of your territorial security that chain is your nextdoor neighboor, and if anything should happen to any of the links in that chain, your safety, here in Springfield, Mass., would be seriously menaced.

How important it is, therefore, my friends, that you realize the direct bearing of Asia on your national security. Asia was once

pictured by Odoric of Pordenone and Marco Polo as something enigmatic, mysterious, and dark. There is no truth in that. There is nothing enigmatic, nothing mysterious, nothing dark about Asia. The peoples there are simple folk, unsophisticated. And, because they are simple and unsophisticated, their thought patterns are simple too, and therefore they cannot be enigmatic nor can they be mysterious.

Asia wants your friendship, and you must try to understand Asia. You can make friends with Asia. You have done it once; you can do it again. You have done it in my country.

When you first went to the Philippines, we hated you. We fought you for 3 long years. You had to kill 350,000 Filipinos before we laid down our arms in defeat, in recognition of your material might.

My father happened to be one of those who fought you to the last. I was trained as a boy to hate you. As I said, we hated you as only an occupied people can hate an army of occupation. And you don't know what that means, because God has saved you from the humiliation of being an occupied people.

But what happened? Why is it that we are now your stanchest friends and most loyal allies in Asia? That is something important for you to know. For America, once in a while, should indulge in some national introspection. We are your friends now, and we are your loyal allies, and we proved it to you in Bataan, in Corregidor, even in Korea. We were fighting our Communists in the Philippines when we had to send out troops to Korea to fight side by side with yours. If that is not loyalty I want to know what loyalty is. And that is the loyalty of your Filipino allies to your ideals, to your democracy.

Why is that so? Because in your dealings with my people, you, the stronger nation, followed the Golden Rule: "Do unto others as you would have others do unto you." Because in your dealings with my people you, the stronger nation, respected the dignity of the human soul, and in the relationships between peoples, that is enough.

This American adherence to the Golden Rule set a unique policy for all of Asia. In the Philippines you announced as your fixed policy the utterance of your first civil governor, William H. Taft, to the effect that "America's policy here in the Philippines is epitomized in one sentence: 'The Philippines for the Philippines.' "

Well, there you have something unique, bizarre, unprecedented in Asia, because, in the countries surrounding us, the colonial powers were following a policy exactly the opposite of that.

Thus we saw gradually that your policy was, by and large, honest and just. You promised us independence; you set a date for that independence. There was a lot of opposition here against that. Powerful sectors of American public opinion, influential American newspapers campaigned against Philippine independence, supported by vested interests and strong sectors of your Army and Navy.

But the average Tom, Dick, and Harry of this United States, the rank and file of the people representing that clean, wholesome, honest American conscience, blind to the allurements of power and deaf to the tinkle of the gold dollar, stood by our cause.

And your Congress, faithful interpreter of the clean American conscience, was unswerving in its determination to keep faith with the Filipino people, and a day for independence was set, against the wishes of the powerful lobbyists working in Congress. Congress fulfilled its word, and that was how we Filipinos came to know that America's word was her bond.

How important that you did that in the Philippines, for now in the United Nations, whenever a Vishinsky or a Molotov or a Gromyko stands up to accuse America of imperialism, there your ambassador is already winking at me. [Laughter.] Because the ready answer is for me to stand up and say, "What are you talking about, 'American imperialism'? America could have stayed in the Philippines, but preferred to relinquish its sovereignty over us. We are exhibit A of the fact that America is not an imperialist country. America proclaimed Philippine independence before any other power ever though of doing the same."

That is your reply now against any charge of imperialism leveled at you. On the other hand, if you had not granted us independence in 1946, what reply could you give Molotov and Gromyko and Bulganin and Krushchev?

How inspiring it is once in a while for America to indulge in national introspection, to look back and to realize that her greatness does not lie so much in her material power, not so much on her atom bomb and military might, on the intangibles and imponderables of the spirit in which you as a nation are immeasurably rich. Let America look to her spirit, because that is where her power and her greatness lie.

Let there be no more boasting of America's might, because that does not make friends for America in Asia. But let America speak of how her forefathers in 1776 proclaimed to all the world the equality of all men. That is one proof of America's greatness.

When your forefathers in 1776 had the vision and the courage to say that all men are created equal, they uttered what at that time was a plain political heresy. You were laughed at and sneered at in other continents where kings and dukes and counts and princes were living way above the level of common man.

Not all men at that time were created equal. But your forefathers in 1776 had the vision and the courage to see and to proclaim that all men are created equal. And, mind you, they could have written—but they did not—that all men north of the equator are created equal. Or they could have written—but they did not—that all men south of the equator are created equal.

In short, what they proclaimed was the equality of all mankind, and then proclaimed it for all ages. That is the strength and might of America.

All that Asia asks is for America to see to it now that she is the world leader, that her allies should follow the pattern she set in the Philippines.

All that Asia asks is for you to continue to make your preachments dovetail with your deeds. All that Asia asks is for America to continue to make her ideals to coincide with her acts,

That, my friends of Springfield, is the message that this, your friend, has come humbly to convey to you tonight. [Applause.]

Address by Hon. Richard E. Lankford, of Maryland, Before the Government Employees' Council, Washington, D. C.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I am particularly pleased to include therein an excellent address made on April 18, 1956, by our distinguished colleague from Maryland, Hon. RICHARD E. LANKFORD, before the Government Employees' Council, in Washington, D. C. Congressman LANKFORD very ably and effectively addresses himself to H. R. 10237, introduced by our colleague the gentleman from Pennsylvania, Hon. GEORGE M. RHODES. Convincingly, he presents reasons why H. R. 10237 should be enacted into law. The presentation made by our colleague the gentleman from Maryland [Mr. LANKFORD] is one of the ablest I have ever heard presented in support of any legislation. It is consistent with the clear thinking evidenced by him on all legislation; it is consistent with the splendid manner in which he represents the people of his district.

I am sure that the employees of the Federal Government will deeply appreciate the position taken by our colleague the gentleman from Maryland [Mr. LANKFORD] on this bill, as well as all other legislation, such as relating to wages, hours of employment, sick benefits, and retirement, as well as conditions of employment; also, that they are indebted to him for his vigorous advocacy of legislation relating to their best interests.

The speech follows:

I am delighted to have this opportunity of meeting with the Government Employees' Council. My remarks will not be lengthy, because I know your program is heavy.

As a matter of fact, I would much prefer to sit back and let you gentlemen conclude your deliberations. It is on the basis of your decisions and advice that I take my cue in matters affecting postal and other Federal employees in my district. And may I say that some of my colleagues in the House of Representatives might well follow the same pattern.

Take the case of pending legislation affecting your retirement benefits. I took a poll on what the employees thought of this legislation. It was not the same kind of poll some of my colleagues announced nor the kind proposed by others on the Senate side of the Capitol. I simply directed my inquiry to the headquarters of the employee groups and to the employees with whom I am in almost daily contact. There was no rhyme or reason to suggest a referendum or worldwide poll in order to learn something that could be ascertained by merely placing a telephone call right here in Washington and through daily conversations.

The answer I got from your council headquarters was to the effect that you gentlemen—speaking for your respective organizations—approved Senator JOHNSTON'S bill, S. 2875. That was the extent of my poll. All the facts were in as far as I was concerned. Anything beyond that was little more than politicking or "gamemanship" to use a more sophisticated term.

Of course, I am not opposed to consultation between Members of Congress and Federal workers or between the heads of departments and employees or representatives designated by them. I consult with Federal workers practically every day. But a poll is hardly consultation. Questions can be loaded and often produce not facts or opinions, but just about what the poll taker wants the answer to be.

I recall that no poll was taken a few years ago when the distinguished gentleman who heads up the Post Office Department attempted to put over his Fry report. There is no record of the White House polling the farmers of our Nation prior to President Eisenhower's veto of the farm bill.

As I said, I am not opposed to open channels of discussion. However, the way to

make certain that employees are given an opportunity to express themselves is not through polls, but through a bona fide labor-management procedure.

I sincerely hope we will be given an opportunity before this session of Congress adjourns to vote on the union recognition legislation your council is supporting. The bill introduced by Congressman GEORGE RHODES, of Pennsylvania, known as H. R. 10237, is fair and equitable to everyone. It does not suggest that the executive branch must forfeit or abandon its responsibilities to Congress or the employees. Nor does it intimate in the slightest degree that Government workers want to determine policy. As I understand the Rhodes bill, all you people ask is the right to sit down with the heads of departments to discuss working conditions, safety, in-service training, methods of adjusting grievances, transfers, promotions, demotions, and any other facet of your employment affecting the day-to-day lives of the people you represent. Following these discussions, you further request assurance that in the event of a serious disagreement both sides will accept the decisions of an impartial board of arbitration.

Frankly, it is difficult for me to understand how anyone can seriously oppose this legislation. Our Federal Government guarantees these same rights under one form or another to workers in private industry. Why should there be a distinction, indeed, discrimination against Federal employees?

I am not going to attempt a résumé of all the bills in which your council is interested. It was simply my intention to drop in and visit for a few minutes. However, I would not want to yield the floor without giving you my pledge to support your drive for better wages. The decision of your council announced early in March hit the nail right on the head. It is time Congrss started to legislate in terms of standard-of-living wages for Government workers. The old method of chasing prices and attempting to peg wages to living costs might have worked out, but it had no chance. It was always a case of too little and too late. By the time a wage settlement was made prices had spurted ahead and the gap between living costs and salaries was as wide as ever. I want to encourage the new approach you have adopted and again assure you that you have my full support. You need not worry that I will be inclined to take a poll of the Federal employees in the Fifth District of Maryland on that decision on my part.

Everybody Pays

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. JOHANSEN. Mr. Speaker, on Friday, last, the Honorable Jesse M. Donaldson, former Postmaster General of the United States, testified in support of the postal rate bill, H. R. 9228, before the House Committee on Post Office and Civil Service, at the invitation of the distinguished chairman, the Honorable TOM MURRAY of Tennessee.

Under leave to extend my remarks, I include an editorial which appeared in today's Washington News, commending the very able case presented by Mr. Donaldson. The editorial follows:

EVERYBODY PAYS

Jesse M. Donaldson, who was Postmaster General under President Truman, has made a welcome contribution to the pile of evidence that postal rates should be increased. He would go even farther than the administration, advocating that rates on newspapers and magazines be increased by more than Postmaster General Summerfield has recommended.

Some Democrats in Congress have attempted to label postage rate reform as a Republican notion. It is nothing of the sort, as Mr. Donaldson's testimony makes clear. He asked Congress in 1951 to double the rates for second-class mail.

Party politics has no place in the pressing problem our chronic postal deficit presents. The cost of cut-rate mail service to business establishments is shared by all taxpayers, Democratic and Republican alike, and they all are interested in seeing the postal service pay its way.

Congressmen are fooling no one but themselves if they think the public doesn't know there is no such thing as free or bargain mail service, so far as the taxpayers are concerned. When a busines firm pays less than it costs the Government to carry its mail, the public pays the difference, in taxes. And this has been going on too long already.

Military Reserve Week

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present herewith a brilliant address made by Brig. Gen. David Sarnoff, Chairman, National Security Training Commission, at the Military Reserve Week luncheon, Shoreham Hotel, Washington, D. C., Monday, April 23, 1956. I feel my colleagues will be interested in reading this important address.

I am highly honored by the invitation of the National Security Committee to speak at this luncheon, marking the start of Military Reserve Week. The occasion is so pertinent to the major challenge of our times and our country's ability to meet that challenge that it is a privilege to participate in our common effort.

In sponsoring this important week, your committee and the member-organizations represented here today have given a significant example of citizen-leadership at its best. In a free country such as ours, the fate of any public program depends in largest measure upon public understanding of its purpose and operation. The inherent merits of an undertaking and the good intentions of its leaders are not enough to guarantee success, unless they are backed by popular comprehension and acceptance.

The National Security Committee, in launching this nationwide effort to bring about greater awareness of the need for a strong military Reserve, is therefore making a decisive contribution. I salute its public-spirited initiative.

In these days of atomic and hydrogen bombs, ballistic missiles, and artificial satellites, too many people rush to the conclusion that push-button warfare has pushed the GI right out of the picture.

The question is sometimes asked, "Why bother recruiting men for the Reserve? What good would men be in future wars?"

It strikes me that a far more relevant question is, "What good would all our new superweapons be without trained men to operate them, without men prepared to provide firm leadership on the homefronts?"

Should an enemy impose a conflict upon us, we must have the trained men to pilot the planes, drop the bombs, tend the radar outposts, launch the missiles, run the submarines.

To use the new weapons effectively, and to survive against them, we must be properly trained and conditioned. The pace of modern war has become so swift that in any future conflict, this training must come before the start of hostilities—and that, of course, means an adequate Reserve program.

It was Lord Nelson who said long ago, "Five minutes may make the difference between victory and defeat." Today we should edit his warning to read, "The first 5 minutes may make the difference."

THE CONTINUING COMMUNIST THREAT

There are some who would have us believe, in the light of recent events, that the mood of the Communist high command is changing from the old belligerence to a new benevolence. Among other things, they point to the fact that the dead despot of the Kremlin, Joseph Stalin, is being harpooned, lampooned, and cartooned by his successors. This view of the change in Moscow is a tempting one, but also a dangerous one, because it may encourage complacency and undercut vigilance.

Moscow has launched some new slogans and tactics designed to confuse and divide its selected victims. But its familiar strategy of probing for soft spots in the free world's material and moral defenses—of exploiting political, social, and economic difficulties—remains unaltered. Now, as in the past, the Communists are everywhere feeding and fanning the flames of discontent.

While ostensibly talking of peace, they continue to block peaceable solutions of century-old problems. In southeast Asia, in north Africa, and—especially right now—in the strategic Middle East, the Red mischief-masters are hard at work to make good their open boast that the 20th century will be the century of the triumph of communism. The fundamental realities of the present situation cannot be wished away or smiled away.

We have no rational alternative but to proceed on the assumption that the main Soviet objective remains to disrupt, and eventually to dominate, the free world. We must face up to the fact that we are not going to wake up next week or next month to a sudden thaw in the cold war. Far from relaxing, we must prepare ourselves for the long pull, and in this preparation our military reserves are more important than ever before.

Their importance is threefold: First, the Reserves are a bulwark for our Armed Forces. Second, they are a support for our civil defense. And third, they are a buttress for our cold-war efforts. Let us consider each of these points briefly.

BULWARK FOR OUR ARMED FORCES

As for our Armed Forces, we all know that the building and maintenance of a huge standing Army are contrary to our democratice concepts. And such an Army might well prove disastrous to our national economy.

What is the alternative? It is to prepare a large body of our citizenry to meet an enemy attack promptly, if and when it arises.

With a pool of reservists trained and ready to draw on, we could send our fighting men to combat areas as fast as our ships and planes could carry them. Without such a

Reserve force, we might be unable to hold our overseas bases and strategic free-world areas.

In addition, a trained Reserve gives us the strength we need at considerably lower long-range cost than a large standing Army. I certainly do not mean to suggest that we should skimp on our defense requirements; but we must recognize that one of those requirements is solvency. Any plan that can enhance our strength and at the same time provide substantial savings, has much to recommend it.

SUPPORT FOR OUR CIVIL DEFENSE

In any future war, the vitality of our home fronts may be as important as—indeed, even more important than—fronts beyond our shores. Besides reinforcing our active military units, the Reserves therefore have a second vital function. They can be a stabilizing factor in our civil defense. In an emergency, not all reservists would be called to the colors instantly—but every reservist would be a trained man on the scene in his own community.

He would be able to provide leadership in controlling panic, instructing neighbors in the elementary techniques of self-protection, participating in rescue teams and setting up emergency camps. Civil defense authorities tell us, rightly, that the most critical work would have to be completed within 2 to 5 days after the outbreak of hostilities. It is precisely during this tense period that the reservists would prove most valuable, no matter when the military found it necessary to call them up after that.

BUTTRESS FOR OUR COLD WAR EFFORTS

The third principal area in which a trained and adequate Reserve can have a powerful impact is our cold war effort—on the political, economic, and psychological fronts. Let none of us underestimate these fronts.

Consider, for example, the vastly important field of psychological warfare—or, as I prefer to call it, "psychological peacefare." Communist propaganda is trying insidiously to convince the world that the United States seeks war, that our military programs are aggressive in intent. Surely the Reserve program, as a wholly defensive measure, reflects our dedication to peace and our determination that no free country must purchase that peace at the price of freedom.

To enlist popular support abroad, to create confidence in the earnestness of our professions and policies, to strengthen hope and resistance among the peoples behind the Iron and Bamboo Curtains, including the peoples of Russia proper—it is not enough for us to reiterate our noble aims. These must be backed up with no less noble deeds. A strong Reserve would serve notice on the skeptical and anxious peoples of the freedom-loving world that we have the trained manpower to defend the ideals we—and they—believe in so fervently.

It would also serve notice on the Communists that we mean business. The very existence of a trained body of manpower ready to swing into action could not help but act as a deterrent to an attack on free countries. We have learned that to be weak is to invite attack; to be strong is not only readiness to meet it, but often insurance against it. Psychological and political efforts can be very important aids, but they are not substitutes for adequate physical power to defend ourselves against aggression.

THE 6-MONTH TRAINING PROGRAM

The National Security Committee and its member organizations have long recognized the crucial importance of having a trained and Ready Reserve. The entire Nation owes a debt of gratitude to these groups. It is largely through their efforts that we now have on the books the Reserve Forces Act of 1955. This act admittedly is not perfect, but it does represent a good start toward putting muscle into our Reserve.

A significant feature of this law is the 6-month training program. This new and practical concept of military service enables young men to fulfill their obligation to national security by being full-time civilians and part-time soldiers. Under this arrangement, a young man goes to a training camp for just 6 months. Then he returns to civilian life, where he spends a reasonable period in his hometown Reserve unit.

The potentialities of the 6-month training program for creating strong Reserve forces are tremendous. But the young men 17 to 18½ for whom it was designed are not as yet responding in sufficient numbers to support it. Why have the volunteers fallen short of the goals?

Our Secretary of Defense put his finger on the heart of the difficulty recently. "When the 6-month training program is generally known and understood," he said, "large numbers of young men will want to enter it. The big problem is to achieve broad public awareness of the need for and advantages of this program."

As Chairman of the National Security Training Commission, I have had occasion during recent months to observe closely the work of the Defense Department in this field of its activities. I am glad to say to you that Secretary Charles E. Wilson and Assistant Secretary Carter Burgess and their staffs are doing everything possible to put this Reserve program into high gear. They are dedicated to its purposes and objectives. And our Commission is receiving the fullest measure of cooperation from the Department of Defense.

ADVANTAGES OF THE PROGRAM

The 6-month training program has many advantages.

It gives the young man himself a chance to plan realistically for his future without worrying about when he will be drafted—and at the same time, to fulfill his legal obligation and patriotic duty.

It gives his family the assurance that he will be away from home for only 6 months instead of the 2 years required under the draft—and that he will not be called away for his training until he leaves high school.

It gives his home town a trained leader capable of helping in time of emergency, and capable, too, of making a real contribution to the labor force. The technical skills a young man learns in the service will help him get a job when he is ready and advance his prospects for promotion.

It gives his country a chance to fill out its Active and Reserve strength and to maintain the necessary stability of forces.

That is what the program has to offer. That is the message—and it is a highly appealing one. Our job now, during Military Reserve Week, is to get that message across to the young men of America and to their fathers and mothers.

The radio and television networks, the press, the motion pictures and all other media of communication have pledged their enthusiastic support for this effort and are cooperating magnificently. But everybody's help is urgently needed—not just on the national level, but on the State and local levels as well. The important thing is to get 165 million Americans to realize that the Reserves are vital to the security of our Nation—which means the security of each one of us.

The clock of history has struck 12 for those Cinderella fairy-tale thinkers who would have us prepare our defenses only after an enemy has attacked. In the present era we must have strength in Reserve if we are to survive as a free Nation—or, indeed, if we are to survive at all.

Croatian Independence Day

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. FEIGHAN. Mr. Speaker, on Sunday, April 22, I took part in ceremonies in Cleveland, commemorating the 15th anniversary of the national independence of Crotia, at which Msgr. Tomislav Firis was chairman.

We Americans will never forget that during World War II our airmen who were shot down over Croatia found the Croatian legions true friends and protectors from the enemy. The same Croatians legions under the leadership of General Mikhailovich established and maintained an underground railway through which our airmen escaped from Croatia to the free world. It will also be recalled that when the Communist occupiers of Yugoslavia captured General Mikhailovich and were preparing to execute him, American veterans of that theater of war protested these actions and sought to prevent the murder of General Mikhailovich. All freedom-loving people were sad upon hearing the news of the murder of General Mikhailovich by the Tito Communists. These are some of the reasons, in addition to our basic political beliefs, which compel us to support the cause of the Croatian people in their aspirations for national independence.

Under leave granted, I include my address delivered at the Croatian Independence Day celebration:

I am very happy to be here with you today and to join with you in commemorating the 15th anniversary of the establishment of the independence day of Croatia.

As most of you know, I have, throughout my entire public life, stood for and advanced the policy of equality for people and for nations. In more recent years, I have led the fight in Congress against all forms of colonialism which today enslave nations and people.

Communism is, by its very nature, imperialistic, predatory, and inhuman. The two outstanding examples of imperialism and colonialism at work in the world today are found in the Russian Communist Empire and Tito's Communist Empire. The Soviet Union has long been called the graveyard of nations. The nations of central Europe were added to this graveyard of nations during and following World War II, but Yugoslavia is also a graveyard of nations. Tito's Yugoslavia enslaves 4 distinct nations and 1 of them is the Croatian nation whose independence day we honor today.

Croatia has every right to be independent and free of the Communist chains applied to it by Tito. We Americans believe in the principle of national self-determination for all people. We, therefore, believe the Croatians are entitled to national self-determination. It is a certainty that if the Croatian people were allowed to express their views today, they would be solidly against Tito's empire and in favor of a free and independent State of Croatia. Even Tito is aware of this fact, and accordingly, he will do everything in his power to prevent the world from knowing about the heroic

struggles of the Croatian nation to regain its national independence.

I again assure you that I shall continue to support, with all the vigor at my command, the right of all nations to self-determination, independence, and self-government. I shall also continue to fight against all forces that deny any people these natural rights. I shall continue to do what I can to expose Tito for the Communist stooge and Russian agent that he really is. The only loyalty Tito has is to the Russian Empire and the world domain of communism. He and the conspirators who surround him are no different than the evil men who live in the Moscow Kremlin. Both are equal evils and threats to the cause of peace.

Farm-Bill Veto

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. QUIGLEY. Mr. Speaker, the veto of the farm bill by President Eisenhower, and his subsequent radio-television broadcast wherein he sought to justify his action, have given editorialists a great deal of grist for their mills. One of the keenest analysis it has been my privilege to read was published by the Carlisle (Pa.) Evening Sentinel of April 11. The editorial follows:

FARMERS HAPPY OR UNHAPPY?

President Eisenhower, in an address to the people of the Nation, after he vetoed the farm bill, said that before he took the action he was told "what a risky thing in an election year." But, "I am no political expert, I will always resist any attempt to make the farmer and his problems a political football."

There is not the slightest degree of doubt that the President most sincerely believes what he said. It must be stressed, however, that acting on authority given through legislation approved in 1954, he has, at the same time, promised farmers that price supports will be increased to 84 percent on wheat and 86.2 percent on corn—and wheat and corn are the most important crops in the farm-belt States. Also he promised he will seek soil-bank legislation with a provision that would permit payment of up to 50 percent of the bank funds to farmers as early as July 1—which would give about $500 million to farmers before the election. It must also be remembered that the farmer has been calling for aid for a period of years, but to all practical purposes has been ignored until this, an election year.

During the 1952 campaign the general told farmers in the Midwest that he was not only willing to approve 90 percent supports (which the farmers were then receiving) but that he felt that farmers should have supports of 100 percent or more if necessary to keep their economy on a level with the rest of the Nation. The President, as is his prerogative, has changed his opinion since 1952 and, with Secretary of Agriculture Benson, has been convinced that lower, flexible supports are better for the farmer. But, though flexible supports, through congressional action, replaced rigid supports, the farmer's lot has steadily worsened.

It appears now that the President has again reversed himself on price supports—that he believes the farmers need higher supports. If not, then the President has promised higher supports for political expediency. And, if $500 million is pumped into the Farm Belt before fall, whether the President intentionally means to attempt to attract the farm vote with silver or not, that will be exactly what he will be doing. The soil bank in itself is a good plan. It is time that we begin conservation of our natural resources, else in a few short years we may find ourselves short on wood, good soil, et cetera, and forced to depend on other countries for that which we have today in abundance.

The principal trouble with the President's program for the farmer is that, at best, it is a stopgap, not the solution to the farm problem. With machinery now available the farmer can produce from only half of his land as much as he formerly produced a few years ago from all his land. He can cooperate in the soil bank and still will overproduce, so that there might still be surpluses. The only realistic answer to the problem apparently lies in proper distribution.

Everybody seems only too willing to tell us what the result of the President's action or futher congressional action will bring forth, but we are not convinced that the solution has yet been uncovered. Everybody is telling us also of the impact the President's courageous veto, planned boost of supports, distribution-in-advance of soil-bank funds and other moves might have on the fall elections. The majority opinion in this locality is that the President, while vetoing the bill, simultaneously made a political master stroke by his compromise pledges. Of what bearing his new program (if he can push it through) may have on the election results, we are not convinced. The Congress will bear watching. The solons have time to debate and act. Election time is far distant. Many things can happen to alter the present circumstances.

Are the farmers happy—or are the farmers unhappy? We do not presume to know. We do not believe that it would be wise for anyone at this stage to attempt to guess what aid the farmer will receive, or to presume how the farmer feels or will feel when he goes to vote, or to presume that Mr. Eisenhower or the Democratic candidate will win because of the farm vote. Farmers are patient, quiet men. They will await the verdict, then without fanfare they will go to the polls.

What we would like to see, naturally, is aid given to the farmer as soon as possible, aid that will increase the worth of his purchasing dollar, and see it done without political interference or manipulation. The prime objective should be to put the farmer back on a level of economy which tallies with the other segments of business. But, in this situation, everything reverts to the time-worn question: How eliminate politics?

Automobile Marketing Practices

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MULTER. Mr. Speaker, during the current congressional hearings on automobile marketing practices, automobile manufacturers have consistently opposed any legislation on factory-dealer relationships. One manufacturer alleged in his testimony that such legislation would only "weaken dangerously an industry fundamental to the Nation's economic growth."

Over the weekend I was pleased to learn that this sham plea has not deterred the Governor of the State of New York, the Honorable Averell Harriman. On April 20, 1956, Governor Harriman signed a bill amending the New York general business law, for the purpose of prohibiting automobile manufacturers from arbitrarily revoking the franchises of dealers in New York State. Under the law effective October 1, 1956, auto manufacturers are required to register with the Secretary of State. Manufacturers are prohibited by the law from terminating a dealer contract except for cause. A maximum penalty of $1,000 fine is imposed for each violation.

In his statement upon approving the bill, Governor Harriman called attention to the growing difficulties of small- and medium-sized independent businesses, and pointed out that the giant corporations have the economic power to decide the life or death of thousands of smaller businesses—not only their competitors, but their own suppliers and distributors. Governor Harriman further stated that, contrary to the claim of manufacturers that "the public interest is not sufficiently affected," it is his firm conviction that "it is very much in the interest of the people that small- and medium-sized business should be protected against unfair exercise of economic power."

I sincerely hope that the Congress will also heed the public interest and take the necessary action to correct the abusive practices in the automobile industry which have been uncovered in the current hearings before the Senate and House committees.

Depressed Areas

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to make a plea that this Congress shall really do something to aid some of the economically depressed areas of the Nation, including my own depressed section in southeastern Kentucky.

The President himself has recommended that something be done. Many people are concerned. Time is running out and we should act to extend a helping hand to our needful areas right now.

I have offered a good bill that would help, H. R. 8283, by bringing about a three-way cooperative effort (a) by the communities involved, (b) by our Government through Employment Restoration Authority created by my bill, (c) by industries that would come and settle in our depressed areas under the plan of this bill.

Other good bills have also been offered and I hope the best ideas of all of these proposals will be chosen and welded into a good legislative instrument that would provide a bright star of good hope to some of our discouraged people in de-

pressed areas over the country. I have sent out about 90 copies of my own bill to Members of the House and Senate and have suggested and urged that we all act collectively and promptly on this serious problem that confronts many of our districts.

An official report that has recently come out of Kentucky says that the eastern part of my State is in "far worse shape in 1955 than 5 years earlier."

The same report says:

First. The average income in the area is 40 percent lower than that of the State as a whole;

Second. Employment in the area fell 18,322 since 1950, while employment in the State as a whole increased 33,591 in the same period;

Third. Earned wages in eastern Kentucky dropped to $51,400,000 last year, a decrease of $8,000,000 since 1950, yet statewide payrolls gained 40 percent during the same period;

Fourth. Harlan County alone, which is the most populous county of my district, lost $5,900,000 in annual wages during the past 5 years;

Fifth. Coal production furnished 25,152 jobs for men in eastern Kentucky last year compared to the 47,108 jobs it furnished in 1950 in the same area;

Sixth. Even last year, when the coal business increased to some extent, there was still a small decline in jobs for our people in eastern Kentucky;

Seven. Population losses in the past 5 years are 15,043 for Bell County and 12,327 for Harlan County and 8,197 for Pulaski County and 7,648 for Whitley County, to mention a few in my own district; and

Eighth. In some of these eastern Kentucky counties the per capita incomes are now among the lowest in the whole United States, the average being $749 in the year 1953 compared to a statewide average of $1,187 for the same year.

Now if a scourge should strike some part of the world or even some part of our own country, we would all be concerned and would gladly send our dollars and our aid to the affected areas without delay. Yet there is a great scourge of unemployment that has right now come over some of our own districts. So, it is time to become concerned about them. We should immediately stop importation of cheap, foreign residual oil into this country to compete with American workmen. And we should certainly converge our attention and our efforts upon early passage of a suitable bill to help the people in some of our districts "trace the rainbow through the rain" with clear assurance that their lands are not the forgotten spots of America.

The Editor's Letter

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. VELDE. Mr. Speaker, on the night of Tuesday, April 17, those of us on this side of the aisle heard our great Vice President, DICK NIXON, introduce our President at a banquet concluding the national Republican conference. Mr. NIXON, in his introduction, extolled the many virtues of our President, emphasizing his courage.

It was quite a coincidence that in the Editor's Letter written by the publisher, Mr. F. F. McNaughton, of the Pekin Daily Times, should have pointed up in his column on the same date this wonderful quality of courage.

Under unanimous consent, I ask that the Editor's Letter be printed in its entirety at this point in the RECORD:

THE EDITOR'S LETTER

(By McNaughton)

We have to hand it to Ike.

He has courage.

Recently we wrote a column in which we expressed admiration of the courage that gets a man ahead in war.

But we added that moral courage was on a still higher plane.

Moral courage makes the difference between a politician and a statesman.

A politician uses Federal money (the taxes you and I rushed to get paid yesterday) to buy votes.

A statesman risks the loss of votes and does "what seems right for America."

Fortunately in the past, such men have been found in both parties.

Happily, today such men are in both parties, but there are too many of the other kind in both parties.

Whether Ike's veto was right or wrong, it stamps him as a man of a high quality of moral courage.

The Scrub Has Lured Riders and Readers

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I wish to have inserted in the CONGRESSIONAL RECORD an editorial appearing in the April 21, 1956, issue of the Florida Times-Union, Jacksonville, Fla., entitled "The Scrub Has Lured Riders and Readers." The editorial follows:

THE SCRUB HAS LURED RIDERS AND READERS

A 3-day ride through the Ocala National Forest is underway this weekend with members of the Big Scrub Trail Riders taking part.

The riders are penetrating into a country of rare beauty and great loneliness. Both these aspects of the big scrub section were depicted for a nationwide audience in the writing of the late Majorie Kinnan Rawlings.

Mrs. Rawlings wrote in the tradition of regionalism and the local color school of American literature which began coming into prominence in the last half of the 19th century. But she transcended the limitations of that school, and her work is far more than local color.

The local colorists stressed the picturesque, as in the Louisiana stories of George Washington Cable, or the flamboyant as in the western tales of Bret Harte. They also made heavy use of dialect, as in the Pike County ballads of John Hay.

But sometime local color and the local accent were subordinated to universal truth, and when that was done greatness was achieved. The local flavor remained in a subdued fashion, giving realism and authenticity; but it was no longer obtrusive. Mark Twain's Huckleberry Finn illustrates how local color grew into something greater.

In such work as The Yearling, Mrs. Rawlings achieved this same dimension of universal truth. The love of the Cracker boy for the deer is something more than local color—it is a story of innocence and loneliness and the tragedy of loss.

Even in Cross Creek, which is not a novel and in which the emphasis is more upon the quaint and picturesque, Mrs. Rawlings generally avoided the temptation to caricature which vitiates so much of the work of local colorists. In Mrs. Rawlings Florida had a far greater novelist—because of her basic capacity for love—than Georgia has had in Erskine Caldwell; and who is actually the realist? Too many who seek to reflect a region actually distort and pervert its image.

The big scrub is the kind of landscape which inspires deep emotion and long thoughts. Though it is a lonely trail that the riders are following this weekend Marjorie Kinnan Rawlings had the insight to see that it was much like the trail which we all follow. Her achievement was in being a flawless mirror, so that the magic of the big scrub is forever enshrined in American literature.

The Fifth Amendment

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. MULTER. Mr. Speaker, I wish to direct to the attention of our colleagues Mr. Roscoe Drummond's column of April 15, 1956, which appeared in the New York Herald Tribune for April 15, 1956. It is as follows:

WASHINGTON

(By Roscoe Drummond)

THE BILL OF RIGHTS AND SUBVERSION

The third branch of the Federal Government—the judiciary—is being heard from regularly these days on one of the most critical issues: how to safeguard the Bill of Rights without giving any aid or comfort to the Communist subversive. The Supreme Court's two latest decisions show that it is steadily building a wall of security around the basic rights guaranteed by the Constitution. I find no evidence that these decisions in any way weaken the capacity of the Government to cope with the trickery efforts of the Communist conspiracy. In the Harry Slochower case, the Court ruled that Brooklyn College could not dismiss the professor merely because he pleaded the fifth amendment, and that to do so was a denial of due process of law. This decision does not mean that Brooklyn College cannot dismiss Professor Slochower. It means only that it cannot dismiss him without evidence. It means that for a citizen to invoke his constitutional right cannot be accepted as evidence of guilt. Brooklyn College remains free to dismiss Professor Slochower on evidence that he is a Communist, but it can't substitute invoking the fifth amendment in place of evidence.

In the Steve Nelson case, the court ruled that protection of the Nation against sedition is a Federal, not a State, responsibility, and that, therefore, the State antisedition laws are unconstitutional.

This decision does not mean that the States can't help the Federal Government guard against subversion. It does mean that the responsibility for investigations belongs to the Federal Bureau of Investigation, and the responsibility for prosecution belongs to the Department of Justice.

The decision of the court rests on the premise that sedition against the United States is not a local offense, but is a crime against the Nation. It recognizes that centered responsibility will make for more effective, not less effective, enforcement.

It deserves to be noted that in striking down the Pennsylvania sedition act, the initiative did not come from the Federal Supreme Court. It came from the Pennsylvania Supreme Court which found the State statute to be unconstitutional. The Supreme Court affirmed the decision on appeal.

State sedition laws have been thrown out by other State courts. Alabama offers a revealing example. Here the legislature passed an act which required that all textbooks—the State buys all public-school textbooks—be certified by their publishers as containing no author and no mention of any author anywhere between the covers, whether in index, footnote, or bibliography, who belongs or might ever have belonged to an organization on the Attorney General's subversive list.

The publishers declared that such a condition could not be fulfilled, that such membership lists were either unavailable, unreliable or unproved. They declared it would mean a textbook blackout for the State of Alabama. The State legislature pushed the bill through, the publishers took it to the Alabama courts, and the courts threw it out.

Forty-two States plus Hawaii and Alaska have a medley of sedition laws which often exceed and sometimes conflict with the Federal laws. There have been a number of prosecutions, but the only evidence in any of the cases concerned sedition against the Nation.

"Out of all the voluminous testimony," said the Pennsylvania Supreme Court, "we have not found, nor has anyone pointed to, a single word indicating a seditious act or even utterance directed against the government of Pennsylvania."

This doesn't mean that people like Steve Nelson, whose sentence under Pennsylvania law is now quashed, will go free or will find it easier to ply their trade. Steve Nelson has already been prosecuted and convicted in the Federal court and is now under sentence.

J. Edgar Hoover, Director of the Federal Bureau of Investigation, has said: "The fact must not be overlooked that meeting the spy, the saboteur, and the subverter is a problem that must be handled on a nationwide basis."

What is needed is that all citizens and law-enforcing agencies report information directly to the FBI. The Supreme Court is simply avoiding the confusion of 50 or more competing headquarters from which to direct enforcement.

A $1.50 Calf

EXTENSION OF REMARKS

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. PERKINS. Mr. Speaker, the Agriculture Department has announced that the farm income for the first quarter of 1956 dropped 5 percent from the postwar low of the first quarter in 1955. The Kentucky farmers who depend on income from livestock feel that the drop has been much greater. I have here a check to Mr. Sam Litton, Jr., route 1, Morehead, Ky., dated February 21, 1956, for one brown, white-faced calf. The gross price received at the Morehead Stockyards, Morehead, Ky., was $2.50. The net check, less 75 cents commission and 25 cents for insurance, was $1.50 for one veal calf. This is the price received by a farmer under the Eisenhower farm program of flexible price supports. The talk of continued prosperity combined with the Benson farm program does not help the Kentucky farmer to meet his bills when the price of a calf is scarcely equal to the truck charge for the hauling to market. The day of the $15 calf is long gone, it is now the $1.50 calf.

No. 1451

MOREHEAD STOCKYARDS, INC.

MOUNT STERLING, KY., *February 21, 1956.*

To Montgomery National Bank, Mount Sterling, Ky.

Pay the sum of $1.50 to Sam Litton, Jr., or order, Morehead, route 1.

MOREHEAD STOCKYARDS, INC.,
DONALD E. IRON.

Void if not cashed in 60 days from day of issue.

SALE BILL NO. 1451—MOREHEAD STOCKYARDS, INC.

Kind, brown calf.
Pen, 57.
Head, 1.
Mark, brown, white face.
Amount, $2.50.
Commission, 75 cents.
Net, $1.75.
Deductions, insurance, 25 cents.
Amount received, $1.50.

Will History Repeat Itself?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. MULTER. Mr. Speaker, permit me to direct to the attention of our colleagues the following remarks on Jewish history by Rabbi Bernard Twersky, which appear in the March 23, 1956, issue of the Jewish Press:

EGYPT-MOSCOW-JERUSALEM—THE LESSON OF PASSOVER

(By Rabbi Bernard Twersky)

Thousands of years have passed by since the exodus from Egypt until the present. The world has seen hundreds of generations come and go. It has witnessed the changes and transformations that have taken place from era to era, changes in ideas and basic concepts.

And yet the world is still the same and human beings are no different. Only the outward manifestations have changed, or better still, they have been adapted to the time.

It is the same order of master and slave, except that the chains are different. It is the same search of the human spirit, but the idols are different. It is the same world and the same mankind with all its weakness, but the outward appearances and conditions of life are different and new.

How true is the saying that "History repeats itself." But it is especially true where it concerns Jewish history with its repetition of historical events of Israel's ancient past in its various eras. Let us take, for example, the ancient story of the Exodus from Egypt.

As we review the history of that period we find that Egypt was the cradle of culture and civilization for the entire Near East. The Egyptians excelled in the fields of the arts and sciences, they spread culture throughout the world, her temples of science were renowned in the world, and so were also her 4,000 year-old architectual monuments and pyramids, which are to this day considered among the world's great wonders of art and technique.

This same Egyptian nation, which attained such a high cultural and spiritual level, at the same time was capable of becoming sadists and barbarians where it concerned Jews. They forgot completely their intelligence and science. With great sadism they oppressed and tortured the Jews, enslaved them, placed them outside the reach of the law. With the greatest of brutality they were bent on destroying and annihilating the Jewish people and forced them to withstand all sorts of persecution and oppression. The Jews groaned from the hard labor and from the heavy burden placed upon them.

Like Communist-Russia of a later day, so ancient Egypt never felt any gratitude to the Jews for all they have done for the country to improve living conditions there. They had forgotten about Joseph's new-deal and fair-deal social reforms which helped to stave off famine and death in the land. The Egyptians had lost all feelings of mercy and humanity in their attitude toward Jews.

As we contemplate the development of events in the past we cannot help but reflect upon the tragedy of our own times. I refer to the events in Germany only a decade ago. Germany, too, was a center of culture and civilization. It excelled in the arts and sciences and spread enlightenment throughout the world. But when it came to the Jews, the Germans emulated the Egyptians in their barbarism.

We are witnessing a similar tragedy in our own day. Russian Jewry has always fallen prey to the savagery of Russian officialdom and their cohorts. Russian Jewry, which at one time led world Jewry in scholarly accomplishment, is today in the throes of tragic spiritual destruction.

Not only have the Russian despots destroyed the culture of their own Jewish population but they are engaged in a campaign to undermine and stifle the creative development of Israel, which is the bastion of freedom in the Middle East. Russia is allying itself with the ancient enemies of Israel, such as Egypt and her "Murder, Inc.," accomplices. This alliance has been solidified for the purpose of conquering and enslaving the whole of the Middle East. Israel is in mortal peril from the brutal aggression of the Russian Gargantuan. The Russian dictators cannot endure the fruitful growth of Israel's political and economic edifice of liberty. Russia is the exponent of the grossest type of materialism and cannot bring to mankind the fruits of humanity and the exaltation of the spirit.

Education and science are no deterrents to an evil nature and a depraved character. Education can help to give man more knowledge and develop his abilities, but it cannot give him a kind heart, a clear conscience, and a refined soul. Only religion and a profound belief in God can give him these attributes.

Mankind and civilization are at the abyss of destruction in this atomic age. Unless mankind finds a way toward peace and justice, the principles of righteousness and human dignity, it will revert to complete darkness as in prehistoric times.

Passover has acquired a new meaning not only as a reminder of the great deliverance

of ancient days in Egypt, but as a hope and forerunner of liberation of Jewry from behind the Iron Curtain and other oppressed areas. With the help of the Almighty God it shall come to pass that our hopes and aspirations will be realized, as the Hagaddah says: "Next year we shall be free men."

Rev. C. Bertrand Bowser

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. LANE. Mr. Speaker, the Reverend C. Bertrand Bowser, rector of St. Augustine's Episcopal Church in Lawrence, Mass., is retiring after 55 years of devoted service to the Creator of us all.

I grew up in the neighborhood of his church. One of my first and lasting impressions of this kind and understanding minister, was the inner sanctity that he radiated to every person that he met.

Although I worshiped at another church, the difference in our faiths became, not the separation but the bridge, that brought us close together in tolerance, respect, and friendship. To preach the divine word is the mission of all clergymen. To live it, is the supreme grace.

That is the inspiring story of the Reverend C. Bertrand Bowser, the good shepherd of St. Augustine's Church.

Although he is retiring from the active ministry, his presence and his example will help all the people of greater Lawrence to become better than they were, following the way of faith, hope, and charity. We are extremely grateful to the Reverend Mr. Bowser, and, in proof of our warm regard, I ask unanimous consent for publication in the CONGRESSIONAL RECORD of the following news report that appeared in a recent issue of the Evening Tribune, of Lawrence, Mass.

REV. MR. BOWSER RESIGNS AS RECTOR BECAUSE OF ILL HEALTH

Rev. C. Bertrand Bowser, dean of greater Lawrence clergymen and one of the oldest active Episcopal ministers in Massachusetts, announced his resignation as rector of St. Augustine's Episcopal Church to parishoners Sunday morning. Rector of that church for the past 50 years, Rev. Mr. Bowser told the congregation that, "It is with great regret that I find it necessary because of continuing illness to submit my resignation as rector to take effect July 1, 1956."

The rector, in announcing his resignation, told the congregation that he was grateful for "the many warm, personal associations that have developed through the years." He also expressed his thanks for the cooperation and help of the willing workers of the parish.

His announcement was as follows:

"It is with great regret that I find it necessary because of continuing illness to submit my resignation as rector of St. Augustine's Episcopal Church, to take effect July 1, 1956.

"During my 50 years of service at St. Augustine's, I have had the privilege of seeing the parish grow and prosper and become an increasingly active spiritual force in the community. I am grateful for the many warm personal associations that have developed through the years, for the cooperation and help given to me by the many willing workers at St. Augustine's and especially for the spirit of friendliness and good will which has always prevailed in our parish and has been one of our greatest assets.

"We have worked hard together for our church in bad and in good times and have known both failures and successes but in the end I think we can point with pride to our accomplishments in making St. Augustine's what it is today. I know the next 50 years will point the way to even higher goals and I leave you with my hopes and prayers for success in all your endeavors for the future."

Rev. Mr. Bowser is the only rector the church has ever had, going to that parish in 1906 when St. Augustine's was founded from the Grace Episcopal Church, where he had been serving as a curate.

Ordained in Trinity Episcopal Church, Boston, in June 1900, he has served in this city almost exclusively in his 55-year career as a clergyman.

The retiring clergyman was born in Sackville, New Brunswick, Canada, and moved to Wakefield in his early teens, and graduated from high school in that community. He furthered his education at Harvard College and Yale Divinity School where he received a bachelor of divinity degree in 1898.

His first 3 years as a minister were spent at Christ Church, Rochdale, until transferred to the Grace Episcopal Church in this community, serving as curate under Rev. Arthur Moulton, who later was named Episcopal bishop of Utah.

He has served here continuously since 1903, taking over as rector of St. Augustine's Church in 1906, the year of its foundation.

Rev. Mr. Bowser married Anstiss McDuffie in the same year. The couple have three children: Anstiss, wife of Richard Wagner, Ph. D., of Cambridge; Howard B. Bowser, of Readville; and Elizabeth, wife of Gordon Smith, of Manchester, N. H.

United Nations' Hymn

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. ASPINALL. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I would like to include a poem by Milford E. Shields, Poet Laureate of the State of Colorado. Mr. Shields has written a poem concerning the United Nations, which I believe deserves our thoughtful consideration:

UNITED NATIONS' HYMN

(By Milford E. Shields)

One God creates all men of common clay
To dwell upon this earth in love and peace,
To labor on unto the shining day
When tyranny in all its forms shall cease;
Thus nations rise up in man's dwelling place,
Become united by God's living grace.

United Nations, rise with righteous might
Before oppressors who would slave the earth,
Meet force with greater force, meet might with right
And under God give freedom fuller birth;
Preserve man's high and holy dignity,
United Nations, keep all mankind free!

God of our fellow-men, we look to Thee—
Give us the vision and the range of sight,
Give us one strength and one humility
To labor on in one great love and light—
Give us the power, make our efforts whole
To work the full United Nations' goal!

American Bar Association Opposition to OTC-GATT

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I include a brief submitted to the Committee on Ways and Means in opposition to H. R. 5550, a bill to authorize the United States membership in OTC-GATT:

AMERICAN BAR ASSOCIATION VIEWS IN OPPOSITION TO H. R. 5550, SUBMITTED TO THE WAYS AND MEANS COMMITTEE, HOUSE OF REPRESENTATIVES, CONGRESS OF THE UNITED STATES, MARCH 8, 1956

(By Albert MacC. Barnes, designated representative)

Mr. Chairman and members of the committee, my name is Albert MacC. Barnes, of the New York bar. I am appearing here today as the representative of the American Bar Association, to oppose H. R. 5550. On August 24, 1955, at the annual meeting of the American Bar Association in Philadelphia, Pa., the house of delegates, the ruling body of that organization, approved the following resolution:

"*Resolved*, That the bill, H. R. 5550, authorizing the President to accept membership in the Organization for Trade Cooperation, is hereby disapproved on the grounds (a) that the Reciprocal Trade Agreements Act of 1934 (Tariff Act of 1930, sec. 350) confers no such power on the President, and (b) that neither the President, nor Congress has the legal authority under the Constitution, to delegate the regulation of our commerce with foreign nations to a foreign-controlled group, and the committee on customs law is hereby authorized on behalf of the American Bar Association to present these views to the Congress, and that the president of the American Bar Association be authorized to select a representative or representatives to appear before the proper congressional committees."

This is not intended to be a fully documented brief but rather a collection of thoughts which we hope the committee may find useful.

Any consideration of H. R. 5550, by the very phraseology of that bill, necessitates consideration of the Charter of the Organization for Trade Cooperation (known as OTC, and the charter of OTC states that it is to implement and administer the General Agreement on Tariffs and Trade (known as GATT). It seems obvious, therefore, that H. R. 5550 and OTC and GATT must be considered together as part of a general plan to take away from Congress the constitutional obligation imposed upon it and delegated it to a supernational or international organization in which the United States, with 20 percent of the world's foreign trade, is relegated to a minor position. The United States must even obtain the consent of that body, in which it has one vote out of 35 and no veto, before it can attend to what may well be considered the sovereign right of the people to mind their own business.

Much talk has been heard and many warnings sounded about the disastrous consequences which will flow from refusal of the Congress to approve H. R. 5550. Much of this propaganda smacks of deliberate effort to pressure the Congress into approval of a course of action to which it is claimed the United States has already committed itself, seemingly without regard to the fundamental questions of whether the proposed action is in accord with the law of the

United States. Whether or not there be validity in such fears, the Congress must determine four basic questions:

1. Has the President any sovereign power to enter into an executive agreement to join a supernational or international organization designed to direct and control our foreign trade?

2. Can Congress under its constitutional power over foreign trade delegate to the President the authority to become a member of OTC?

3. Did the Trade Agreements Act of 1934, as amended, delegate in advance an authority to the President to make and proclaim the General Agreement on Tariffs and Trade (GATT)?

4. Has the President usurped a nondelegable power of Congress in creating GATT?

Discussion of these questions should be prefaced by refreshing the recollection of the committee as to certain specific provisions of the Constitution of the United States.

Article I, section 1, provides that: "All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

Article I, section 8: "The Congress shall have power to lay and collect taxes, duties, imposts and excises."

* * * * *

Article I, section 8, clause 3: "Congress shall have power * * * to regulate commerce with foreign nations, and among the several States, and with the Indian tribes."

Article II, section 2, clause 2 under powers of the President provides: "He" (the President) "shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur."

The most casual inspection of these clauses forces the conclusion that so far as the matters involved in this foreign trade-control plan are concerned, the Constitution gives to the President only one power, i. e., "to make treaties with the advice and consent of the Senate." GATT has no status as a treaty.

Lest we lose sight of the main path, and drift off into the realm of sovereignty as a basis for so-called executive agreements, perhaps it would be well to again consider the phraseology of the Constitution. The preamble thereof states:

"We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution of the United States of America."

Sovereignty, wrested from the British Crown, was assumed by the people of the Colonies. It certainly could not have descended upon 13 separate collections of people whether known as colonies or states or territories.

The Declaration of Independence states: "When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another," and further: "We, therefore, the Representatives of the United States of America * * * in the name, and by the authority of the good people of these Colonies."

The concept of sovereignty, suffered a severe change from the old idea of the ruler being the state. No longer could one say, "The sovereign is dead—long live the sovereign." Here sovereignty for the first time was reposed in an indestructible and perpetual power—the people.

And so when the Constitution came to be written it was "We the people," who granted to officers and divisions of the Government established thereby, certain prerogatives of their sovereignty. To Congress they, the people, delegated the sole and exclusive right to legislate, and specifically mentioned the right to tax and to control foreign commerce. To the President they gave only one direct trade power—that, to make treaties.

It seems almost self-evident that the President has no rights of sovereignty from the British Crown or elsewhere unless they were passed through the people in the Constitution. Therefore, we must look to the Constitution only for the power to engage in any activity involving sovereign rights, as well as for any power involving foreign trade.

Any powers which Congres has under the Constitution must be exercised by Congress, and by Congress alone. What is not written in a delegation of authority cannot be assumed under any theory of a sovereignty in the President superior to that of the people or the Constitution.

The administration of laws can be delegated to the Executive or other agents of Congress, only in case Congress sets up an intelligible principle or legislative yardstick by which the delegate is governed. In *Panama Refining Co.* v. *Ryan* (293 U. S. 388) the Supreme Court passing on the question of delegation of authority in the National Industrial Recovery Act, and construing the exclusive power of Congress to regulate commerce under the Constitution, stated:

"The Congress manifestly is not permitted to abdicate or to transfer to others the essential legislative functions with which it is thus vested."

This principle is definitely applicable to GATT in spite of the dictum of Mr. Justice Sunderland in *United States* v. *Curtiss Wright* (299 U. S. 304). Certainly in that case the delegated power was sufficiently described and limited by Congress to be well within the established rule regarding legislative yardsticks, limits, or principles necessary in any delegation of power. Such cases as *Field* v. *Clark* (143 U. S. 649 (1892)); *Buttfield* v. *Stranahan* (192 U. S. 470 (1904)); and *Hampton* v. *United States* (276 U. S. 394) have clearly supported the principle that where Congress incorporates in a delegation of authority, phraseology establishing an "intelligible principle," definite limitations of activity and leaves nothing involving the expediency or just operation of such legislation to the determination of the President, the delegation is within the Constitution.

The delegation was not of the right to make law but to fill in the facts or conditions under which a congressionally made law was to take effect, be disregarded, or made inoperative.

H. R. 5550 provides only for membership in a so-called administrative body. The charter of that body (OTC) which must be considered a part of this legislation, contains no legislative yardsticks, limitation, or "intelligible principle" established by Congress. The operation is left to the discretion of the membership without any control by Congress. If GATT is to be considered a part of this executive program then it will be found that GATT goes far beyond the limitations of authority granted the President in section 350, Tariff Act of 1930, as amended.

GATT was put into effect by signature to a protocol of provisional application. On behalf of the United States it was signed by a division chief of the Department of State. In our case the alleged delegation to the President was in fact redelegated by him to the Secretary of State, and redelegated by the Secretary of State to a division chief. Now it is sought to redelegate the power to an international or supernational organization. The President's proclamation, T. D. 51802, only amplifies the view that no such power was reposed in the President by the provisions of section 350 of the Tariff Act of 1930, as amended.

H. R. 5550 is a delegation of authority to the President to accept membership in the OTC. No limitations or control or statement of an intelligible principle accompanies this delegation. On the contrary, for example, the bill carries an appropriation to the Department of State of "whatever sums may be necessary" for the payment of the United States "share of the expenses" of OTC. These expenses are to be "in accordance with article 9 of the agreement referred to in subsection (a)", OTC Charter. But it is significant that this is a delegation of unlimited authority because the fixing of expenses and shares is left to the OTC assembly, by article 9. The delegation also carries with it the fixing of salaries on an unknown basis, and of employees in unknown number. It delegates to the Secretary of State the authority to fix "other expenses which he may deem necessary." The bill itself does not comply with any of the rules governing the delegation of an authority, and seems of itself to be unconstitutional.

OTC, article 9 (b): "The assembly shall apportion the expenditures of the organization among the members, in accordance with a scale of contributions to be fixed by the assembly, and each member shall contribute promptly to the Organization its share of these expenditures."

H. R. 5550 presents for congressional approval an international trade body to be known as the Organization for Trade Cooperation (OTC), designed to provide permanent administration and implementation of the General Agreement on Tariffs and Trade (GATT), which in itself has not been approved by Congress. This GATT is, in turn, the creature of a broad interpretation by the State Department of the authority delegated to the President in the Reciprocal Trade Agreement Act (sec. 350, Tariff Act of 1930), the constitutionality of which has been raised in two cases now pending in the courts: *Morgantown Glassware Guild, Inc.* v. *George M. Humphrey, Secretary of the Treasury* (C. A. No. 876–55), United States District Court for the District of Columbia; *Star Kist Foods, Inc.* v. *United States* (Bruno Scheidt Inc., party in interest, protest 258737–K, before the U. S. Customs Court).

It will be remembered that an International Trade Organization (ITO), familiarly known as the Habana Charter, was denounced by the American Bar Association after recommendation by three of its committees and the association's position was presented to Congress in 1950. Public opposition to the ITO caused its ultimate withdrawal by the State Department.

This is the State Department's second attempt to create an international trade organization, in which the United States is 1 out of 35 nations represented; where it has 1 vote; where it has no veto; where it subscribes to a permanent policy of tariff reduction; deprives our elected representatives of control of our own foreign trade fiscal policies; commits the United States to review its own tariff rates and policies at the request of any one of the said members; and takes away even our right to vote on any question where we are one of the parties in dispute.

This bill, H. R. 5550, is simply a roundabout method of placing Congress in the anomalous position of indirectly approving GATT, a thing which it has several times specifically refused to do. GATT should not be approved indirectly by subterfuge, but should be thoroughly aired before legislative action takes place. The reasons for such airing become apparent when consideration is given to the subject matters dealt with in GATT. Many of them vitally affect our domestic laws and international trade practices. For example—

1. Internal taxation (GATT, pt. II, art. IV, par. 8).

2. Identifying marks of foreign merchandise (art. IX (3) (4) (5)).

3. Bases of customs valuations (GATT, art. VII (2) (3)).

4. Antidumping law (GATT, art. VI (4) (6a) (6b) (6c)).

5. Countervailing duties (GATT, art. VI (4) (6a) (6b) (6c).

6. Embargoes or quotas (GATT, art. XI (1) concluding unnumbered paragraph).

7. Currency restrictions (GATT, art. XII (1)—balance of payments—monetary fund).

8. Subsidies by Government (GATT, art. XVI, sec. A (3) (4)).

9. Emergency action on certain imports (clearly GATT, art. XIX (1a) (3a) is at variance with our safety device called the escape clause).

We would not be permitted to find that an industry of our own was injured by foreign competition, without submitting the contemplated remedy to the OTC for approval. This seems to be one situation in which the sovereign right to attend to our own business should not be abridged. Shall we abandon our Tariff Commission and its procedures for a foreign-dominated OTC executive committee?

The ITO (Habana Charter) was repudiated. The OTC contains many of its provisions in substantially identical form as disclosed by a comparison.

Comparison of articles of proposed organization and corresponding articles of Havana Charter for an international trade organization

	Article No. OTC	*Corresponding article No. ITO*
Structure	4	73.
The Assembly	5(a), (b), (c), (d), (e).	73(1), (7), 76(1), (2).
The Executive Committee.	6(a), (i), (ii), (iii), (b), (c).	78(1), (2), (a), (c), 80(1), (4).
The Secretariat	7(a), (b), (c), (d), (e).	84(1), (2), 85(1), (2), 88(1), (3).
Voting	8	75.
Budget and contributions.	9(a), (b), (c)	77(6), 91.
Status	10(a), (b), (c), (d)	89, 90(1), (3).
Relations with other organizations.	11(a), (b), (c)	87(1), (2), 86(1).

If the principle of control of our foreign trade by a foreign dominated group was undesirable when the ITO was before Congress in 1950, it is infinitely more undesirable today.

Certainly the Constitution contains no specific authority for the President or the Executive Department to enter into a so-called executive agreement transferring the policy and control of our domestic and foreign trade affairs to an international body, beyond the control of our legislators. Nor can such authority be spelled out as an incident of sovereignty.

If the President has such power it can only be by lawful delegation from the legislative branch of the Government.

Whether Congress itself has any authority under the Constitution to create such a foreign-controlled body having virtual charge of our foreign commerce, is at best highly doubtful, limited as that power is by article 1, section 8 of the Constitution granting solely to Congress the power to regulate commerce with foreign nations.

The OTC charter contains in article 1 the following statement: "The Organization for Trade Cooperation (hereinafter referred to as 'the Organization') is hereby established to further, as provided for in the General Agreement and herein, the achievement of the purposes and objectives set forth in the General Agreement on Tariffs and Trade (herein referred to as 'the General Agreement')."

The objectives of GATT are set forth as follows:

"ARTICLE I

"1. The contracting parties recognize that their relations in the field of trade and economic endeavor should be conducted with a view to raising standards of living, insuring full employment, and a large and steadily growing volume of real income and effective demand, developing the full use of the resources of the world and expanding the production and exchange of goods, and promoting the progressive development of the economies of all the contracting parties.

"2. The contracting parties desire to contribute to these objectives through this agreement by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international commerce."

This ambitious statement is strangely similar to the stated objectives of the National Industrial Recovery Act, which read substantially as follows:

"It is hereby declared to be the policy of Congress to remove obstructions to the free flow of interstate and foreign commerce which tend to diminish the amount thereof; and to provide for the general welfare by promoting the organization of industry for the purpose of cooperative action among trade groups, to induce and maintain united action of labor and management under adequate governmental sanctions and supervision, to eliminate unfair competitive practices, to promote the fullest possible utilization of the present productive capacity of industries, to avoid undue restriction of production (except as may be temporarily required), to increase the consumption of industrial and agricultural products by increasing purchasing power, to reduce and relieve unemployment, to improve standards of labor, and otherwise to rehabilitate industry and to conserve natural resources."

The NIRA was held to be a delegation of "unfettered discretion" to the President and was contrary to the Constitution. It was before the Supreme Court in *Panama Refining Company* v. *Ryan* (293 U. S. 388), and again in *Schechter* v. *United States* (295 U. S. 495), and in both cases held to be too broad a delegation, containing no legislative yardstick, nor enunciating an intelligible legislative principle.

The OTC without GATT is nothing—with GATT it raises the question of whether GATT has any legal authority for its existence.

This leaves for consideration the question of whether the Trade Agreements Act of 1934, as amended, contains within it a legal basis for the delegation of authority therein contained to include GATT. That act, section 350, Tariff Act of 1930, as amended, provides as folows:

"(a) (1) For the purpose of expanding foreign markets for the products of the United States (as a means of assisting in establishing and maintaining a better relationship among various branches of American agriculture, industry, mining, and commerce) by regulating the admission of foreign goods into the United States in accordance with the characteristics and needs of various branches of American production so that foreign markets will be made available to those branches of American production which require and are capable of developing such outlets by affording corresponding market opportunities for foreign products in the United States, the President, whenever he finds as a fact that any existing duties or other import restrictions of the United States or any foreign country are unduly burdening and restricting the foreign trade of the United States and that the purpose above declared will be promoted by the means hereinafter specified, is authorized from time to time—

"(A) To enter into foreign trade agreements with foreign governments or instrumentalities thereof: *Provided*, That the enactment of the Trade Agreements Extension Act of 1955 shall not be construed to determine or indicate the approval or disapproval by the Congress of the executive agreement known as the General Agreement on Tariffs and Trade.

"(B) To proclaim such modifications of existing duties and other import restrictions, or such additional import restrictions, or such continuance, and for such minimum periods, of existing customs or excise treatment of any article covered by foreign trade agrements, as are required or appropriate to carry out any foreign trade agreement that the President has entered into hereunder."

It will be seen from the foregoing extract of section 350 that the purposes of that act were apparently broad enough to cover a complete reorganization of the world. But only two specific powers were granted to the President; (a) to enter into foreign trade agreements, and (b) to proclaim such modifications of existing United States duties and other import restrictions as are required or appropriate to carry out the agreement. There is no intimation here that Congress granted to the President any authority to enter into an international compact creating an international body to control our foreign trade.

It is significant that reference is made in paragraph 2 D (ii) to the fact that "The standards of valuation contained in section 402 of this act" (i. e., the Tariff Act of 1930) "(as in effect during the representative period) shall be utilized by the President, to the maximum extent he finds such utilization practicable, in making the determinations" required under combination ad valorem and specific rates, or a combination of rates producing an ad valorem equivalent above 50 percent. Thus again is raised a conflict of authority between Congress and the sections of GATT having to do with determination of dutiable values.

Article VII of GATT departs radically from the provisions of section 402 of the Tariff Act of 1930, and provides that the contracting parties recognize the vitality of the general principles of valuation set forth thereafter and undertake that they shall "upon a request of another contracting party review the operation of any of their laws or regulations relating to value for customs purposes in the light of these principles." This leaves the United States open to complaints by any of the members of GATT of any specific customs valuation scheme which we may adopt and obviously if we adopt one which someone does not like and we change it, someone else may not like the latest one, and so ad infinitum.

If authority is given to the President to become a member of OTC he must accept that membership with the full knowledge that he must abide by all the rules, regulations and policies of GATT—or walk out with all the caustic criticism or censure generally attached to such an action. It is better not to go in than to incur the displeasure of any of the world's friendly nations.

Authority is claimed under the Reciprocal Trade Agreements Act to bind this Nation to GATT as an executive agreement (which authority stands at best on shaky ground), as evidenced by four congressional refusals to commit itself. Thus the present consideration of H. R. 5550 is probably as close as Congress will come to having GATT before it. Approval of H. R. 5550 carries with it, by implication, approval of GATT. Congress should not even consider passage of this bill without having GATT before it.

As the Supreme Court stated in *Buttfield* v. *Stranahan* (192 U. S. 525): "The power to regulate commerce with foreign nations is expressly conferred upon

Congress, and, being an enumerated power, is complete in itself, acknowledging no limitations other than those prescribed in the Constitution."

An analysis of GATT and OTC will readily show why Congress should not delegate its constitutional powers by direction or indirection to this international body.

In its preamble (which will now become article I) GATT lists its broad objects: "Raising standards of living, insuring full employment and a large and steadily growing volume of real income and effective demand, developing the full use of the resources of the world and expanding the production and exchange of goods." To this was added this proposed language in 1955: "and promoting the progressive development of the economies of all the contracting parties." These objectives are to be accomplished "by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international commerce."

This article I sets the theme for GATT: an international organization which is actually an attempt at a world-trade government in which we are merely a satellite having 1 vote in 35.

As a member of GATT we subscribe to at least one objective we have refused to espouse in our own domestic legislation. In the Employment Act of 1946 Congress was careful not to declare it to be the policy of the Federal Government to insure full employment, but instead to promote maximum employment, and there is a world of difference between those two phrases. To insure full employment—which means to insure everyone's having a job at all times—a nation must of necessity be either socialistic or communistic. Where everyone works for the state, jobs can be guaranteed or insured for all. On this point consider this excerpt from the constitution of Soviet Russia, chapter X, article 118:

"Citizens of the U. S. S. R. have the right to work, that is, the right to guaranteed employment and payment for their work in accordance with its quantity and quality. The right to work is insured by the Socialist organization of the national economy."

Under article II each member shall accord nondiscriminatory treatment to all other members with respect to import and export duties (with few exceptions). This seems to mean that if we make a special trade concession to Haiti, Communist Czechoslovakia must be accorded the same treatment. If this be so this provision presents a direct conflict with the policy of the Congress as expressed in the trade agreement statute, that Communist controlled countries shall not receive the benefits of reduced trade agreement rates. To get out of that difficulty it was necessary for the United States to get permission to withdraw Czechoslovakia from the list of nations entitled to most-favored nation treatment.

Under article II, no member shall alter its method of determining dutiable value or of converting currencies so as to impair the value of any of the concessions provided for in GATT.

H. R. 6040 now before the Finance Committee of the Senate changes most of our existing laws on the subject of customs valuations which were in effect at the time GATT was negotiated. If H. R. 6040 becomes law it may be found to be a violation of article III of GATT and will require at least the giving of compensatory concessions to any country interested.

Under article IV imported products must be treated the same as domestic products regarding all laws affecting their internal sale. There is a specific provision that would prohibit Congress from requiring that a certain proportion of a given product must be supplied from domestic sources.

Under article VI a Member may levy a special dumping duty if dumping by an export nation threatens the domestic industry—a provision generally in accord with our domestic dumping statute. On countervaling duties, however, the GATT requirement "material injury" to a domestic industry is not found in our law.

Quotas—embargoes—price supports: In this area GATT and our domestic policies and laws are in direct conflict. GATT has decided that the United States violates the general agreement article II and article XI when it applies quotas or fees under section 22 of the Agricultural Adjustment Act of 1933, noting that "The United States Government has taken positive steps aimed at reducing 1955 crop supplies by lowering support price levels, or by imposing marketing quotas at minimum levels permitted by legislation," and has assured GATT that, "The United States will discuss proposals under section 22 with all countries having substantial interest prior to taking action."

Under this same prohibition against quotas the United States has been attacked and has been compelled to give compensating concessions where it obtained a waiver to impose quotas on dairy products. In return GATT authorized the Netherlands Government to suspend the application to the United States of its obligations under the general agreement to allow the United States to supply Netherlands a limit of 60,000 metric tons of wheat flour during the year 1955. (See Decisions, 3d Sup., Basic Instruments and Selected Documents of the General Agreement on Tariffs and Trade, Geneva, June 1955, p. 46.) This in spite of the provisions in section 22 of the Agricultural Adjustment Act that "no international agreement entered into by the United States shall be applied a manner inconsistent with this section."

In this area GATT is in direct conflict with our farm price support legislation formulated by Congress. It creates a definite conflict with H. R. 7925; H. R. 8954; H. R. 9595, and others.

Although no waiver has yet been requested, it is probably that our Export Control Act of 1949 also violates article XI. This act authorizes the President to prohibit or curtail export of any materials in order to protect the national security, or protect the domestic economy from excessive drain of scarce materials, or further the foreign policy of the United States. The act was originally scheduled to terminate June 30, 1953, and was subsequently renewed for another 3 years until June 30, 1956. If it is again renewed, one could hardly say it represents "temporary" legislation, and there would be a question as to whether it was being "temporarily applied" so as to come under the article XI exemption. But the exemption applies only to restrictions "temporarily applied to prevent or relieve critical shortages of foodstuffs or other products essential to the Nation involved." GATT thus cuts down the scope of Presidential action permitted under the congressional declaration of policy.

With so many provisions of GATT at variance with domestic policy or requiring approval or direction of domestic policy by the OTC–GATT, the question might well be raised as to whether it is not wiser to stay out of such an organization that will impede our domestic action, and enter into agreements on a point-by-point basis that is in keeping with congressional regulation of foreign commerce provided by the Constitution.

Under article XI, any nation that does place import quotas on agricultural products and receives an exemption because it similarly restricts domestic production must maintain the same ratio between the two as existed prior to the restrictions. Under article XIII, proper trade volume proportions among importing nations must be maintained when import quotas are invoked. It is probable that the OTC would supervise both these procedures to insure that importers did not suffer. Article XIII provides that a member shall consult with OTC regarding adjustment of such proportions, on request.

The interesting thing about GATT's quota ban is that apparently the United States is one of the very few of the members that would be forced to ask for a waiver—most of the rest have built-in exemptions either in article XI XII or XVIII. Article XII permits quotas where needed to prevent serious decline in monetary reserves or to increase them if they are low. Thus no so-called soft currency nation need worry about waivers when it imposes quotas. Article XVIII provides that increased tariffs or quotas may be used for economic development purposes by underdeveloped countries if the prior approval of OTC is obtained.

Article XVI deals with subsidies. There probably is inevitable conflict between these GATT regulations and our domestic subsidy program. It is provided that if a member maintains a subsidy which increases exports or decreases imports of any product, a report must be made to OTC. If the subsidy is causing a serious prejudice to another member's trade, consultations must be held. Recently added language would ban the use of export subsidies on nonprimary products or manufactures after January 1, 1958. Export subsidies on primary products may continue to be used but they must be applied so that the subsidizing country will not acquire more than an equitable share of the world export trade in that product. Just who determines this "equitable share" is left unsaid, but of course if would be the OTC–GATT.

Article XIX is the so-called escape clause provision. It provides that if as a result of unforeseen developments and of obligations incurred under GATT, a product is being imported into a country in such increased quantities and under such conditions that serious injury is caused or threatened to domestic producers, a member is permitted to suspend the obligation or modify the concession. If this is done, other affected members can suspend substantially equivalent concessions if the OTC approved. This escape clause differs from the one written into our own tariff law by Congress (Trade Agreement Extension Law 1951), in that, in order to suspend the effect of a concession, it is only necessary under our law that a product, as a partial result of the concession, is being imported into the United States in such increased quantities that serious injury is caused or threatened to the domestic industry producing like products. No "unforeseen developments" are required as under GATT. It is, therefore, entirely probable that we could take advantage of the escape clause in our own law and still be in violation of GATT. The conflicting interpretations of the two provisions may be measured by the storm of protests and second guessing on the facts by member countries of GATT following each of the few instances in which the United States has taken action to protect its own industries from injury under the escape clause provision of our laws.

Under the new language of article XXVIII, concessions are open for withdrawal or modification only once very 3 years starting January 1, 1958. However, the OTC may at any time, in special circumstances, authorize a member to enter into negotiations for modification or withdrawal, such negotiations to be supervised by OTC.

The new article XXIX (of GATT) gives OTC authority to sponsor tariff negotiations.

Although no member is obligated to participate in such negotiations, the moral suasion of paragraph 2 (b) of the article is of interest:

"The contracting parties recognize that in general the success of multilateral negotiations would depend on the participation of all contracting parties which conduct a substantial proportion of their external trade with one another."

Thus it could be said that a United States refusal to participate in negotiations sponsored by OTC would be in violation of the spirit of GATT.

Under the new article XXX, if a nation does not agree to amendments to articles IV to XXX of GATT already accepted by two-thirds of the members, it can be eased out of OTC, or remain a member, at the discretion of OTC.

Article XXV provides for OTC, which carries out the provisions of GATT as well as other activities set up by the OTC agreement.

It is most interesting to note here that although we can keep Communist China out of the United Nations through use of the veto, we would be powerless to ban Red China from OTC discussions if two-thirds of the membership voted against us. Furthermore, by a two-third vote Red China could be admitted as a member of OTC–GATT if she wished. OTC–GATT is an attempt at a world trade constitution without a bill of rights.

Next we come to article 13, where we find that waiver of an obligation under GATT can be granted by OTC if approved by a two-thirds majority, such majority to comprise more than half of the members. Congress thus delegates to OTC the power to allow any member to violate any provision of GATT. Such a delegation is unconscionable.

Let us briefly catalogue at least some examples of the extent to which Congress would delegate its rights under OTC–GATT.

1. Delegation of authority as to what questions of international trade and commercial policy to study, what recommendations to make, and what propaganda to publish in keeping with GATT's broad world-trade-state objectives (OTC, art. 3, GATT new art. I).

2. Delegation of authority to permit or forbid the United States to levy a dumping duty if dumping in the United States by another country injures an industry in a third country—say Cuba (GATT, art. VI).

3. Delegation of authority to permit or forbid the United States to enact import quota legislation. A general national policy against import quotas is one thing. Having to ask OTC for permission to enforce our laws—such as section 22 of the Agricultural Adjustment Act—is quite another. Enactment of H. R. 8954 or similar legislation would send us on our knees to OTC again.

4. Delegation of authority to permit or forbid the United States to enact any other legislation contrary to provisions of GATT (OTC art. 13).

5. Delegation of authority to obtain from the executive branch of our Government numerous reports on various matters, including the steps taken in pursuance of the various provisions and policies set forth in GATT (e. g., GATT art. VII, Valuation for Customs Purposes; GATT, art. X, XVII).

6. Delegation of authority to cause the United States Government to review the operation of its laws and regulations in the light of provisions of GATT (GATT, art. VIII).

7. Delegation of authority to decide whether the United States, through giving subsidies on the export of a primary product, is gaining more than an equitable share of world export trade in that product (GATT, art. XVI).

8. Delegation of authority to permit or forbid the United States to suspend substantially equivalent concessions if another nation invokes GATT's escape clause (GATT, art. XIX).

9. Delegation of authority to decide whether the United States can put into force a customs union or free-trade area (GATT, art. XXIV).

10. Delegation of authority to force the United States to confer with a nation designed by OTC in addition to the nation with which the concession was originally negotiated if we wish to modify or withdraw a trade concession at the end of its term.

11. Delegation of authority to decide whether the United States is actually in violation of any provision of GATT, and to direct us to take corrective measures. That is one meaning of article 3 of OTC, saying that OTC will "administer" GATT. There is no appeal from OTC's interpretation of the facts. In the United States violation of a law would be determined by the courts. Not so here. This is contrary to our entire Constitutional concept of justice.

We realize that H. R. 5550 comes before this Committee as part of the President's program. But on that point we ask your indulgence for other quotations from the Panama Refining case, page 418 and at page 420:

"The Congress left the matter to the President without standard or rule, to be dealt with as he pleased. The effort by ingenious and diligent construction to supply a criterion still permits such a breadth of authorized action as essentially to commit to the President the functions of a legislature rather than those of an executive or administrative officer executing a declared legislative policy.

"The question whether such a delegation of legislative power is permitted by the Constitution is not answered by the argument that it should be assumed that the President has acted, and will act, for what he believes to be the public good. The point is not one of motives, but of constitutional authority, for which the best of motives is not a substitute."

And also from the Schechter case, in striking down the "codes of fair competition" sections of NIRA as unconstitutional delegations of authority, page 537:

"But Congress cannot delegate legislative power to the President to exercise an unfettered discretion to make whatever laws he thinks may be needed or advisable for the rehabilitation and expansion of trade or industry."

We think the conclusion forced upon us by a study of section 350 is that Congress never intended the President to use it as a basis for joining an association of "contracting parties" governed by majority rule without veto, amounting in every sense of the word to an international organization even though not denominated as such.

If OTC–GATT were made into a purely advisory international trade body without power to compel action; with no rulemaking power; with no decision-making authority; with no authorative regulatory power; with no voting; with no sanctions, and with no compulsion, it might be useful as a tribunal which could hear governments and individuals alike, and advise the governments as to the best course to follow to simplify, amplify, and promote international trade.

It is not necessary to have finality of judgment or enforceability of decree which in the last analysis cannot be enforced, and can only impel a noncomplacent nation to walk out.

Respectfully submitted.

THE AMERICAN BAR ASSOCIATION,
By ALBERT MACC. BARNES,
Designated Representative.

NEW YORK, March 8, 1956.

(NOTE.—It might be well for the Congress to consider the situation of the secret treaty and executive agreement culminating in the Lansing-Ishii Agreement with Japan in 1905. Mr. Lansing told your Foreign Relations Committee that the agreement had no binding force on the United States—but it took an international conference, two complete treaties, and a series of notes to get rid of it in 1921. (See Constitution of the United States of America, Revised and Annotated 1952 by Edward S. Corwin, editor, p. 426.))

No Public Official or Employee Can Serve Two Masters

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I made on WMEX, Boston, Mass., on Saturday, April 21, 1956:

They call it "conflict of interest" when a person goes to work for the Federal Government "with an ax to grind." To use his inside position to serve an outside interest.

We have laws to prevent such activities, but continuing vigilance is required to make sure that people in key positions do not direct Government policies for the benefit of any individuals, groups, or corporations.

An employee of the United States Government is expected to put the public interest above any and every private interest.

Ninety-nine percent of them do.

The 1 percent used their position in Government for the financial advantage of private enterprise.

Oftentimes this is difficult to pin down. It is not easy to trace the tipoff to one corporation, for instance, and concerning some change in Government policy, or the way in which contracts are awarded to a preferred company that has access to influential friends inside Government.

As to full-time Government employees, the majority observes the code of ethics, similar to the one promulgated by the General Services Administration. This requires that all employees of the agency so conduct themselves as to permit no possible basis for suspicion of unethical business practices. It prohibits employees from engaging in any outside business unless the approval of competent authority is first obtained. And it prohibits employees from taking any final action with respect to any matter in which the employee has any personal or financial relationships.

As to WOC's, meaning those who serve without compensation, such standards are difficult to enforce. The Government must avail itself of the best skills and talents, particularly on Government advisory groups and in the employment of WOC personnel by administrative agencies.

Certain advisory groups are composed of the principal executives of some of the most important business firms in the country. WOC's serving as Government officials in charge of divisions dealing with the particular industry often are important but subordinate officials of these same firms.

The Antitrust Subcommittee of the House Committee on the Judiciary is concerned about this problem.

It wants to know whether this relationship leads to special influence on Government policy by industry through its control of advisory groups.

Unfortunately, many of the practices that are considered to be legitimate in the give-

and-take world of keen competition become abuses when done in the name of Government that is supposed to be the impartial umpire.

Businessmen, by force of long habit, are inclined to favor the interests of their own business or industry when they serve as advisers to Government.

During the past year the Government felt it necessary to disengage itself from the services of four high officials. If they had been rank-and-file employees, they would have been fired. But this is too harsh a term to apply to influential people. To save face, they are permitted to resign.

You see, it began to appear that these four officials were using their Government positions to favor firms in which they had a political or financial interest. Although no corruption was chargeable, there was much doubletalk in evidence. Their two-faced roles, as Government advisers and as possible financial beneficiaries, did not appeal to the public.

Their behind-the-scenes activities did not pay off—because the public is determined that no official shall try to serve two masters.

It can't be done in a well-informed democracy.

But how and where are we going to draw the line?

I recall the hue and cry that was raised when Charles E. Wilson, president of General Motors Corp., was appointed Secretary of Defense. He sold all his holdings in GM so that there would be no possible suspicion that his decisions as Secretary of Defense would in no way favor GM.

In view of the fact that the stock of GM has gone up considerably since then, Mr. Wilson made a very real personal sacrifice in accepting a Cabinet post.

This raises the serious question as to whether anyone coming into the service of the Federal Government should divorce himself completely from a business to which he has given most of his life.

The United States Government, which is the biggest organization in the world, must not be deprived of the best talent it can get.

But how can we be sure of attracting and holding this talent and, at the same time, make certain of its devotion to the public interest above all else? Especially those who serve without compensation.

Must we insist that a person sell all stock holdings in a business concern for which he worked to remove any temptation of furthering the interests of that business as against the interests of Government?

This is a hard question to answer.

Such drastic action would discourage many high-type men who might otherwise regard it as an honor and a duty to serve their Government.

At the same time, we must protect ourselves against the few who would exploit their Government positions to favor private interests.

Perhaps we need a stronger and more detailed code of ethics regarding such activities, supported by a wide-awake press that will keep the public informed as to whether standards are being maintained * * * to protect us against "conflict of interest."

As to present laws there are statutory provisions of the United States Code which affect Federal employees, or former Federal employees, in their conduct of private business activities. These statutes, better known as the conflict-of-interest statutes, are aimed at protecting the public interest by prohibiting Federal officers and employees from engaging in private activities which are incompatible with the duties and responsibilities of public office. Penalties for violation include both fine and imprisonment. Except as provided by these statutes, there is no legal prohibition against the conduct of private business activities for compensation by an officer or employee of the United States.

As to political activity, all employees in the executive branch of the Federal Government, including persons employed as experts or consultants, even on a part-time or intermittent basis, are subject to the political activity restrictions of the Hatch Act. This covers the full 24 hours of any day that the individual performs some services for the Government, rather than just the actual hours of employment. The Hatch Act prohibits the use of official authority or influence to interfere with or affect the results of an election, and active participation in political management or in political campaigns.

Supplementing the laws, we have directive such as the following one titled: "Steps Followed by the Business and Defense Services Administration To Avoid Conflicts of Interest."

1. The incoming WOC is advised during negotiations in connection with his hiring, that he will be expected to devote his full time and energies to Government work without the influence of any prejudicial interest.

2. Upon entrance, he is required to take the usual oath of faithful performance to the United States Government.

3. On taking the oath he is handed a document which sets forth his exemptions from the "conflict-of-interest" statutes and the limitations to such exemptions as set out in Executive Order 10182.

4. Shortly after reporting for duty the WOC is given a face-to-face indoctrination which includes a caution against acting upon any individual matter in which he or his company has any direct or indirect interest. He is told that he should withdraw from any matter which, if he acted upon it, would embarrass himself, his company, or the Government. In such cases, he is instructed to refer the matter to the chief career employee of the division, who is specified, and who is usually the deputy director. He is advised that, if there is any question in the application of this rule, he is to consult with the legal staff or chief administrative officer.

So far so good.

But laws and directives in and of themselves do not always guarantee compliance.

Human nature being what it is, partiality is apt to affect decisions.

As the Chairman drily observed, however, "I am not so much interested in directives. It is a question of whether the directives are followed."

Congress has added one new safeguard for the public by providing that private interests of WOC employees appointed under the Defense Production Act must be published in the Federal Register.

We have the feeling that much more can be done to separate conflicting interests.

John Lord O'Brian, whose experience and integrity command respectful attention, advises that heads of divisions should not come from industries in which they have an interest. In other words, if the Government wants an industrialist to head the Iron and Steel Division, it should not seek a man from that industry. In this way it will remove temptation from an official who heads a division in which his employer has a special interest—the temptation for him to serve the master who pays him rather than the master to whom he owes primary allegiance under these circumstances, namely, the Government of the United States.

There are several bills being considered by the Judiciary Committee designed to curb those who leave the Government and then use this previous Government experience improperly. These bills implement the rule of conduct as expressed in Canon 36 of the Canon Ethics of the American Bar Association.

Perhaps the cure for this whole problem would be to develop a genuine career service in Government. With adequate salaries to attract and hold the best talent, and with special leave provided each year for key employees to freshen up on current developments in those fields outside the Government, but related to its problems.

In this way we would avoid the alarming turnover in Government employment, and would not have to call in experts or advisers for temporary service.

This would eliminate the "in and outers" and their divided loyalties.

In the meantime we can help to reduce conflict of interest in Government service by keeping the bright spotlight of public opinion trained on those areas where temptation might occur.

Priest Hits Princeton Board Over Hiss Talk

EXTENSION OF REMARKS
OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news article from the outstanding newspaper in the State of New Jersey, the Newark Star-Ledger of April 23, 1956, entitled "Priest Hits Princeton Board Over Hiss Talk." Father Hugh Halton's speech is indeed heartening. The article follows:

PRIEST HITS PRINCETON BOARD OVER HISS TALK

PRINCETON, April 22.—A Roman Catholic priest today unleashed a scathing attack from the pulpit against Princeton University's Board of Trustees for refusing to ban Alger Hiss' scheduled speech here Thursday night.

The Reverend Hugh Halton, chaplain of the university's Aquinas Foundation, said under the trustees' nonintervention plan Princeton students "might just as well invite prostitutes and embezzlers to discuss purity and banking."

He said the trustees' refusal to invoke authoritarian censorship in the student-planned speech is utter nonsense in this context.

"What is missing is authority and discipline," Reverend Halton said.

His remarks were made at mass in Princeton's Roman Catholic chapel, where he had delivered another stinging attack on Princeton administration officials last weekend.

"There is a kind of spiritual and moral subversion which will do a greater disservice to Princeton * * * and similar institutions than some of the threats we consider more immediate," Reverend Halton said of the forthcoming Hiss talk.

He said "a university administration and board of trustees which abandons its authority for informed and uncritical minds does not put the students on trial; it puts itself on trial.

"It is already judged," he added.

Reverend Halton called the university stand on the Hiss speech "hazy" and said school officials were now "clinging to a raft." He added that the school's board of trustees has committed itself to "the drift."

The priest charged there was "a decline of spiritual and moral values at Princeton practically and speculatively."

Reverend Halton told his audience "the mind should be treated as gently as the stomach. We don't put poison in the stomach," he said, alluding to the convicted perjurer's scheduled appearance.

The Hiss speech was scheduled by Princeton's Whig-Cliosophic Society, a 187-year-old debating group.

The Debating Carrer of Vice President Nixon

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. UDALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a penetrating article written by William Lee Miller which appeared in the April 19 issue of the Reporter magazine:

THE DEBATING CAREER OF RICHARD M. NIXON

RICHARD MILHOUS NIXON is an able young politician who has got himself into an awkward and unpromising situation—except, of course, that he may at any moment become President of the United States. The talents that have brought him to this powerful position may some day undo him.

The chief of these talents is his ability in the art of public persuasion. If Adlai Stevenson is the high-minded commencement speaker in politics and Dwight Eisenhower the morale-building football coach, then Mr. NIXON is the bright young debater. Almost his whole life has been spent in the arguing business, and his success has been, in the language of his native southern California, supercolossal.

He engaged in his first debate, on the subject "Resolved, that insects are more beneficial than harmful," in the seventh grade. He won. In his California high schools he entered something called the Constitutional Oratorical Contest 3 times; 3 times he won. He led winning debating teams both in high school and in Whittier College, and when he entered the southern California Intercollegiate Extemporaneous Speaking Contest, he won that.

In 1946, the Congressman in California's 12th District, a well-liked Democrat named Jerry Voorhis, agreed one day to meet his young, unknown Republican opponent, RICHARD NIXON, in a series of five debates. The first one was held in a high school in South Pasadena, and after it was over Voorhis asked a friend how the debate had gone. "Jerry," said the friend, "he murdered you."

Four years later, in 1950, Congressman NIXON was running for the Senate against Helen Gahagan Douglas, and a leading California Democrat spoke for Mrs. Douglas in a debate with NIXON. "He knew every detail," says this Democrat. "The audience was with him, and he made a monkey out of me."

Two years later, in 1952, Senator NIXON was running for the Vice Presidency. "I come before you," he said earnestly one memorable night in late September, "* * * as a man whose honesty and integrity have been questioned. * * *" After the telecast, telegrams, letters, postcards, and even gifts of money came in by the thousands.

Two years after that, in 1954, Vice President NIXON traveled across the country in a campaign expedition that, in sheer expenditure of lung power, is probably unmatched by any in the history of American off-year elections. The President praised him; everybody credited him with Democratic scalps; midwestern party chairmen publicly thanked him for what he had done "for the American people and his party"; and a Republican columnist voiced the conclusion of many when he said "virtually singlehanded, he averted a GOP debacle."

Now, in 1956, just 10 years from the time he entered politics, Mr. NIXON has talked and argued and campaigned his way to the threshold of the most powerful office in the world. As one of the so-called "committee of 100" that first picked NIXON to run in 1946, has said, "I guess we didn't know what we had hold of. We knew DICK was smart, and we knew he could talk, but we didn't know that he was that smart or could talk that fast."

A SPUR TO DEMOCRATS

For all the Vice President's ability to persuade, there still are many Americans who remain quite unpersuaded about the man himself. The Democrats, who feel a special hostility to Mr. NIXON, say things like: "He doesn't give a damn about the truth"; "He's absolutely ruthless"; and "He doesn't have a shred of character."

The degree of opposition from one's enemies can be important to a politician, particularly when he is approaching the highest national office. Americans are not so neatly divided into parties that the deeply felt opinion of one group has no effect on the other.

Moreover, the strength of feeling against a political figure helps determine the power his opposition can mount against him. Many Democrats really like Mr. Eisenhower, and cannot get terribly excited about opposing him; therefore, he spikes the Democratic guns. Mr. NIXON's effect, however, is the opposite; he loads them. Against him the Democrats would unite and fight and work and give and organize and vote with a passionate response beyond that evoked by any other candidate. As one Democrat said, "If I think he may become President, I'll be really frightened. I don't mean just politically frightened, I mean really frightened about what it would mean for the country."

On most ordinary counts, Mr. NIXON does not appear to deserve this unrelenting hostility. Personally, those who know him say he is a nice fellow. His social philosophy contains nothing extreme enough to scare anyone very badly; it is, in fact, a little hard to know what his philosophy is, but that's no crime or novelty amidst the pragmatism of American politics. His voting record is a mixed and mildly conservative Republican one; it has to be carefully edited by the liberals who oppose him when they want to make it seem to be something fierce. He does his homework better than many members of the administration. His role in the Hiss case may not be quite heroic enough to justify the implication one sometimes discerns in his promotional literature, that a grateful Nation should ever after do whatever he recommends, but still it is impressive. He appears in the record as an alert, intelligent, and persevering investigator. After becoming Vice President he made a ceremonial trip to Asian countries that was considered a distinct success. It is repeatedly said that he has brought a new significance to the Vice Presidential office—a claim that has been made for several of his predecessors. He has performed his role as mediator within the administration in a way that William S. White of the New York Times would describe as "great, and on certain grave matters both signal and uncommonly courageous."

One can even find, from the calm between the storms of Mr. NIXON's campaigning, some quotations from his speeches that contrast with the usual list. He once admitted, with a little surprise aside noting that he was admitting it, that there had been great Presidents from both parties. In the fall of 1953 he chose to say in a St. Louis speech to the American Legion: "* * * let's recognize right now that the decision to go into Korea was right * * * on this issue President Truman was right, and he deserves credit for making that decision * * *." He also has said that "No party has a monopoly on patriotism or love of country."

Why then is there such a widespread distaste for Mr. NIXON?

HOW IT IS DONE

To understand the feeling against Mr. NIXON one must turn not to the substance of his politics but to the character of his polemic.

Though the early ones are now many years gone, none of Mr. NIXON's campaigns has been forgotten; each has left a memorable stain.

For all their victories and acclaim, the champions in the art of persuasion, from the days of the sophists to our own, have been under a bit of a shadow. After the applause has died down and a more reflective mood has set in, one is never sure just where conviction ended and sheer artistry began. In our time these ancient doubts have taken on a new dimension, as the persuasion of men in the mass has become not just an art but a science. Mr. NIXON, in the practice of that science, has gathered not only laurels but also the antagonism that men feel toward its more unrestrained practitioners.

Almost everybody has been made to look the fool by a glib debater, or been sold something he didn't want by a fast-talking salesman, or been put in the wrong before a crowd by the sincere and emotional appeal of an opponent. Such experiences are remembered when one listens to RICHARD NIXON.

Mr. NIXON's success has been extravagantly admired. His friend and campaign manager, Murray Chotiner, who is credited with developing many of the Nixon techniques, has been sent on a tour to tell Republicans how it is done. Mr. NIXON himself has given lectures on the subject, with such advice as: "If he asks you where you stand on Dulles, ask him where he stands on Acheson. If he asks you how you stand on the McCarthy issue, make him say where he stands on Mitchell and Bobby Jones, on Roosevelt and Condon * * *." But, in the long run, men are not satisfied with the technique of attack and counterattack, or convinced just by success; at the last, they do want to know where one stands. With Mr. NIXON, it is not easy to tell.

It is not that he hasn't taken positions; it is just that his arguing and persuading and his platform performances are much more central to his public personality than any clear political commitment; his articulate ability to sway a crowd is far more noticeable than any restraining set of values. The worthy things he may do or say appear to be, as in one of the devices that he uses in his campaigning, just the preliminary concession to truth or to the other side that one makes in order to win the audience, so that the final, calculated argument will be the more damning. It may just be a part of what you have to do to win.

GOOD GUY-BAD GUYS

The Vice President and his supporters have quite different explanations of the feeling against him. NIXON's own version came out clearly in the unguarded moment just after the Nixon fund story broke, and for some citizens the way he responded to the whole affair was more damning than anything about the fund itself: "Hold the train. You folks know the work that I did investigating the Communists in the United States [applause] * * *. After I received the nomination for the Vice Presidency, I want you folks to know—and I'm going to reveal it today for the first time—I was warned that if I continued to attack the Communists and crooks in the Government that they

would continue to smear me * * *." An essential part of Mr. NIXON's presentations is to present those who oppose him as an assortment of evil types—Communists, left-wingers, crooks—while his own resistance to them on the side of good is cast in the most personal and dramatic terms.

The current biography entitled, with admirable succintness, "NIXON," and written by the subject's friend, Ralph de Toledano, is a longer and more sophisticated development of that same heroic, good guy-bad guys theme. This sympathetic biography of him is composed in large part of attacks on his critics.

Sometimes this attack proceeds from very dark assumptions; Toledano says that "NIXON is hated most by those who most hate themselves." This strange item of high psychology is just tossed off in passing and not explained. But the main thrust of his argument is that his admired subject is disliked by left-wing intellectuals because, in two instances, the Nixon fund and the Hiss case, he showed them to be wrong.

The fund matter, however, was hardly a case of showing "intellectuals" to be "wrong"; it may have been a case of showing them to be in the minority, but that is hardly the same thing. It is interesting that Mr. NIXON's biographer should not notice the distinction, and, apparently like his subject, should conclude that right and wrong are determined by Hooper ratings.

The questions raised by the fund were not answered in the famous telecast, but were smothered in references to cloth coats, St. Patrick's Day, and Alger Hiss, and by elaborate details of the Nixon family finances. From the television speech and subsequent information about Mr. NIXON, a reader comes to feel he knows the NIXON's financial situation better than his own; there is even a little, faintly socialistic, complaints by Mrs. Nixon, possibly reflecting her background as a Democrat, about the prices that doctors charge the family now that its head is Vice President. But all this is irrelevant; the question about the fund, to paraphrase a distinction that Mr. NIXON made about Adlai Stevenson in 1952, does not have to do with NIXON's personal honesty, but with his judgment: He accepted a special fund from one segment of his constituency as a "salesman against socialism," and may thus have obligated himself to their ideological position. Amid all the dramatic, personal, and emotional details, that main question went unnoticed. Another debating device that can be learned from Mr. NIXON is that it is better to deal with an irrelevancy on which one can make an effective performance than with a relevant point on which one may be less compelling.

As to the Hiss case, the feeling of resentment that Mr. Toledano describes fastened much more on Whittaker Chambers than on NIXON. The doubts about Mr. NIXON began with the 1946 campaign before there was any Hiss case; they have grown with the 1950, 1952, and 1954 campaigns without reference to that case. They exist among conservatives—one who has felt them so deeply that he avoided contact with Mr. NIXON after the 1954 election, and who said that Mr. NIXON's "name is mud," is Speaker SAM RAYBURN. They are pretty widespread. The polltakers, when they were wondering if Mr. NIXON might run for President, found him running behind either Stevenson or KEFAUVER; Walter Davenport, of Colliers, recently crossed the country asking people about politics, and reported thus: "NIXON? The noes ran down the line like echoes. No NIXON. Why? Too young. Too emotional. Too slick. Not enough experience. Only now and then, from California to New Hampshire, was I to find Nixon votes. * * * Lacked stature. Just another opportunist. Didn't look the part. Just another slick politician."

"MR. REPUBLICAN"

The other characteristic of Mr. NIXON's public personality, related to his debating, also bears both a secret of his rapid rise to power and a possibility of his defeat; that is his ability to fit any of the major factions of his party while being identified with none. Even more than Mr. Eisenhower, he transcends the old, still bitter Dewey-Taft split in the party—and even the division over MCCARTHY. He manages to keep in touch with all sides of the party; he has been described by various commentators on his Vice Presidency as a bridge, cement, and a broker, among the different factions; this magazine once said he was all things to all Republicans. But whereas Mr. Eisenhower transcends the factions of his party by touching upon simple, clear, often platitudinous values that all Americans share, Mr. NIXON rises above the factions by emphasizing the practical necessities that all Republicans share; where Mr. Eisenhower comes close to finding the common denominator for the country, Mr. NIXON finds the common denominator for Republicans. That means most certainly the attack upon Democrats; on that all Republicans agree, and in that, he excels.

Mr. NIXON is thus perhaps deserving, as has been suggested, of Mr. Taft's old label, Mr. Republican. On him, however, it would mean something quite different. Where Taft defined Republicanism by a distinct philosophy to which he tried manfully, though unsuccessfully, to get the party to conform; and where he looked on those "me too" New Deal Republicans who did not hold to his orthodox position as some kind of an alloy—not quite real Republicans—Mr. NIXON is not so demanding. He has no discernible policy requirements for Republicans; he takes the party as he finds it and makes the persuader's case for what is given. He argues for CLIFFORD CASE against conservative Republicans; he argues for HENRY DWORSHAK against liberal Republicans; when he goes into Indiana after a bitter fight between JENNER'S forces and those of Governor Craig, an Eisenhower supporter, he has glowing words of praise for Governor Craig—and also for Senator JENNER. He says to assembled party workers: "We've got to get 48 votes in the Senate and let's get that into our heads." It is not surprising that party chairmen, from Leonard Hall on down (or up) really love him.

But the support he gets from Republicans concerned with policies and philosophies as well as partisan success is tempered with a note of wariness. A Taft Republican said: "I'm not sure that NIXON is as conservative as I would like, but when all the radicals began talking about dumping him, I was for him. I love him for the enemies he has made."

NIXON has combined the sides of the party not by a weak and compromising middle position, but by a sustained, vigorous attack that, waiving factional differences, concentrates on the common enemy.

PRIZES AND PUBLICITY

Yet he can be very winning, as when, introduced by a fumble as "President NIXON," he turned the error aside with a modest little disclaimer; he can also be a little frightening, as when he had a man who called but one sentence of heckling during a television speech brought forward afterward, held while he lectured him in front of the crowd, and then thrown out of the hall. In any case, he is full of smiles, sincere passages, pauses in the right places ("his [Eisenhower's] strength and his wisdom [pause] and his faith"), and audience contact: (NIXON: "He [Stevenson] makes speeches like Acheson. Do you want to promote Acheson to the Presidency * * *?" Crowd: "No.").

His campaigning also cannot be understood apart from the devices that accompany it. In 1946 there were telephone calls that Mr. Toledano tries now to say didn't exist, which said: "I know you will vote for NIXON, because Voorhis is a Communist," and there were 25,000 free thimbles given out which said: "Vote for NIXON and needle the PAC." In the closing weeks of the 1950 campaign fliers were dropped in great numbers in California cities, saying, "Win with NIXON: When your phone rings on Monday and Tuesday, November 6 and 7, pick it up and say 'Vote for NIXON,' and you may be the lucky winner of a valuable prize. * * * Prizes galore. Electric clocks, Silex coffee makers with heating units—General Electric automatic toasters—silver salt and pepper shakers, sugar and creamer sets, candy and butter dishes, etc. * * *"

In the 1954 campaign, NIXON's speeches in the West correlated with booklets on "Senator MURRAY and the Red Web Over Congress" and advertisements asking, "How red is John Carroll?" A candidate cannot, of course, be held responsible for all that is done by his supporters, but in Mr. NIXON's case what was done has been on a very large scale, with billboards, full-page ads, expensive public-relations firms, and fancy techniques, in very similar ways each time. It has always played on the same themes, helping create an atmosphere in which his meaning is understood.

Other Republicans have defeated Democratic opponents without incurring the special disapproval reserved for Mr. NIXON. Senator KNOWLAND, for example, who represents positions at least as far removed from those of many Democrats, expresses them in a campaign in a quite different way: "* * * no Democratic administration which follows the Truman administration could divorce itself from the mistakes of the past 7 years." Compare that stodgy, earthbound sentence with the higher flights of RICHARD NIXON on the same subject.

When Senator RICHARD NEUBERGER came to Washington, the Oregon Democrat gave a speech at the women's press club, with NIXON present, in which he criticized those who violate the ten commandments in their campaigning. He pointed to Senator KNOWLAND, who was also present, as an example of a man who had campaigned against him fairly. He didn't mention Mr. NIXON by name, and says that he didn't know he would be there, and was just saving what he had said and worked out long before. But everybody assumed he was attacking the Vice President, and the wife of a Republican Senator left the meeting in protest. Senator NEUBERGER says, "Apparently the shoe fit."

CONTROVERSIAL FIGURE?

Some Republicans know that the shot fits. Back in 1950, Earl Warren did not support him for the Senate, and there have been strong Republican rumblings against him in California throughout his career. Some eastern Republicans wonder about his appeal to the independent vote. This expert at making others into controversial figures has himself become one. In a time when partisans are suspect and independents praised, he may be too thoroughly Republican for the good of the Republican Party.

The President is "liked" with an affection that rises above parties; the Vice President is disliked with a hostility that also transcends political positions. Where the President has refused to use compound words built from a politician's name, such words ("Trumanism," or, as NIXON prefers, discredited Trumanism") are a major feature of Mr. NIXON's vocabulary. Where the President has refused to "deal in personalities," personalities have been Mr. Nixon's stock in trade.

Most politicians, unlike Mr. Eisenhower, do—and in some cases probably should—specifically mention their opponents. Plenty

of Republicans have called Democrats names, and plenty of Democrats have reciprocated. But Mr. NIXON's way of engaging in this autumn sport is his own. He does not say "Dean Acheson is a pink," or "spineless"; he speaks rather of "Acheson color blindness—a form of pinkeye—toward the Communist threat in the United States"; and of "Dean Acheson's spineless school of diplomacy which cost the free world 600 million former allies in the past 7 years of Trumanism." He does not say that Acheson and Stevenson are cowards or Communists or college intellectuals; rather he explains that Mr. Stevenson has a degree all right—a "Ph. D. from the Acheson college of cowardly Communist containment." Mr. NIXON's way is imaginative and deft. What does the word "cowardly" modify in that sentence? Just how does the word "Communist" fit in? He avoids a flat assertion that might offend some of even a sympathetic audience, but he achieves his desired effect and more by his careful phrase. That takes practice and planning.

Mr. NIXON's remarks are not, as with many blunt and adjectival campaigners, the crude, undisciplined, and exaggerated outpouring of outraged political emotions; they are rather the polished weapons of a skilled debater who knows exactly what he is doing, and who shapes his words primarily on the basis of a calculated strategy. There appears in Toledano's book, and again in a sympathetic article about Mr. NIXON in a Sunday magazine section, a remarkable little rule of thumb of his that is profoundly revealing: "The only time to lose your temper," he is quoted as saying, "* * * is when it's deliberate."

PLANNING YOUR SPONTANEITY

When you think about it, this premeditation, even about losing his temper, is a striking characteristic. Mr. NIXON has also said some interesting words about spontaneity. He told radio and television executives, in the fall of 1955, that candidates should make an intimate approach to the audience with a spontaneous, off-the-cuff speech. But, as the Times reported it, "An efficient 'off-the-cuff' appearance on television, creating the illusion of intimacy so desirable to win the viewers, according to Mr. NIXON, entails many hours of preparatory work." Mr. NIXON told about planning the spontaneous intimacy of his fund speech. The broadcast was put off from Sunday night to Tuesday for two reasons: To give him time to prepare thoroughly, and to build up the audience. "We wanted to create suspense."

A political worker who has seen Mr. NIXON in action says this: Most good stump speakers have a kind of intuitive feel of their audience, so that they play by ear, trying out themes as they speak, sensing what gets a response and developing it. With Mr. NIXON, however, it is a matter not so much of intuitive rapport on the stump as of post mortems, careful polls, and trial runs. It is more systematic, more a matter of calculation and testing. Mr. NIXON, as everybody says, works hard. He acknowledged in the early days of the 1952 campaign that his principal mission in barnstorming through Maine was to try out campaign techniques. One can see them developing—the scandal-a-day administration, the "four-headed monster that was Korea, communism, corruption, and controls," the boys dying in Korea while Mr. Stevenson makes jokes—and as Mr. NIXON gets the most effective phrases and themes worked out and polished, he then repeats them at each town. By the end of the campaign his speech has become a veritable masterpiece of planned spontaneity and deliberate loss of temper.

Some of his devices are traditional platform tricks: mock-serious "advice" to the opponent ("I would suggest to Mr. Stevenson * * *"); challenges to say whether he has stopped beating his wife (will he continue the "blindness and ignorance toward communism"?); thrusts to leave him with the burden of proof ("If that is not true, let them deny it"). Like everybody else, only more so, he uses metaphors ("Side-saddle Adlai * * * his feet stick out to the left"), rhymes ("MORSE * * * well, he acts just like a horse."), and alliteration ("Korea, communism, corruption, and controls."). His summaries of the differences between the parties can be breathtaking in their simplicity ("The Truman-Acheson policy got us into war; the Eisenhower-Dulles policy got us out").

LINKAGE

Mr. NIXON also uses the device of counting on the ignorance of the audience and making a simple, memorable charge, the answering of which would involve the opponent in too complex an explanation to be grasped in a swift exchange. Against Representative Voorhis, for example, NIXON's forces claimed that Voorhis' colleagues in the House thought so little of him that they had passed only 1 of the 132 bills he had introduced, and that that one—here comes a laugh—was the "rabbit transfer bill." This attack was infuriating to Congressmen who knew Mr. Voorhis as an exceptionally devoted and respected Member of the House, but Mr. Voorhis' patient effort to explain the rabbit transfer bill was not very effective.

In the Voorhis campaign one of the techniques more especially distinctive to Mr. NIXON began to appear, that of linkage. Mr. NIXON's experience in politics must have been disillusioning for a clean-cut American boy because everybody he has ever campaigned against has turned out, on his investigation, to be linked to somebody sinister. It must be very sad for him never to have had an opponent he could really treat as honorable. Mr. Voorhis was linked to the National Citizens PAC, which in turn was linked to the CIO-PAC, which in turn was linked to outer darkness. Voorhis was not endorsed by the CIO, and was surely anti-Communist, but the whole linkage was handily foreshortened to "A vote for NIXON is a vote against the PAC (and) its Communist principles."

Against Mrs. Douglas, in addition to allowing himself to wonder out loud about the state of her health, Mr. NIXON worked out and used as a major theme of his campaign a linkage with Congressman Vito Marcantonio—he had learned, apparently, that it can be more powerful to use a particular individual. The way this one was done was to list the votes on which Mrs. Douglas and Marcantonio had voted on the same side, to parade the total number, hence to equate their political activity, and to ask "Would California send Vito Marcantonio to the United States Senate?"

In 1952, just after the Democratic convention, other Republicans were a bit taken back by the candidate the Democrats had nominated. But Mr. NIXON, with a brisk professional competence, went right to work to find the linkage for Mr. Stevenson. At first, with the "captive candidate" theme he made the main link to Mr. Truman, with side links just in case: "He's Jack Kroll's candidate; he's Jake Avery's candidate; and—this is his greatest handicap—he's Harry Truman's candidate." Later on in the campaign, however, Mr. NIXON was to work out a much more useful linkage for Mr. Stevenson, one that he had got plenty of mileage out of before, and one he used for all it was worth: Alger Hiss.

An interesting little subordinate motif in his attack on the Democratic candidate was the "mouse" theme. Many of Mr. NIXON's edifying metaphors come from the animal kingdom: Communists are rats, MORSE is a horse, President Truman is braying about the country. In Binghamton, N. Y., he said Mr. Stevenson was a "waltzing mouse." In a speech in Joplin, Mo., he listed 10 reasons why Mr. Stevenson was "unfit" to be President ("His soft attitude toward the Communist conspiracy at home as proven by his defense of Alger Hiss * * * His cheap opportunism, as demonstrated by his willingness to help Harry Truman scrawl nasty words about Dwight Eisenhower on any convenient back fence * * *"), and included among them this one: "his mouselike dependence on Harry Truman." In a speech in East St. Louis he gave the "black record" of Stevenson in Illinois, contrasted him with Eisenhower, and ended with these stirring words: "The choice that must be made is whether we want to select as President of the United States a man or a mouse." As one of the newsmen who covered his trip reported, laconically, Mr. NIXON does not speak over the head of his audience.

Mr. NIXON's attacks have an intensely personal quality; other political figures call each other names, but usually just in the line of political duty, without overtones of real derogation of the other's character as a private citizen. Mr. NIXON's remarks, though, suggest that there is far more wrong with their target than just that he holds the wrong political position. For example, he has dwelt on the theme that Mr. Stevenson is "unfit" for the Presidency. In a speech wholly devoted to that subject, one reason was that his subject had a "character weakness that could prove fatal at this moment of history."

On the eve of the elections of 1954, Mr. NIXON issued a statement responding to a Stevenson speech in which he said: "Mr. Stevenson proved again that 34 million Democrats, Republicans, and independents were right when they found him unfit to be President in 1952." That is an interesting interpretation of what voters were doing when they voted for the Republican candidates, a little insulting to all concerned. One would have thought that some of these 34 million decided that, as between two "fit" candidates, they preferred Mr. Eisenhower.

SOME STAGE SETTINGS

It is not just opposing candidates, but the whole of the opposing party, that, in Mr. NIXON's campaigning, is connected with a sinister set of images. (Mr. NIXON said he possesses a "secret memorandum" to California Communist Party leaders, directing them to "fight out the issues within the ranks of the Democratic Party.") A major and continuing effort in Mr. NIXON's public presentations has been to connect the Democratic Party with war, subversion, and darkness. As a man trained to the platform, he heads straight for those issues on which the deepest emotions can be aroused: the blood of "our boys" in Korea, and Communist spies in our Government on the one side; peace, morality, innocence, and Eisenhower on the other—and in all the starkest terms. Part of this is done explicitly. But perhaps the more important part is done implicitly.

It is the essence of Mr. NIXON's method to say something without saying it. This can be done by a drumfire of adjectives and associations resolutely and incessantly connecting one's opponents with all that is bad and one's own side with all that is good. It is like the advertising device of making hidden associations by repeatedly showing one's product in pleasant surroundings—walls papered, teeth bright, people happy—and the situation without the product dismal in every way. It is crucial that these associations be repeated and repeated, drumming them into the hearer's subconscious. In Mr. NIXON's lexicon, for example, Americans for Democratic Action—an organization about which it may be assumed that 90 percent of Mr. NIXON's audience really know nothing at all—is always a "clique;" the way it "ruled" the Democratic convention in 1952 was always "ruthlessly." Here is a passage from Mr. NIXON that shows how it builds: "Stev-

enson's is a slave-labor program hammered together by a union clique that wants to continue holding workingmen captive to their selfish whim." In one short sentence Stevenson is associated with "slave labor," "hammered together," a "clique" (any organization on the other side from Mr. NIXON is a "clique"), "captive," and not just ordinary whims but "selfish" whims.

Here is another that throws in a little of the advertising man's appeal to the testimony of unnamed experts: "Let me speak tonight of Adlai the appeaser, the man whose slavish devotion (not just his ordinary devotion) to the dubious foreign policy of Truman and Acheson could bring on world war III. This is not idle scare talk. Seasoned experts, men who know, firmly believe the Truman administration is writing the ticket for another global war—which could well destroy the world as we know it." In addition to endangering the world as we know it, Mr. Stevenson and the Democrats are likened to those who appeased Hitler: "What we are seeing now is a tragic return to the gray days of 1938–39, when another dictator was being appeased by another set of confused little men. Remember Hitler? The appeasers thought they could 'contain' him by giving him Czechoslovakia. * * * It brought the bloodiest war in the history of mankind."

Mr. NIXON said all this in a speech in Evansville, Ind., in which he gave his warm endorsement to Senator JENNER. He explained about Adlai Stevenson holding his doctor of philosophy degree from Dean Acheson's college, and gave a list of Democratic foreign-policy failures, well covered with adjectives. "Saddled with such a heritage of complete failure, even Superman himself would fail. Few would call Adlai Stevenson a superman." Not content with that, Mr. NIXON added that the Democrats' choice was a second-rate presidential candidate.

TRICKS WITH WORDS

The finesse in Mr. NIXON's work is sometimes lost on unappreciative souls like Harry Truman, who persists in thinking that he was called a traitor, when, of course, Mr. NIXON really didn't say just that; sometimes it is lost upon a too unimaginative public and press, also, and someone has to follow after Mr. NIXON to explain his work:

In Oil City, Pa., in 1952, Mr. NIXON said that Mr. Eisenhower would have only one test: "Is it good for America?" "Compare that," he said, "with Harry Truman, Harry Vaughan, RFC Dawson, O'Dwyer, and all the rest of these crooks and these incompetents." Reporters asked his press secretary, James Bassett, whether Mr. NIXON really meant to call the President of the United States a crook. Mr. Bassett reported back that Mr. NIXON meant that in the administration around Mr. Truman there were crooks and incompetents, and that Mr. Truman was one of the incompetents.

In 1954, in Van Nuys, Calif., Mr. NIXON told about a "dangerous well-oiled scheme" with "plans for * * * socialized medicine, socialized housing, socialized agriculture, socialized water and power, and * * * atomic energy." "When the Eisenhower administration came to Washington on January 20, 1953," he said, "we found in the files a blueprint for socializing America." His press officer said later that he was not referring to any specific documents in using the term "blueprint" but was just using figurative language to describe the philosophy and proposals of President Truman.

In 1954, Mr. NIXON said, in Minneapolis, Omaha, and many other cities, that "the Eisenhower administration has kicked out the Communists and fellow travelers and security risks not by the hundreds but by the thousands." A press report said he gave this sentence very carefully. When Stephen Mitchell said that NIXON lied in claiming that Communists had been kicked out by the thousands, since only a handful of those who had been kicked out might conceivably be labeled as "subversive." NIXON's aids pointed to the words "security risks" which, including anyone against whom there was derogatory information of almost any kind, accounted for the thousands.

In February this year, the Vice President in a Lincoln Day speech spoke of Republican accomplishments on civil rights of the decision of the Supreme Court under a "Great Republican Chief Justice, Earl Warren." To the immediate indignation that he would make a partisan claim for a Supreme Court decision, his defender David Lawrence solemnly answered that there was an unquoted comma between the words "Republican" and "Chief," which separated the party designation from the office.

The niceties of punctuation and phraseology become very important when one is dealing in blueprints that turn out to be only figurative, crooks that turn out to be just incompetents, Communists that turn out to be just someone who went on a bat, and party accomplishments that just happen to have, incidentally put in their midst, a Supreme Court decision.

When a man has built his career this way, it is not surprising that many people do not relish the thought of his becoming President.

SOME QUOTATIONS FROM NIXON'S 1954 CAMPAIGN

DULUTH, September 22.—If the Democrats were put in control of the Congress, NIXON said, they would see to it that the Eisenhower program was "stopped at midmark—stopped cold, flat, and with malice aforethought." (Des Moines Register.)

September 29, Averill Park, N. Y.: "Ike," said NIXON, "found fair and effective means to smash the Communist conspiracy at home, to rout out the corruption that was gnawing like a cancer at the structure of our Federal Government and to halt the dangerous leftward swing toward socialism." (New York Daily News.)

October 11, Richmond, Calif.: "The previous administration's lack of understanding of the [Communist] danger and its failure to deal with it firmly abroad and effectively at home has led to our major difficulties today. The previous administration unfortunately adopted policies which were soft, vacillating, and inconsistent in dealing with the Communist threat.

"Abroad, this type of policy contributed to the loss of 600 million people to the Communists in 7 years. It contributed to the loss of China and if China had not gone Communist there would have been no war in Korea.

"At home we saw the results of the previous administration's blindness on this issue in the flow of secret State Department documents to the Communists through the Hiss and Bentley espionage rings, and in turning over of our atomic secrets to the Russians in such volume that they were able to develop the atomic bomb * * * years before they would have without the assistance of their Communist agents in the United States." (Contra Costa (Calif.) Gazette.)

October 18, Washington: "The people realize that the alternative [to a Republican 84th Congress] is a Congress unfriendly to President Eisenhower's administration, under the thumb of the ADA leftwing, which captured the Democratic Party at Chicago in 1952, and which is masterminding the current campaign. The people know from bitter experience that this clique is notoriously soft on the Communist threat at home and is blatantly advocating socialization of American institutions." (Baltimore Sun.)

October 24, Las Vegas: Vice President RICHARD M. NIXON says that if a Congress of Adlai Stevenson's choosing is elected, "the security risks which have been fired by the Eisenhower administration will all be hired back." He said the 1952 Democratic presidential candidate "has not changed since he testified for Alger Hiss." (UP dispatch.)

October 27, Los Angeles: "There is nothing the Communists would like better than a return to the Acheson policy of weakness, inconsistency, and compromise" or a return to "the Truman loyalty program under which Communist agents were cleared and hired."

November 1, Denver: "96 percent of the 6,925 Communists, fellow travelers, sex perverts, people with criminal records, dope addicts, drunks, and other security risks removed under the Eisenhower security program were hired by the Truman administration. What are they trying to cover? The terrible ignorance and blindness of the administration which shielded Harry Dexter White, which tried to cover up the treachery of Alger Hiss, and which in case after case refused to heed the warnings of the FBI and promoted rather than fired those with Communist records." (New York Times.)

Yes and No

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. METCALF. Mr. Speaker, this administration has a double standard on river basin development.

When he signed, as he should have, the bill providing for development of the upper Colorado River Basin, President Eisenhower said it represented "something I believe in" because it treated "river valleys as a whole thing."

Basinwide development of the upper Colorado, then, has Presidential approval. Basinwide development elsewhere, however, does not. One example is the Missouri Basin. Others include the Columbia and the Tennessee, as the St. Louis Post-Dispatch pointed out in the following editorial from the issue of April 16, 1956:

YES AND NO

President Eisenhower spoke some words of excellent wisdom in signing the Upper Colorado River Development Act. He said it represented "something I believe in" because it treated "river valleys as a whole thing."

The puzzle is that Mr. Eisenhower, while enunciating this fine principle for the Colorado, not not apply it elsewhere.

One of the President's appointees, General Vogel, chairman of the TVA board, is busily engaged in an effort to weaken the first application of the unified-development principle to an American river valley.

Another of President Eisenhower's appointees, Secretary McKay, who has just resigned to run for the Senate from Oregon, has been throwing the unified-development principle to the wolves in the Columbia River valley.

How can these contradictions between the Colorado, Tennessee and Columbia valleys—between words and actions—be explained? Thomas L. Stokes discusses this apparent enigma in an illuminating column on the opposite page.

The $331 million Federal project at Hells Canyon on the Snake River, a tributary of the Columbia at the Idaho-Oregon line, was defaulted by Mr. McKay to the Idaho Power Co. 3 years ago. One of the principal reasons

he gave was that "the cost * * * is not small and bears examination in the light of present efforts to balance the national budget."

Yet the cost of the upper Colorado project is twice as great—$760 million—and President Eisenhower was advocating its adoption even before the announcement of a balanced budget.

Why this double standard for different areas?

The partial and piecemeal development on the Columbia which President Eisenhower has so far viewed with complacency is wasteful of natural resources. It wastes an electric-power potential estimated to be as large as the entire prime-power output of Bonneville Dam, on the Columbia. It wastes this power potential in a power-hungry region whose development will be retarded by anything less than full realization of its waterpower.

Private design, construction and operation of three small dams at this site of a key project of the overall Federal development program will break up the very unification which Mr. Eisenhower finds so essential on the upper Colorado.

This obstructionism has been the objective of bitterly anti-public-power private utilities toward unified river valley developments generally. It has been pursued persistently in the Central Valley of California. If the Federal Government gives in to it elsewhere as at Hells Canyon, TVA will become the last unified development in this country as well as having been the first.

Nobody actually opposes unified development, as such, any longer; it makes too much sense. When are we going to start practicing what we preach in the Columbia and other river valleys?

I believe all river valleys should be developed "as a whole thing" no matter where they are.

The junior Senator from Oregon, Senator NEUBERGER, had the Thomas L. Stokes column, which prompted this editorial, inserted in the CONGRESSIONAL RECORD on page 5662 of the April 16 issue.

Admitting Satellites to U. N. Is Called Immoral Proposal

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting as a part of my remarks in the CONGRESSIONAL RECORD an article by David Lawrence which appeared in the New York Herald Tribune on November 29, 1955, as follows:

ADMITTING SATELLITES TO U. N. IS CALLED IMMORAL PROPOSAL

(By David Lawrence)

WASHINGTON, November 29.—Rarely in world history has there been such a glaring example of concessions to immorality by a supposedly moral organization as in the proposed acceptance of a package deal by the United Nations whereby governments plainly unable to carry out the obligations of the Charter are to be admitted as members.

For it now is proposed that the governments of Rumania, Bulgaria, Hungary, Albania, and Outer Mongolia, which are puppets under the control of the Soviet Union—itself a partner in the conspiracy of aggression against the free world—shall be accepted in defiance of the provisions of the Charter itself.

"PEACE-LOVING STATES"

These provisions state that membership is open "to all peace-loving states which accept the obligations contained in the present Charter, and which, in the judgment of the present organization, are able and willing to carry out these obligations."

What are the "obligations"? They are set forth in many articles of the Charter. One article says that the organization is based "on the sovereign equality of all its members." Another article says:

"All members shall give the United Nations every assistance in any action it takes in accordance with the provisions of the present Charter and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action."

PROVISION FOR EXPULSION

The charter is replete with statements of the obligation of members to maintain peace and participate in efforts to achieve peace, and then says:

"A member of the United Nations which has persistently violated the principles contained in the present charter may be expelled from the Organization by the General Assembly upon the recommendation of the Security Council."

The Government of the Soviet Russia has persistently violated these principles and openly boasted before the General Assembly in 1952 that it had aided North Korea with arms and munitions in the war which the United Nations itself waged against the aggressors. The Soviet Union, being a party to a dispute, could be held ineligible to vote in the Security Council and hence her own veto could not prevent expulsion.

The United Nations, moreover, in admitting the governments of the Communist-occupied countries would be compounding the crime against morality by allowing governments that have been deprived of their independence by Soviet Russia to come into the Organization on an equality with sovereign governments that are truly independent. None of the five satellite states is independent or capable of acting independently.

Expediency, which has always been the cancer that has ruined good statesmanship in both national and international affairs, is, however, being extolled nowadays by those who argue that the only way to bring into the U. N. the several non-Communist governments, such as those in Italy and Japan—13 of them in all—is to appease Moscow and make a deal whereby no objection will be made by the West to the admission of the Communist governments provided the Soviet doesn't veto the admission of the non-Communist states.

CALLED BLACKMAIL

This is nothing less than blackmail. Yet there are those who favor it, including officials of the American Government. If there ever was a time when moral principle required an objection to the admission of the additional Communist states, it is today. The cause of peace would be uplifted by rejecting the expediency which demands a deal and brushes idealism and morality aside. It would be far better to let the Soviets use the veto and keep some peace-loving nations out than to surrender on principle.

It would be far better, too, to uphold the basic provisions of the charter and consider the expulsion from the U. N. of the obstructive Communist states, including Soviet Russia. Then membership in the United Nations would be worth something. Then, also the many well intentioned American groups which laud the United Nations as an Organization representing a great advance toward achieving world peace would not have to hold their heads in shame as they teach the schoolchildren of America that the U. N. is based on international morality.

There Was No Defeat at the Alamo

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a brilliant and most appropriate speech delivered by the Hon. Paul J. Kilday at San Antonio, Tex., on April 16, 1956, in celebration of the great victory of the Texans at the Battle of San Jacinto. It is entitled "There Was No Defeat at the Alamo." I think every Member will benefit by reading this outstanding résumé of our struggle for constitutional rights and the preservation of liberty:

THERE WAS NO DEFEAT AT THE ALAMO

(Address by PAUL J. KILDAY, Member of Congress, at the pilgrimage to the Alamo, April 16, 1956)

We stand on hallowed ground. Ground hallowed by the life blood of 187 patriots. One hundred and twenty years, 1 month, and 10 days ago the last of that valiant band died within the walls of this chapel of the Mission San Antonio.

"Texians" they were called and Texians they were, but they came from many States and originally from many nations. To place the time in perspective, remember that this occurred but 61 years, almost to the month, after the minutemen drawn up on the village green at Lexington, Mass., had heard the British command: "Disburse ye rebels" and the countermanding order of their own commander: "Stand your ground. Don't fire unless fired upon. If they mean to have war, let it start here."

And then at Old North Bridge at Concord, Mass., and:

"By the rude bridge that arched the flood,
Their flag to Aprils' breeze unfurled.
Here the embattled farmers stood
And fired the shot heard 'round the world."

Like their fellow Americans of but sixty odd years before they loved liberty. They loved liberty to the extent that they would give up their own lives to establish and maintain it for others. Those earlier Americans began their resistance as loyal British subjects to maintain the rights and liberties enjoyed by all British subjects since the barons met on the Plains of Runnymeade in 1215 and wrung from the reluctant King John the Great Charter, Magna Carta, which established for the first time that rights existed in men above and beyond those granted by the sovereign king. That was the first idea of the concept so dear to Americans—constitutional government.

In the course of events the shots fired at Lexington and at Concord resulted in that meeting of the Continental Congress at Philadelphia which declared on July 4, 1776:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure there rights, governments are in-

stituted among men, deriving their just powers from the consent of the governed."

The issue being formed, the bitter and long drawn out American Revolution ensued. Many lives were lost, much suffering and privation were endured.

Through many defeats and the long winter at Valley Forge they persevered. Shortly before the battle of Trenton, Thomas Paine, the great pamphleteer of the Revolution, sat by the flickering camp fire and, using a drum head to write upon, wrote the inspiring words of the "American Crisis." Words so inspiring and typical of the times, that George Washington directed that his troops be paraded and the "American Crisis" read to them. It included:

"These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country; but he that stands it now, deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem too lightly: It is dearness only that gives every thing its value. Heaven knows how to put a proper price upon its goods; and it would be strange indeed if so celestial an article as freedom should not be highly rated."

Those words were true before the Battle of Trenton. Those words were true before the Battle of the Alamo. They were true before the massacre at Goliad. They were true before the Battle of San Jacinto; and they are true today.

Their efforts triumphed, victory was achieved. There followed what a great Englishman has called "the greatest document ever struck off, at a given time by the mind and purpose of man." Again from Philadelphia, this time in 1787, comes the pronouncement:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Peace survived only until 1812, when Americans again fought to maintain the Nation so newly established. In 1814, just 22 years before the battle of the Alamo, Americans saw their Capital sacked by the British invader, their Capitol Building, the official residence of the President, and other public buildings burned. But their Nation and their Constitution endured. They endured because Americans who had been willing to fight and to die to establish them were willing to fight and to die to maintain them.

The Texans had come here relying upon the protection guaranteed them by the Constitution of the United Mexican States proclaimed on October 4, 1824. It guaranteed to each of the Mexican States, of which Texas was one, that each State be divided as to the exercise of its powers into a legislative, executive, and judicial department; and that two or more of those powers could never be vested in the same persons. Most important, that legislative power be never confided to a single individual, but be entrusted to a Congress of each particular State. It guaranteed that executive and judicial power be exercised in accordance with the constitution of the respective States.

A free legislative system has always been, and still is, the one effective deterrent to dictatorship. Hitler and Mussolini as the first step to dictatorship assaulted and subjugated the legislative bodies of Germany and Italy. Communist Russia has never tolerated a free legislative system.

As Americans these Texans had come to the Mexican State of Texas believing that Mexico's Constitution was as sacred and inviolate as that of the United States.

In 1835 there arose in Mexico a dictator named Antonio Lopez de Santa Anna. True to the pattern of all dictators before and since, Santa Anna abolished the Constitution of the United Mexican States with its restrictions on the powers of government and seized all power for himself. As the self-proclaimed "Napoleon of the West," he proceded to establish his one-man rule. In violation of the Mexican Constitution, he abolished the separate State of Texas and combined it with the State of Coahuila.

Let us here and now remember that Santa Anna's oppression was against all of the people in all of the States of Mexico, not only the former citizens of the United States now Mexican citizens settled in Texas. Long devoted to constitutional government, these Americans fought against dictatorship, proclaimed a provisional government, declared in favor of a union with Constitutionalists of all of the Mexican States, and dedicated themselves to the restoration of the Mexican Federal Constitution.

No patriots ever fought for higher purpose than these Texans—the protection of constitutional rights—as dear to us here today as it was to them. Did these men, under siege in the Alamo, know the high purpose of their resolve to remain in the Alamo and die with their leaders, Travis, Bonham, Bowie, and Crockett? There can be no doubt. In the last message from the Alamo, in which he pleaded for reenforcements and pledged never to surrender, Travis said, "Our flag still flies proudly from the walls." It was not our beloved Lone-Star Flag of Texas nor was it the Stars and Stripes of the United States. Rather, it was the red, white, and green flag of Mexico, their adopted country. However, the Mexican eagle had been removed from that proud banner, and substituted for it was the date 1824, which symbolized for these besieged all of their rights, their freedoms, their protections—1824, the sacred date of the constitution of the United Mexican States. To Santa Anna's observers at the Church of San Fernando, that date, 1824, on the Mexican flag was a galling reminder of his perfidy.

Their defense of basic rights, to the very last drop of the blood of each of the 187, has long thrilled the hearts of freedom-loving men wherever the story has been told, and the story has been told wherever men love liberty. Here is the Cradle of Texas Liberty. Not a combatant remained alive on March 6, 1836; only three noncombatants remained alive.

Today we begin a week of observance of the gallant deeds of our forebears. It is mete and proper that our first thoughts be of the Alamo and its immortal dead. We celebrate with pageantry and with pomp, not that the Alamo was conquered and its defenders slain, not that here some 3,000 annihilated 187. No; we celebrate the victory of the Battle of San Jacinto and its triumph of right over might—the vindication of constitutional government over dictatorship and oppression.

We here pay honor to the memory of the immortals who died here, but we celebrate the victory of San Jacinto some 6 weeks later. Herein lies the basic difference between our new world and the old world with its constant wars. Even today in Europe, nations observe and celebrate defeats of the 18th century. They are determined that each succeeding generation shall remember that the neighboring nation is its traditional enemy and shall remain so. Hence, the interminable wars between them.

How different in our own beloved America. Nowhere in our calendar of holidays and observances is there one dedicated to the remembrance of a defeat or a wrong. Those reverses belong to the dead past. Not forgetting those who were the victims of defeats, keeping them fresh in our memories, we celebrate our victories. The victor can be magnanimous. The vanquished can only be embittered.

In our country, unlike the old world, we have no traditional enemies. We have many traditional friends. The descendants of the British redcoats at Lexington and Concord are now the traditional friends of the descendants of the minutemen they faced. You and I, as the successors to the men of the Alamo, are the traditional friends of the descendants of the men who fought here and at San Jacinto under Santa Anna. It will ever be so.

An orator has said most eloquently: "Thermopylae had her messenger of defeat, but the Alamo had none." There may have been defeat at Thermopylae. But was there defeat at the Alamo? True every combatant was slain. Their bodies were placed on a funeral pyre interlaid with mesquite wood and the torch applied. They were reduced to ashes. But from their own ashes they rose in youthful freshness like the Phoenix. In that pristine beauty they formed the inspiration of the gallant army of Sam Houston in its decisive victory at the Battle of San Jacinto. They provided the battle cry, "Remember the Alamo." There followed the Republic of Texas, its admission to the United States as the 28th bright star of the galaxy of 48. Their devotion to constitutional rights, their defense thereof, rendered it possible for us to stand on this hallowed ground surrounded by the marvels of modern progress and stable government. The wild frontier conquered, the blessing of liberty maintained for you and for me and for generation after generation which shall follow us as did every generation which has followed them. No; there was no defeat at the Alamo.

State of Israel

SPEECH

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. KLEIN. Mr. Speaker, I am privileged today to add my sentiments to those of my distinguished colleagues in the House and Senate in congratulations to the State of Israel upon the occasion of the eighth anniversary of its establishment as a free, independent, and sovereign state.

This is a singularly happy occasion that shines out like a star of hope in a dark-clouded sky. In a world beset by confusion, aggressions, and subversions, in a world where the democratic ideal is so often under attack, it is an exhilarating satisfaction to call attention to one new nation that has from the beginning manifested its adherence to the ideas and ideals of a democratic society.

It is also gratifying to know that this new nation has exhibited a generosity of national spirit that has solved a problem of homelessness for hundreds of thousands of people to whom it opened its doors in welcome. The great humanitarian service that Israel has rendered in converting desperate people from the category of "refugees" to that of upright, free citizens will always shine as a bright page in the history of our times.

In saluting the State of Israel and extending to it our good wishes, I cannot

help but draw parallels with the early history of our own country, the United States of America. We, too, started as a new young Republic after the embroilment of war, with a devotion to independence and democracy and in need of understanding and friendship. It is heartening to know that the social and spiritual concepts that marked the birth of the United States have their parallels in the State of Israel.

I hope that the views expressed by Members of both Houses will give notice to the world at large of American friendship and support for the State of Israel. Those with aggressive designs on the security and independence of Israel might do well to read the record of the United States Congress and reconcile themselves to the bonds of friendship and mutual regard that link the people of the United States of America and the people of the State of Israel.

This occasion, however, must not be noted without regard for the threats of and actual aggression that hover like a calamitous cloud over the State of Israel. The cry of the victims reaches out to us and calls upon us to reassert vigorously our national policy to prevent aggression and to warn and, if need be, punish aggressors.

The security of the State of Israel is vital to the stability of the entire area of the Middle East and this in turn is basic to America's own defense and the defense of the free world. This calls for an administrative policy of action rather than of inaction; and of direct, friendly, and timely intervention rather than by a nod to our allies. It calls for prompt and sympathetic action as to the defense needs of the State of Israel, out of the same considerations that justify our provision for our own defense needs and for those of the Western World.

It calls for an ample and timely counterweight to the armaments furnished by the Communist and satellite governments.

Above all, it calls for a clear unambiguous assertion on the highest level that the United States is committed to the proposition that peace is indivisible and that peace and the safeguards of peace for the State of Israel are basic in our national policy.

The Income Tax—What To Do About It

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 24, 1956

Mr. COUDERT. Mr. Speaker, in 1950 I introduced a constitutional resolution to repeal the 16th amendment and to substitute for it a limited power to impose a Federal income tax in national emergencies and for debt reduction. This is now House Joint Resolution 16. This resolution was accompanied by a proposal for the establishment of a joint commission to consider reallocation of Government functions and tax sources as between Federal, State, and local units. At the time I had no illusion that so drastic a change in the Federal tax structure could be effected so long as the cold war emergency demanded such an enormous proportion of the national income. Nor had I any illusions about the disastrous impact of the present confiscatory income-tax law upon the traditional pattern of American life, political, economic, and social—a pattern which had been so largely responsible for the creation of a great nation upon a virgin continent.

I hoped then, and I hope more than ever now, that we may live to see a stable peace in the world and the cost of national defense reduced to the point where it may be possible to reduce drastically Federal taxes. Meanwhile no time should be lost in preparing for such day by the establishment of a Hoover-type joint commission as suggested by the Honorable Coleman Andrews, distinguished former Commissioner of Internal Revenue, to give consideration to the defects and inequities of Federal tax structure, including the income tax, and to recommend constructive changes. I intend to introduce such a resolution.

I am inserting excerpts from a provocative article by Mr. Andrews in the American Weekly of April 22, 1956, entitled "Let's Abolish the Income Tax." This graphically reveals the evils of the present income-tax laws and analyzes the harmful impact upon American life. It should be read and pondered by every citizen. It cannot fail to excite interest in effecting such changes as present exigencies permit and ultimately in the substantial limitation upon Federal taxation of income as and when world conditions permit. I congratulate Mr. Andrews and the American Weekly.

The excerpts follow:

LET'S GET RID OF THE INCOME TAX

(By T. Coleman Andrews, former Commissioner of Internal Revenue)

Recently a 14-year-old boy won $100,000 on a television quiz program. He winds up with about $25,000, after giving the Federal Government its two-thirds tax share ($67,000) and New York State its $8,000.

Did I say that the young man won? Pardon me, Mr. Tax Collector, as you say, "After me, you come first."

In order to take home a full $100,000, that young man would have had to win a grand prize of roughly $765,000. Taxes would have taken all the rest.

Striking as his case, is, it actually represents one of the lesser inequities of our present tax structure. Luck was on the boy's side; he was gambling, and after all he did win a sizable amount.

But what of people of large earning power and often erratic income—high 1 year, low the next—actors, authors, painters, and other artistic or professional people? More than luck and casual knowledge go into the winning of their jackpots. Usually their skill and talent is made to pay off only after long years of study and training. Yet the taxes they have to pay are equally brutal, equally confiscatory. Not being permitted to average their incomes over a period of years, except in special situations, they pay much higher effective rates than people with steady incomes.

The professional athlete fares even worse. Those who manage to break through to the top usually do well incomewise. But the way up is pitifully unrewarding, so much so that those who make the grade more often than not mount the throne of glory head over heels in debt. And their reign usually is short.

These are people with whom the tax collector forms a real heads-I-win-tails-you-lose partnership. For instance, let's see what the income tax does to a boxing champion:

If such a fellow winds up a year having to pay on $200,000—not a high amount for even a not-too-colorful champion—he obviously is 50 times better off incomewise than, let's say, a man paying on $4,000. But—I still gasp at just the thought of this—his tax is nearly 500 times more. And before he can get clear financially some challenger polishes him off and put him right back where he started. No averaging for him either. His are indeed the highest effective rates of all.

However, people of irregular earning power are by no means the only sufferers from our income tax laws. Almost everybody has now been gathered under the tent, and the percentage of those taxed leaves few immune to plucking who have enough feathers to notice.

IT'S LEGALIZED CONFISCATION

Up to $2,000 of taxable income the tax collector takes 20 percent. That's a mighty big bite for a person at that level of income. But from there he really moves in fast. From $4,000 to $6,000 it's 26 percent. Between $8,000 and $10,000 he takes a third. From $16,000 to $18,000 it's a half. From $32,000 to $38,000 it's two-thirds. From $50,000 to $60,000 it's three-fourths. And so on, until the top rates of 91 percent (more than nine-tenths) is reached at $200,000. This is called progression, a fancy term which, realistically defined, means legalized confiscation. But if the term used to define this brigandage is fancy, the results certainly are anything but fancy; they are murderous.

For instance, an executive, professional man or other person with an income of $40,000 pays 47 times more tax than the fellow with an income of $4,000. Ten times more income, 47 times more tax.

But even that isn't the whole of it. To the extent that income is derived from dividends, the Government already will have skimmed off more than half (52 percent) before you get yours. Every stockholder should realize by now that while he takes all the risk and responsibility he's just a junior partner when it comes to participating in the profits and must eat at the second table and take what is left.

While the top rate (91 percent) of our steeply graduated tax is not reached until taxable income amounts to $200,000, one-half of the graduation above the beginning rate of 20 percent takes place by the time the income level reaches one-tenth of $200,000, or $20,000. This is rank discrimination against the middle-income, white-collar class. Is it deliberate?

Well, I'll give you one fact and one observation that ought to answer that question: The fact is that the first order of business of every dictatorship is to destroy the middle class. The two simply cannot live together. The masses are not regarded as a problem because dictators figure that the masses can be made to believe anything. The well-to-do don't count because there never are enough of them to be a serious threat.

The observation is that I have never known an advocate of statism in any form who did not give me the impression of being either a dupe or, at heart, a dictator. In my book one is as dangerous as the other.

* * * * *

IT'S TOO COMPLICATED

One of the strongest and most serious counts in the indictment against the income tax is its complexity. It started out simple enough, but it is not an exaggeration to say that it has become as bewildering, confusing, and frustrating a fiscal problem as the people ever had to cope with.

* * * * *

WHO UNDERSTANDS IT?

Who, if anybody, does really understand this tax? How about the people who write it? The answer is not greatly different. By the time the tax committees and their staffs get through with the grist that is delivered to their mills many undecipherable changes have been wrought. The problem then presented is well illustrated by the struggle the experts in the Treasury Department have been having with the job of getting out regulations to cover the 1954 code.

There is official recognition of the fact that standing alone no revenue law is understandable. So the Treasury Department follows the enactment of each revenue law with an official interpretation of that law. The official interpretations are called regulations. Almost 20 months have elapsed since the Income Tax Code of 1954 became law—but the official interpretation of it isn't out yet.

* * * * *

IT COSTS THE GOVERNMENT TOO MUCH

Another count in the indictment against the income tax—and a very serious one—is the high cost of it. There are two categories of this cost: first, what the Government spends to administer the law; second, what the taxpayer pays to comply with it.

Notice that in identifying the first category of cost I did not speak of it as a cost that the Government pays. The Government doesn't pay any part of this cost; the taxpayers pay every cent of it—the cost of administration as well as the cost of compliance. The Government never pays anything; it spends and the taxpayers pay.

I am not suggesting that the Internal Revenue Service is wasteful or inefficient, because I know better. After 3 years of unrelenting war against redtape and unnecessary overhead, and of using the savings thus made to strengthen and expand enforcement and other operating activities, the Service is showing a degree of improvement of which its management and personnel have every right to be proud.

What I am suggesting is that the complexity of the income tax law necessitates the use of a lot more people in the Nation's revenue department than would be necessary under a simple and better understood revenue system and that, therefore, the cost of administration is a great deal more than it ought to be. We should have a revenue system under which no more than one-half the present revenue force would be required.

* * * * *

IT'S UNSTABLE

At least some of the Members of Congress must fear what many knowing outsiders firmly believe, namely, that if Congress ever allowed the Revenue Service to have enough money for all-out enforcement of the income tax the demand for repeal would become so great within a year that it would be irresistible.

As to the complaint about having to employ professional help there is no answer short of wiping the slate clean and starting fresh.

Another count in the indictment is that the income tax is unstable. Being based upon income, it's a low producer in slack times and a high producer in good times. Thus, theoretically, rates must be raised when people are least able to pay, and they must be lowered when everybody is most able to pay.

I am aware, of course that Congress' practice is to resort to the use of deficit financing in slack times in order to avoid increasing taxes. But this validates my citation of inherent instability. I also am aware of the tendency to hold expenditures at such a level that decreases are seldom effected in good times. I suggest that this only compounds that instability.

After 23 years of deficit financing everyone should be convinced by now that in addition to all the other indictments that may be laid against the income tax it just isn't up to the job that has to be done. And, to paraphrase Virginia's Senator BYRD, if the job can't be done in prosperous times like these—and, I might add, at the outrageously high rates presently in effect—when can it be done?

The manmade deficiencies of the income tax law are to a large extent the consequences of submission to the demands of pressure groups. For instance, tremendous accumulations of income-producing wealth have been removed from the jurisdiction of the income tax law by the exemptions granted to foundations and certain other nonprofit organizations.

Considering the fact that large accumulations of funds such as those segregated for the use of foundations usually compound themselves, it is clear that the effect of this removal of income from the reach of the tax collector is to cause the Government a loss of revenue that grows and grows with the passage of time.

Billions of dollars of potential income also are kept out of the reach of the tax collector by the Government's engagement in business activities that compete with private enterprise.

The Second Hoover Commission tells us that "more than 2,500 business facilities that provide goods and services are operated by the Defense Department alone," that the investment in these facilities exceeds $15 billion, and that the facilities range all the way from "shoe repair shops to clothing factories, from cement mixing plants to sawmills, from chain stores to tree and garden nurseries."

In all the foregoing ways (and in others as well—space does not permit complete citation) we have by legislative enactment deliberately kept taxable income from keeping pace with economic development and growth, thus precluding realization of the full potentialities of the income tax as a revenue producer and making it more and more unequal to its job. And, sin of all sins, we've made up the loss by taking it out of the hides of the people with the know-how that has so largely accounted for our success as a Nation.

Also, the income tax having proven to be an unstable source of revenue, Congress has availed itself of a variety of other taxes. Some, if not many, of these other taxes could be dispensed with if the primary tax were a stable one and could be permitted to produce fully and freely.

WHAT CAN WE DO ABOUT IT?

What then can be done about all this? I suggest that the time has come to take a new and sincerely critical look at our whole tax system. After all, some elements of the present system are as old as the Union itself. Even the income tax, which we have been relying upon as our primary source of income ever since shortly after it was adopted, isn't any chicken. It's 43 years old.

Now, clearly, age alone is not a sufficient reason to condemn any particular tax or any tax system. But, as I have shown, there's a lot wrong with the income tax besides its age. Moreover, it isn't just old; it is incurably infirm. If the present administration couldn't give it simplicity and effectiveness, I don't believe anybody can.

My proposal is simple. It is that Congress appoint a Hoover-Commission-type group to make a really critical analysis of the income tax in particular and of the tax system in general, and to study such reasonable proposals as may be made with regard to both. Such a study is long overdue. None has been made in 43 years.

There hasn't even been any search for something better in all that time. Incidentally, why hasn't such a search been conducted on a continuing basis? Research pays off handsomely for business as to matters far less important to it than the Government's tax system and its principal source of revenue are to it. It's time the Government got some research started in this important field.

Such a commission as I have in mind should be a nonpartisan one, and all the responsibility for it and its findings should be assumed by Congress. Moreover, it should not be put under the handicap of a deadline. It should have time to do a thorough job, and not be restricted in its inquiry.

No doubt most of my readers have asked by now, "Well, if we get rid of the income tax what would you put in its place?" That's a fair question, and I have some ideas. But that's not the immediate problem. Moreover, if I proposed any substitute tax or plan at this juncture the first step in my proposal would never be taken. The necessity for a commission to go into the whole problem of taxation thoroughly would be lost in an argument over whether my suggestions would be feasible. Those who have a vested interest in maintaining the status quo would see to that. There are many such people, and some of them have tremendous political power.

For the time being I will say only that I believe that a law or system can be contrived that would be simple enough for the average taxpayer to understand. Such a system might be relatively inexpensive for the Government to administer and the taxpayers to comply with and at the same time be a stable source of revenue. Such results have been worked out in at least two very important categories of business enterprise. I believe that the same can be worked out for business generally, and for individuals as well.

IT'S DESTROYING THE MIDDLE CLASS

There isn't any time to lose, ladies and gentlemen of Congress. Whether you believe it or not, everybody is being overtaxed and the middle class is being taxed out of existence and the Nation, thereby, is being robbed of its surest guaranty of continued sound economic development and growth and its staunchest bulwark against the ascendency of socialism. We who somehow have managed to hold on finally are beginning to see the shameful extent to which we have been made the special victims of rapacious tax enactments—and we don't like it.

* * * * *

Things are mighty serious, ladies and gentlemen. Largely because of the income tax, big business gets bigger and little business and "substantial folks" are beginning to disappear.

We are concerned about the future because we don't believe that we could stand another serious recession, what with the present "good times" founded as largely as they are on defense production, deficit financing and other generators of thin ice and phony prosperity. And with the tax collector taking the fruits of our labors in "progressive" ratio to our achievements. High rates of tax don't mean anything when there isn't anything to tax.

Time's a-wasting, and the enemies of the way of life that we cherish rejoice as we are obligingly led closer and closer to national suicide.

What are you going to do about it and when?

Also Against Sin

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an editorial, Also Against Sin, appearing in the Boston Post of April 19, 1956, and how true the editorial is in its expression of facts and logic.

The editorial follows:

ALSO AGAINST SIN

It would be a foolish man, indeed, who would quarrel with the eight points which President Eisenhower proposed should be embodied in the Republican platform to attract independents and irregular Democrats to the party in the 1956 presidential election.

These were in effect a hearty hurrah for the individual, for the spirit of the people, for prosperity, for a heart as well as a head in government, for courageous principles, for government that serves, to be strong and free and espouse freedom under God for all peoples. We assume that the GOP party leaders who conferred with the President will in their wisdom also write a plank against sin in the Republican platform in favor of home and mother, and call upon all to smite the iniquitous Democrats hip and thigh.

But one can scarcely miss the fact that this eight-point proposal is of a piece with all the glittering generalities, the spread-eagle clichés, the McGuffey First Reader maxims and adages which establish the President as one of the best intentioned of men. Good intentions have been demonstrated to be only one ingredient of leadership, either of a party or a nation.

Home and mother are treasures beyond price. But in these perilous times something more than sentimental attachment is required to keep a home going and provide for mother—and this is the area in which the President has a distinct poverty of ideas. There are questions of great urgency—the national security, foreign aid, the farm problem, foreign policy failures, and many another controversial matter upon which the noble-sounding clichés have nothing to say.

This is a dynamic Nation, not yet—it is earnestly hoped—suffering from the inertia that clings with fainthearted timidity to the status quo. An expanding economy doesn't have its way greased by clichés, analects, homilies, and aphorisms, but by courageous and imaginative thinking translated into certain action.

This does not mean the formula of the superliberals embracing all the half-baked propositions which emerge untested from the fertile but often frivolous minds of the love-'em-all political innovators. When the President is making a bald appeal to independent voters and to the hedge-hopping Democrats something more than treacle is expected. He is elevated so far above party as to be invisible.

The businessmen who gave him stout support want some better explanation for the tightening credit policies of the administration. The farmers want to know why loans have become so tight in a situation in which they have to go shopping around for loans to tide them over this year. People want to know why national security was given second place in the administration's plans.

It is not the statement of noble principles which are understood to be implicit in both major party platforms that interests the voters, but the implementation of these noble principles.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Barkley, Anderson, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Bible, Neuberger, Laird, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dill, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Cooley (chairman), Poage, Grant, Gathings, McMillan, Abernethy, Albert, Abbitt, Polk, Thompson of Texas, Jones of Missouri, Watts, Hagen, Johnson of Wisconsin, Anfuso, Bass of Tennessee, Mrs. Knutson, Messrs. Jennings, Matthews, Hope, August H. Andresen, Hill, Hoeven, Simpson of Illinois, Dague, Harvey, Lovre, Belcher, McIntire, Williams of New York, King of Pennsylvania, Harrison of Nebraska, Laird, Dixon, Mrs. Farrington, Messrs. Bartlett, and Fernós-Isern.

Committee on Appropriations

Messrs. Cannon (chairman), Mahon, Sheppard, Thomas, Kirwan, Norrell, Whitten, Andrews, Rooney, Gary, Fogarty, Sikes, Fernandez, Preston, Passman, Rabaut, Yates, Marshall, Riley, Sieminski, Evins, Lanham, Deane, Shelley, Boland, Magnuson, Natcher, Flood, Denton, Murray of Illinois, Taber, Wigglesworth, Jensen, H. Carl Andersen, Horan, Canfield, Fenton, Phillips, Scrivner, Coudert, Clevenger, Wilson of Indiana, Davis of Wisconsin, James, Ford, Miller of Maryland, Vursell, Hand, Ostertag, and Bow.

Committee on Armed Services

Appendix

The FCC and the Broadcast Industry's Growing Pains

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, April 25, 1956

Mr. BRICKER. Mr. President, the Chairman of the Federal Communications Commission, Mr. George C. McConnaughey, addressed the 34th annual convention of the National Association of Radio and Television Broadcasters in Chicago, Ill., on April 17, 1956. Mr. McConnaughey has made a forthright statement on the problems facing the Commission and the broadcast industry. It is heartening to hear a public official welcoming congressional probes. Mr. McConnaughey warns the industry that there is no room for complacency. He calls for a crash research development program on UHF by industry. He points out that the Commission's task may well turn out to be that of finding a practical means to keep UHF alive until technical developments can make it as good as or better than VHF. I am confident that the Commission will find a practical means to encourage the development of UHF in the very near future, and that American industry will respond to his call to improve UHF receivers, transmitters, and antennas on a crash basis.

Mr. President, I ask unanimous consent that Chairman McConnaughey's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FCC AND THE BROADCAST INDUSTRY'S GROWING PAINS

(An address by George C. McConnaughey, Chairman, Federal Communications Commission at the 34th Annual Convention of the National Association of Radio and Television Broadcasters, Conrad-Hilton Hotel, Chicago, Ill., April 17, 1956, luncheon)

Recently a public official in Washington was looking for a high school in Fairfax County, Va., where he was to address a parent-teacher association in connection with a drive for funds for the Community Chest. After driving in a vicious circle for several blocks, he stopped at the curb and asked a teen-ager where the particular high school was located. The young man who attended that school daily squared his shoulders, inflated his chest, and said resolutely, "That is a subject on which I am an expert."

When I addressed this group at your 33d annual convention in Washington last year, I had been appointed to the Commission for a bare 6 months and I pointed out to you that it would be presumptuous for me as a newcomer to attempt to lecture you concerning the operations of your business. I still feel that way. However, since then, it has been my good fortune to visit many European countries and to observe at first hand the status of the various systems of broadcasting by comparison to ours. Without in the least casting reflections upon other countries, I can unqualifiedly congratulate broadcasters and members of your organization for giving to the American public one of the finest radio and television broadcast services in the world. Like the young high-school boy in the story, I can speak with authority upon this subject.

Some of you may be whispering at this point, "I wish you could convince the Congress of this." It is true that the Federal Communications Commission is well on its way to obtaining the distinction of being the most investigated agency in the Government. The March 26, 1956, issue of Broadcasting-Telecasting contained the following banner headline: "Investigations of Radio-TV Begin Bustin' Out All Over."

Some of you may view such headlines with alarm. From the outset, let me state that I welcome congressional probes. Most of them are born of a sincere desire on the part of Members of Congress to keep abreast of developments in the industry and the activities of the FCC. This is as it should be. It is true some investigations may be spawned by suspicions of individual Members of Congress, suspicions based upon misinformation or half-truths furnished to them by disgruntled litigants before the Commission. Even in these cases, after the initial smoke of charges and counter charges has been cleared from the atmosphere, the net result is usually a better understanding on the part of the Congress of the real problems facing the Commission and the industry at this stage of the development of the technology. One of the prominent members of one of these committees before whom we have appeared several times recently said to me, "We now know you Commissioners truly have difficult problems."

And let us make no mistake about that, we are facing grave problems that cry out for a solution. There is no room for complacency on the Commission's part or on yours. The Commission's role at this point is largely that of a doctor. We have initially diagnosed the ailments as consisting largely of growing pains.

Let me say at the outset that my remarks today represent my own thinking and do not necessarily reflect the views of all of my colleagues.

Commercial television is only in the 15th year of its development. It is not abnormal that it should have growing pains. However, we must guard against letting these pains become symptomatic ailments with the danger of their developing into cancerous growths that will hinder the full development of a healthy, highly competitive industry with the rich rewards to the public and to private enterprise that competition in a free economy normally brings. Stop and think what other industry offers such rich rewards to the public for so little.

What are these growing pains? The questions currently raised by Members of Congress simply serve to highlight these pains which have been known to you and to the Commission for quite some time. After all, the Congress is normally a reliable sounding board of the opinion of large segments of the people or of dissatisfied segments of industry. In the pending investigations in Congress, I think it is quite obvious that dissatisfaction among certain segments of the industry, rather than among the people in general, is being reflected.

I need not review for the benefit of this audience the phenomenal growth of television since July 1952. It spells out a record of achievement which speaks volumes as a tribute to a dynamic, alert group of men and women, many of whom are here today.

While I state my conviction that current congresional inquiries center around the problems of disgruntled segments of the broadcast industry, that is not to say that the American public does not have as large a stake in the proper solution of these problems as if it had originated the complaints. We have a right to be concerned that about 10 percent of the population does not get television at all and that only a little over 100 communities have more than 1 local television station in operation. Despite the evident growth of television, the development of a nationwide competitive service has not been realized to the extent contemplated by the Communications Act of 1934, as amended, and the sixth report and order of the Commission.

Broadcasters and members of your association deserve great credit for the remarkable growth of radio and television to date, but until something more can be done in television to reach every home in America and to give every family a choice of programs, we will hear complaints on Capitol Hill and we will be called before committees to explain why the objectives of the act have not been fulfilled. I am certain that the Commission can expect the full cooperation of your members in accelerating the day when these aims can be regarded as accomplished.

There is some comfort to be derived from the fact that many of the criticisms now being leveled at television—dominance by the networks, inability to survive without a network affiliation, inability of stations in smaller communities to obtain national advertising, etc.—15 or 20 years ago were being hurled at the Commission and the radio industry by Members of Congress. In less than 2 decades, radio has made its adjustments, I am pleased to note, without direction or assistance from the regulatory body or any other governmental agency. Instead, as any dynamic industry in a competitive economy, it has created new markets for itself. Radio is intensely tilling the local markets, down to towns of 5,000 population. In programing, it is catering more than ever to a broad variety of distinct interests in the community, with good music stations, sport stations, foreign language stations, educational stations, and background music stations. A large number of them have found it more remunerative to operate without network programs. Many of them prosper on local advertising. Many of them find no difficulty in obtaining national advertising. On the networking side, which has been hardest hit by television competition, the networks are currently engaged in an intensive effort to rebuild advertiser and public support by innovating new program materials. Still, just a few years ago, radio's demise was being freely

rumored. In dollar volume, radio has held, roughly, to its 1949 level. In number of outlets, it has grown from 2,100 to 2,800 stations in this period. And the demand for new stations shows a steady, upward trend. In fact, we have more requests for new radio facilities than we have for television.

It would be grand to have a "Futuravision," an instrument which would not simply reproduce programs originated in an emitting studio, but one which would reflect future events, in order to look forward 15 or 20 years and see the shape of things to come. Perhaps we would find color television in every home, with a choice of myriads of programs, such as is possible now in radio, with one or more stations in every community of 5,000 or more inhabitants. And, perhaps, we would find every set an all-channel set, with the televiewer blissfully ignorant of the difference between VHF and UHF.

Even if such does come to pass, I predict that there will still be congressional investigations. Even though radio has reached the age of maturity, we hear congressional criticisms leveled at alleged bait and switch advertising, lotteries, overloud commercials presented in a hysterical manner, as many as five spot commercials end to end, and too frequent repeating of inferior films. I wish to commend your association for its concern with these matters and the prompt action which you have taken recently to find out to what extent these accusations are justified.

The fact that censorship legislation is presently under consideration should be sufficient notice to affected broadcasters that affirmative action on their part to correct this abuse is long past due. I am confident that a word to the wise will be sufficient. You do not want your life regulated by a Government censor and the Commission does not want to be a censor. I shall repeat here what I told broadcasters in my home State last month:

"Let me suggest that instead of so much emphasis being placed upon profit, set sales, percentage of advertising and commercial progress, that you stress your public service accomplishments that have not received adequate publicity and build a record of public service that cannot be successfully challenged. You cannot only afford such a program but you cannot afford not to expedite it on a crash basis."

The most serious growing pain confronting the Commission today is the problem of the survival of UHF. Committees of Congress have expressed fear that UHF will not succeed. I know I can speak for every member of the Commission when I say that we, too, would prefer to make 82 channels available to the public rather than only 12. The high incidence of business failure among UHF licensees who went on the air and the failure of many licensees to go on the air has distressed the Commission as much as or perhaps more than it has Members of Congress. After all, it was the Commission's decision in 1952 to make these channel available to the public and we, perhaps more than anyone else except the licensees themselves, should want them to succeed. This is undoubtedly the most difficult problem confronting the Commission at this time.

There is no need for me to review here the reasons for the economic and technical problems besetting UHF. You know those perhaps better than I do. However, some of you may have gotten the impression that our recent action, in denying the petitions to defer or stay the authorization of new VHF stations in a number of communities, meant that the Commision has thrown UHF to the dogs. Nothing could be further from the truth.

The suggestions in the pending general proceeding or review of television allocations encompass a considerable variety of approaches. What impressed me from the start in this matter is that the interested opponents of any given plan are far more numerous than the proponents. Therefore, no matter what the Commission does, it will be the subject of critcism and further hearings.

As far as the Commission is concerned, it will arrive at a conclusion as promptly as possible upon whether, and if so, in what manner, the public interest may be served by revising the structure of the present allocations plan. But the Commission will not be stampeded into hasty, ill-advised action in a frantic attempt to ward off the barbs of critics with a tendency to desperation.

Some of these critics say: Why haven't you done something about this situation 2 years ago? Why didn't you just shift everything over to UHF? This remedy reminds me of the one resorted to by the young doctor who had just finished his internship in a large metropolitan hospital where he had specialized in cases of convulsions in children. He had just hung up his shingle and hurried to his first call. He found the 2-year-old patient with a high fever, the cause of which he could not diagnose. He instructed the mother to prepare a tub of hot water and a tub of cold water so that he could immerse the child in one and then the other. Panic-stricken, the mother said, "But, doctor, if you do that, you will throw the baby into a fit of convulsions." "That's just what I want to do," replied the doctor, "because I am a real expert on curing convulsions." That is not the kind of a doctor that the Commission proposes to be in this matter. The transfer of all commercial broadcasting to the UHF band would be a simple cure. The Commission has acquired a lot of experience in dealing with only one band. However, this could easily turn out to be another case where the operation was 100-percent successful but the patient died.

Another criticism frequently leveled at the Commission is the following: "It would seem to me that you could solve this problem of intermixture in a very short time. Just make up your mind what you are going to do and do it. Why don't you follow the advice given in such and such a staff report?" This reminds me of another young doctor who was advising a woman patient on how to cure a nosebleed. He suggested that she hang a cold key on a chain around her neck. The patient remarked, "That is odd. My maid advised me to hang a warm key." The doctor hastily replied, "Oh, no. My own maid insists it must be a cold key." The Commission will not follow this medical approach. While we welcome the assistance from the industry and suggestions from committees of Congress, the Commission must diagnose these growing pains itself and evaluate all the factors involved. We are not building a house of cards. We are molding the pattern for the future growth of television in the United States.

I am certain that every Commissioner wants UHF to thrive and prosper. We shall resort to any reasonable and practical means to achieve this end, but we must not deprive the rural areas or other segments of the population of existing service in order to accomplish that objective, nor shall we make second-class citizens of the population in large areas of the country in order to provide other sections with a multiplicity of program sources and outlets. Should we do that, we would really hear from the grassroots and we would justly incur the wrath of Members of Congress.

It is not enough to make people accept UHF and tell them that, at some time in the indeterminable future, it will be pretty good or, perhaps, on a par with VHF. Some of the witnesses before the Senate Commerce Committee would have us believe that UHF is as good as VHF right now. Others insist that it is a vastly inferior medium and that all UHF grantees should be given a VHF allocation. I incline to believe that the scientific facts will show that the truth lies somewhere between these two extremes. If this is so, the Commission's task may well turn out to be that of finding a practical means to keep UHF alive while the incomparable genius of American inventors and scientists can determine whether the medium is worth saving for the benefit of the American public within the foreseeable future.

It is in connection with this phase of the problem that I would like to present to you, the experts, for close scrutiny and your friendly advice, the following ideas.

If the facts adduced in our general allocations proceeding indicate that UHF has not yet reached that state of development that will allow it to supply all our needs for additional channels, it will still be true that almost no informed technician will predict that it will never be able to accomplish the desired result. Many engineers have stated that after many years of development UHF may prove to be the answer. Of course, that is no remedy for our present growing pains.

The Commission is unable to obtain a sufficient number of VHF channels. We have for the first time explored this phase. You are acquainted with the results of this examination. Therefore, I urge the members of your association to give serious consideration to the following suggestions as a long-range plan, regardless of what the Commission may do in the present allocation study.

Why would it not be a good idea to begin a crash research development program on UHF immediately? Industry could set up quickly a private nonprofit educational research development corporation which could qualify to receive tax-free education grants. All segments of the television industry, I feel sure, would want to contribute to this enterprise. There are also other foundations and educational institutions which have funds and facilities to devote to this cause. I believe they would contribute to the solution of the UHF problem in the public interest. I am sure that such a private nonprofit organization would receive the full cooperation of the Commission.

A concentrated research program in which all knowledge is pooled has never been directed to the specific subject of UHF only. A twofold approach should be made, concentrating on both the UHF receiver and the UHF transmitter. A genuine UHF receiver could perhaps be developed with an improved detector for increased sensitivity and range, and a more practical tuning device to be used with a newly designed antenna.

Once this development program has been completed, the Commission and the industry will have a sound technical basis for making a long-term decision on the merits of UHF.

America has witnessed the almost miraculous results obtained by such research projects during the war in a relatively short time. When we consider the many problems confronting the development of the atomic bomb as compared with the few problems confronting the improvement of UHF and consider that the atomic bomb was developed in less than 2 years, it is certainly reasonable to expect that UHF could be improved in a much shorter time. At least, in a reasonably short time, we would know the true potentialities of UHF. Let us make no mistake about that. We do not know today.

Industry has a very large stake in the utilization of adequate additional channels. A prolonged scarcity of TV outlets will cause renewed and increasingly grave congressional demands for regulation of the industry. You

all know how much I abhor avoidable industry regulation.

It is obvious that the future expansion of television broadcasting toward an economically stable nationwide competitive business must depend, in large degree, upon the business and technical ingenuity of free enterprise to improve the practical usefulness of the only spectrum space which can be allocated to television. The Commission is aware of many of the facets of this developmental program and is prepared to cooperate with private industry in any practical way to achieve this ultimate objective as may be consistent with the public interest and with the interest of the television industry as a whole.

The Commission realizes that the present allocation of spectrum space to television presents complex technical problems with respect to the design, manufacturing, and marketing of a compatible television receiver. I believe the Commission will make such readjustments to its policy and television channel assignment plan as may be deemed necessary to minimize the complexity of these television receiver problems.

It appears to me that the present channel assignment plan and the policies relating thereto are not altogether compatible with the basic economics of the business of a national competitive television broadcast structure. The Commission should not adopt a television channel assignment policy which is tailored to a preconceived plan of television economics or which regiments the business economics of the television broadcast industry. However, the Commission, in my judgment, should alter its present policies to permit the development and expansion of television in accord with natural economic laws insofar as this is possible within the terms of the Communications Act requiring equitable distribution of television facilities to States and communities.

The Commission has continued its diligent efforts to reduce the large backlog of mutually exclusive applications for television channels which have required numerous lengthy hearings. Only a few weeks ago it was my pleasure to be able to inform the Senate Commerce Committee that there were only 10 cases awaiting the final decision of the Commission. Eleven were ready for oral argument. Only four were awaiting the examiner's initial decision. Hearings were in progress on the 11 other cases now remaining for disposition. I am proud of that record and particularly am I proud of the really devoted hard-working staff of the Federal Communications Commission. They are doing a magnificient job.

That reminds me of one of President Eisenhower's boyhood stories. The President likes to reminisce about his boyhood days on a Kansas farm. One day he had this episode to tell:

"An old farmer had a cow that we wanted to buy. We went over to visit him and asked about the cow's pedigree. The old farmer didn't know what pedigree meant, so we asked him about the cow's butterfat production. He told us that he hadn't any idea what it was. Finally, we asked him if he knew how many pounds of milk the cow produced each year.

"The farmer shook his head and said, 'I don't know. But she's an honest hard-working old cow and she'll give you all the milk she has!' "

In the solution of the problems I have discussed, the Commission, like the farmer's cow, will give you everything we have.

As I stated earlier, dissatisfaction stems basically from certain segments of the industry—not the public. That is why I am a confirmed optimist about the future of the broadcasting business in America. With your sincere cooperation we will succeed in finding a remedy to the growing pains.

What Is Our Mission in the World Today?

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

WHAT IS OUR MISSION IN THE WORLD TODAY?

(Address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp. annual meeting, Bethlehem Chamber of Commerce, Bethlehem, Pa., April 17, 1956)

I am one of a number of Americans who has been active in politics and who believes that the United States has a world mission. She did not seek it. Frequently she has done her best to avoid picking up the hugh check implied in having a mission; but history has handed it to her. When history makes a date for a country the country must keep it with strength and honor and dignity, or find itself in serious trouble. You will remember the prophet Jonah in the Bible. The Lord told him to go to Nineveh and preach there. Jonah did not want to go and started for somewhere else, whereupon the combination of the storm and the wave took him to Nineveh anyhow, against his will.

Our country wishes to mind its own business and develop its own affairs. It was so successful in this that it found itself one of the two or three strongest nations in the world, looked to by many peoples as a mighty force which must try to bring peace and law to a torn and unhappy world. This, I think, the United States has tried to do to the best of its ability.

Now, the mission is in a dangerous phase. Three or four years ago, the Soviet Union talked boldly of seizing all Europe—but the United States was there and the Soviet Union settled for the less violent policy of coexistence. Today the young Chinese Communist revolution talks belligerently and rattles a borrowed Russian sword. The United States has no earthly interest in possessing or governing Formosa, still less in trying to run China. It has every earthly interest in not letting a new imperialism run riot over the whole Pacific Ocean and is endeavoring to make that clear. There will be other anxious moments as time goes on. My point now is that the American mission is primarily moral rather than military. We may have to defend ourselves by force, but our ultimate victory, of which I am certain, will come by conversion rather than conquest.

America, which was cradled in the principles of freedom and human dignity, cannot retire within its own orbit and do nothing. Such a position represents spiritual sterility and mental cowardice. I do not know how long it will take us to overcome the dark forces of totalitarianism but since we are obliged in the name of decency and good conscience to accept the challenge we shall not fail—just as we have never failed when called on to defend a righteous cause. I say defend because we are a people who are opposed to attacking others and interfering with the internal affairs of other nations. But we will defend, to the last man, our right to maintain our way of life in our Republic.

The answer to this lies in the history of our country and in the traditions of our people, who acknowledge freedom to differ without impairing national loyalty.

The United States, a republic dedicated to freedom, came into existence in 1776. It had no great military power and little foreign influence. Nevertheless the example of America was followed throughout most of the world so that a century later much of the earth's surface was ruled by democratic governments. Clearly, America had a mission then and performed it. The mission was to show the world that free government was workable. Our pre-Civil War forefathers were convinced that the American experiment in freedom was divinely inspired and was practical and that America was to be a beacon light of liberty, pointing the way for others to follow. Amazingly, they did follow.

To the mid-twentieth-century politician the speeches and writings of our forefathers seem a little self-centered. In the light of today they seem to lack appreciation of the fact that other peoples, too, have contributed to the art and practice of free government and made their own contribution to democratic living. In those days, America was nationalistic and talked that way. Then, of course, the United States could afford that luxury of thought. Sailing ships were slow, North America was empty, and the rest of the world was far away.

This attitude does not altogether fit a modern world in which you can have breakfast in Paris and dinner the same night in New York, or in which an attack on an Asiatic peninsula like Korea could set strategists calculating whether Alaska, Seattle, or San Francisco may not be threatened. And yet there is a good deal of nationalist sentiment still active in the United States.

It can be useful. It can help us to understand new and young nations just coming into independence and to appreciate the intense nationalist sentiments of those countries. Some of them have come into existence as a revolt against imperialism, just as we did. Thoughtful Americans will appreciate that nationalism of these new countries springs from the same cause that made us nationalists a hundred years ago.

Our duty toward the world, I think, is still to demonstrate that free government is workable and is more desirable than any other. To fulfill it, however, we must stand by certain principles.

First and foremost, we must continue to make democracy work at home. That is the cornerstone of any American sense of mission today. This means that we have to bring our practices and our ideals into line. Freedom to take part in the processes of government and economics is not an occupation for the few or for isolated groups. It is part of the life of everyone. The American system has given a larger share of power and participation in public life and in private affairs to all of its people than any great country in history. We have trusted our people, and the trust has been repaid.

This needs some explaining abroad. Some Europeans particularly quarrel with American tastes. Some even think and say we are vulgar. These are the ones who forget that tens of millions of Americans from humble backgrounds take part in American cultural, as well as American political life. Never on such a scale as here have literature and music and art and journalism and business and politics been open to a whole population. Of course, we get a result different from the results where learning and the arts and government have been kept in a relatively small circle. The power and the strength and the glory of the American way is witnessed by a single fact. No group of peoples who have ever lived in America for any length of time have ever desired to leave America and go back from whence they came. A South American politician once said: "Other people talk about freedom; you practice it; and it has proved the most assimilative system in the world."

We must maintain that freedom at home. Any attempt to limit or mistrust it endangers our primary mission. Free government is workable, and we have proved it.

What we are learning today is a corrollary proposition. We cannot and should not attempt to export our particular form of government unless it is voluntarily sought. American democracy cannot be foisted on others. Woodrow Wilson talked about the self-determination of peoples—and he meant it. This goes for us as well as for others. There are parts of the world in which American institutions and the American economic system are not wanted, and perhaps would not work. Democracy means different things to different people, depending on their traditions, their habits, their religion and their way of thinking. Our tradition calls for tolerance and respect for difference. Indeed respect for difference is one of the great forces binding us to our friends. If elsewhere peoples choose to adopt in whole or in part some of our ways they will do it because having looked at the example they want that result. Any salesman knows that you cannot force a product where it is not wanted; if it is adopted it is adopted on its own merits. The American mission thus is not the same as the mission of the Roman Empire, nor do we now talk of the "white man's burden" as they did at the end of the last century.

If the problem could be stated in those terms we could stop here or at least be smug.

However, we cannot accomplish the American mission alone. In fact we cannot live alone now, even if we wished to do so. The Wright brothers settled that 1 day when they flew a contraption through the air at Kitty Hawk, if it had not already been settled when man learned to send communications from anywhere to anywhere in a split second. Safety and well-being today depend on an international system which observes some rules of morality and of law, producing international relations established more or less on the rules of fair play. We have fought two wars on that theory. It is true that from 1919 to 1939 most of the country seemed to feel that the rule of law in international affairs could be maintained if the United States lived alone in unprepared isolation and urged pious resolutions outlawing war. World War II, I think, taught us by bitter experience that international cooperation is necessary if any rule of right and law is to be maintained. At the close of that war the atomic bomb launched from long-range aircraft blew up forever the idea that Americans are entirely masters of their own destiny. That is why I supported, as I hope you did, the formation of the United Nations, and while it has a long way to go I am free from doubt that the principle will eventually succeed. If this United Nations fails another will have to be built to take its place. As we fought to withstand aggression in Korea and to prevent new Koreas and to provide the aggressor of our time—the Communist faction—with clear-cut evidence that the lawless expansion could not be permitted, so we are bound to work with others in building a world-wide community of nations.

Now this will be a long and difficult task, as any one who travels abroad as I do knows very well. The world of nations outside our own has its realities and its hard facts. We have to work with that world as it is and not as we think it ought to be. We will have to work with peoples who do not think as we wish they did, and often govern themselves as we wish they did not. At the moment, we work with the other nations of the free world chiefly to assure military safety and to protect ourselves and them against lawless aggression. But while we are doing this we can help to extend and strengthen the moral foundation of the community of nations.

Even a politician reads occasionally and profits from it. A book written several years ago by Arnold Toynbee makes the point that whenever the culture of one nation enters another a wide contact is established which continues to unforeseeable limits. A country which first becomes familiar with American manufactures and manufacturing methods eventually may come to learn the dominant principles of American life, just as close relations with Europe have made us somewhat acquainted with their ways. The salesman and the politician, the Army officer and the journalist, the engineer and the student who work abroad are carrying out the American mission for good or evil, whether they know it or not. The policy now famous as point 4, offering technological assistance to other countries, was perhaps one of the most imaginative ways by which America could perform its mission. Other, better ways will continue to be developed as the days go on, as we realize more and more their importance.

A new duty is placed on the United States by this modern conception of America's mission. This is the duty to be strong nationally. Even Abraham Lincoln, struggling for peace, was willing to go to war to assure that the Union should be preserved—else there was danger, as he put it, that government of the people, by the people and for the people might perish from the earth.

We shall not achieve a community of nations at peace merely through strength; but it is perfectly clear that we shall never achieve it without strength. We are quite clear that our mission does not require us or even permit us to try to rule the world. But we are equally clear that our mission includes being a bulwark of the free world and joining in its defense. But this means the most careful attention to foreign policy. Someone observed that the British Empire was acquired in a fit of absentmindedness. America could have the same experience if we do not draw a careful line between democratic leadership of a free world and practices which might slowly lead to an American imperialism.

The men (there are still a very few noisy ones) who talk loosely about "going it alone" and who want to pull out of cooperative arrangements like the Inter-American Organization of States and the North Atlantic Treaty Organization, and who want to torpedo the United Nations, have not learned an important lesson. Fortunately, few in this country agree with them.

It is barely possible, of course, that the United States could make itself into an empire and organize an American century. But if we did we would slowly and steadily find our cherished freedom disappearing. There would no longer be freedom of speech, and freedom of assembly, and free inquiry, and fair trial and the right of every American to look all these ideas in the face. Even as we are fighting the Communist menace at home and abroad, we must be sure that we do not betray our own traditions. Under free institutions America grew. By free institutions America forged her position. Under free institutions she defended herself against totalitarian enemies and by virtue of free institutions she has become the senior free nation of the world. We do not want a police state, or thought control, or rule by hysteria of fear in our system.

The success of the United States is largely due to one fact. We have discovered the art of throwing thousands of free minds against a problem. We do this in politics, we do it in business, we do it in education, and do it in science. As a result, we have come up with the right answers more often than those who depend on a small group of party officials, politburos or police chiefs. This is often confusing to foreigners. They hear the noise of our debates and discussions and do not realize that out of these discussions come firm decisions. The result has given American the most stable Government and the most stable economy of our time. It is respected by our enemies, hence their sound and fury. The fact is that most of the countries under Communist domination would like to achieve what America has achieved and will try to do so as soon as they are free to make the attempt. Because of this, I do not think a third world war will be attempted; and it is attempted I have no doubt of the result.

For the first time in our history we are called on to maintain continuously a measure of armed might. I venture to think that the arms are as strong, and no stronger, as the free institutions which bring them into being. Armed strength so supported can be trusted by America and by the neighbors of America. Armed strength not derived from free institutions would be a danger to us and to the entire world.

As I see it then, America's mission is still to demonstrate that free government is workable, not only for the United States but for the world. Nationally, we must cherish and foster and maintain our institutions and use them to give our own citizens progress toward wider life and fit them to be the heirs of a great civilization. Internationally, we must, in strength and not in weakness, work toward a community of nations steadily developing a wider common base in morals and in law. It will be said that this is ideal rather than practical. I can only say that, as a politician accustomed to deal with an infinite number of practical matters, I know that a chief source of power can be an ideal, since the ideal alone gives consistency to the efforts of the day.

Criticism of TV and Radio Commercials Is Unjustified

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. GATHINGS. Mr. Speaker, a few days ago I received a letter from Mr. Ted Rand, general manager of radio station KDRS, Paragould, Ark., regarding recent attacks made against the radio and television industry in the House of Representatives. Mr. Rand is an outstanding business and civic leader. The principal complaint against these media was that both television and radio stations increased the sound volume when commercials were being presented. According to Representative CRAIG HOSMER, of California, "these excessively loud commercials" applied to networks as well as local programs. Mr. HOSMER asked the Chairman of the Federal Communications Commission to look into the matter and advise him of the Commission's findings.

Mr. Rand's letter, giving views and observations of an owner and operator of a radio station, is good reading indeed. His letter portrays the value of radio to a community. I highly recommend that you read it. The full text of Mr. Rand's letter is as follows:

KDRS,
Paragould, Ark., March 31, 1956.

The Honorable E. C. GATHINGS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN GATHINGS: The assaults upon radio by Representative CRAIG HOSMER and others, in my opinion, accent the negative. It seems to me that radio needs something of a champion among Congressmen who will accent the positive.

I feel sure that you appreciate the services which the radio industry has rendered to the Nation. Moreover, I am confident that you have intimate knowledge of the manner in which many Arkansas radio stations relate themselves to their communities.

In our community, we do not merely give lip service to the goals, dreams, problems, and purposes of our people. We roll up our sleeves and pitch in. We devote time, talent, and energy to the building of our community. We try to do our best in support of those groups which are creating happiness within our community—from a home demonstration club's bake sale to a citywide campaign to raise $100,000 for a new industry.

We have time for our churches, Girl Scouts, Boy Scouts, Red Cross, cancer, nursing home, schools, civic clubs, service clubs, farm groups, and every other similar organization. We rarely receive any direct remuneration from our work on behalf of these groups, although we do feel that our community service policies are directly responsible for our overall successful business operation.

We are typically American in the business sense, and I firmly believe that our industry is suffering unnecessary abuse from some of its critics. While criticisms of specific abuses by a few stations may be completely valid, the tendency to smear them across the entire industry is unfair to many of us.

I sincerely hope that you will find an opportunity to speak up for the great majority of the Nation's radio stations and in defense of the typical small city Arkansas station which builds its entire service around its people and their needs.

If the emphasis remains upon the negative aspects, may I then recommend that someone be equally unfair in appraising other aspects of the American scene which might be loud, noisy, and obnoxious in their own way:

Used car dealers illuminate their lots in a manner which is bright, glaring, and disagreeable to me.

Service stations fly masses of distracting pennants and twirling silver devices. They display huge day-glo signs. They distort the natural beauty of my town.

Magazines cluttered with attention-getters continually force me to turn to page one-hundred-and-something for a continuation of the article I am reading.

Full pages of my newspaper contain nothing but advertising. I find this annoying.

Billboards put to shame the loudest radio commercial I have ever heard. These billboards obliterate the landscape, and they divert my attention from the somewhat important function of operating my automobile.

I pay to see commercials at my neighborhood theater.

Times Square is simply a disgrace.

Anyone who will acknowledge the futility of these observations may then wonder with me why radio and television are such prime targets.

After all, radio and television offer two great compensating factors: a dial for the selection of various stations and a switch for turning the entire receiver off.

May I urge you to caution critics of the broadcasting industry to temper their observations with an appraisal of the services performed for the Nation, and to properly relate radio and television to the age in which they live.

Frankly, I am proud to be part of an industry which is vitally important in the everyday lives of the Nation's people. Because we are, we should not be shielded from valid criticism. However, there surely must be room for the presentation of radio's positive side in the Congress of the United States.

Very truly yours,

TED RAND,
General Manager.

Many people accept fine programs of both radio and television as a matter of course and apparently do not appreciate fully that the station or network that is making such program available to them is performing a distinct and outstanding public service. Numerous viewers and listeners over their television and radio receiving sets do not stop to think that these programs are offered to them gratis; that if they do not like one particular station they have but to turn the knob. So many are prone to be unappreciative and ungrateful for the entertainment and educational value of the programs which come into our homes, and criticize the time consumed in advertising the product or firm or company that makes the program possible. Without advertising there would be no radio and TV industry; the public could not have and receive the entertaining, news, and educational programs that are a part of the daily lives of the American people.

I am of the opinion that those who criticize commercial advertising are in reality in the great minority, and that such is not the attitude of the majority of our populace.

The radio industry has consistently grown bigger and stronger from year to year. I set forth a table showing the growth of commercial radio stations:

Growth of commercial radio stations

Year:	Commercial stations
1922	30
1923	556
1924	530
1925	571
1926	528
1927	681
1928	677
1929	606
1930	618
1931	612
1932	604
1933	598
1934	593
1935	623
1936	616
1937	646
1938	689
1939	722
1940	765
1941	897
1942	925
1943	948
1944	957
1945	977
1946	1,009
1947	1,346
1948	1,835
1949	2,340
1950	2,611
1951	2,782
1952	2,915
1953	2,990
1954	3,094
1955	3,244

Source: Years 1922–1926 from Federal records; 1927 onward from Federal Communications Commission.

The broadcasting industry has become and is one of our most significant fields of endeavor. The following economic analysis of the total radio and television industry, as published by Caldwell-Clements, Inc., in Mart magazine, reflects the general importance of this industry:

Year 1955

Sale of time by broadcasters	$1,000,000,000
Talent costs	200,000,000
Electricity, batteries to operate 176,900,000 radio and TV receivers	750,000,000
12,500,000 radio receivers, retail value	485,000,000
7,500,000 television receivers, retail value	1,215,000,000
250,000,000 phonograph records	310,000,000
Radio repairs and supplies, 95,000,000 replacement tubes	237,000,000
Parts, accessories	425,000,000
Labor	850,000,000
Total	5,472,000,000

This data covers both the radio and television industry.

The following table clearly illustrates the phenomenal growth of the radio manufacturing industry.

Radio receivers—Selected data, 1922–55

Year	Sets produced	Retail value	Homes with radio sets	Total sets in use
1922	100,000	$5,000,000	260,000	400,000
1923	550,000	30,000,000	1,000,000	1,100,000
1924	1,500,000	100,000,000	2,500,000	3,000,000
1925	2,000,000	165,000,000	3,500,000	4,000,000
1926	1,750,000	200,000,000	5,000,000	5,700,000
1927	1,350,000	168,000,000	6,500,000	7,000,000
1928	3,281,000	400,000,000	7,500,000	8,500,000
1929	4,428,000	600,000,000	9,000,000	10,500,000
1930	3,827,800	300,000,000	12,048,762	13,000,000
1931	3,420,000	225,000,000	14,000,000	15,000,000
1932	3,000,000	140,000,000	16,809,562	18,000,000
1933	3,806,000	180,500,000	20,402,369	22,000,000
1934	4,084,000	214,500,000	21,456,000	26,000,000
1935	6,026,800	330,192,480	22,868,000	30,500,000
1936	8,248,000	450,000,000	24,600,000	33,000,000
1937	8,064,780	450,000,000	26,666,500	37,600,000
1938	6,000,000	210,000,000	28,000,000	40,800,000
1939	10,500,000	354,000,000	28,700,000	45,300,000
1940	11,800,000	450,000,000	29,200,000	51,000,000
1941	13,000,000	460,000,000	29,700,000	56,000,000
1942	4,400,000	154,000,000	30,800,000	59,340,000
1943			32,000,000	58,000,000
1944			33,000,000	57,000,000
1945	500,000	20,000,000	34,000,000	56,000,000
1946	14,000,000	700,000,000	35,000,000	60,000,000
1947	17,000,000	800,000,000	37,000,000	66,000,000
1948	16,000,000	700,000,000	40,000,000	74,000,000
1949	10,000,000	500,000,000	42,000,000	81,000,000
1950	14,600,000	721,000,000	45,000,000	90,000,000
1951	13,000,000	605,000,000	45,850,000	100,000,000
1952	10,000,000	500,000,000	46,000,000	114,500,000
1953	13,400,000	536,000,000	48,000,000	120,500,000
1954	11,200,000	470,000,000	50,000,000	127,000,000
1955	12,500,000	85,0400,000	52,000,000	135,000,000

People of India Will Preserve Individual Rights

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, recently there has come to my attention a statement by Dr. Douglas N. Ensminger, representative in India for the

Ford Foundation, which is very enlightening to the people of the United States.

As part of my remarks I am including an excerpt from a personal letter which Dr. Ensminger and his wife have written to friends in the United States. Dr. Ensminger points out that the people of India will eventually prove to the world that individual rights can be preserved and strengthened while the social and economic revolution is brought about through peaceful means. He says that the road ahead is a long one, but the free world can expect India to support the principle of the sanctity of individual human rights. The excerpt referred to follows:

Given a chance to help improve their welfare, as provided through the community and other development programs, the people of India will succeed in proving to the world that individual rights can be preserved and strengthened, while social and economic revolution is brought about through peaceful means.

Make no mistake about it, India has a long road ahead to achieve social and economic freedom from poverty. Its people are poor, averaging in income less than $55 per person per year. Thousands of Indian village teachers receive less than $9 per month. India has at least 10 million people unemployed and another 10 million underemployed. It has 550,000 graduates of high schools and colleges who are yet to find their place in India's economic life. These hard facts stand to challenge all of us who hope and work for peace. India has the will to succeed and the leadership required to see it through. It needs only sympathetic understanding and limited financial help from the West. While we in America, through military strength and other ways, are seeking to make the world free from aggression and armed conflicts, we should know and understand that India is aggressively striving to remove the conditions of poverty, which cause unrest and provide the soft spots for growth of communism. India believes that, as it succeeds in freeing its people from the bondage of poverty and develops them to be responsive and responsible citizens, it too is contributing to conditions of peace.

As the largest parliamentary democracy in Asia, India's political achievements for the past 8 years include the following:

1. India has developed a strong, responsible and responsive Government, concerned about and capable of planning and carrying out big programs to raise the level of living of the masses and poverty ridden people.

2. The policy and actions of the Government are (a) to develop and strengthen democratic organizations and institutions; and (b) to develop the Indian people as self-respecting citizens, capable of making and willing to make intelligent, independent decisions, and contributing voluntarily to the the nation's growth and development.

3. The policy and action of the Government of India encourages and provides for criticism of the Government leaders as well as the Government policy.

Many feel today that the peace of the world for the next generation may well be determined by what happens over the next 5 or 10 years in southeast Asia. We have in Red China a firmly established Communist government committed to totalitarian methods of revolution in economic and social development. In India we have a country committed through its actions, policies, and methods, to the bringing about of a revolution in social and economic developments through democratic means.

The other countries of southeast Asia are eagerly watching Red China and India. It is the belief of many observers that whichever country succeeds in bringing about the greater improvement in living conditions of its people, will influence the political development of the other countries. Repeatedly one hears it said that as India goes, so goes southeast Asia. Peace we can have only when we have found the way to remove the millions of people of the world from the bondage of poverty.

In the Indian and American quest for peace, we need to recognize our dependency on each other. From India, we should look for dynamic leadership in pointing the way for Asia's now democratic nations to remove conditions of poverty, by democratic means in which the freedom of the individual is guaranteed. From America and the west, India should expect moral and financial encouragement and essential help, if it is to succeed in its great democratic experiment.

We must recognize that India's motives for peace are as strong and sincere as are those of the United States. Our differences in approach to peace are largely the result of our different geographic location, internal economic conditions, and the newness of India's independence. India should be looked upon as the ally of all nations committed to social and economic development by democratic means. That India wants to maintain international political neutrality is related to its all too recent and long period of domination and rule by others. That India may make mistakes we must accept, as others had to observe and accept our early efforts.

We from the United States often seem too many generations removed from our own struggle for independence to understand India's psychological, economic, and political stresses and strains during its early years as a new nation. Like the United States, when it gained its independence in 1776, India wants to and must find its own way and with its own methods.

India is engaged in the greatest experiment the world has ever witnessed, seeking to prove that a new way of life for the masses can be brought about through democratic means, and holding as its highest aim the development of effective, responsive citizens, capable of playing their part as freemen in building a new India.

Eugene Landyshev Becomes a Citizen

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 25, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news release by Martin L. A. Sternberg, director of public relations of Gallaudet College, Washington, D. C. The release is dated April 9, 1956, and relates to the naturalization of Eugene Landyshev, a deaf student at Gallaudet College.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

WASHINGTON, April 9.—A small but moving notation will be made in the annals of American democracy tomorrow (Tuesday, April 10) at 10 a. m., when 23-year-old Eugene Landyshev appears in United States District Court for the District of Columbia to join ranks with a group of newly naturalized citizens in taking the oath of allegiance to the United States.

Russian-born Eugene will look like any of the other damp-eyed newcomers to the American family. Like all the others he will be in his Sunday best, standing at the threshold of a new life, the first real security he will know. For him, as for the others, this oath-taking will be the culmination of a long period of waiting, hope, and prayer.

But, unlike the others, young Eugene will be unable to hear a word of the oath of allegiance uttered by Judge James R. Kirkland, for he is deaf. Instead, he will watch the swiftly moving fingers and lips of an interpreter from Gallaudet College, here, the world's only college for the deaf, where Eugene is a student.

Born in the tiny town of Krasny Lutch, which means "red beam of light," in the Ukraine, Eugene was the first of the two sons Mrs. A. N. Landyshev bore for her electrical engineer husband. At the age of 8 he was stricken with German measles, which left him totally deaf. That was in the spring of 1941. The Nazis were already well on the road toward their planned world conquest.

Three months later the Ukraine was overrun by the enemy. In 1943, on the retreat again, the Nazis "borrowed" Papa Landyshev for technical help in Germany. Strangely, they brought the rest of the family with him.

For the next few years Eugene lived in Germany, with his parents and brother, "I had comparative freedom," he recalls, "but I was unhappy, for I couldn't speak German, and it was difficult getting along with the German children." His education was sadly neglected during this period.

Finally, in August 1949, the Landyshevs left Hamburg for the home of relatives in San Francisco, on a regular immigration quota. It was a big day for the young deaf boy when he arrived in the "Promised Land."

In San Francisco he quickly made up for the lag in his education, learned English, and matriculated at George Washington High School. Papa Landyshev could not practice his profession until he became a citizen, in 1954. He now teaches electrical engineering at the University of California in Berkeley.

Meanwhile, Eugene had entered Gallaudet College to prepare for a scientific career. His leaving San Francisco resulted in a delay in his naturalization. Ever confident in the outcome of his citizenship application, however, the young scholar preferred a delay here, rather than jeopardize his chances for a higher education. He is a junior today and is very much absorbed in his scientific studies.

How does he feel about tomorrow? "Good, very good," he says simply. He is an unemotional young man: He has seen too much suffering and strife in his short life not to have been affected. But his eyes betray his breathlessness and excitement. "You know, I like to dance," he says, as he awkwardly changes the subject.

Anniversary of the Birth of John F. Stevens, Chief Engineer of the Panama Canal

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 25, 1956

Mr. PAYNE. Mr. President, this year marks the 50th anniversary of the decision of the Congress and the President in 1906 to approve the lake-lock plan for building the Panama Canal. Today is the 103d anniversary of the birth at

West Gardiner, Maine, of John F. Stevens, who was the chief engineer of the Panama Canal. I ask unanimous consent that a statement and a poem on Mr. Stevens may be printed in the Appendix of the RECORD.

There being no objection, the statement and poem were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PAYNE

The State of Maine has produced many leaders on the national scene but few have attained the stature of John F. Stevens, who was born at West Gardiner, Maine, on April 25, 1853.

In a career packed with hard work and adventure he built a record of constructive achievement that stands as an inspiration to the youth of our land.

After graduating from the State Normal School at Farmington, Maine, and an attempt at teaching, Stevens decided upon an engineering career. In 1874, at the age of 21, and without technical engineering training, he went to Minneapolis where his uncle, Jesse Stevens, was an engineer. There he began as an assistant engineer—a rodman—for the city.

Attracted by greater opportunities that would be afforded on the railroads, then at peak construction, he went to Texas in 1876, and secured employment as a railway section hand. Rising step by step, he worked as rodman, instrument man, surveyor, and location and construction engineer—all of which served as a great school of experience.

Attracting the attention of the great railroad empire builder, James J. Hill, he was sent by the latter to locate a route for the Great Northern Railway over the Rocky Mountains. This led to his dramatic discovery on December 11, 1889, of Marias Pass in Montana, through which the railroad was constructed.

This notable achievement is commemorated by a bronze statue of the engineer-explorer near the track at Summit, Mont., showing Stevens as he appeared at the time of his discovery. Replicas at this statue are in the Maine State Library and in the national headquarters in New York of the American Society of Civil Engineering, of which society he later became national president.

In the course of his rise in the railroad work, Stevens was well prepared for a still greater assignment in taking over the building of the Panama Canal. For appointment as Chief Engineer of the Isthmian Canal Commission, the combination of his ability and extraordinary background of experience made him a "natural."

Assuming charge in the Canal Zone on July 25, 1905, at a time when chaos and hysteria incident to yellow fever was coupled with the resignation of its previous Chief Engineer, by the adoption of wise policies, Stevens promptly brought matters under control. One of the outstanding instances of his broad outlook was his sympathetic and timely support of the health and sanitation plan that had been proposed by Colonel Gorgas—adequate health and sanitation being an absolute prerequisite for constructing the Canal.

Considering the problem of constructing the Panama Canal from every significant viewpoint, functional as well as economic and engineering, Stevens strongly recommended to President Theodore Roosevelt what is known as the lake and lock type canal as offering the best solution, and vigorously opposed the so-called sea-level proposal.

When this celebrated issue as to the choice of type was before the Nation in 1906, he was the greatest single influence in bringing about the decision of the Congress and the President for the high-level lake and lock plan. This contribution, which has been justified by more than 40 years' successful operation, establishes him in history as the basic architect of the Panama Canal. He was rewarded by the President with the first appointment to the combined positions of chairman and chief engineer of the Isthmian Canal Commission (1907).

Having organized the forces for construction, acquired the necessary equipment, designed the key features of the waterway, launched the project and brought it to a point where its success was a certainty, Stevens resigned in April 1907 and returned to railroad work. The Panama Canal was completed by others under the Stevens plans.

Though separated from the project his interest never ceased. At times of crises during the remaining years of construction, he always gave his support in the best interest of the project. In later years, he wrote extensively of his Isthmian experiences. Special reference is made to his collaboration with Col. William L. Sibert, a member of the Isthmian Canal Commission in charge of Atlantic construction, in a book entitled "The Construction of the Panama Canal," published in New York by D. Appleton & Co. in 1915. This volume is probably the best engineering historical treatise produced by the construction era.

Just after the declaration of war by the United States in 1917, Mr. Stevens went to see President Wilson and requested an active assignment in the war. The President expressed his interest, as Russia was then an ally and badly in need of a competent railroad man, in connection with its war transportation problems. Appointed as Minister Plenipotentiary and head of the United States Railway Mission to Russia in 1917, he undertook the difficult tasks involved in operating its railroad system. Later, from 1919 to 1923, he was president of the Inter-Allied Technical Board supervising the Siberian railways.

In these positions he observed the start and early years of the Communist Revolution. Accurately foreseeing the vast scope of that work conspiracy, he was among the first to alert responsible leaders of the United States to its dangers.

It is thus historically fitting that in 1956, which marks the 50th anniversary of the decision in 1906 by the Congress and the President for the lake-lock plan for building the Panama Canal, that the Honorable Maurice H. Thatcher, of Kentucky, formerly Civil Governor of the Canal Zone, and the only surviving member of the Isthmian Canal Commission, serving during peak years of canal construction, and later a Member of Congress, should write for the occasion of Mr. Stevens' birthday an inspiring poem that epitomizes the vision and work of this eminent leader for the Panama Canal.

The poem follows:

"JOHN F. STEVENS: A TRIBUTE

"Amongst all those whose labors cleft the land
To blend, as one, the seas at Panama—
There was none greater than John Stevens; and
The passing years bear witness. He foresaw—
More clearly than the others had foreseen—
The value of the plan for lock and lake,
And led Authority—in doubt between
Diverse designs—the wiser choice to make.
Possessed of genius rare, with skills supreme
And ripen'd knowledge gained from ventures vasts—
He shaped the moulds to vitalize the Dream
Which had so long persisted in the past.
His all he gave to serve the Isthmian Task:
What more could men demand, or duty ask?"

—*Maurice H. Thatcher.*

WASHINGTON, D. C., April 25, 1956.

Eleventh Anniversary of Meeting of American and Russian Soldiers on the Elbe River

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 25, 1956

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me about the 11th anniversary of the meeting of American and Russian soldiers on the Elbe River.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR POTTER

Today is a significant day for a great many American veterans. It is a day which is well worth remembrance and thoughtful consideration of the American people. Today marks the 11th anniversary reunion of the American Veterans of the Elbe River link-up. I would like to quote now from a letter by Joseph Polowsky, the secretary of the American Veterans of the Elbe River link-up, sent to the fellow veterans of that occasion:

"Eleven years ago, at noon on Elbe day 1945, a patrol of American riflemen thrust through the no-man's land between the forward American and Russian lines and linked up with a patrol of Russian soldiers on the east bank of the Elbe River. On that blood-soaked river bank, we met the Russian soldiers with high resolve and as friends. All of us on both sides swore never to forget the scene, the day or each other, swore to do what we could to make a freer and more peaceful world for our children, and to meet again in peace. Two days later, when the link-up was more fully secured and American and Russian military units were joyously greeting each other, our patrol mission was completed, and we returned to the American lines; General Eisenhower said the American people were proud of us for our initiative and devotion to duty. The confidence and optimism, the spirit of comradeship and hospitality all of us had 11 years ago, from General Eisenhower to the privates in the field, lives on in us as American veterans. We'll make the American people proud of us once again when we shake hands again with the Soviet Elbe veterans at our reunion this month in Washington."

I should like to quote also from a letter from Mr. Polowsky addressed to the Soviet Veterans of the Elbe River link-up:

"Last spring, the Governments of the United States and the Soviet Union cooperated in bringing together the American and Soviet Elbe veterans for an inspiring and successful 10th anniversary reunion in Moscow. On May 11, 1955, at a formal meeting at which military and civilian representatives of the United States Government and the Soviet Government were present, the Elbe veterans read the following unanimously approved joint declaration: 'We Soviet and American veterans of the Elbe River link-up of the Allied armies in 1945, gathered together in Moscow on the 10th anniversary of that historic event, affirm that we have not forgotten the friendly alliance formed during the war years. The link-up of our soldiers at the Elbe will live on in history of mankind as an enduring symbol of friendship, good will and mutual respect between our peoples. Today, as 10 years ago, we declare our determination to work for friendship between the American and

Soviet peoples and the establishment of a peaceful world. We hope this first reunion will establish a tradition. We hope that on future anniversaries of the Elbe River link-up, American and Soviet war veterans will exchange friendly greetings and hold reunions as friends."

"We American Veterans of the Elbe River link-up will hold our 11th anniversary reunion in Washington, D. C., on Elbe Day—April 25, 1956. We extend to the Soviet Veterans of the Elbe River link-up a cordial invitation for a group of Soviet World War II veterans to visit us at our reunion. We are sure that the visit of the Soviet veterans to the United States this spring will contribute to the establishment of the free and friendly world we all fought for during the years of the Second World War."

And now, may I read the words of acceptance from the chairman of the Soviet committee of the participants of the meeting at the Elbe. He says:

"Permit me, on behalf of the Soviet veterans of the Elbe meeting, to sincerely thank you for the invitation extended to the Soviet participants in this unforgettable, historic meeting to visit the United States of America to participate in the meeting of the American Veterans of the Elbe River link-up, which is being held on April 25, 1956, in Washington, D. C.; and thank you also for your good wishes and your efforts toward supporting and strengthening the ties between the American and Soviet veterans of the Second World War."

"The Soviet committee of the participants of the meeting at the Elbe, with a deep feeling of gratitude, accepts your kind invitation and is ready to send to the United States a group of Soviet participants of 5 to 7 people to take part in the meeting of April 25th of this year in Washington, D. C."

"We trust that the meeting of the Soviet and American veterans of the Second World War will further mutual understanding between the people of the United States and the Soviet Union, and other freedom loving peoples who carried on so great a battle against a common enemy in the years of the Second World War."

It is interesting to note that some 11 years ago the armies of the United States and of the Soviet Union were fighting a common cause. The meeting at the Elbe demonstrated that the peoples of these two countries deeply cherish the common goals of freedom and peace. This should serve as a reminder to all of those in positions of responsibility in all countries that these are the goals of the peoples. We all sincerely hope that these meetings on a man to man basis at the various levels of our society will continue to deepen the mutual understandings and to strengthen the bonds of common interest all over the world.

Chemical Progress Week

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. MILLER of New York. Mr. Speaker, it is my honor and privilege to represent the city of Niagara Falls, N. Y., and the Niagara frontier, which is one of the greatest chemical centers in the world. This being Chemical Progress Week, under leave to extend my remarks, I would like to call to the attention of the House of Representatives and insert in the RECORD an editorial that appeared in the Monday, April 23, 1956, edition of the Niagara Falls Gazette honoring this great industry.

I would further like to take this opportunity to compliment industry, genius, and labor for the great part they have played through the research, development, and production of chemical products to help make the United States the greatest and strongest Nation in the world.

The editorial follows:

CHEMICAL PROGRESS WEEK OF SPECIAL IMPORT HERE

This is Chemical Progress Week, an unusually significant observance for Niagara Falls and the Niagara frontier.

Of all developments in the last 25 years, none has helped raise the American level of living more than the growth of a strong American chemical industry. Day in and day out, chemical progress is a vitally important thing in Niagara Falls. Our community prosperity depends, to a large extent, upon chemicals and their uses.

During the past three decades alone the chemical industry has introduced nearly 6,000 new chemical products; and last year placed new products on the market at the rate of more than one a day.

Although these products are seldom visibly a part of our daily living, like steel or oil, they are essential to virtually everything we use, eat, or wear in our daily lives.

Chemistry also makes it possible for us to enjoy longer and healthier lives. The conquest of disease through medicinal chemicals, notably the antibiotics, and gains made through vitamins, hormones, and sulfa drugs has been but one of the outstanding chapters in American chemical progress.

Today, with more than 825,000 employees at 11,000 locations, the chemical industry is the fourth largest industry in the Nation. And in great part through chemistry, 165 million Americans are living richer, healthier, and happier lives.

Niagara Falls, as one of the greatest chemical centers of the world, can be proud of its contribution to chemistry and the chemical industry. Through chemistry, our city has contributed greatly to America's peacetime prosperity and to its strength in war.

Defense Highway Legislation

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter from the Public Utilities Commission of the State of Colorado stating its position concerning certain features of the defense highway legislation. The letter is as follows:

STATE OF COLORADO,
THE PUBLIC UTILITIES COMMISSION,
Denver, Colo., July 20, 1955.

Hon. BYRON ROGERS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN ROGERS: It is our understanding that the Public Works Committee of the House of Representatives has just reported out House bill 7072. Section 7 of this bill permits reimbursing municipal and private utilities for 50 percent of the cost of relocating facilities on a Federal aid highway project.

We are fully convinced that public utilities should be reimbursed for the expense of relocation of their facilities occasioned by the construction and reconstruction of the Federal Aid System of Highways. The following reasons support our position:

1. All costs of this expanded program of Federal Aid are to promote national defense and interstate commerce and are for the benefit of the public as a whole and therefore should be borne by the general public. This includes relocation costs as well as other construction costs.

2. Users of utility service are not directly benefited by the highway program. They should not be forced to bear the burden of relocation expense merely because utility property happens to be located in the paths of new highway construction.

3. The users of utility service, as part of the general public, pay in their taxes for the cost of highway construction. They should not have to pay a second time through their rates for utility service. They should not contribute twice.

4. While the expense of utility relocation forms an insignificant part of the highway program, it could have a disastrous impact on some utilities if they were forced to bear this burden themselves.

5. The Federal Government is causing these relocation costs by the expansion of the Federal Aid Program and the Federal Government should at least recognize and reimburse the utility for the share of these relocation costs which it creates.

Section 7 of House bill 7072 is a watered-down version of section 11 of Senate bill 1048. We favor the stronger section 11 of the Senate bill but believe that the House bill should be passed in its present form in order to expedite the matter in this session of the Congress.

The above is an expression of the opinion of our entire Commission.

Respectfully,
JOSEPH W. HAWLEY, *Commissioner.*

Alaska Mental Health Bill

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. BURDICK. Mr. Speaker, I have here two letters which appeared in the Buffalo Evening News, Buffalo, N. Y., on April 19, 1956, which were sent to me with the request that they be inserted in the RECORD. Since this is a subject which affects the liberty and rights of every person in the United States, I want to call again to the attention of the Members of both Houses the necessity of defeating H. R. 6376 in the Senate.

The letters follow:

ALASKA MENTAL HEALTH BILL WOULD CREATE SIBERIA?

Have you heard of House bill 6376 known as the Alaska Mental Health Act? It passed the House by a voice vote.

This voice vote allotted 1 million acres, or 1,560 square miles of land and $12,500,000 to build a hospital for mentally ill in Alaska. There are about 350 mentally ill in Alaska, yet the experts are allotting half again the land area of Rhode Island, which has 800,000 inhabitants. Why 1 million acres? Are the

experts expecting the number of mental patients to increase more than in proportion to population?

The proposed law to provide for the mentally ill of Alaska, and for other purposes (what other purposes?) provides that any Federal judicial officer may conduct proceedings for commitment. No longer would a member of the family need to consent for application to the Commissioner could be made by an interested party, defined in section 101 (g) as "an interested, responsible, adult friend." One section provided a penalty for unwarranted hospitalization or denial of rights set forth in other parts of the bill, but this was stricken out.

Under section 119 the governor of any State could contract with the governor of Alaska to take over all or part of that State's mental cases on a reimbursable basis.

Our one worlders, left wingers, and fellow travelers are working day and night, bit by bit, as through shrewdly worded parts of this harmless-looking bill, to provide machinery under which, when the time comes, the state (Federal Government) will have omnipotent power over all the people.

These provisions in H. R. 6376 could take care of many honest dissenters who had been warning the country about the socialistic and communistic phases of our own Government which they don't like. What better way than to railroad them to Alaska? What better scheme than an American Siberia?

Write your Senators and demand they defeat this bill. Write and ask for copy of H. R. 6376 or send 15 cents for a copy of Letter 377 to Social Economic Council, Empire State Building, New York, N. Y. Time is short. This could go through and be signed by the President by July 1.

LILAS A. STANTON.

FREDONIA, N. Y.

PROPOSAL FOR HOSPITAL IN ALASKA PROTESTED

The Alaska Mental Health Act or H. R. 6376 has been brought to our attention recently. On March 14 Representative BURDICK, of North Dakota, said, regarding this resolution: "There ought to be no person in the United States ignorant enough to believe that this procedure is constitutional, yet, the planning goes on. * * * This whole program is a brain-washing procedure borrowed from the Russians and is intended to block all opposition."

Its vicious provisions are a menace to our civil liberties, especially that of freedom from unreasonable seizures. It was railroaded through the House under very suspicious circumstances.

JANET THOMAS.
NANCY CALHOUN.

The Parris Island Tragedy

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mrs. KEE. Mr. Speaker, recently I was shocked to read of the death of some fine young Americans at the Marine training base on Parris Island.

My first reaction was one of horror. It seemed completely inconcelvable that this tragedy could have happened in this country. Even more amazing, the incident occurred in the United States Marines.

Everyone knows that the Marine Corps has a reputation for toughness. It is an important part of the great spirit of a great fighting organization. Each former Marine I know takes particular pride in his service. Without exception, every young man I have met who served with the Corps wears his former service with a certain air, a knowledge that he was one of the finest outfits in world military history.

On every battlefield the United States Marines have acquitted themselves well. Every volume that tells of the growth of this great Nation has an important place for the leathernecks. It is true now as it was 170 years ago, the Marine has no superior as a fighting man. An important part of the secret of his success has always been the training he receives. In a word, it is rough; it's meant to be. Yet for all its roughness there is intelligence, planning and direction to it.

Still in the final analysis any system is only as good as the men who administer it. In the Marine Corps, as indeed everywhere else where man is involved there are instances of abuse and flagrant violation. A review of the record of any criminal court will show that man has a habit of violating his conscience and the best laid plans of God and his fellow creatures. So it is with the Marines.

In every instance the corps tries to find and correct any inequalities or injustices in the system. Their only interest is in maintaining the quality of their organization. Humiliation of the individual and stupidity are not a part of their plan. If those two undesirable qualities crop up occasionally they are committed by individuals and not by the system, nor the men who direct the Marine Corps.

This is a most difficult matter to consider rationally or objectively. The fact is that young Americans have died while taking training under the rules and regulations of a United States Armed Force.

Still, it seems to me that there has been some hysteria toward this tragedy. The papers have been filled with stories about other abuses or alleged abuses in boot camp. Everyone has an opinion and it is usually a very violent one.

However, I firmly believe that this is a matter which the Marines can handle. They have been dealing with the weakness and the strength in men for a great many years. Their discipline and training have always been tough. Their court-martial records show that there have been abuses before. In every instance they have handled their problems with the same dispatch and efficiency which characterizes every combat action in which they have participated.

Commandant Pate's reaction to the news of the tragedy was instant and commendable. He flew down to the scene to take charge, to make sure that an investigation was launched with the maximum of authority to get the job done; he called for a board of inquiry. At no point can I find reason to criticize the action of the general or any of his officers since the entire incident came to light. They know the full story of what happened and will act accordingly.

Whatever the decision rendered by the board of inquiry, I have every reason to believe that it will be a fair one—fair to the American people, just to the parties involved, and in the finest tradition of the United States Marines.

As to the future of the training programs, I think they are in the best hands right now. If modifications are called for, they will be modified. If the system is right and some individuals are wrong, the individuals will be changed.

We have trusted the United States Marine Corps in war. Now let us have confidence in them in peace. And more, let us pray to God that they might always receive His help and guidance.

"The True Heart, Spirit, and Character of TVA Should Be Preserved"—Radin

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. EVINS. Mr. Speaker, opponents of TVA have for the past several years, by one means or another, been waging a continuing battle designed to cripple and eventually destroy this great agency of Government.

In a recent speech in Knoxville, Tenn., Mr. Alex Radin, general manager of the American Public Power Association, pointed out, step by step, the onslaught by TVA critics in this misguided crusade.

I ask unanimous consent that this excellent address by Mr. Radin concerning TVA be printed in the Appendix of the RECORD.

The remarks follow:

I turn at last to the situation in the Tennessee Valley. It was, of course, no news to you when I said earlier that the cancellation of the Dixon-Yates contract did not end the problems of TVA. Having the day-to-day responsibility of serving your customers, you know better than I that the Tennessee Valley area—like every other area of the country—needs a constantly expanding source of power to meet ever-growing loads. Consequently, the cancellation of the Dixon-Yates contract and the decision of Memphis to build its own steam plant presented no long-term solution to the need for ever more generating capacity in the Tennessee Valley.

For many years the private-power companies have been telling TVA that it should be operated like other power companies, and should get its funds for expansion from the private money markets, rather than ask for appropriations from Congress.

One might have had hopes, therefore, that the power companies would not have objected to TVA's plan for issuing revenue bonds on the open market. After all, this would force TVA to go to the money markets just like any other power system. The bonds would not be guaranteed by the United States Treasury but would be secured by power revenues alone. And interest on the bonds would not be exempt from Federal taxation.

It was with some degree of disillusionment that we found last year, in the hearings on the TVA revenue bond financing legislation, that the power companies were unalterably opposed to the TVA self-financing plan. Their blind opposition made it crystal clear that they are opposed to any plan for TVA short of the complete wrecking of the agency.

Nevertheless, in the current session of the Congress, earnest efforts have been made in the Senate Public Works Committee to

bring out a bill that would preserve the essential provisions of the TVA self-financing plan, but at the same time would take cognizance of some of the objections which have been voiced.

I betray no secrets, of course, when I report that the progress on this bill does not appear to be encouraging. Whether or not it will be acted upon during the current session of the Congress remains to be seen.

Meanwhile, the President, in his budget message to Congress earlier this year, advocated the construction of 450,000 kilowatts of generating capacity at existing projects, consisting of 1 additional units of 180,000 kilowatts to be placed in operation before the end of 1957 at the John Sevier plant, and 2 units, totaling 270,000 kilowatts, to be placed in service in 1958 at New Johnsonville. A supplemental appropriation of $3,500,000 was requested for the current fiscal year to provide funds for starting work at the John Sevier steam plant, and the President said that funds to be needed in later years for this unit, as well as the two units at New Johnsonville, are expected to be provided through congressional enactment of the revenue bond legislation.

About 2 weeks ago the House Appropriations Committee knocked out the $3,500,000 appropriation to begin work on the unit at John Sevier. The committee, citing legal opinion of TVA's general counsel, declared that TVA's power revenues "have provided it with sufficient funds for the construction of such additional units as TVA now requires." The report added that TVA "should follow normal business procedure, using its revenue to the extent necessary."

In its report, the committee noted that "a minority of the committee opposes the TVA using its own money to meet its power needs and in addition voted against the President's recommendation to appropriate money for this purpose. The only conclusion to be reached is that the minority is simply opposed to the people of the TVA region having power to meet increasing needs."

It was only by a tie vote of 21 to 21 that the opponents failed to carry a motion that would have inserted language in the report to the effect that TVA did not have the authority to use its own funds, without specific congressional approval, for adding units at existing steam plants.

In passing the supplemental appropriations bill last week, the House, in effect, sustained the position of the committee. Opponents of TVA were ready and willing to try to stop TVA from using its power revenues to add units to existing plants, but it was clear that the opponents were unable to find a means of preventing such action by TVA. The opponents had their weapons aimed directly at the intended victim—TVA—but they found themselves in the rather frustrating position of not being able to pull the trigger.

The position of the opponents was perhaps best described by Congressman DAVIS, of Wisconsin, who told the House that, "Those of us who take exception to the use of $3,500,000 of TVA revenues to initiate construction of a new steam-generating plant are in a most frustrating position. There is no language in the bill which we can seek to delete, or to which we can seek to add a limitation. The use of the $3,500,000 is authorized by the language of the majority committee report, which is not subject to amendment under the rules of the House."

So, with their pistols cocked, the opponents had to put their weapons aside—to await another day.

The question of TVA's authority to use its corporate funds to add units at existing plants was again examined on Tuesday of this week by a subcommittee of the Senate Appropriations Committee. Joseph Swidler, general counsel of TVA, gave a detailed account of the legislative history showing that TVA did have the authority to use its corporate funds to add such units at existing plants, and his statements were reaffirmed by Senator GORE, who was a member of the House Appropriations Committee at the time when Congress adopted legislation in 1948 stating that none of TVA's power revenues were to be used for construction of new power-producing projects (except for replacement purposes) unless and until approved by act of Congress. Senator GORE said the record showed that it was clear that the word "project" referred to a new dam or new steam plant, and not the addition of units to existing plants.

However, in response to a question from Senator DWORSHAK as to whether he thought TVA has the legal right to use corporate funds for new units, General Vogel replied, "Not necessarily. I think that's the question that's before this committee today."

As the hearing ended, there seemed to be rather general agreement by the Senators present that to require congressional approval, in the pending appropriation bill, of TVA's use of power revenues for the addition of new units would be adding legislation to an appropriation bill, a procedure which is not permissible. At the same time, some of the Senators seemed to indicate that this question might be raised soon before another committee of the Congress.

This indication was reinforced that same day by the release of a letter to Congressman JOHN TABER, of New York, ranking minority member of the House Appropriations Committee, from Comptroller General Joseph Campbell. While he did not directly answer the question as to whether or not TVA had a legal right at the present time to finance new units from power revenues, the Comptroller General recommended that the law be amended "to clearly state the intent of the Congress with respect to its control over TVA's capital expenditures for power facilities." He said that such legislation is needed at the present time because "(1) the present law is not clear in this respect, (2) there has been a substantial change in the nature of TVA's capital expenditures for power facilities between 1948 and 1955, and (3) the present law, as currently applied, does not give the Congress effective control over TVA's expenditures of public funds for power facilities."

He added this significant statement: "It is our view that the Congress can most effectively control expenditures of this character through appropriations; however, if the Congress wishes TVA to use its power revenues, or funds obtained from other sources, to construct or acquire power facilities, it should require TVA to obtain specific and prior authorization from the Congress for such facilities."

In other words, the Comptroller General has stated he feels that the Congress should specifically approve TVA's use of its own revenues to finance each addition to existing plants. It is clear that such a requirement would seriously hamper the conduct of TVA in carrying out its obligations to the people of the Tennessee Valley, and would deprive TVA of necessary flexibility of operations—one of the features of the TVA act which has made it such a notable success. Certainly such a requirement would lead to anything but a business-like operation.

The supplemental appropriaton bill will not be considered by the Congress until after the Easter recess, but it is now clear that if the opponents of TVA do not succeed through this bill in blocking TVA's use of power revenues to build additions to existing plants, efforts will be made through other routes to bring about such a restriction.

Regardless of what happens as a result of the current controversy over TVA's use of corporate funds, it is evident, in any event, that the use of such funds do not provide an answer to TVA's long-range power supply situation. Everyone in the utility business realizes that, with the rapidly growing loads which all utilities are experiencing today, all utilities ultimately must borrow some funds to finance the necessary expansion of their plants. TVA is no exception to this rule.

The most satisfactory long-range solution to the TVA power supply problem is to be found in the self-financing plan embodied in the Kerr bill in the Senate and the similar Davis-Jones bill in the House. Only time will tell whether this bill will be adopted during the curent session of the Congress, but if this legislation is not enacted during the present session, then it is clear that an all-out effort must be made in its behalf during the next session of the Congress.

I do not feel that I am exaggerating the situation or over-dramatizing it to say that the next few years will be among the most critical in the history of TVA. The entire nature and character of the agency can be radically changed. And in the final analysis, it is the character of TVA that is of equal, if not greater importance than its physical features. For just as one should judge a person more by his character than by his physical appearance, so must we judge TVA, in the final analysis, by its character rather than by its dams, its powerhouses, its navigation locks, and all its other works.

When friends of TVA say that certain legislation, or the Dixon-Yates contract, would destroy TVA, obviously they do not mean that the TVA dams would be blown up, or that other TVA structures would be taken out of the valley. But what they do mean is that the basic character of TVA would be destroyed—and such a result would be as catastrophic as the wrecking of the TVA physical facilities.

And what is the character of TVA • • • what is its basic nature In my opinion, TVA represents the essence of the efforts of man to bring into a harmonious relationship the work of man and the forces of nature. In the power field, TVA is a symbol of what can be accomplished when the principal objective is greater service to mankind, rather than profits or dividends on stocks or bonds. In the power field, TVA in the past has pointed the way to dynamic technical progress; its ever-larger units, tied together with high-voltage transmission lines have shown the way to the economies that can be achieved through a regional, integrated power system. TVA, in all the facets of its character has brought a fuller and more meaningful life to millions of people throughout the Tennessee Valley, and it has kindled new hope in many distressed and worn-out sections of the ancient world.

As we face the future, literally scores of plans may be offered for the future of TVA. These plans should be measured, not against the physical structures of TVA and the disposition of these works, but against this standard: Will these plans change the true heart and spirit and objectives of TVA? That spirit and character have been worth fighting for in the past, and it will be worth fighting for in the future. I know your great organization will continue to be in the forefront of that effort in the trying days ahead.

A Case of Algers

EXTENSION OF REMARKS

OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another interesting edi-

torial on the Hiss Princeton controversy by the Advocate, official publication of the Archdiocese of Newark and of the diocese of Paterson in the State of New Jersey. The Advocate has an unequaled reputation for reportorial accuracy and editorial excellence. The article follows:

A CASE OF ALGERS

The present uproar over the invitation extended to Alger Hiss by an undergraduate society at Princeton University demands some attention. Times have changed most certainly. Apparently Alger Hiss, a convicted perjurer, can become a campus attraction if not a campus hero. Fifty years ago it would have been another Alger, perhaps, who would have attracted Princeton's attention. Horatio Alger, with his advocacy of honesty and integrity, hard work and thrift, simple morality, and economic success, presented the ideal American. This second Alger presents the opposite side of the mirror. If standards have changed so much that ideals of Horatio Alger have been replaced by the recognition of the standards of Alger Hiss, then education has not done much for men.

Even more, apart from the case of Hiss, it is a frightening thing for a university and its authorities to admit that the students have done something wrong and then refuse to right that wrong, to remand the students who have so acted. This is supposed to be a democratic procedure but it is certainly an inversion of the philosophy of teaching. College men treated with a laissez-faire when they are injudicious and even wrong, are being trained to expect the same treatment when they are no longer undergraduates. When the principle of authority in education becomes lost in a maudlin tolerance, then the strongest asset of education is lost, and the best effect of education cannot be achieved.

United States Coal Development Program Is Justified for Vital Industry

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following editorial from the Huntington (W. Va.) Advertiser, for Tuesday evening, April 24, 1956, on the subject of the United States coal development program:

UNITED STATES COAL DEVELOPMENT PROGRAM IS JUSTIFIED FOR VITAL INDUSTRY

Representative KEE, Democrat, West Virgina, has justice on her side in her protest against the Atomic Energy Commission's use of Federal funds for the "commercial business enterprise" of building powerplants for utilities.

"By contributing most of the construction," she said, "providing the fuels for operation of atomic plants, and possibly assuming at least some of the insurance risks involved, the AEC is in fact taking away traditional coal markets in the electric utilities field, whether or not these markets are located close to coal-producing areas."

There is no objection, of course, to pilot atomic plants operating on a purely experimental and noncommercial basis. Such plants will contribute to the scientific progress and know-how of the country.

They are part of the research and development work necessary to keep America abreast of the world in atomic science.

With all the progress experimenters can make, it will probably be many years before atomic power will replace coal as a fuel for commercial generation of electricity.

That is obviously the belief of the Nation's big utilities. Otherwise they would not spend billions of dollars constructing new coal-burning powerplants.

But while the Government is pushing its atomic research, it should also take more than a casual interest in the future possibilities of coal.

A resolution authorizing a study of a proposed coal research and development program has been presented to the House of Representatives by Representative JOHN P. SAYLOR, Republican, of Pennsylvania.

Over the years such a program could have a vastly stimulating effect on the economy of West Virginia and other coal-producing States.

The known available supply of coal is much greater and will last much longer than the present reserves of oil and natural gas. It is possible, as Representative SAYLOR suggests, that synthetic oil and gas produced from coal will eventually find its way into most of the market areas of the Nation.

Whether that ever happens or not, coal is still a potential source of great many by-products as yet unknown.

A Federal program of research in this field is no more out of place than that now underway in atomic science.

It could have tremendous influence on the progress of the chemical industry as well as upon the science of fuels and could bring about revolutionary advances much more spectacular than the development of nylon to replace silk.

Even without such a possibility, the program would be justified as a means of providing a prop to the coal industry during future periods of recession.

For a good many years coal will probably continue as the main source of power and fuel and as the mainstay of the Nation's program of defense in peace or war.

Keeping its potential available for an emergency is vital to the Nation's survival.

Further than that, it is only a matter of sound economy to provide for the future well-being of the hundreds of thousands of people dependent upon the coal industry for a livelihood.

Resolution by Mohr-Christie Post, No. 158, VFW

EXTENSION OF REMARKS

OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks I desire to record a resolution of the Mohr-Christie Post, No. 158, Veterans of Foreign Wars of the United States, of Hoboken, N. J. The resolution contains some very interesting suggestions and is as follows:

At a regular meeting of the Mohr-Christie Post, No. 158, VFW., held on April 17, 1956, at the post headquarters, 1000 Garden Street, Hoboken, N. J., the following resolution was adopted and directed to be forwarded to the Hudson County Council, VFW., for their concurrence and further action:

"RESOLUTION

"Whereas an organization known as the American-Whig-Cliosophical Society comprised of alumni of Princeton University has invited convicted perjurer Algier Hiss to speak to them on April 26, 1956; and

"Whereas said society, its officers and members must know that the whole weight of evidence at Hiss' trial concerned treason and that the verdict carried the clear indication that Algier Hiss has been an espionage agent for the Soviet Union; and

"Whereas on Friday, April 6, 1956, a United States Senator while addressing said society was greeted, according to press reports, with discourtesy and with cries of "We want Frank Costello"; and

"Whereas convicted gangster Frank Costello might object strenuously to being classified with convicted perjurer Algier Hiss; and

"Whereas the officers and members of the American-Whig-Cliosophical Society of Princeton University have exhibited a lack of good manner, judgment, and knowledge of current events; Therefore be it

"Resolved, That the officers and members of the Mohr-Christie Post, No. 158, VFW, do recommend the following: (a) That the officers and trustees of Princeton University do all in their power to make it mandatory that the officers and members of the American-Whig-Cliosophical Society be enrolled in courses of ettiquette, logic, contemporary American history and Americanism; and be it further

"Resolved, That the authorities of university censure the actions of the officers and members of the society."

Military Reserve Week

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. EVINS. Mr. Speaker, as the Nation celebrates National Military Reserve Week, I ask unanimous consent that there be reproduced in the RECORD a timely discussion of our Reserve training program by the outstanding military news correspondent Hanson W. Baldwin, which appeared in the New York Times April 24, 1956.

The article follows:

MILITARY RESERVE PLAN—A DISCUSSION OF THE TRAINING PROGRAM AND PROSPECTS OF WIDENING ITS APPEAL

(By Hanson W. Baldwin)

Ceremonies this week which symbolize the proclamation of Military Reserve Week.

The week marks an intensive nationwide drive to popularize and publicize the reserve components of the Armed Forces. The Pentagon, aided by a private sponsoring organization—the National Security Committee—is stressing particularly the 6-month military training program, instituted last year, in an attempt to build up the reserves.

The 6-month program—one of several optional methods of fulfilling the military obligation facing young men—has not yet attracted nearly as many volunteers as had been hoped. Many youths have preferred to take their chances on 2 years of conscription rather than volunteer for 6 months' active duty training, followed by 7½ years in the Reserve. When the 6-month program started last fall the Army had hoped to re-

cruit some 90,000 6-month volunteers between then and next June 30; the Marine Corps had planned for 5,500. The Air Force and Navy are not participating in the program.

These high hopes have not been met. Incomplete Pentagon figures made available yesterday indicated that about 22,176 young men had volunteered to date all over the Nation for the 6-month program. A major part of the objective of the program—to strengthen the Army's Ready Reserves to about 1,700,000 men by 1959—is not being accomplished.

National Reserve Week, strongly endorsed by the President and the Secretary of Defense and sponsored by the National Security Committee and its 19 national constituent organizations, is an attempt, therefore, to dramatize the advantages of the 6-month plan and to give it the benefit of national publicity.

The 6-month training plan is essentially a "civilian-soldier" program. Young men between 17 and 18½ years of age may enlist in Army or Marine Reserve units. Normally 6 months of active duty training follows soon after their enlistment, but induction for the active training program may be deferred until the age of 20, pending graduation from high school. However, the volunteer must sign up before he is 18½, or he becomes subject to the 2-year draft.

Basic training in the 6-month program is given by the Army at Fort Ord, Calif.; Fort Jackson, S. C.; Fort Knox, Ky.; Fort Leonard Wood, Mo.; Fort Bliss, Tex., and Fort Chaffee, Ark. Specialist training follows at various specialist schools. The Marines train their 6-month volunteers at Parris Island, S. C., and San Diego, Calif.

Following the 6 months of active duty training, the volunteers return to civilian clothes. For the next 7½ years they must train with specific Reserve units. Normally, the reserve training includes 2 hours of drill each week at Reserve training centers or armories near their homes, and 2 weeks of training each summer at an Army camp near their home. The men have no obligation for extended active duty except in case of emergency, and they are not subject to the draft.

From the point of view of the young man, the 6-month plan has certain advantages. His active duty training can be completed in 6 months and he can take a job, or complete his education with the assurance that his career will not be interrupted by a 2-year draft. He does his Reserve drill training near his home. And, if he wishes, he can apply for officer candidate schools. He draws drill pay as he trains, and he is considered for promotion.

This is the program which is now being publicized in Military Reserve Week. Whether or not it can produce a strong Reserve depends upon the solution to a number of problems. So far, the Nation's young men would rather take their chances with the draft than commit themselves to a total of 8 years of Active and Reserve training. They are not convinced the draft will get them, even though Maj. Gen. Lewis B. Hershey, Director of Selective Service, has said that "in the long view practically every young man must expect to be called upon for some kind of service in the Armed Forces."

Many young men do not like the idea of committing themselves to spend their vacations, or part of their vacations in uniform each summer for 7½ years. Some employers, it is true, are paying employees their salaries for their 2-week summer training and are allowing some vacations in addition. However, most small businesses cannot afford this and even some big ones do not follow this procedure.

And finally, and most important, the entire value of the 6-month program will, in the long run, be no better than the organization of the Reserve and the training it gives in weekly drills and in 2 weeks of summer camps. This training has been totally inadequate and grossly unrealistic in too many cases. It is undergoing major revision; new armories and reserve facilities are being built and there is more hope now than there has ever been before for the creation of a strong Army Reserve. But this is not assured; only an effective partnership between the Nation's young men and the Nation's armed services can provide it.

The Boxcar Shortage

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Wednesday, April 25, 1956

Mr. O'MAHONEY. Mr. President, in the issue of April 12, 1956, of the Green River Star, Mr. Adrian Reynolds, the editor of the paper, published a penetrating analysis of the seriousness of the shortage of railroad boxcars. The mater is of such importance that I ask not only that the analysis may be printed in the Appendix of the RECORD, but that a copy of the article be filed with the Committee on Interstate and Foreign Commerce.

There being no objection, the article was ordered to be printed in the RECORD, and to be referred to the Committee on Interstate and Foreign Commerce:

WHY NOT RAIL-TRUCK SERVICE TO MEET NATIONAL SITUATION AND IMPROVE FREIGHT SERVICE?

(By Adrian Reynolds)

Being a former railroader, and being as Green River interests are so entwined with railroad well-being, I am naturally interested in railroad problems. At the present time, much attention is being given to the freight-car shortage. The seriousness of this shortage becomes more apparent when we read of a shortage of steel that will slow production of freight cars and thus threatens to prevent solution of the problem. We have local interest in this because of our very important industry using a large number of boxcars, although I understand the most serious trouble seems to be moving grain and lumber.

From my own experience in various positions on the railroad, I have long been concerned with the loss of less-than-carload or so-called package-freight business from the railroads. At times when it was necessary to search for suitable cars for the loading of wool and other locally produced commodities, it often came to my attention that freight cars often are required for this less-than-carload service to haul but a few hundred pounds.

Of course, all such freight must be accepted and handled by the railroads—which is as it should be—to serve the public, but in many instances railroad highway vehicles often could be operated more economically and speedier, giving faster and more satisfactory service, an important matter to places away from freight terminals. But, at the same time, such usage would release large numbers of boxcars for handling of carload traffic.

There are, however, various roadblocks in the form of Interstate Commerce Commission imposed restrictions such as so-called prior-rail-haul or key-point requirements or limitations that prevent railheads from utilizing highway vehicle service when justified to avoid wasteful use of boxcars and to render service.

At present, the railroad is required to load and package cars daily from Ogden and Salt Lake City to Green River and Rock Springs, even though the amount of merchandise in each car is small. I believe a single substitute highway vehicle would handle these shipments and serve merchants and other consignees of freight, including those at Evanston and other intermediate rail points, with better and faster service.

Similarly, peddler cars, i. e., cars stopping to unload freight at various towns, are handled westbound, all adding up to wasteful use of approximately 75 cars per month or about 900 cars per year in this relatively small service area. These freight cars are tied up 2 or 3 days each to handle these often small amounts of merchandise business, but could be put to better use if loaded with soda ash, lumber, grain, or other commodities in carload service.

Such Interstate Commerce Commission restrictions might have been justified several years ago, but certainly any restrictive regulation interfering with full and efficient use of the freight car supply and interfering with fast service is outmoded and without justification. This becomes more apparent when the problem is considered in relation to the national boxcar shortage.

Many Wyoming shippers feel this freight-car pinch and farmers, small-timber operators, and other shippers throughout the West are suffering financial loss directly or indirectly because of the freight-car shortage.

Reportedly, some Members of Congress are recognizing the seriousness of the situation and are investigating it. Up to now, I have not seen any report that they have any knowledge of various contributing causes, including that I have mentioned, and which obviously could be corrected by the ICC without delay.

From my observation and inquiry, our local wasteful use of rail cars and the possibility of a more practical and modern substitute railroad vehicle service is similar to that in other areas, and allowed some railroads. If our little area shows such wasteful use of approximately 900 cars annually, it is not impossible to accept the estimate of the loss of the use of at least 100,000 boxcars annually in the Nation, needlessly used in package car- and peddler-car service, which could be made available to ease the carload shipper requirements and aid in relieving the car shortages, which affect all of us in one way or another.

In fact the matter is serious enough, despite its local effect, to warrant congressional investigation.

Clayton E. Freeman

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks I wish to include an editorial which appeared in the April 19, 1956, issue of New Jersey's Newark Evening News extolling Mr. Clayton E. Freeman, a resident of the town of Glen Ridge, N. J., and an outstanding American. Mr. Freeman, who has been known for his interest in civic and community affairs, has lent himself unsel-

fishly to the service of his fellowman. It is indeed a fitting tribute to a very deserving individual:

TO AN OLD FRIEND

On hand was a boyhood friend and fellow worker he hadn't seen in 40 years. A congratulatory telegram came from President Eisenhower. A sketch, This Is Your Life, was performed by a cast of old friends who know him best. All were joined in what must have been for Clayton E. Freeman a heartwarming tribute by his fellow townsmen of Glen Ridge.

Mr. Freeman had been lured to this hometown testimonial under palpably false pretenses. He was there, ostensibly, to introduce an old friend, United States Senator H. ALEXANDER SMITH, at a public meeting. Instead he found 650 friends and neighbors assembled to make him the principal of the affair. They must know by this time, though, that their pleasant deception has been forgiven.

This was the Battalion Forum's way of expressing its warmth, regard, and friendship for a man whose useful life has been devoted in such generous measure to the public good. They didn't call it Clayton Freeman Night, but it was. And for Glen Ridge, no less than "Essex County's first citizen," it was an occasion to be remembered.

The Way Things Are

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks I include in the RECORD syndicated column appearing nationwide titled "The Way Things Are," by Irene Corbally Kuhn. The distinguished New Jersey State newspaper, the Newark Star-Ledger, carried the column on Saturday, April 21. The article follows:

THE WAY THINGS ARE

(By Irene Corbally Kuhn)

If I were a parent with a son at Princeton, I'd sure want my tuition money refunded. Recent student behavoir there indicates that the higher education, as practiced at Old Nassau is pitched to the kindergarten level. A few years ago Princeton undergraduates distinguished themselves by swallowing live goldfish. This year they are making the embarrassed but impotent university administration and the outraged alumni swallow a live, convicted perjurer, Alger Hiss. Something called the American Whig-Cliosophic Society has invited Mr. Hiss to talk to them on April 26.

Mr. Hiss, for those who came in late, will be remembered as the slick smoothie who rose so high in Government in the Roosevelt administration that he was virtually Mr. State Department. He was a man so intellectually able and with so many powerful friends and connections that it was a terrible shock to all Americans when he was accused of being a Communist agent. Americans just don't expect men with university degrees, high-type intellectuals, to be Communists. Why, it's like being called a Communist yourself to have a fraternity brother or someone high up in your own Government accused of being a Red—especially when the then Secretary of State, Mr. Dean Acheson, stood right up for him and said, "I will not turn my back on Alger Hiss."

Nevertheless, Mr. Hiss was convicted in 1951 of perjury for denying he had passed secret Government documents to Whittaker Chambers, another intellectual, but not considered as high-type-like as Mr. Hiss. Chambers was an admitted and repentant Communist who had been a courier for a Soviet spy apparatus.

The elegant, arrogant Alger might have got away with it if he hadn't pressed his luck too far and brazenly sued Chambers. It was then that Chambers, who had a few tricks of the trade left from his Communist espionage days, produced the "pumpkin papers," rolls of compromising microfilm he had kept hidden inside a pumpkin on his farm against such a contingency. The jury believed Chambers' evidence, and the slim and elegant Alger exchanged the diplomat's striped-pants uniform for the convict's stripes in the pokey for a 5-year term, shortened for good behavior. His parole ended last year, and now he is going to tell us, courtesy of Princeton, all about "The Meaning of Geneva."

As if we didn't know.

However, instead of getting mad at the wet-eared Princeton lad with the euphonious name of Bruce D. Bringgold, the debating group president who issued the invitation to Hiss, I think I'll just reserve a few sneers for the management.

When youths, still in their teens, living on parental allowances and bounty, behave in college like irresponsible, publicity-seeking jerks, it is ridiculous for the college administration to treat them as adults, and wash their hands piously of responsibility for their actions. But that's just what Princeton's president, Dr. Harold Willis Dodds has done. "The university administration believes it unwise to take the responsibility for the decision out of the hands of the student group that issued the invitation," he said.

The view that college undergraduates should be allowed to get away with any kind of stupid, irresponsible thing they feel like doing is a basic tenet of modern egghead philosophy. It's an extension of the extreme view the ultraprogressive educators have imposed on teachers everywhere for 25 years that children should be allowed to run hog wild and never be disciplined lest their growing little egos be stunted.

It must be that Princeton has a goodly number of undisciplined men with disorderly minds, for a straw poll of the undergraduate student body, and of faculty members, indicates that both favor the scheduled address of Hiss, the convicted perjurer.

One of the hallowed buildings on the Princeton campus is Nassau Hall, built 200 years ago, in 1756. It was a barracks and a hospital, during the American Revolution. It was a meeting place of the Continental Congress from June to November 1783.

Princeton doesn't deserve either hallowed building or hallowed memories. As New Jersey Congressman T. JAMES TUMULTY said, "'Old Nassau' will henceforth be 'Old Nausea.'"

Statement of Hon. Thomas J. Lane, of Massachusetts, in Support of H. R. 10344

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid statement made by our colleague and my very good friend from Massachusetts, Mr. LANE, in support of H. R. 10344, introduced by Mr. LANE—

To establish the concurrent jurisdiction of the Federal Government and the States and Territories with respect to sedition against the Government of the United States, States, Territories, and their political subdivisions.

Which statement was made April 20, 1956, before Subcommittee No. 1 of the House Judiciary Committee.

There is no Member better versed on the subject matter of H. R. 10344 than our distinguished colleague from Massachusetts, Mr. LANE. I might also say there is no Member of the House more devoted in the performance of his duties to his people than my distinguished friend, Mr. LANE, of Massachusetts.

The bill which he introduced, and the statement he made in support of it are evidence of the fine character of service which the gentleman from Massachusetts [Mr. LANE] renders.

The statement follows:

STATEMENT OF CONGRESSMAN THOMAS J. LANE, DEMOCRAT, MASSACHUSETTS, SUPPORTING H. R. 10344, "TO ESTABLISH THE CONCURRENT JURISDICTION OF THE FEDERAL GOVERNMENT AND THE STATES AND TERRITORIES WITH RESPECT TO SEDITION AGAINST THE GOVERNMENT OF THE UNITED STATES, STATES, TERRITORIES, AND THEIR POLITICAL SUBDIVISIONS," SUBCOMMITTEE NO. 1 OF THE HOUSE JUDICIARY COMMITTEE, APRIL 20, 1956

Mr. Chairman, in recent years we have witnessed a gradual erosion of States rights.

It goes without saying, that only the Federal Government can carry out certain functions, but the growing tendency to take over more and more authority, denying to the States even the right of cooperation, will lead to a topheavy centralization of power.

Amendment 10 to the Constitution provides that "The powers not delegated to the United States by the Constitution nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Under the Smith Act, passed by the Congress, the Federal Government is empowered to try and punish those who are accused and are found guilty of sedition.

The law does not specifically prohibit the States from taking such action under their own laws.

The Supreme Court of the United States has recently decided, but with a strong dissenting opinion by the minority, that only the Federal courts have jurisdiction in cases involving sedition.

This has paralyzed the initiative of those States which, under their own laws, have been most active in prosecuting sedition within their own borders.

In turn, this has weakened our total efforts to protect ourselves from the Communist conspiracy, and has had the effect of giving aid and comfort to the enemy.

The Communists are expert in exploiting every legal loophole to their advantage, and will continue to do so as long as we permit them to claim a conflict between Federal and State laws of this issue. Any division plays into their hands.

Obviously, State officials are more familiar with certain aspects of the problem, as well as having the additional facilities to prosecute sedition.

Furthermore, there is a precedent for joint Federal-State action.

Under the Volstead Act, both authorities moved in on violators of the prohibition laws.

Unfortunately, the Smith Act was loosely written.

This fact is generally recognized as a result of the Supreme Court's interpretation.

To compensate for this omission, several bills are up for consideration by the subcommittee.

One of them is H. R. 3 "to establish rules of interpretation governing questions of the effect of acts of Congress on State laws."

I submit that is language altogether too general.

It states "that no act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect."

This covers all legislation.

It could have far-reaching applications, establishing the principle of precedence and priority on the part of the Federal Government "to occupy the field" if Congress so states. Without delegation of that power to the Federal Government by the States through amendment of the Constitution.

Secondly, H. R. 3 provides that, in cases of irreconcilable conflict between acts of Congress and State laws, the Federal law shall invalidate those contradictory provisions of the State laws.

We are primarily concerned here with the problem of sedition alone, and not dealing with possible legislation in which there might be an honest difference of opinion among our people, or progressive legislation which the several States might enact without fear of being subordinated in all cases to the will of Congress.

Again there is no conflict on the issue of sedition.

We need and want the most effective employment of our courts to try and punish sedition.

Acting in concert, we shall make sure that no Communist conspirators will escape.

Speaking in support of my bill, H. R. 10344, I want to emphasize that it is specifically limited to sedition.

And that it will establish a concurrent jurisdiction as among the Federal Government, the States, the Territories, and their political subdivisions, to make certain that the laws and the courts give us full protection against those who conspire to overthrow the Government by force and violence.

To ferret out the Communist intriguers, there must be specific authority under both Federal and State laws for this purpose.

H. R. 10344, by establishing concurrent jurisdiction with respect to sedition keeps us well on the target.

It avoids the suggestion that Congress might expressly provide for the exclusion of all State laws on the same subject matter.

It clearly removes any possibility of judicial conflict of authority in dealing with the Communist danger and without establishing rules of interpretation that might be used in similar circumstances, and regarding other issues as a subterfuge for weakening our cherished institutions.

I submit that H. R. 10344 is strictly to the point.

Military Reserve Week

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. KEATING. Mr. Speaker, George Washington once said:

Every citizen who enjoys the protection of a free government owes not only a proportion of his property but even his personal services to the defense of it.

Never before in our history was there more truth in those words than today. Though we hear a great deal of talk about changing Russian policies, the plain fact of the matter appears to be that we are in the cold war for a good long time. We must, therefore, prepare ourselves for the long haul. We must be patient. And the only thing that will defeat the patient plotters of the Kremlin is our own patient readiness.

Reserve training is the anwer. It enables us to build up a large, nonveteran Reserve through military training that is ready for the worst, yet pursuing the productive ways of normal, civilian life.

If this program is to succeed, its merits and purposes must be understood by the young men and their parents who will be involved. That is one of the main aims of Military Reserve Week.

Under leave to extend my remarks, I am including questions and answers on the Reserve program and Facts on Drafts Odds issued by the National Security Committee. This is the kind of material which I hope will be brought to the attention of all young men of this Nation during Military Reserve Week:

QUESTIONS AND ANSWERS ON THE NEW 6-MONTH RESERVE TRAINING PROGRAM AND MILITARY RESERVE WEEK

Question. When is Military Reserve Week?

Answer. April 22–28, 1956.

Question. What is Military Reserve Week?

Answer. Military Reserve Week is designed to focus attention on—and spur enlistments in—the 6-month Reserve training program.

Question. What is the new 6-month Reserve training program?

Answer. This is a new and practical concept of military service that enables young men to fulfill their military obligation by being full-time civilians and part-time soldiers. It enables young men to: (1) Plan when they want to go on active duty, and (2) fulfill their military obligation in their hometowns. The 6-month training program was authorized under the Reserve Forces Act which became effective on August 9, 1955. The purpose of this act is to assure those Ready Reserve Forces essential for our Nation's survival.

Question. How does this program work?

Answer. Young men between the ages of 17 and 18½ may enlist in the United States Army Reserve for a 6-month active duty training course. The basic training usually is done at the Army camp nearest his home. After completing the training course, the young man returns to civilian life. From that point on, he has only two obligations: (1) To train 2 hours a week at his local Reserve center; (2) to put in 2 weeks of training at an Army camp each year until he has completed a 7½-year period of Reserve duty.

Question. What opportunities does this program give to plan for the future?

Answer. By taking part in this program, a young man becomes draft proof. He can make definite plans for his education, for a job, for marriage and a family, but he must volunteer before he reaches age 18½.

Question. Can a young man fulfill his military obligation through this program?

Answer. A young man can fulfill his patriotic duty and his legal obligation—by serving only 6 months in a training camp, instead of the 2 years required of draftees. He is paid for all duty performed.

Question. Can he choose his unit?

Answer. Depending on a young man's aptitudes and the unit vacancies available, it is possible for him to pick the exact job he wants to be trained for during his 6-month basic course.

Question. Does a young man taking this program improve his job prospects?

Answer. Without the draft threat hanging over his head, a young man is a better prospect for an employer. The employer knows he is not going to be pulled off the job for 2 years service just when he becomes useful—the employer can plan on facts, not chance. What's more, the technical skills a young man learns in this program can help him to advance faster on the job.

Question. How does this program help him to make his educational plans?

Answer. A young man can enlist in the 6-month training program before he is 18½ but can postpone the 6 months' training until he graduates from high school. After his 6 months' training his further education will not be interrupted.

Answer. He must join before he is 18½ years of age, even though he does not actually go to training until age 19 or even 20. The decision must be made before age 18½ or he becomes liable to be drafted for 2 years after age 18½.

Question. What is the purpose of the Reserve Forces Act of 1955 and the 6-month Reserve training program?

Answer. Its purpose is to improve the measures by which our Reserve Forces may be so organized and trained that in the event of war they can be mobilized quickly to augment the Active Forces in combat and to carry out defense and internal security missions in the United States.

Question. Where will the 6 months of active duty for training be conducted?

Answer. The following installations will be utilized for basic training for the 6-month training program: Fort Ord, Calif.; Fort Jackson, S. C.; Fort Knox, Ky.; Fort Leonard Wood, Mo.; Fort Bliss, Tex.; and Camp Chaffee, Ark. Specialist training will then be conducted at appropriate specialist schools.

Question. Where will members of the reserve components train after the 6-month Reserve training program?

Answer. Training programs will be conducted in facilities such as Reserve training centers and armories, located throughout the country consistent with the need and budget approval. Reserve facilities of the Army will be expanded and new ones constructed. Annual active duty for training programs will be conducted at installations of the Active Forces, or in other military facilities as required to provide the necessary training.

Question. What tangible benefits accrue from Ready Reserve training?

Answer. The individual who participates in Ready Reserve training is entitled to pay. In addition, he is periodically considered for promotion and he may by satisfactory participation over a period of years qualify for retirement.

Question. Will a member of the Army Reserve who is precluded by distance, geography, or occupation from a 48-drill program be subject to the compliance measure for failure to participate?

Answer. No. He may apply for 30 days' active duty for training each year. This does not apply to the National Guard, all of whose members are required to attend scheduled drills and active duty for training. In proper cases, members of the National Guard may attend drills with units other than their own, perform appropriate duty, or obtain constructive credit for attendance.

Question. Will there be an opportunity for young men enlisting in the 6-month Reserve training program to qualify to become officers?

Answer. Yes. The act establishes the basis for such persons to attend officers candidate schools.

Question. Is the 6 months' trainee entitled to any veterans' benefits?

Answer. When a young man enters the 6 months' program, his enlistment is for "active duty for training" and as such he is not

considered a member of the Active Forces. He is, however, eligible for certain benefits such as reemployment rights, hospital and medical care, serviceman's indemnity payments, disability retirement, death gratuity, Veterans' Administration compensation or pension, payment for accrued leave, and Federal employees' compensation.

Question. What will be the function of the National Security Training Commission insofar as young men entering the 6 months' active duty for training program are concerned?

Answer. The act provides that the National Security Training Commission shall advise the President and the Secretary of Defense, and shall report annually to the Congress with respect to the welfare of persons performing the 6 months' period of active duty for training. The Commission has no authority with respect to the military training of the trainees. Within 60 days of enactment of this act, the Commission is required to submit to the Secretary of Defense a program containing recommendations for the personal safety, health, welfare, and morale of members of the Ready Reserve while performing active duty for training, including regulations concerning the dispensing of alcoholic beverages on training establishments in conformity with the laws of the several States.

FACTS ON DRAFT ODDS

Contrary to a very prevalent and very erroneous popular belief, today's young American can count on wearing a uniform before he reaches his 27th birthday if he is in good health, mentally normal, and has no criminal record, no children and no critical specialty. He may find himself in uniform even if he does have a critical specialty, or children. That is the conclusion that must be reached after a careful study of recent selective-service actions and military requirements.

It is a matter of very simple arithmetic.

Last year practically as many men without prior service entered the military service as qualified men were added to the selective-service manpower pool. Here are the facts:

There were 1,108,150 men added to the list of selective-service registrants in 1955. That was the total input in what might be called the overall manpower reservoir. Past experience indicates 40.7 percent of these individuals are unacceptable for military service because of physical, mental, or moral reasons. Of this number, then, approximately 657,000 are usable for military service.

Last year 533,000 non-prior-service men enlisted or were inducted. In addition, another 100,000 men (in round figures) enlisted in the National Guard, the Army Reserve, or were senior ROTC students with a contract obligation to enter active service upon graduation.

Roughly then, the military accepted 633 for every 657 men that became available. To put it mildly, these odds should not encourage a young man to the belief that he will not be called upon to don a uniform.

We do not mean to imply that all of the men that come under selective service last year are now wearing a uniform. They are not. We haven't touched as yet upon deferments, or upon the relatively small backlog that exists in this many-compartmented manpower reservoir. But if world conditions remain as they are at present, and if these men are qualified, they can certainly count on military service of some type before they reach age 27.

Maj. Gen. Lewis B. Hershey, the Director of Selective Service and probably the Nation's greatest authority on this country's manpower situation, recently made this statement:

"In the long view practically every young man must expect to be called upon for some kind of service in the Armed Forces."

Taking an entirely different approach to the picture, we see that Selective Service, in their annual report, list 1,542,189 men registered but not examined, as of December 1, 1955. Let's presume that we have a son who turned 18 years of age last year and registered for the draft. He is one of the men in the above pool.

What are his chances for military service, providing he does not volunteer?

If he has no physical, mental, or moral defect, he will be one of some 914,000 men remaining after the first screening. If this group are like their brothers were last year, well over 300,000 of them will enlist in one of the services, and thus remove themselves from the selective service available list. This leaves somewhere in the neighborhood of 600,000 in the pool with our son.

All of these men, however, are not going to be available. If the current rate of enlistment in the National Guard and the Army Reserve is maintained, the above figure will melt to less than 450,000 men. Another group will be deferred for one of the following: Dependency (III–A); students (I–S); occupational deferment (II–A); agricultural deferment (II–C); sole surviving son (IV–A); officials (IV–B); aliens (IV–C); and ministers or divinity students (IV–D).

Our son in now left in a pool that numbers slightly over 300,000. How many of these men will be called?

There are two major factors that determine this number. One is the world situation and the required strength of the services. Here again the wheel of chance spins rather lopsidedly for our boy if he wants to avoid military service. Most readers will admit that there are few signs of a bettering world condition as far as military requirements are concerned. The other variable that is difficult to predict accurately is the reenlistment rate of prior servicemen. If this rate is maintained as it is at present, and if there is no requirement for a buildup in any of the services, slightly less than 200,000 men will be drafted in 1956.

It is possible that our son will be in that pool for 7 years, waiting, never knowing for sure when he will receive his official "greetings." And if he is deferred, he remains in the pool until age 35, a total of 17 years. Each year the odds get tougher by reason of the fact that the older men are called first. The closer our son gets to age 26, the higher his priority on the draft board's list.

Look around your own neighborhood. Take one age group, those men born in 1931. They are, or will be 25 years of age this year. A study made by the Selective Service System as far back as 1953 showed that over 56 percent of them had been, or were in the military service. Today the percentage is higher.

It is doubtful if you know a man 25 years of age who has not had military service, and who is acceptable. If you do, he has been deferred because of occupation or dependency. And he is still sweating out the draft—still liable to be called, and will be to age 35.

From all of this it is apparent that the only sure way for a lad 17 to 18½ years to be able to plan his future, is to complete his military service as early as possible. The United States Army Reserve offers just that opportunity.

The Halo Is Slipping

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 25, 1956

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Halo Is Slipping," published in the Sapulpa, Okla., Herald of February 19, 1956, relating to the veto of the natural gas bill and other matters.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HALO IS SLIPPING

That jarring and inexplicable shake experienced by Oklahoma day before yesterday was not an earthquake, as so many of our residents thought.

It was the thud of the halo, the tinsel, and the gilt falling from the shoulders of the President when he vetoed the vital gas bill under as extraordinary and out-of-focus bit of logic as ever assailed the hopes of the American race.

We lost a national hero and gained another politician.

It was a poor trade for America.

The reasons advanced by the President for his veto were, undoubtedly, the lamest ever advocated by our past rulers, or, at the best interpretation possible, equally as lame as any of bygone years.

It brings into focus the thought that legislation under the GOP set of rules is not based upon intrinsic merit per se but rather will be based upon the current interpretation of what is the politically expedient thing to do.

The pattern of philosophy which for many years shelved the Republican Party now comes back into view.

It was momentarily obscured when President Ike went into office.

His voice seemed to be that of a new vein of governmental philosophy in the ranks of the GOP.

Then came Dixon-Yates, Hells Canyon, and Ezra Benson.

And now the gas bill.

Vetoed because of arrogance.

Arrogance from an obscure source (fully documented by a Senator seeking a face-saving episode to change his vote) and which was not revealed until the time came for a desperate last-second maneuver to defeat the bill.

It shapes up as an interesting year—what with elections slated.

And could be the turning point.

History might record this the "Pickett's" charge in the realm of political warfare, a la GOP.

A lot more hopes and aspirations might have been gassed by this ill-advised veto than appears on the surface.

No, sir; that thud Oklahomans felt wasn't an earthquake.

It was a falling halo.

Alumni Warns on Hiss Invitation

EXTENSION OF REMARKS

OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I am pleased to insert in the RECORD the following editorial from the Hudson Dispatch, a distinguished newspaper in New Jersey:

ALUMNI WARNS ON HISS INVITATION

Princeton Alumni Association of North Jersey has warned Whig-Cliosophic Society, an undergraduate Princeton University organization, to think it over before going through with the invitation to Alger Hiss to speak before the group on April 26 to appraise the accomplishments at the Geneva

summit conference last July and compare same with the results of the Yalta session, the last of the World War II international meetings of the big three attended by Franklin D. Roosevelt.

In a half-page advertisement in Daily Princetonian on Friday, placed by the executive committee of the alumni unit, the Whig Society was told that if the invitation was not recalled and Hiss was allowed to talk at the meeting, it would hurt the raising of funds for unrestricted use of the university sponsored annually by the alumni.

The university officials have refused to interfere with the engagement despite protests from various sources. This position of "neutrality" by the university was upheld by the Undergraduate Council, which represents the students. On Thursday, New Jersey Department, American Legion, urged students to cancel the Hiss invitation.

In the meantime, Congressman T. JAMES TUMULTY, of the 14th District, reiterated his censure of the university officials for failure to stop the Hiss appearance.

Replying to taunts in Daily Princetonian that he was using the Hiss incident as a "rabble-rouser," the representative said again that the university officials should prevent the appearance of Hiss. He thought that there might be a sinister move behind this action of the Whig Society. He wanted to know who was responsible for getting the Princeton club to invite Hiss.

"I am convinced," he said, "that somebody wants Hiss there for a purpose and is using Princeton as a backdrop. If the faculty refuses to take any action to bar the speech, it will be a detriment to the university."

It may be that the representative's suspicion that there is a sinster source behind the Hiss invitation is well founded. It may not just be a spontaneous action by a naive undergraduate debating society.

We reiterate that Alger Hiss, only recently out of prison after serving a term for perjury, should not be allowed to address an undergraduate group at Princeton University or on any other campus. The Hiss case has more serious implications than his being found guilty of perjury. The perjury consisted of his denying he clandestinely arranged for secret papers to be transferred from the State Department at Washington to Whitaker Chambers, an admitted courier of Communist undercover agents. The name of Hiss is the very symbol of the subversive Communist activity in America, even though he was not convicted as a saboteur or subversive.

Since the trustees of Princeton University will meet on Friday, Congressman TUMULTY has suggested that Gov. Robert B. Meyner, an ex officio member, urge that body to overrule the Whig Society's action on Hiss. Seems like a good suggestion.

Principle or Pauperization

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a very interesting editorial that appeared in the National Tribune-The Stars and Stripes, April 26, 1956.

The subject matter is one that is of vital interest to each Member of Congress and deserving of thoughtful and studious attention of all Americans:

PRINCIPLE OR PAUPERIZATION

The Bradley Commission, appointed more than a year ago by President Eisenhower to study and report on nonmedical veterans' benefits, has at long last released its report, and, as frequently predicted in this column, it confirms the worst fears of informed former servicemen and compares only with the proposals made nearly 25 years ago by the infamous Economy League. The Commission's findings are to be given to the President. If, as contemplated, the Chief Executive calls upon the Congress to enact the recommendations into law, and if the legislators are constrained to do so, the veteran class, as such, would be as dead as a dodo.

It would be impossible here to analyze completely in one writing the devastating extent of the group's conclusions. We have in this issue attempted to brief the 415-page report for the information of our readers, and, as events indicate, we shall doubtless have much more to say about the whole sordid business, because the entire substance of proposed treatment of this Nation's saviors and their dependents in future is as typically un-American as is the socialistic processes indulged in by Soviet Russia. Service-connected or not, every benefit to the veterans of this country, and to the dependents of their dead, would be geared to need. Those whose disabilities are not proved to have been service-incurred would, if the findings of the Commission are approved be tied in with social security. All distinctions as between the man or woman who served the country in war, and those who for any reason did not, would be wiped out, and a new deal would be built around service in the permanent Armed Forces with rank and length of service as the guiding principle.

There are to be further findings presented in addenda to the published report that has gone to the White House where its present content is fully known. Spokesmen for organized veterans have been thoroughly briefed, as promised, but with no right to interpose objections. Senate leaders, according to General Bradley, the Commission head, seem presently to be uninterested but the House Veterans' Committee has been fully advised of the report's content. We anticipate that most Congressmen who have the interests of war veterans at heart will agree with us that in its studies the Commission demonstrated a total disregard for the sacrifices that war entails and that its conclusions constitute a gross insult to those who have saved this Nation and its cherished institutions from enemy rape but who managed to return practically unscathed to civilian pursuits. We do not have nor would we offer any protests to proper care for discharged draftees, or enlistees—they, to, have their rights—but we do have a very high regard especially for those older veterans and their dependents who fought and won their wars without enjoying any of the extended privileges that had their advent with the end of World War II fighting. These classes of veterans proved their citizenship without regard to special inducements such as seem to have had the greatest bearing upon Commission thinking, and they will very properly resent the philosophy voiced in the Bradley recommendations. These people, according to the report, will all be poured into the social security melting pot along with the highly paid munitions and shipyard worker who was exempted from carrying a rifle and with the craven individual who somehow managed to avoid war service. Civil workers have earned and paid for their security insurance but this proposal, regardless of assertions to the contrary, would favor the coward over the lonely Joe who did his wartime duty, and the widow of the general or admiral would be treated with far more generosity than the now little old lady who lived from hand to mouth while her man was away at war furnishing what little he could from his meager pay to make up a limited allotment to keep her alive. We cannot agree that this can be accepted procedure in a land of plenty.

For one thing we must commend the Bradley Commission. It did adhere strictly to the scope of investigation sought by the President when he named its members and dictated its duties. The study was most thorough along lines calculated to make Mr. Average Citizen believe that veteran costs will eventually be unbearable and that he who did not actually suffer injury or disease in uniform will wreck the national economy. And it sought to sell the false bill of goods, so often heralded these days, that the farmer serviceman lives in a land of milk and honey whereas he has no more claim upon his fellowmen than any other person who approaches the age of fear engendered by insecurity. We also see good in the report that found more realistic payments should be made to the badly disabled and that the family man requires more aid than one who enjoys single blessedness, but the failures in the recommendations tie in the false suppositions that were followed.

Significant changes have taken place in society in recent years, the probers say. True, there are more of us and we have more of the world's goods, but there have been no fundamental alterations in our way of life, there will always be the rich and the poor, the good and the bad, the industrious and the indolent; it is false idealism to attempt to place all in the same social pot and let it boil. Veterans and their families will soon be in the majority, they say. That is absolute rot. So long as we have wars, there will be more veterans, but they have always been and will always be in the minority unless a plague halts a population growth and a universal draft is necessary. Conditions of military service have bettered, it is asserted, but while they have lessened the hazards and reduced death rates, a dead soldier is still just as dead as ever and modern weapons have made the fighting of wars more horrible and their aftereffects more lasting both physically and mentally. And, certainly, new conditions as defined can have no relation to veterans of our earlier wars. It is alleged that veterans are better off economically than nonveterans; in spite of methods followed in Commission studies, we can easily and successfully challenge that finding. Changes in security requirements, it is true, do call for larger armed services, but that does not make peacetime duty as hazardous as service in wartime. Spending, as charged, has been stepped up, but the care of the veteran class is as much a part of the costs of war as are the guns that kill, and it appears we still have enough money in the till to rehabilitate the world, including those enemy countries that hatched the wars in the first place. The Nation, we agree, has been generous to its defenders and their loved ones, and, for a time, costs will mount in maintaining that generosity, but that is no argument for a change in national policy that would detract from the demonstration of patriotic zeal, and one that has worked so well since the country's birth, and to substitute for it a philosophy that so levels off all factors that draft-dodging would be considered an honorable profession.

If, indeed, it should be agreed that the entire system of dealing with war veterans must be overhauled—and we cannot for a moment see any justification for such a demand—we would still consider the proposals of the President's Commission unthinkably cruel. When General Eisenhower said a year ago that he was in full accord with the pension policy followed by the United States since the Revolutionary War, he must have uttered the words with tongue in cheek or he could not have instructed

his Commission to come in with the sort of findings it has returned; and if anybody questions that statement, let him read, as General Bradley did last week, somewhat apologetically we thought, the injunctions given to the factfinders on March 5, 1955. The seven-man group could not do other than it did while engaging in its studies with the help of $300,000 and a professional and administrative staff of 54 members. If its conclusions were faulty and its assumptions unsound, it is because its directives were restricted. But if veterans' benefits and the treatment of dependents were to be given an entirely new approach, the age factor, which was not considered, should be the most important of all elements, and a distinct starting point should be found. From Civil War dependents on down to veterans of the Korean war and their loved ones, all are to be given exactly the same treatment under the newly proposed arrangement. That is as arrogant as it is preposterous. It is equivalent to denying a person insurance, after his premiums are fully paid, and only because he purchased some other type of protection. It makes paupers out of men and women who have earned the right to every consideration their country can afford to give them. It is faithlessness personified, base ingratitude, and dishonest from every standpoint. Promises made should be kept if our countrymen would maintain their decency and the Government its honor.

As greatly as any others, younger groups of veterans are as much to blame for the threat that faces their older comrades today as are any politicians, public servants or other despoilers of their earned privileges. They were weaned on the sour pickle that was voiced so often when they entered uniform in recent years, "Citizens first, veterans second," and they came to attach to the expression something never intended. By their ready acceptance of some of this strange new philosophy, which they will cast aside in abhorrence if or when they, too, reach an hour of need, they have given credence to a false theory that one who seeks Government aid after full and unselfish service to country is diluting his citizenship. The record, of course, speaks for itself. Most of the older war veterans now living proved their love of country before Junior was born.

A short time ago President Eisenhower told the leaders of his political party that regardless of what he does and irrespective of what others might think, whatever he approves will be based upon sound principle and his belief in the right. The next move is up to him. The Bradley group has made its findings and has recommended courses to be followed. They are in most part totally unacceptable to the veteran class. The Chief Executive can disregard them in whole or in part, or he can ask that the Congress enact them into law. On that decision rests the conclusion as to whether this Nation is to be requested to believe in high endowments or whether it will hereafter be asked to resort to dollar expediency and the pauperization of its warriors.

An Address by Former President Herbert Hoover

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address delivered by former President Herbert Hoover before the Inter-American Bar Association, Dallas, Tex., on Monday evening, April 16. In this speech Mr. Hoover has sketched briefly and concisely a penetrating picture of the "world experiences with the Karl Marx way of life."

WORLD EXPERIENCE WITH THE KARL MARX WAY OF LIFE

(Address by Herbert Hoover)

I am naturally awed before a convention so representative of the legal profession from the whole Western Hemisphere.

I am not, however, going to attempt to improve your legal minds. I give you this reassurance, lest you fear that I might try reprisals from the brainwashing that I have had continuously from your profession for nearly 60 years. But every lawyer, like every engineer, by the nature of his profession, is interested in every phase of government, of economics and of social life—or he ought to be.

OUR COMMON PROBLEMS IN THE WESTERN HEMISPHERE

We in this hemisphere have had many problems in common. For more than a centurn and a half, we had a common struggle to shake off colonialism. We have had the problems of maintaining defense of our hemisphere from reassertion of European or Asiatic domination right down to this hour. We have had need to establish our own distinctive form of representative government. And it differs widely from that of our European forebears. We have had to develop new protections to personal freedom on a better pattern than those brought from Europe.

We have had common problems in the development of our natural resources to improve the standards of living, and the general welfare of all our people.

We have sought to make this hemisphere a refuge for the oppressed of all mankind. These problems have haunted us since we began our independence. We have learned much from each other's successes and failures.

ENTER KARL MARX

But a new problem has come across the Atlantic to plague us during the past 50 years. That was the invasion of Karl Marx Socialism. While I do not credit him with the original discovery of this philosophic virus, yet he can be credited as its chief carrier. And today its blight takes many shapes and forms over the world.

COMMUNISM

I do not need to take your time with a discussion of the theory and practice of the Communist variety of socialism. Today it is rotting the souls of two-fifths of mankind. The threat to freemen of Red colonialism, with a supply of fission bombs, needs no emphasis from me. The unity of free nations is the only certain defense.

But the Red citadel in Moscow is right now carrying on aggression against the Western Hemisphere by conspiracies among our fuzzy-minded to overthrow our governments. They compromise a cult of disloyalty. Almost daily do we need pluck out these disgusting things which have crawled into our governments.

For the last year the Kremlin has been exuding peace and good will toward all men. But I have not observed that they have called off these conspiracies and corruptions. In the last month the men in the Kremlin have turned Stalin's face violently to the wall. Their next step to righteousness would be to give us the names and addresses of all his collaborators in the Western Hemisphere.

However, without such a gracious act we can take care of this particular manifestation of Karl Marx—although it is a good deal of a nuisance.

The picture of Karl Marx still appears everywhere in Russia in the place of the old religious icons. Possibly the Russians have not read Karl Marx' writings very attentively. In letters to his friend Engels in January 1869, Marx said: "I do not trust any Russian." Also, he said: "As soon as a Russian worms his way in all hell breaks loose." Possibly in time they will discover that they invented socialism prior to Marx and turn his picture to the wall also.

THE LEGALISTIC SOCIALISTS

But it is on the other forms of socialism that I propose to speak briefly on this occasion. The advocates of these other forms proclam that their difference from the Communists is that they would attain their ends by making use of the legal processes of our free institutions.

Recently a meeting was held in Europe of representatives of legalistic Socialists from different nations. They said that they did not like the Communists. Also they kept Karl Marx's picture on the wall. After all, they maintain his philosophy—only they would tread softly. However, every convention has a right to its own Utopia.

Over recent years the words "socialism" and "Socialist" have become unpopular words in most of the Western Hemisphere. Many of our political parties under the name "Socialist" have declined or have been abandoned. They no longer have the courage to proclaim their principles as does the Socialist Labor Party in England. That party frankly declares that its purpose is "Government ownership and operation of all of the agencies of production, distribution and exchange."

OUR NEW MARXIAN CULTS

Instead of frank advocates, our Socialists have developed new and disguised cults in many of our Western Hemisphere countries. These new cults prowl around under many fronts. They are like hermit crabs. They crawl into our long-accepted phrases and proclaim their sole ownership of human progress. They claim to be "liberals" and "progressives," they vociferously advocate real "democracy" and "public welfare." They have a fondness for the threatening word "action" in the titles of their political organizations.

Our Western Hemisphere nations have stood for the true, and a far more wholesome, definition of such terms and principles, for a century before these hermit crabs were born. And this hermit crab habit is not confined to words and phrases. They crawl into some of our many associations of citizens advancing some cause. Their leadership embraces the Socialist-minded and those who would flirt with Karl Marx. But they include many persons who are genuinely seeking a better world. I do not believe that 1 in 50 of the members of their captive groups detects the disguise of Karl Marx.

However, some of these cults and fronts are less subtle in their phrases. They advocate "managed economy," "nationalization" of a particular industry, and "public electric power."

I could give them another phrase for use by their cult—that is "statism." But the Socialist-minded shy away from such a disclosure of the Karl Marx parentage.

OUR WESTERN HEMISPHERE'S ECONOMIC AND SOCIAL PHILOSOPHY

I suggest to you that we in the Western Hemisphere have developed an economic and social philosophy of our own far different from our old world inheritances. It has brought fabulous blessings to this hemisphere. And for that matter, it is far different from the philosophies against which Karl Marx developed his virus.

I submit to you that our system may be defined as "private enterprise regulated to prevent monopoly and unfair competition."

Freemen can no more permit private economic power without checks and balances than governmental power without checks and balances.

And to my definition I would add that "the state must undertake business enterprises in great national emergency or because the size of the undertaking is beyond the abilities of its citizens."

And I submit to you that this philosophy of economic freedom is an indivisible of all freedoms. You cannot extend the mastery of government over the daily life of men without making it the master of the people's thoughts and souls.

THEIR DISGUISED INFILTRATION

Yet the legalistic Socialists with their disguises claim they can maintain all freedoms except economic freedom. These variegated cults promote creeping socialism through centralizing government and thus weakening the strength of local government. They strive to absorb the income of the people by unnecessary spending and exorbitant taxes.

They seek to continue and amplify the government business enterprises undertaken in crises or in wars after their emergency tasks are completed. Most of these continuing government businesses pay no taxes, seldom pay interest on the taxpayer's capital invested in them or pay any return of the capital itself. Thus by any definition they are unfair competition with taxed and regulated enterprise and tend to drive it from the field.

These cults and fronts work to expand every other form of bureaucratic empire. They divert well-meaning associations into pressure groups seeking for special privilege.

All of which dulls the initiative and enterprise of the people. And it undermines the safeguards of free men.

WORLD EXPERIENCE WITH LEGALISTIC SOCIALISM AND ITS NEW CULTS

The world in our own times has had some experience with these legalistic Socialists and where their cults and fronts can lead.

THE SOCIALIZATION OF ENGLAND

We have witnessed the great attempt legally to socialize England. There it so reduced the productivity of the British people as to contribute to years of so-called "austerity." That was simply a polite phrase to cover their constant reduction of the standard of living of all the people by compulsion from the state. Furthermore, the British Socialists touched the Communist ideal when they passed a law compelling labor to work at jobs designated by the state. Fortunately the British people have revolted from it. But they have inherited continuing injuries to their economic and social life.

THE FRENCH EXPERIMENT

We witnessed another variety of Karl Marx tainted experiment in France. Lenin advocated parliamentary coalitions of the Communists with the Socialists and the other dupes of Karl Marx's disguises. Such was the Front Populaire of the Blum regime. Under it the economic and moral life of France was so degraded as to contribute to the humiliating defeat of France in World War II. France still suffers from its aftermaths.

THE CASE OF THE EIGHT SATELLITE STATES

But there is another experience in legalistic socialism or its cults and fronts in the world of even greater tragic consequence.

The peoples of Estonia, Latvia, Lithuania, Poland, Rumania, Hungary, Yugoslavia, and Czechoslovakia have descended from free men into the abyss of communism. There were many steps in common among them during the years of their descent into slavery. And the impulse which the legalistic Socialists or their fronts gave to their downfall has been too little observed.

I have had occasion to deal intimately with the peoples in many of these onetime 8 nations at intervals over more than 40 years.

The first time was prior to the First World War. I practiced my profession among many of them when they were subject to the old empires of Russia, Austria, and Germany.

The second time was a few years later in 1918 and 1919. Immediately after the First World War, these states had established their independence from the old empires, with constitutional guaranties of personal liberty and representative government. My duty was to relieve a great famine and aid in their reconstruction on behalf of the Allied Governments.

The third time was 19 years later when in 1938 I visited most of them to study why many of them had gone Fascist.

The fourth time was 8 years later, in 1946, when all but 1 of these 8 states had gone Communist and that 1 was on the way. That contact with most of them was on a mission on behalf of the United States Government to relieve the great postwar famine.

THE FIRST STAGE OF THEIR DESCENT TOWARD THE ABYSS

We may first examine the forces in motion in their descent to Fascism. There was a pattern roughly common to all of these nations, except one, in their descent from freedom into the Fascist furnace of human rights. It was not always parallel in timing or in sequent steps.

All these nations made progress in every avenue of life during their early years of freedom after the First World War. But at once the Socialists and their various cults and fronts and the Communists organized fractional political parties with representation in their parliaments. The Socialists professed dislike for the Communists, but they joined them in advocating nationalization of industry and one of their joint slogans was "managed economy." Pressure groups of farmers, of labor, of business grew apace, each seeking parliamentary representation. With these fractional political parties came the next phase. That was impotent parliamentary coalition governments.

The net result of this stage was to create hesitation, uncertainty and fear in every avenue of free enterprise. It made impotent the individual judgment of men. These poisons weakened the initiative, the vitality and the productivity of their people. Unemployment became chronic. More and more statism was injected as its remedy. Coalition governments could agree only on more spending in frantic efforts to care for the unemployed. Debts, taxes and inflation grew apace.

SEVEN OF THE EIGHT NATIONS GO FASCIST

With all these confusions the people themselves, except in Czechoslovakia, welcomed a strong or mild Fascist man-on-horseback with his beatific promises. The Fascists bitterly denounced the Communists but they embraced much from Karl Marx in their programs. And private enterprise was still further eroded away by regimentation.

THE EIGHT NATIONS GO COMMUNIST

Just before the Second World War, Stalin took the three Baltic States with their mild Fascist governments into his Communist bosom by violence. In the latter stages of the war, as Stalin's armies moved westward following the defected Germans, he set up provisional governments in four more of these nations. He agreed with the Western Allies that their ministries should include representation of all the democratic "elements" in addition to the Communists. But when it all washed out, the only so-called democratic elements in these ministries were picked selections from legalistic Socialists. And even these have been expelled or executed.

The last of these nations to go under was Czechoslovakia. It had followed all the patterns except full fascism. It finally fell by a coalition of the extreme Socialists and Communists which seized the ministry and the democratic "elements" escaped or were assassinated or imprisoned.

One cannot say that the legalistic Socialists or their cults and fronts were wholly responsible for the descent of these eight nations into the Communist pit.

But one thing is certain—and that is that from the beginning of their independence, the Socialists and their cults joined with the Communists to sabotage freemen. Certainly the Socialists helped to build the boarding ladders by which the Communist pirates took over the Ship of State. And perhaps the ghost of the Atlantic Charter, by which those nations were assured freedom, now listens to the clank of their chains.

OUR WESTERN HEMISPHERE EXPERIENCE

I believe that if looked at broadly there is a proof of these conclusions within the Western Hemisphere itself. I think you will find it is a fairly general rule that those of our countries which have the highest standard of living and freedom have today shed the most statism. Each of you can name these states for yourself.

THE NET OF OUR WORLD EXPERIENCE

Thus, there are some conclusions that we might learn from these years of world experience with the Karl Marx virus-infected civilization.

Despite many setbacks and all the disguises of Karl Marx, we in this hemisphere have in the main sustained the dynamic incentives and creative energies of regulated economic life. We have thereby made it a better place for the masses of our people to live than anywhere else in the world.

Certainly the exhibits of Karl Marx elsewhere would not indicate that his philosophy has anywhere produced a Utopia.

WHAT OF RELIGIOUS FAITH?

There is far more to all this than just economics. Some people seem to forget that the primary dogma of Karl Marx was atheism and substitution of economic materialism for religious faith. It denies the existence of God. It defiles the ideals and spirit of men.

For 6,000 years, since the beginning of recorded time, every civilized race has believed in a Supreme Being. They have realized that the laws which control the orderly movement of the stars were not economic materialism.

Religious faith is deeply imbedded in our Western Hemisphere civilization. The Sermon on the Mount established the transcendent concept of compassion and good will among men. From those principles have come our moral foundations, our obligations as our brothers' keepers, and our respect for the dignity of man.

I would not have you think that I believe our civilization is perfect, or that we do not have a multitude of problems if we would improve the life and invigorate the spirit of our peoples. But these problems can be solved only by freemen. And I prefer to go forward with the philosophy of Christ to that of Karl Marx.

THE FUTURE OF OUR HEMISPHERE

And there are mighty hopes before us.

The last dozen years have seen advances in science, invention, and technology which amount almost to revolution in our life and world relations.

If we maintain free minds, free spirits, and direct our steps aright, still other new horizons and new frontiers will open to us. New scientific discoveries, new inventions, and

new applications of old knowledge will come to us daily.

These new frontiers give us other blessings. Not only have they taken great burdens from the backs of men and expanded the standards of living of all our people. They have opened new opportunities and new areas of adventure and enterprise. They open new vistas of beauty. They also unfold the wonders of the atom and the heavens. Daily they prove the reality of an allwise Supreme Giver of Law.

South Riding Back Seat

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 25, 1956

Mr. MUNDT. Mr. President, the Aiken Standard Review, published in Aiken, S. C., recently ran a most interesting and thought-provoking editorial on the political problems now confronting the South as the result of its blind allegiance to the national Democratic Party through all the long expensive years of the New Deal and the Fair Deal.

Since this editorial suggests methods whereby the South can once again exercise an important and prevailing influence in our national elections, I take pleasure in calling it to the attention of the country and the Congress. I ask to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTH RIDING BACK SEAT

Senator MUNDT, Republican from South Dakota, was probably trying to stir up trouble in the Democratic Party recently with his statement on the problem of the South and the party.

Regardless of his intentions, he hit the nail squarely on the head in almost every comment he said and especially when he stated "the South is weary of riding in a political automobile which it can never steer."

The South Dakotan, said the restlessness of Southern States as being "straitjacketed" in the grip of "a one-party system which rejects its policies, and resents its political leadership" hit its height in 1952 when four Southern States voted for Eisenhower.

This year, he said, "is likely to witness a similar revolt of Jeffersonian Democrats in Dixie." MUNDT said this group has "about had enough of the Rooseveltian formula of pitching the party policy to attract Northern minorities while relying on Southern docility and political prejudice to furnish over 100 electoral votes in each election."

The racial controversy, he said, is but one manifestation of the "wide-open split" between Northern and Southern Democrats.

"Actually," he added, "There is a whole pattern of programs and policies which Stevenson, Harriman, Kefauver, and the Democratic National Committee offer as 'lures' to Northern voters in big metropolitan eastern cities which are repugnant to the States rights advocates who predominate among Southern voters."

MUNDT said that the Southern resentment at their "one-party political trap" is increased by the knowledge that 8 of the 9 Justices of the Supreme Court who handed down the decision against racial segregation in public schools were appointed by Democratic Presidents.

He said that the recent manifesto of Southern Members of Congress, "if it means anything at all, is a warning shot over the prow of the ship manned by Northern Democrats that the days of docility and blind obedience to the demands of their city-machine associates are over."

While MUNDT's comment may be aimed at stirring trouble in the Democratic Party of the South he has nevertheless called a spade a spade and has gone further in outlining the problem that some of our own representatives and party spokesmen who place seniority and blind party loyalty above the will of the people of this State and section of the country.

Israel Celebrates Eighth Birthday

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. KEATING. Mr. Speaker, while we in the United States marked the eighth anniversary of Israel's independence recently in a state of calm and peace, those within the borders of that embattled nation were also celebrating. But in Israel the birthday was overshadowed by the threat of war and the tension which must necessarily grip a people whose very future hangs in the balance. Nevertheless, with characteristic fortitude and enthusiasm, the citizens of Israel proceeded to give thanks and celebrate the eighth anniversary of the independence which means so much to all men of good will the world over.

Under leave to extend my remarks, I include a short article from Israel Speaks of April 20, 1956, which describes the tension-filled anniversary in the Holy Land:

NATION CELEBRATES EIGHTH BIRTHDAY

Israel celebrated the eighth anniversary of her independence in an atmosphere of tension and expectancy much like that which reigned when the State came into being. In celebrations throughout the country the people expressed readiness to repulse any invasion. Economies marked the external aspects of the festivities, but the people made up in their spirit for whatever material displays may have been wanting.

The traditional memorial ceremony took place on the eve of Independence Day at the military cemetery on Mount Herzl, overlooking Jerusalem and its approaches—the site of battles that took the lives of many of those buried there. The speaker of the Knesset, Mr. Joseph Sprinzak, whose son was among the fallen, addressed the assembly in the presence of bereaved parents and citizens. A guard of honor was mounted by crack paratroopers; eight salvos were fired and the flag was lowered to half mast, lighted by a single searchlight glowing against a backdrop of spreading darkness.

More than 250,000 Israelis watched a parade of defense forces in Haifa on Independence Day. The crowds cheered as jet planes swooped and circled overhead and heavy guns rumbled along the streets. A number of new arms were seen, including a submachinegun, Uzi, designed by an Israeli army captain, which has become a standard weapon in the Israel army. The troops wore their new summer uniform, of olive green khaki, similar to the one already used by Israel paratroopers.

FOLK FESTIVAL

Dancing and singing in the streets, artistic performances, torchlight processions, athletic displays, fireworks, and every other form of popular merriment marked the day. Kol Yisrael transmitted special programs on wavelengths increased for the occasion. Folk dancers representing Israel's many communities performed their ethnic dances in colorful costumes.

There were no elaborate grandstands for spectators this year. Makeshift seating was provided for some 6,000 tourists and 2,000 Israelis. But many of these gave up their seats in a spontaneous movement to enable border settlers to watch the military parade in relative comfort.

The celebrations were not limited to the big cities—there was much merrymaking in the villages, kibbutzim, moshavim, and above all, in the lonely border outposts.

The shadows of war were lengthening over the land, but Israelis hailed their independence, and vowed to defend it with their blood.

Wilkes-Barre Girl Nation's Fastest Key Punch Operator

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Record of Wednesday, April 18, 1956, which discloses that Mrs. Isabelle Langan, of Wilkes-Barre, has been described as the Nation's No. 1 key punch operator which has enabled the Federal Government to have over $10,000 in the past 4 years.

Mr. Speaker, I would like to add my congratulations to this loyal and talented public servant whose remarkable record is a goal toward which others may strive.

NATION'S FASTEST KEY PUNCH OPERATOR CITED

The Nation's fastest key punch operator, Mrs. Isabelle Langan, 25, of 177 McLean Street, has been commended by the Government for her speed which has saved the Government $10,393 in the last 4 years.

Described as a natural born puncher, in which she uses her hands to punch a machine, not pugilists, Mrs. Langan nevertheless is considered a prizefighter for Government economy.

Employed in the Wilkes-Barre section of the Report Processing Branch of the Bureau of Old-Age and Survivors Insurance of the Social Security Administration of the Department of Health, Education, and Welfare located on the ninth floor of the Veterans' Administration Building, North Main Street, Mrs. Langan daily punches out cards with holes at a tremendous speed.

As a key punch operator, she sits at an IBM machine all day long striking the keyboard and producing cards with oblong holes punched in them. The cards become a record of the quarterly earnings of every wage earner in the country.

The Bureau has figured that when an employee punches 240 cards an hour, she has performed minimum requirements. If she punches 350 she is downright superior.

But Mrs. Langan, through her uncanny skill, has averaged over the last 4 years 577 cards per hour. Furthermore, she makes less than 3 errors per thousand cards as compared with 13 mistakes for the average operator.

The Bureau figures the $10,393 was saved in persons who didn't have to be hired, machines that didn't have to be purchased, and mistakes that didn't have to be corrected.

Mrs. Langan earns about $3,300 a year. As a key puncher she is way down on the totem pole of Government employees. But she is living proof that little people can sometimes do big things.

In recognition of her prowess, Mrs. Langan was honored at an award dinner along with 21 other Government employees at a Baltimore Hotel last Friday night. She will receive a cash award of $140 in recognition of her production speed and accuracy. She previously received awards totaling $600.

A graduate of Hanover Township High School in 1949, where she excelled in typing classes, Mrs. Langan has been employed by the Government for 5½ years.

She was married to William Langan, Jr., a Fleetwood Airflow employee, 4 years ago. They have one son, Daniel, 2. Her mother, Mrs. Mamie Stemplewski, lives at Korn Krest.

Mrs. Langan will celebrate her birthday anniversary today.

Continuing the Policy of the United States Concerning Certain International Injustices in the World

SPEECH
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. FEIGHAN. Mr. Speaker, I supported House Resolution 370, introduced by our distinguished colleague the gentleman from Michigan [Mr. BENTLEY]. The able chairman of the House Foreign Affairs Committee has given a most explicit explanation of the purposes of House Resolution 370. He has pointed out that the purpose of this resolution is to make clear the policy of the United States with respect to Germany, Korea, and Vietnam, and the basic policy of our Government toward all people who are today denied human freedom and the right to national independence.

Germany, Korea, and Vietnam all stand as victime of a crude experiment in Russian surgery. Each of these nations has been divided by Russian military action and Communist aggression. Germany was divided during the twilight sleep of the West when the Russians were posing as our allies and when it was believed that a defeated enemy could only be controlled by four-power occupation. The Western powers many years back recognized that the German people had demonstrated a fine capacity for democratic self-government and that there was no further reason to maintain occupation forces in that country. But the cunning Russians who seek neither a democratic Germany nor a representative government in Germany, have continued to occupy a part of Germany and have even set up a stooge government in the part of Germany they occupy for the purpose of carrying out subversive and other illegal activities against free Germany. Thus the Russian Communists alone are responsible for an unnatural and unjust division of the German people.

In Korea we find practically the same set of circumstances applying as those which brought about the division of Germany. The Russians were granted military jurisdiction of Korea north of the 38th parallel until such time as a treaty of peace was arranged with Japan and stability established in the Far East.

Moscow used this advantage granted by the West in order to launch a war of aggression against free Korea and in particular, against its former Allies, the United States, Great Britain, and France. The Communist war of aggression in Korea brought great suffering and hardship to the Korean people. We Americans will never forget that thousands of our youth died a hero's death in the defense of freedom on the cold battlefields of Korea. It is with sadness that we recall to memory the fact that a precarious truce which was arranged in 1953 still recognizes the cruel handiwork of the Russian Communists which continues the division of the Korean nation.

In Vietnam the agents of Moscow got control of the national independence movement which opposed French colonial rule and ultimately brought about a state of war. The same Russian agents were supplied with arms, ammunition, tanks, and soldiers by the Communist Chinese, and their Russian bosses. This same unholy trio brought about a Geneva Conference in which the French Government ceded part of Vietnam to Communist occupation. In the southern part of Vietnam, which remained in French hands, there has lately arisen a great and patriotic leader of the people who is completely dedicated to democratic principles and to government of the people, by the people, and for the people. This new leader, President Diem, is dedicated to the goal of a free, independent, and united Vietnam.

The people of Germany, the people of Korea, and the people of Vietnam seek the common goals of political freedom, self-determination and independence. It is in this spirit that they seek reunification of their homelands now divided by the tyranny of Russian surgery.

I agree with the distinguished gentleman from Michigan [Mr. BENTLEY] that the people of Germany, Korea, Vietnam, and Japan should, and of right ought to be represented in the councils of the United Nations. The Russian efforts to deny the German people, the Korean people, the Vietnamese people, and the Japanese people this right deserves the condemnation of all mankind.

This resolution reaffirms the long-standing policy of the United States Government in support of all people who seek freedom and independence from Russian and Chinese Communist bondage. The now famous McCormack resolution, which Congress passed unanimously last year, stated, in unmistakable terms, the rights of all people and nations to freedom, self-determination, and independence. House resolution 370 gives specific application to the principles of the McCormack resolution to the people of Germany, Korea, and Vietnam. These are time-honored principles in support of which the people of the United States have shed their blood here at home and on foreign battlefields, and our unwavering support of which have brought us the approbation and prayerful thanks of people everywhere in the world.

The distinguished chairman of the House Foreign Affairs Committee, the gentleman from South Carolina [Mr. RICHARDS], has summarized the compelling purposes of this resolution by stating that we must continue to nurture in the hearts and minds of the enslaved peoples their hopes for freedom and independence and that this can best be done through expressions of the executive branch, through expressions of Congress, and through public expressions. Our colleague the gentleman from Michigan [Mr. BENTLEY] points out that passage of this resolution has served notice on the world, at a time when a massive effort is being made to bury the long and cruel record of Communist crimes against humanity, that we continue to recognize that there are in this modern world grave injustices which remain uncorrected. He emphasizes that we, as a Nation and people, must avoid any action which will tend to perpetuate these wrongs and must engage in undertakings which give promise of correcting the inhumanities and grave injustices which now bar the way to a just and lasting peace.

John L. Lewis' Visit to Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Record, Wednesday, April 11, 1956, in which the newspaper comments on the recent visit to Wilkes-Barre of John L. Lewis, president of the United Mine Workers of America:

JOHN L. LEWIS' VISIT

It is a far cry to 1906 when John L. Lewis, now long since the veteran president of United Mine Workers of America, took on his first official assignment for his union—as delegate to the UMWA convention. During the ensuing 50 years and more particularly since he became president in 1920, Mr. Lewis has made numerous visits to Wilkes-Barre, but usually they have been spaced far enough apart to give each the character of an event. Mr. Lewis paid a surprise visit to Wilkes-Barre on December 15, 1953, and made his first call to the then newly located UMWA district office, 165 South Franklin Street. Always he comes with a definite purpose on behalf of his union and its members.

So when Mr. Lewis unheralded arrived at the Hotel Sterling on Monday, immediately official importance was attached to his appearance here. On that score there were no advance announcements, but with yester-

day's meeting of the Committee of 12—the members of which are hard coal operators and UMWA officials—came confirmation of a report that the conference was related to more uniform working time throughout the industry.

Clearly this cannot be an overnight achievement. Recognized as a prerequisite for success is revision of the present allocation plan, and to use the language of the official announcement, the task of revision, entrusted to a committee, is "an effort to make it (the allocation plan) a more effective instrument."

Mr. Lewis termed the meeting constructive. Of special interest was his reply "No" when asked by a reporter if the 1952 union contract with operators had been opened or if an opening of it was discussed.

As viewed by Harry J. Connolly, chairman of the Committee of 12, the meeting yesterday was concerned with taking joint action by the UMWA and the operators "endeavoring to expand the markets existing in anthracite and improving the conditions existent in the industry." Attainment of this objective would promise direct benefits not only to the industry and its employees but also to the region.

Basically labor-management relations in the anthracite industry are the product of many years of experience. The stability was suggested yesterday by the reminder that the Committee of 12 has been functioning for upward of 26 years, a degree of permanency that is an augury of success for its newest and apparently harmonious undertaking.

We Do Not Want Vigilantes

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, the throwing of sulfuric acid into the face and eyes of Victor Riesel, who has exposed many a labor racketeer, was not an isolated act. It was characteristic of the methods of the vicious gangsters who so frequently, by beatings, bombings, sometimes by murder, have sought to silence those who exposed their lawlessness, their stealing of welfare funds, the misuses of union dues.

Ever since the gangsters attained nationwide power in organizations like the Chicago Capone crime syndicate, they have frequently, without punishment, made good their boast that those who exposed them would be silenced.

Many a gangster, turned informant, has been executed by the gang. The recent attempt to silence Riesel obviously came from the same source.

Nor have police officers been exempt from the decrees of the gangsters. Well do I recall that, when a legislative committee held hearings in Chicago in an attempt to ascertain from whence came the pressure back of the paroling of the 4 Capone gangsters, 2 certifying police officers were threatened with physical violence. Not long thereafter, one, Captain Drury, when on his way to furnish another committee with information about the gang, was cooly and deliberately slain.

Others, sometimes officers charged with enforcement of the law, sometimes reporters or newspaper publishers or editors, have met a similar fate.

Time and time again have legislative committees, State investigatory bodies, called to the attention of the public this lawlessness which apparently has known no limits. If we continue to permit gangsters to ignore the law, to beat and to kill not only their own associates who inform against them, but innocent individuals whose only fault is that they speak or publish the truth about crime—if men like Victor Riesel are to be murderously assaulted—how long will it be before men like Pegler, Clark Mollenhoff, and others who publish or speak the truth about these gangsters will be likewise permanently injured or removed from the scene?

If those charged with the enforcement of the law fail in their duty because of lack of public support—if that situation worsens, will not otherwise law-abiding citizens attempt to retaliate by lawless punitive acts? Will not a situation develop similar to that which existed in the West when outraged citizens acting in defense of their rights organized and without legal procedure hung or shot those who over-long wilfully disregarded all law? Drifting into such a situation is unthinkable. The cowardly assault on Victor Riesel—a courageous fearless writer—should be another warning to law enforcement officials to fully perform their sworn duty.

One remedy for the threat to our freedom is to elect to law-enforcing offices only those who, regardless of threats of physical violence or political execution, have the will, the ability, the courage, the determination to see that all laws are enforced without fear or favor.

That remedy has worked in Berrien County, in the Fourth Congressional District of Michigan, where two prosecutors, Joe Killian and Jack Spelman, with the assistance of Sheriff Kubath and fearless judges, have successfully demonstrated that the unlawful activities of gangsters will not be tolerated and that the civil rights of citizens will be protected.

What we need is not more civil rights legislation, but a better enforcement of what we have.

Concordia Singing Society's 77th Annual Concert

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Record on Wednesday, April 18, 1956, which calls attention to the 77th annual concert to be presented in Wilkes-Barre on May 1 by the historic and talented Concordia Singing Society, which is the oldest group of its kind in Wyoming Valley, Luzerne County, Pa.:

CONCORDIA'S 77TH CONCERT

Concordia Singing Society, Wyoming Valley's oldest group and one that has achieved national note on more than one occasion, is rehearsing for its 77th annual concert to be held on Tuesday, May 1.

In that connection an appeal is being circulated for support by means of patron memberships. When we consider the value of Concordia to the community, the honors it has brought here and the society's many contributions to civic welfare, a generous response to the appeal is indicated.

Apepals made in other years have not gone unheeded. Many civic-minded individuals, appreciating the society's endeavors, have contributed to its support.

The quality of its programs has become traditional. They are worthy of a large attendance on merit. As has been true in other years, the continued existence of the society is dependent on public support.

Some 65 members of the society will appear in the chorus on May 1 under the leadership of Clyde Owens, director of the society and a member of the city school district musical staff.

During the first 10 years the society operated under four different directors. In January 1889, Adolph Hansen became the director and conducted the society continuously until the summer of 1942, the year of his passing. This was an unmatched record of continuous conductorship during which the society rose to national fame on the concert stage, as well as in competition.

Among the guest airtists of the long past were Paul Althouse, metropolitan tenor; Frederic Martin, bass; Edwin Grasse, blind violinist; John Barnes Wells, tenor; Milton Cross tenor; Ruth Rodgers, soprano; Joan Peebles, mezzo soprano.

This year's artist will be Frank Guarrera. He is a metropolitan baritone and has made more appearances in the metropolitan theater than any other baritone. He is now averaging 3 or 4 appearances a week in the metropolitan opera. The night before his apeparance in Wilkes-Barre, he will give a concert in Washington, D. C.

Japanese Imports and the American Textile Industry

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. DORN of South Carolina. Mr. Speaker, if there is any doubt in your mind about the affect of Japanese imports, read the following statement by Mr. Roger Milliken. He is president of Deering, Milliken & Co., one of the Nations largest textile companies, representing 28 mills. In addition to being a great textile man, Mr. Milliken is a great American and a champion of our free enterprise system.

PUBLIC STATEMENT OF ROGER MILLIKEN, PRESIDENT, DEERING, MILLIKEN & CO., INC.

The United States Department of Commerce now has joined the Department of State in what can only be interpreted as a concerted effort to sell out the great American textile industry.

For years—most recently for Japan—the State Department has been bargaining away our mills and the jobs of our employees by reducing tariffs under the General Agreement on Tariffs and Trade (GATT). Now we have the spectacle of a United States

trade mission, sponsored by the Department of Commerce, advising the Japanese on how they best can step up their already damaging shipments of textiles and apparel to this market. Indeed, the mission, whose expenses are paid in part by our mills and employees, is advising the Japanese which of our markets to hit so that their exports may be further increased.

Recent newspaper headlines tell a succinct story both of rising imports and Government inaction:

"Cottons Imports Sharply Higher During December."

"Textile Imports of United States During 1955 Up Substantially."

"Japan Predicts Export Rise in 1956 for all Textiles."

"United States Rejects ACMI Requests for Cottons Imports Quotas."

I repeat a warning made on March 15 to the House Ways and Means Committee in opposition to H. R. 5550, the bill to permit United States membership in the Organization for Trade Cooperation, the alleged administrative agency for GATT. On behalf of the National Council of Textile Industries, comprised of the American Cotton Manufacturers Institute, National Association of Wool Manufacturers and the National Federation of Textiles, I said:

"If the present rate of increase of Japanese goods is permitted to continue, unemployment in the textile and apparel industries of the United States will grow in proportion and ghost towns will replace the thriving mill communities from Maine to Texas."

This warning and others like it bear repeating. Press reports from Japan during the last 2 weeks reveal the shocking activities of a Department of Commerce trade mission headed by Eugene Braderman, Director Far Eastern Division, Bureau of Foreign Commerce. Other members of the mission are American businessmen none of whom, it is significant to note, are textile or apparel manufacturers.

On April 2 a report from Nagoya said the mission told the Japanese there was "plenty of room to increase American imports of woolen goods" and urged them "to give further close study to American wool textile fashions."

On April 9 it was reported from Osaka that the mission "urged Japanese manufacturers to diversify exports of cotton textiles and apparel for the United States market not only on types of goods but also on price brackets as a means of simultaneously increasing export business and minimizing the impact on United States producers." The mission meant, of course, that such procedure might lessen the opposition here.

On April 10, another dispatch from Osaka found the mission defining what it had meant by the term "wool textiles." This term, it said, did not mean wool apparel fabrics. It did mean "textile products in the sense of cashmere sweaters, gloves and other specialties." Apparently, in the mission's opinion, American manufacturers of such specialties would welcome still more imports of these items from Japan.

The Department of Commerce surely must know that imports of textiles and related products from Japan, and other countries as well, have soared to record levels and will soar still higher under present conditions. These imports are damaging American manufacturers and displacing American workers. The Department must also know that American tariffs, cut again and again under GATT, fall far short of even tending to equalize the immense wage gap between American and Japanese mills.

Yet, the Department, through its trade mission, is issuing a cordial invitation which tells the Japanese in effect: "Go and get the American textile and apparel industries and their 2¼ million employees."

It is high time that the Secretary of Commerce put his Department squarely on the side of all American industry and labor by repudiating and recalling the trade mission to Japan and any similar missions which may be roaming the world.

Moreover, the actions of the mission to Japan offer further proof to Congress—if any was needed—that H. R. 5550 must be defeated. The mission to Japan is merely an example of what will happen if Congress permits United States membership in OTC-GATT. Such approval, as I warned the House Ways and Means Committee on March 15, "Would invite and practically assure the eventual destruction of the textile industries of the United States."

Boston High School Turns Out Farmers

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a deserving article Boston High School Turns Out Farmers—referring to the Jamaica Plain High School—which article was written by Paul R. Stevens and appeared in the Boston Post of April 8, 1956.

I am sure it will be of interest to the agricultural communities of our country to know that in the great city of Boston, where there are very few if any farms, that 38 years ago there was established at the Jamaica Plain High School a special course of study for its students in certain fields of agriculture. This specialized course was set up in 1918 by Thomas P. Dooley, who is assistant headmaster of Jamaica Plain High School.

The article pays a deserved tribute to an educational experiment which was started 38 years ago and which has proved very constructive:

BOSTON HIGH SCHOOL TURNS OUT FARMERS

(By Paul R. Stevens)

Some of the country's most successful farmers today grew up deep in the heart of Boston. Here's where they learned how to milk cows, plant potatoes, and make hens lay jumbo eggs.

Boston—for all its teeming industries and bustling ways—has one of the finest high school agricultural courses in the country.

Founded at Jamaica Plain High School, 38 years ago, the course has turned more city teenagers into farmers than there are straws in a haypile.

More than 2,500 of these youngsters have taken at least 1 year of agriculture, and 1,500 have majored in it. Students from all parts of the city have enrolled for the course—unique in the Boston public school system.

Graduates and students have won hundreds of ribbons, rosettes, medals, and medallions at local fairs and interscholastic contests.

The school's city-slicker "Aggies" have walked away with 15 out of 19 championships in the interschool flower judging contests at the annual spring flower show; they have taken 8 straight first prizes and a gold medal for their garden exhibit, "A Typical City Backyard Garden."

The course was set up in 1918 by Thomas P. Dooley of the "Old Southie" Dooleys. It had a starting class of 6 students. Today, the annual enrollment is about 110.

Since 1937, Dooley—still active at 68—has been sending his "boys" to work at Harvard's world-famous Arnold Arboretum in Jamaica Plain for practical training. Here's what Donald Wyman, horticulturist, once wrote of these boys:

PROVE INDUSTRIOUS

"They have proved industrious, good workers in every way. We have tried to give these boys all-around experience in the arboretum so that they will gain a working knowledge of the many phases of our work."

Other students are sent for on-the-job training to nearby estates, Franklin Park (where Dooley had charge of one of the Nation's biggest "Victory" gardens during World War I) and farms during the school year.

Students work full time for pay from early May to August 15 on farms. A representative of the school visits each boy every 15 days to check on his progress.

Dooley, a graduate of Massachusetts Agricultural College (now the University of Massachusetts), set up the course at the request of John C. Broadhead, then assistant superintendent of schools.

Broadhead conceived of the idea after boys had inquired about an agricultural course that was being taught at Walpole.

FAVORABLY LOCATED

The school was favorably located for this almost unheard of experiment in teaching city boys farming, horticulture and floriculture, because of its nearness to Franklin Park, the 360-acre Arnold Arboretum and easy transportation to nearby poultry plants, orchards, dairies, nurseries, and market gardens.

Students learn classroom theory 4 days a week; the 5th day they spend in on-the-job training. Buses carry them to nearby farms and estates.

Dooley serves as administrator and finds jobs for students. His teaching staff consists of experts in landscape and market gardening, poultry-raising, fruit growing, floriculture, forestry, dairying, and allied subjects.

DEAN OF AGRICULTURE

Farmers are always on the lookout for Jamaica Plain High's aggies, and the department boasts of 100 percent placement record.

Hundreds of the school's graduates go on for further study at the University of Massachusetts, Cornell University, the Stockbridge School of Agriculture, the University of New Hampshire and other top-ranking training centers.

A student who commuted to Jamaica Plain from South Boston to take the aggie course is an outstanding cytologist with the United States Department of Agriculture today; a Jamaica Plain graduate is dean of an agriculture college in North Carolina.

A former Brighton boy is a professor at Cornell; a Dorchester boy teaches animal husbandry at the University of Massachusetts, a West Roxbury graduate manages one of the State's largest ice cream factories.

And so it goes.

One of the school's most illustrious graduates is Oswald Tippo, formerly of Roxbury—a community about as remotely associated with farming in most peoples' minds as Admiral Byrd's Little America. He is chairman of Yale University's plant science department and one of the world's foremost specialists on woods.

Occasionally a youngster takes the course only to find that agriculture is not quite his dish. Just such a boy was John X, who Dooley believes may be the reincarnation of Tom Sawyer.

John was sent out to a retired general's estate to get in some practical training in weed removal. He was paid 20 cents an hour. When the general returned late one afternoon

to check the boy's work he found he had made almost no progress.

PAY IS BOOSTED

The next day the general boosted the boy's pay to 40 cents an hour as an incentive for faster work.

When the general returned at noon to check on the effectiveness of his double-pay plan, he found the boy lying with his shoes off in the general's orchard. Another boy was doing the weeding.

"You're paying me 40 cents, so I'm a boss now," John explained.

"I'm paying my helper half."

P. S.—John X didn't go far in agriculture. Dooley himself tended a vegetable patch in South Boston as a boy, and the thrill of making things grow has stayed with him all his life.

In recent years, however, he has been too busy teaching others how to farm to do any gardening himself. As Dooley explains it, "Cobblers' sons are always the most ill-shod."

The Faith of a Military Man

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. MACK of Illinois. Mr. Speaker, last summer a young man gave his life for his country. This young man was Lt. (j. g.) Robert Clem Allison, who was killed instantly on August 11, 1955, when his Banshee jet fighter crashed near Perry, Fla.

Bob Allison was held in unusually high regard by young and old alike in his hometown of Robinson, Ill. As a former naval aviator, I admired him for his great contribution he made in the development in the jet air age. The security of America is dependent upon young men like Lieutenant Allison, who are willing to risk their lives to promote a strong air arm. The contribution these men are making is important to all of us, as citizens of this great country.

Lieutenant Allison graduated from Annapolis in the Class of 1952, after winning many honors as a student at the Academy both in scholarship and in sports. He served 18 months in the Korean action aboard the heavy cruiser, U. S. S. *Bremerton*. He made a great record in the Navy and his loss is keenly felt by all of us.

Mr. Speaker, I was so much impressed with the remarks made by Rev. William M. Hunter, pastor of the First Presbyterian Church, Robinson, Ill., at the funeral of Lieutenant Allison, that I asked that a copy be made available to be included in the RECORD. Therefore, under leave to extend my remarks, I include the following sermon:

THE FAITH OF A MILITARY MAN

(Remarks made by the Reverend William M. Hunter, pastor of the First Presbyterian Church, of Robinson, Ill., at the funeral of Lt. Robert Allison, United States Navy, Tuesday, August 16, 1955)

THE SCRIPTURE LESSON

"After Jesus had entered Capernaum, a captain in the Roman Army came up to Him, entreating His help.

"'Sir,' he said, 'my manservant is lying ill at my house with a stroke of paralysis, and is suffering terribly.'

"'I will come and cure him,' answered Jesus.

"'Sir,' the captain went on, 'I am unworthy to receive You under my roof; but only speak, and my manservant will be cured. For I myself am a man under the orders of others, with soldiers under me; and, if I say to one of them, "Go," he goes, and to another "Come," he comes, and to my slave "Do this," he does it.'

"Jesus was surprised to hear this, and said to those who were following Him: 'Never, I tell you, in any Israelite have I met with such faith as this.' Yes; and many will come in from east and west, and take their places beside Abraham, Isaac, and Jacob, in the Kingdom of Heaven; while the heirs to the Kingdom will be "banished into the darkness" outside; there will be weeping and grinding of teeth.'

"Then Jesus said to the captain: 'Go now, and it shall be according to your faith.'

"And the man was cured that very hour." (Matthew 8:5–13; 20th Century New Testament.)

THE ADDRESS

The Scripture passage I just read is one I have never read at a funeral before. I must admit I have never had an occasion of this sort where I felt it would be especially appropriate. But, as soon as I heard the first, limited details of the passing of Bob Allison, I could not get this passage out of my mind. Something seemed to tell me: "Here is a clue to the whole matter; the answer lies in this incident in the life of our Lord."

What we need at a time like this is faith. But we need not only something to believe with our mind; we need something to act upon. We need to see, to understand, to accept, to live by something which makes sense, which gives meaning not only to life, but to a death which normally seems to us so utterly unnecessary. Notice, I said seems to us. Our own minds, our own wills, are too limited in their grasp, their ability to comprehend everything which needs to be considered. On top of that, our national shock, grief, unhappiness make those already limited human minds even more limited. Truly we need a faith at a time like this—a faith which more than makes up for our all-too-present and obvious limitations.

But what does our Scripture passage tell us about such a faith—and how does it apply to this circumstance? Believe me, it isn't simply because Jesus cured the servant of the military man that I feel it speaks to us now, through I am sure that is part of it.

Military men of all branches of the service work under orders. Usually those orders are right, because not one, but many trained minds have worked on them. The Roman Captain summed it up very nicely when he said to Jesus: "For I myself am a man under the orders of others, with soldiers under me." As we said, being under orders usually leads the man to do that which is right and good for both the service and the man. These orders are intended to enable the doing of a job, the completion of a mission, with a maximum of results, and with a minimum of risk: The military man under orders very, very rarely will question those orders; he simply accepts them and does them. That is the result of his faith; he does what his belief, drilled into him, tells him is the right thing to do.

Bob Allison, I am reliably informed, died in the performance of duty, while acting under orders. It would appear to us that, in this case, the orders may have been wrong. But were they? I am confident that whatever may have caused something to go wrong at this time, and perhaps we may never know just exactly what did go wrong, that the orders were not only basically right for that situation, but had probably brought more men in safely than otherwise.

Certainly, while wise and intelligent men will strive to avoid such things in the future, possibly revising future orders, if need be, the basic system of acting under orders will not be abandoned.

Bob Allison, then, acted in good faith. He was not only a good officer and a gentleman, but he had a belief which could lead him on to a brilliant career—or to his death. But he had faith in more than merely being under orders. He had the mind of one who believes in Him Who, though Invisible, is none-the-less real. I believe that Bob's belief in God did not come from being a good officer; I believe he was a good officer because of his belief in God. Just as the Roman Captain who came up to Jesus, he believed that if God, or God's Christ, were to say "Let a thing be done," it could be done. Just as simple, just as direct, as that. And Jesus Christ admired that faith, and held it up to Eternal Credit, saying, "Never, I tell you, in any Israelite have I met with such faith as this."

But—some may say—where did Bob's faith get him? Where did his obedience to orders get him? That is a question everyone, or nearly everyone, may ask. They don't stop to realize that in asking it, they are questioning the Love and Wisdom of God. But, I am sure, God understands our limited love, our limited wisdom in asking it—and seeks more to bring to our understanding a deeper meaning than is now the case.

When we ask this question, we assume that for any of us death is stark, unutterable, terrible tragedy. But is it, for the man of faith? Does not the Bible say, "Believe on the Lord Jesus Christ"? Do we not believe that Jesus Christ died and rose again mainly that we would also rise again, in Him? Does He expect us to be weeping for Him at the tomb—or does He expect us to be awaiting Him among the living? Of course, much of our sadness, of our grief, is caused more by our sense of loss, our frustration. When we stop to think of the joy, the triumph, the achievement of the one who has gone on, our love for him will ultimately triumph, and we will some day say, "It is good. God loved him and was truly good to him. Now I've had a chance to think it over, I wouldn't have it any other way."

I have told people, many times, that we never learn how to live until we overcome our fear of death—that is, until our faith becomes so strong we are ready for either, as God may will. And I do believe that the man under orders, whether in time of war or of peace, obeys those orders, knowing these is risk, knowing something can go wrong. I believe it was a local veteran of Korea who said in my presence that the men who don't last long in time of battle are those who are so cocky, they don't know the risks. In other words, it is the man who, under orders, or in faith, does his job, taking every reasonable precaution and care because he knows the risks, but still goes on—that man is the one who can and does teach us much.

We live in an age where we have made a god of success. We won't accept anything (at least many of us won't) unless we are positive, before hand, how it will work out. But God calls upon us to believe, to follow Him, to be under orders to Him in true faith, even though it may lead to a cross.

Jesus Himself was under orders. Jesus Himself was a young man. Jesus Himself knew the risks, and faced them. And Jesus Himself met death. But because He did—Bob Allison and the rest of us need have no fear of death. The only fear we need is that we are too timid, too lacking in faith—because we want to share in the adventures to which He beckons us.

The Honorable George A. Dondero

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. LANE. Mr. Speaker, I know that I join with every Member of the House in congratulating Congressman GEORGE A. DONDERO on his courteous, efficient, and capable services as a Member of this honorable body.

In my mind, he was one of the outstanding leaders, due to his kindliness and consideration of Members on both sides of our political aisle. We all regret that he has decided to complete that meritorious service in the Congress, and I know that the people of his congressional district will have difficulty in replacing our amiable colleague.

However, I sincerely hope that his decision will be for the best and that he will continue to enjoy many years of happiness and good health in his retirement.

I herewith include the following article from the April 1956 issue of the American Highways, which I am pleased and proud to have ordered printed in the RECORD:

CONGRESSMAN DONDERO TO RETIRE FROM CONGRESS

Almost simultaneous with his presentation of his portrait to the House Committee on Public Works, GEORGE A. DONDERO of Michigan announced that he was not going to again be a candidate for Congress. Climaxing some 25 years of service, Mr. DONDERO's decision will remove one of the staunchest supporters of adequate highway legislation from the House Committee on Public Works. Following the reorganization of the House committees, Mr. DONDERO was the first chairman of this committee. The following are his remarks made at the time he presented the portrait, shown on the opposite page, to the committee:

"A little more than 5 years ago an occasion similar to this was held in this chamber. At that time the portrait of my good friend, a very distinguished American, our former colleague from Mississippi, the Honorable William M. Whittington, was placed in this room.

"My own portrait as first chairman of the Committee on Public Works under the Reorganization Act of Congress was to be placed here at the same time. It is of no interest now to detail the cause of delay.

"An occasion of this kind is rare indeed, it occurs only once in a lifetime.

"In this room I have served nearly a third of a lifetime—24 years of my official life as a Member of Congress.

"It is a red letter day for me. That a likeness of myself is to adorn these walls is a distinct honor in itself. That it shall be in company with my former chairman of the Committee on Rivers and Harbors, Mr. Mansfield of Texas, and Mr. Whittington of Mississippi, makes it a lasting and double honor.

"Politics rarely enters this room. Years ago when the Honorable Joseph Mansfield was Chairman of the Rivers and Harbors Committee, he on more than one occasion requested that I preside or act as chairman while he absented himself from the room.

"If there is any lesson or any example that might be gleaned from the portrait now being placed here, it is that of complete confidence and harmony between men of different political faith and coming from widely separated sections of the country.

"The end desired in human existence is happiness. All men and women cherish and desire the respect and esteem of their fellow man. That in itself is a great factor in making life pleasant, gratifying, and happy.

"Your very presence here this afternoon is an expression of your kindness and friendship, for which I am truly grateful, and which I deeply appreciate.

"It is, indeed, with a deep sense of gratitude that I am honored and privileged to present at this time a remembrance of my long membership on the Committee on Rivers and Harbors and the Committee on Public Works—this portrait of myself."

The portrait, painted by Miss Dorothy Drew, of New York City, was accepted in behalf of the committee by Chairman Buckley. Present at the presentation were many friends of Mr. DONDERO, including Congressman MARTIN, of Massachusetts, and Secretary of the Army Brucker, former governor of Michigan.

At the time of the presentation of the portrait to the Public Works Committee, Mr. DONDERO had not yet announced his decision not to seek reelection. In his brief remarks made at the presentation ceremony, former Speaker JOSEPH MARTIN mentioned the fact that Mr. DONDERO came to the Congress for his first term in 1933, and "you'll recall that year we did not have very many freshmen Republican Congressmen." As a matter of record, only one other new Republican Congressman still in office came to Congress that year.

Mr. DONDERO has established a reputation as one of the greatest living authorities on Lincoln. He was acquainted with the surviving members of Mr. Lincoln's family, and it will be noted in the biographical data at the end of this article that his son is named Robert Lincoln. Few, if any, Members of Congress are held in higher respect and esteem by their fellow Members than is the Honorable GEORGE A. DONDERO. * * * "Congressman from Michigan; born December 16, 1883, in Greenfield Township, Wayne County, Mich.; educated in the public schools; graduate of Royal Oak High School in 1903, and of the Detroit College of Law in 1910 with an LL. B. degree; admitted to the bar the same year, since which time he has practiced law; held the following office: village clerk of Royal Oak, 1905–06; township treasurer of Royal Oak, 1911–21; assistant prosecuting attorney for Oakland County, Mich., 1918–19; first mayor, city of Royal Oak, 1921–22; member of the board of education for 18 years; member of Methodist Church, Masonic orders, and Kiwanis International; married to Adele Roegner, June 28, 1913, and they have three children—Marion E., Stanton G., and Robert Lincoln; elected to the 73d and each succeeding Congress, including the 84th (24 years)."

Soil Bank

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith historical background on the idea of the soil bank, contained in an article which appeared in the St. Louis Post-Dispatch. The article written by Leonard Hall, a Post-Dispatch columnist, was forwarded to me by an alert constituent, Mr. Pete Fields, of Venice, Ill.

The story follows:

As for the so-called soil bank, the idea is not without merit. Yet the conservation crops which we propose paying these fellows to plant are the ones with the good, family sized conservation farmer plants as a matter of course in order to build and protect his land. Nor is the idea a new one. Back in 550 B. C. the Attican dictator Peisistratus was offering a cash bounty to farmers and landowners who would take their marginal, sloping hill lands out of grain crops and plant these acres to trees. Attica was that part of Greece which produced the remarkable civilization centering in Athens; a city state whose power and prosperity are certain proof that it had once been a land rich in soil and forest resources.

There's a difference in the reasons for our soil bank and that of old Peisistratus. In his day Attica was beginning to know shortages because of misuse of the land. We are, despite much bad land-use, still blessed or cursed with oversupplies. But the plan for persuading landowners to plant conservation crops and take marginal land out of production seems old as time; you offer them a cash bounty. It evidently didn't work too well in ancient Greece, for the area that was then Attica supports fewer people today than in the time of Pericles. I rather doubt it will work today; my observation being that the only true conservation is practiced by people who have a deep respect for and love of the land.

Tribute to the Memory of the Honorable Vera Buchanan, Late a Representative From Pennsylvania

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. SPENCE. Mr. Speaker, it is with deep sorrow that I rise to add my small tribute to the memory of my friend and colleague, the Honorable Vera Buchanan, late a Representative from the 30th District of Pennsylvania. I know that this feeling is shared by all of us here, for her courageous spirit, her patience and understanding were an inspiration to all who knew her.

Mrs. Buchanan was elected to the 82d Congress on July 24, 1951, to succeed her husband, the late Frank Buchanan. Like her husband, she worked hard for the people of her district, and they returned her to the 83d and 84th Congress. After having previously served on the Committee on Merchant Marine and Fisheries and the Committee on Public Works, she was elected to the Committee on Banking and Currency in the 84th Congress. As you know, the Banking and Currency Committee deals with housing matters. We are constantly concerned with the statistics of housing, and their effect on the Nation's economy. Being a successful homemaker herself, Mrs. Buchanan brought to the committee a special insight in housing matters, and a warm understanding of the problems and needs of homemakers and the

importance of the home in American family life.

A severe case of pneumonia overtook Mrs. Buchanan last year when she had devoted her energies to the point of exhaustion in support of housing and flood-control legislation for her constituents. Her death on November 26 deprived the people of her district of a devoted and courageous representative. The House has lost a sincere and capable Member who will be sadly missed by those of us who knew her and valued her friendship.

My deep feeling of sympathy goes out to her two daughters and other relatives in their great loss.

Acres for Tomorrow

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. HAYS of Arkansas. Mr. Speaker, since the Congress has become increasingly concerned with providing for the establishment of a soil bank, retiring acreage not currently needed for food production, there is an interesting timeliness in an item that first appeared in the Chicago Daily News on September 1, 1954. In this article, Dr. Raymond Miller, presently a lecturer at Harvard Business School, offered a plan for Government payment for retired acres to prevent the creation of enormous surpluses. He describes his plan as "putting land in mothballs," although he prefers the expression "acres for tomorrow." Since this article appeared I have discussed this currently popular idea with Dr. Miller, who states that credit for originating the idea must be shared with several others. However, I know that he expended a lot of energy familiarizing people with this plan and building up sentiment for it. Mr. Speaker, I believe that regardless of differences of opinion over price supports, "acres for tomorrow" should be adopted as part of our farm policy. Under leave to extend my remarks, I include this Chicago Daily News article as follows:

EXPERT HITS WASTE OF UNITED STATES FARMLAND

The use of all American farmland, resulting in enormous surpluses, has been labeled "foolish and wasteful" by a farm expert.

"We don't need all the land now, but we will 100 years from now," said Raymond W. Miller, Harvard University lecturer.

"We should not keep our farmland in full production when American women haven't produced enough babies to use the surpluses up," he said.

Miller, American consultant to the U. N. Food and Agricultural Organization, offered his own plan to curb surpluses.

"Instead of paying out millions for price subsidy and food hoarding, we should take some land out of production and pay the farmers for doing so."

Miller said his plan, which he calls Mothball Acres, calls for laying fallow 5 million to 10 million acres yearly.

"This will not only cut down on surplus production but will give the land a rest to recover its fertility," he explained.

Miller, 59, who calls himself simply a California farmer, recently spent 5 months studying farm problems in India with a team of Ford Foundation experts.

He was in Chicago Tuesday to speak on India at the Institute of Management of Northwestern University's School of Business.

"But India has no problem similar to ours. In fact, I don't think any other country has, except maybe Canada," Miller said.

"In this country we've tried paying farmers to stop growing one crop.

"So they plant something else causing another surplus. We've even tried burning crops.

"My mothball plan is similar in principle to the system used in oil-producing States, where only the amount of oil needed is pumped."

Testimony of J. Spencer Love in Opposition to H. R. 5550

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. DORN of South Carolina. Mr. Speaker, I was impressed with the testimony of Mr. J. Spencer Love, of Greensboro, N. C., made recently before the Ways and Means Committee. I was so impressed with this testimony, Mr. Speaker, that I recommend it to all Members of this House and Senate:

Mr. Chairman and gentlemen, I am J. Spence Love, of Greensboro, N. C., chairman of the board of Burlington Industries, Inc. The next witness, Mr. Roger Milliken, and myself are appearing here today on behalf of the textile industry in opposition to H. R. 5550. We speak for the National Council of Textile Industries and, through it, for the member associations—the American Cotton Manufacturers Institute, the National Federation of Textiles, and the National Association of Wool Manufacturers.

During 1955 the textile industry, including manufacture of apparel and other end products, employed an average of 2.3 million persons, accounting for 14 percent of total manufacturing employment in the United States. In addition, a substantial portion of the 813,000 workers in the chemical and allied products industry group are engaged in the production of man-made fibers, dyes, bleaches, and other chemical products used in textile manufacturing. Many thousands more are employed in the manufacture of textile machinery and cotton agricultural machinery. Probably textile manufacturing and directly related allied activities account for 1 out of every 6 jobs in American manufacturing industry today. In addition, of course, several million people in this country derive their livelihood from the growing of cotton and the preparation and movement of the crop from the farm to the mill door.

The textile manufacturers of this country, regardless of which particular fibers they individually process, are united in opposing United States membership in the proposed Organization for Trade Cooperation. We are opposed to it because OTC, constituting as it does an endorsement of GATT, would guarantee a continuation of GATT's trade policy. This policy has already done much damage to the textile industry and threatens to do much more. Furthermore, United States membership in OTC would freeze this situation by removing from the Congress effective control over our foreign-trade policy as specifically delegated to the Congress by the Constitution of the United States. Delegation of such vital authority, in whole or in part, to a supranational organization in which the United States would have but 1 vote in 35 would, in my judgment, add so much more uncertainty and doubt as to the future of textile operations in this country as to have serious consequences.

With your permission I want to summarize briefly the situation in which the textile industry finds itself today.

At no time in the past 5 years has the textile industry in the United States earned a rate of profit after taxes anywhere approaching the average of United States manufacturing industry as a whole. Even in 1955, with an improved business picture, the textile mill products industry profit rate was only half as large as that of United States manufacturing industry as a whole. This is the case whether profits are figured as a percent on sales or as a percent on stockholders' equity. This decline in profits has directly resulted in a 50-percent reduction in the industry's spending on new plant and equipment since 1948 and the industry continues to shrink in volume of equipment in place.

In my own company, with half again as much average volume over the 1951–55 period, due almost entirely to diversifying acquisitions with borrowed money, our average profits were less than half those of the 1947–50 period. Such results as these are generally characteristic of the industry.

Another indication of this situation is that the textile industry in the United States has not participated in the postwar expansion of the American economy to any important extent. According to the Federal Reserve Board, production of all textiles has increased only 10 percent since pre-Korean days, while total industrial production has been increasing 44 percent.

The foregoing facts can have no other meaning but that the textile industry is in close to the poorest condition of any major United States industry to absorb large new import competition. Yet the cotton segment of the industry was singled out last year for drastic tariff reductions in the GATT negotiations at Geneva.

The tariff on cotton cloth in the grey was reduced by about 27 percent. On Japanese cloth comparable to our 39 inch, 80 x 80, 4.00 yards to the pound print cloth, for example (the most important single item in united States production), this tariff cut alone is the equivalent of two times the profit per yard in 1954 of the average United States grey goods sales mill, the latest year for which such data are available. On most of the bleached, printed, dyed, and colored cloths the tariff was cut by 48 percent.

Because there are relatively few important secret processes or patents in the manufacture of textiles, because most machinery is readily adaptable to a vast range of cloth constructions, and because the industry in the United States is highly competitive, being composed of hundreds of independent companies, the price structure of the entire industry is extremely sensitive to small variations in supply and demand.

Virtually the entire output of the American textile industry, together with imports from abroad, is priced and sold in New York City. In the cloth market lead times between orders and deliveries are frequently several months long. The availability of foreign deliveries with normal lead times means that the price effect on the New York market is far greater than actual imports from abroad would seem to indicate, for the buyer

uses foreign availabilities to beat down United States prices.

The offer in New York of a relatively small amount of foreign goods at a lower price will not only result in a decline in price of the comparable American-made product, but by stimulating the shift of mill machinery to other still profitable cloth constructions, will spread the price decline and profit squeeze rapidly throughout the entire range of goods. Furthermore, this chain reaction is usually accentuated by concentration of imports in particular types of cloth and is often aggravated by substantial and apparently unlimited availabilities.

Owing to the foreign industry's great competitive advantage resulting from lower costs of both raw materials and labor, and the ability of a cartelized industry like Japan's to target its shipments against segments of the intensely competitive American industry, the only certainty is that nothing stands in the way of Japan's taking over almost any portion of the United States textile market when and as she decides to do so.

The rapid growth of import competition in cotton textiles, largely from Japan, which followed upon the 1955 tariff cuts, illustrates the extreme vulnerability of the United States textile industry to unrealistic trade policies of the sort OTC would perpetuate. The Association of Cotton Textile Merchants of New York estimates total imports of cloth in the form of piece goods, household articles, and clothing into the United States for 1955 at not less than 250 million yards. Imports of piece goods add up to half this quantity. An additional 60 million yards have come in in the form of blouses alone. Some 35 million yards represent table damask, towels, and sheets and pillowcases. Imports of shirts, handkerchiefs, and a variety of other apparel items account for the balance. Not included are sundry lines not readily converted to yardage terms. These imports represent roughly 40,000 less jobs or 40,000 American men and women for whom there is suddenly no livelihood in the textile industry.

The impact of such imports becomes clear when we consider that though the specific items Japan is shipping us may on the surface be equivalent to only about 2.5 percent of United States production stated as a general average, imports have taken about 70 percent of our velveteen market and 30 percent in ginghams. It is worth mentioning that the American velveteen people, after having in effect lost their market to Japanese manufacturers, filed for relief on January 23, 1956, under the so-called escape clause of the Trade Agreements Extension Act. June 19, 1956, has been set for the hearing before the United States Tariff Commission and it is estimated that a decision will be reached by the end of the year. We don't know what action the Tariff Commission will take, but all reasonable men certainly must agree that this surely is a slow way to escape. On the broad basis a loss of 250 million yards is a serious loss for the textile market. When we add that our exports of cloth have fallen 250 million yards from 1951 to 1955, largely from competition with Japan overseas, it is clear that real damage is being inflicted even on so large a textile industry as ours. A half billion yards a year can and often does spell the difference between a good year and a bad year for the textile industry.

Even the best Japanese wage scales are only about one-tenth of the prevailing scale of the United States textile industry. Such a differential combined with lower raw material and other supply costs makes possible prices which, while profitable to the Japanese textile industry, are completely ruinous to the American. The observation of American textile mill operating executives recently visiting Japan, is that in the larger Japanese mills labor productivity is as high as in the United States industry; and it is, of course, the larger and more modern mills of Japan which dominate the export trade to the United States. In addition, of course, Japan is now buying cotton—including United States growths—several cents a pound cheaper than United States mills must pay. In fact, the United States Government has just announced an expansion of the program of selling American cotton abroad below the price paid by the American manufacturer. World prices on synthetic yarns and fibers are generally lower also than in the United States.

The net result under GATT has been the contraction of United States textile export markets and the opening of our domestic market to a full-scale attack by overseas industries operating Western-type machinery at Oriental wage levels. Under such circumstances, there is little likelihood that the needed equity capital will be forthcoming to modernize and expand the United States textile industry in line with peacetime needs, much less essential defense requirements.

In recent years mill property after mill property has been sold at prices equal to or less than 50 cents on the replacement dollar. Textile equities, including those of the very best companies, sell characteristically in recent years at less than 50 cents on the replacement dollar on the established exchanges. And this is going on during the period of the most dynamic growth in American history. It can only be explained by the fact that the investor must believe that the textile business is going to live constantly under the cloud of unbearable competition from low-wage labor countries. Necessary new capital for the most essential requirements of modernization, expansion, research, and development is obviously not seeking employment in the textile manufacturing industry.

The American textile industry today has no reserve capacity such as it had at the outbreak of World War II, and in that war there developed acute shortages of key textile items. As Chairman of the Textile, Leather, and Clothing Bureau of the War Production Board from October 1943 to December 1944, I have vivid personal recollections of the problems we faced at that time. At the commencement of the war emergency the cotton and woolen portions of the industry were just starting to utilize their third shift capacity and this reservoir made it possible for use to squeeze out minimum needs without rationing. We have 8 percent less spindles and 8 percent less looms in the textile industry today than we had at that time and are running mostly on a three-shift basis. With substantial population increases, and the industry now having little or no shift capacity reserve, it is obvious that we would have to go to a system of rationing immediately if such an emergency should confront us again. In this connection the plight of the woolen and worsted end of the industry is particularly serious. A petition has already been filed with the Office of Defense Mobilization by the National Association of Wool Manufacturers under section 7 of the Trade Agreements Extension Act of 1955 relating to the effect of imports upon the adequacy of the United States wool textile plant today to meet United States emergency military requirements.

This country cannot afford further decline in its basic textile-manufacturing capacity or deterioration in its facilities. Many American communities (whole States, in fact) are almost wholly dependent upon textile mill payrolls. World competition is already pinching our pay envelopes and deterring our employees from enjoying the full fruits of better conditions in industry generally. Unless the threat of ever-increasing textile imports at sales prices below United States production costs is removed, equity capital needed to keep this basic industry modern and competitive with other segments of our economy will become less and less within reach and plants will continue to close. We will lack the essential minimum capacity for any emergency needs.

It would be fallacious to appraise this influx of cheaper textiles as a net gain for American consumers or as true stimulation of world trade. The American textile plant is adequate for our present peacetime requirements. Thus any increases in imports represent displacement of mill operations and employment in this country. American textile employees are the highest paid textile workers in the world and, as such, constitute far greater consumers, when employed, of this world's goods than their foreign counterparts anywhere. In essence, these cheap labor imports represent completely unfair competition wtih and displacement of American textile workers. I might add that this competition even goes to the extent of frequently copying our exact designs and patterns.

I am proud of the American textile industry. We will bow to no one in our loyal and patriotic devotion to our country. We are more than willing to accept our share of the burden of the cold war, but we must warn you that we are being pushed into a very unhealthy state; and our strength is a part of the strength of America. We are a part of America's essential system of defense. Some have said that in time of national emergency the textile industry is second only to the steel industry in importance. Since winning the war, and in the spirit of international amity, brotherhood and good will, the United States has poured money into Japan and other low-wage countries. We have been constantly exchanging technological know-how under the point 4 and other programs, and now we are helping see to it that basic raw materials for textiles will be available at substantially lower levels than our domestic prices. The textile industry has not opposed these programs; it has even participated in the point 4 work constantly in the interest of contributing to world progress. However, when the end result of such programs is permitted to lead to the gradual confiscation of our major industries, to the gradual loss of hundreds of thousands of jobs and to the ultimate desolation of entire communities, the textile industry can only rise with all the strength it can muster to protest what is not only the grossest sort of injustice but what will also lead to ultimate economic suicide.

Passage of H. R. 5550, authorizing OTC and thus perpetuating GATT, would further undermine investor confidence in the future of the American textile industry and destroy thousands of jobs. We, therefore, oppose this legislation.

Thank you.

An Excellent Idea

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial that appeared in the Cleveland Plain Dealer on April 24, 1956. The editorial supports the most meritorious proposal of my distinguished col-

league, Hon. OLIVER P. BOLTON. The editorial follows:

AN EXCELLENT IDEA

We wish Congressman OLIVER P. BOLTON, Republican of Ohio success in his attempt to have Federal buildings in Washington properly marked so that each could be easily identifiable from the sidewalk or from a passing vehicle.

After having heard the question of visitors, "What's that building over there?" a few thousand times, Congressman BOLTON decided to investigate.

"I found some Government buildings labeled only with tiny plaques near the entrance bearing the agency's name or initials in small print," BOLTON reported. "Others were marked only with a number or street address; and still others carried hard-to-find names inscribed near the top of the building."

A uniform system of marking would, indeed, end much confusion among visitors, and the cost would more than be justified. We hope the idea succeeds.

The Supreme Court's Grab for Power

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Richmond (Va.) News-Leader from the pen of its brilliant editor, Jack Kilpatrick.

The editorial contains the ablest review of the sweeping grab for power by the Judges of the Supreme Court into all fields of human endeavor.

The editorial follows:

THE STATES REACH ARMAGEDDON

There could have been no real surprise among observers of the United States Supreme Court at the Court's arrogant action yesterday in rejecting an appeal sought by the South Carolina Electric & Gas Co. in a bus-segregation case. The Court announced, in its own contemptuous fashion, that the petition was filed "without authority of law" and "needlessly consumed our time."

In the view of many thoughtful attorneys, the South Carolina petition was no waste of time. It challenged a breathtaking stretch of the Constitution. The case arose when Sarah Mae Flemming, a Negro woman, sued the buss company for damages because a bus driver required her to change her seat in accordance with South Carolina law. Her suit was dismissed in the Federal district court, but on appeal to the Fourth United States Circuit Court of Appeals, Judges Parker, Soper, and Dobie last summer reversed the district court and ordered the suit tried.

In their opinion of July 14, 1955, the circuit court judges called attention to the Supreme Court's opinion of May 17, 1954, in the school segregation cases. Here the Supreme Court, after terming education "perhaps the most important function of State and local governments," held that "in the field of public education the doctrine of 'separate but equal' has no place." But though the Supreme Court had carefuly confined its ruling to "the field of public education," the Fourth Circuit Court held, in the South Carolina case, that the doctrine of "separate but equal" had been repudiated not only as to schools, but in every other field also.

That was a big jump for the circuit court to take. Hundreds of other appeals, involving modifications of long-standing law far less severe, have been reviewed by the Supreme Court in other years. But this time, the South Carolina company's petition "needlessly consumed our time." With that abrupt and high-handed stroke of its pen, the Supreme Court snatched from the States a part of their inherent police power, daily exercised by the States for generations.

It was, we say again, no surprise. In triphammer succession, the Supreme Court of the United States has taken from the States their clear power to maintain racially separate public schools. It has deprived them of the power to regulate their own natural resources. It has seized their authority over nonnavigable waters wholly within their borders. It has voided the sedition laws of 42 States. It has invaded their right to fix conditions for the employment of college professors. Now it has distorted the 14th amendment to make it read that no State may regulate seating on wholly local buses; merely to separate the races is to abridge the privileges and immunities of citizens of the United States.

The States have reached Armageddon. By successive assaults upon the Constitution, the Supreme Court has undertaken, in effect, to repeal the 10th amendment and to write into the 14th amendment sweeping new provisions to which the States have never consented. The Court has usurped the amendatory powers reserved to the States in article V of the Constitution. The Court has established itself as a superlegislature. It has arrogated unto itself a power, never given the Court, to twist and shape the Constitution as a thing of wax or putty.

If ever the time has come when the States should take urgent counsel among themselves, that time is now. The Federal Government they created is devouring them.

This crisis transcends any particular question of schools or buses, or gas or oil or water or sedition laws. It goes to the very heart and soul of our constitutional Union. If the Court is not checked—if the States fail to reestablish the dual structure of our Union—the Court will have achieved, by judicial legislation, what the Convention of 1787 resolutely refused to approve: It will have saddled upon us a consolidated government; it will have reduced the States to nullities and placed all meaningful power in the hands of a national authority.

The one possible check upon the Court, in our view, lies in interposition by the States. They, and they alone, by concerted action may restore a constitutional balance of powers. Five States already have interposed their sovereignty in the matter of school segregation; North Carolina and Louisiana are expected to raise the number to seven this spring. But the matter cannot be met regionally; it cannot be met on the single issue of schools or segregation. It can be met only if the States reclaim their clear powers, assemble in convention as they did in 1787, and dedicate themselves to a rewriting of our Constitution in order to repair the damage the Court has done.

Outstanding Negro Leadership in Jacksonville Acclaimed

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. BENNETT of Florida. Mr. Speaker, the Afro-American Life Insurance Co. this week moved into its new $1,085,000 office building in Jacksonville, Fla. This marks an important milestone in the history of this company, discussed in the following newspaper account in the Jacksonville Journal. I take this opportunity to congratulate the Negro leadership which founded and carries forward this important financial institution. Moreover, the article mentions another Negro leader in Jacksonville, who is now primarily known for his great philanthropic and social work, Eartho M. M. White. As to her I can truly say that all of Jacksonville is her debtor for her Christian spirit and her good works of all kinds through a long and fruitful life. I am proud as her Congressman to express my gratitude for her fine life. The article is as follows:

INSURANCE COMPANY 55 YEARS OLD—NEGRO FIRM NOW IN BIG TIME

(By Doug Danford)

Fifty-five years ago 7 men got together in Jacksonville and chipped in $100 apiece to form a company that today has assets of $8,400,000.

The men were Negroes and their company has grown into the Afro-American Life Insurance Co., which is now moving into its new $1,085,000 home office building at 101 East Union Street. Dedication ceremonies will be held Sunday afternoon.

It was January 15, 1901, that the seven founders met in Bethel Baptist Institutional Church at the invitation of the pastor, the Rev. J. Milton Waldron. Oldtimers say the minister was disturbed because Bethel's burial society had just been bankrupted by the death of two members. (Dues were 10 cents a week and the death benefit was supposed to be $30, which was the full price of a funeral in those days.)

Waldron sold the others on a large-scale burial society and on March 4, 1901, Gov. William S. Jennings signed a charter for the Afro-American Industrial and Benefit Association for the United States of America. Waldron became secretary and the first president was another minister the Reverend Elias J. Gregg, of Mount Zion Methodist Episcopal Church. The other founders:

J. F. Valentine, a Western Union lineman; A. W. Price, business manager of a weekly, the Florida Evangelist; Dr. Arthur W. Smith, physician; E. W. Latson, a bricklayer; and Abraham Lincoln Lewis, a 34-year-old planer who was working in Cashen's Mill.

On April 1 the new firm opened for business at 14 Ocean Street, using the front part of the Florida Evangelist's printshop. A few weeks later the Afro narrowly escaped being wiped out; the clerk came back from lunch on May 3 to find the great fire bearing down on the premises and she paid a drayman $2 to haul the entire corporation—records, furniture, and a small rug—to safety in Oakland. That clerk was Eartha Mary Magdalene White, who left the business world for full-time social work and is still going strong.

After the excitement subsided, the company office was set up in the dining room of the treasurer, A. L. Lewis, at 621 Florida Avenue. They moved in 1902 to 609 Main Street, then to 722 Main, and finally, in 1910, built a two-story brick home office at Ocean and Union that has served until now.

A bookkeeper has preserved one of the company's first policies. The document was decorated with an assortment of woodcuts: A beehive, symbol of industriousness; a reclining St. Bernard, symbolic of tenacity; a loosely draped Columbia, leaning on an anchor peering seaward, whose symbolism is unclear. For the premium of 15 cents each Monday the association promised to pay $30 upon the death of the insured. In the small print, probably as a hedge against a catastrophic epidemic, the company mentions that only one-half of the $30 will be paid within the first 6 months after death.

Today the Afro-American is writing policies up to $25,000. The company began operating in Georgia in 1926 and expanded into Alabama in 1946. Now there are 126,000 policyholders and 600 employees in the 3 States.

In 1938 the Afro-American became Florida's first million-dollar business owned by Negroes. At present it claims to be 6th among the Nation's Negro insurance companies and 27th among all United States insurance companies.

A. L. Lewis, the original treasurer who rose to the presidency and gained stock control of the company, died March 10, 1947. He was 81 years old and worth $337,764.36. Three generations of descendants are working in the company now—a son, James H. Lewis, who is president and chairman of the board; a granddaughter, Mary Lewis Betsch, who is vice president and treasurer; and a great-grandson, James Leonard Lewis, Jr., who is assistant agency director.

Southbridge DAV

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the text, in part, of an address I delivered on Sunday, April 22, 1956, at the annual banquet of the Southbridge, Mass., chapter, Disabled American Veterans.

The material follows:

REMARKS, IN PART, OF CONGRESSMAN PHILIP J. PHILBIN BEFORE THE DAV, SOUTHBRIDGE, MASS., APRIL 22, 1956

Distinguished commander, distinguished State commander, Judge Williams, my able and distinguished friends of the general court, Senator Benoit and Representative Cournoyer, distinguished town officials, Gold Star Mothers, officers, members, and friends, it is always with a great sense of privilege that I attend the installations of this outstanding veterans' organization because I am conscious of the fact, as the American people are, that this Nation owes to you and to all our gallant veterans a deep debt of gratitude that can never be repaid.

Moreover, you have not been satisfied to serve in time of war alone and to offer your all on the altar of patriotic devotion. You have also made, and are making, tremendous contributions to the Nation in time of peace.

Your service to this beautiful community in various phases of its civic, economic, and political life, your unselfish service to the State and particularly your untiring efforts for the disabled veterans and their dependents are so well known, so memorable and distinguished, so praiseworthy, that they scarcely need comment from me or anyone else.

However, I gladly embrace this opportunity once again to tell you how deeply and sincerely your fine work is appreciated, and I am sure that it will be continued with the same zeal with which it has been conducted in the past.

I propose this afternoon to discuss with you very briefly some matters relating to veterans' affairs which are presently pending in the Congress and before the country, but before I do that I would like to make some reference to the progress we are making regarding flood-control and flood-rehabilitation work because I know how close to your hearts this subject is, and you know how close it is to mine.

When the great flood disaster struck us last summer and fall, it came like most disasters of this kind without particular warning. Not even our weather services, which usually endeavors to the best of its ability to give us timely reports, was able to present an accurate forecast of the approach and course of the terrible storm which caused such great loss of life and heavy damage in our area.

Most unfortunately and most unhappily this lovely community was afflicted with a sorrowful blow almost without precedent in the history of our State, in fact, I doubt that any similar disaster has ever beset any area in our State as the result of floods and turbulent waters as that which was visited upon us last August and which was augmented during the fall season.

The damage was great and the losses and suffering that followed almost unbelievable but, as I stated in your town hall a few days after this frightful disaster, I am proud and filled with unbounded admiration for this stirring manner in which all the people of your community faced up to this great disaster and the way in which you set to work both in your public and private facilities, to bring order so speedily out of the chaos and confusion and restore vital public services and set into motion the machinery of rehabilitation. Let me emphasize that you are all entitled to great credit, all of your town officials, your able, diligent, effective representatives in the general court, your various civic and business organizations and, indeed, all the people of Southbridge, for the spirit of determination and fortitude which you exhibited in the midst of adversity.

As you know, Government at every level has been participating in the efforts to repair the damage that was wrought and to bring the community back to normal in every respect. In this work your town government has made tremendous contributions and all your town officials to a man, have given their cooperation and assistance.

The State government, which has primary responsibility for the rivers and waterways of the Commonwealth, due in large measure to the unceasing, vigorous, persistent labors of Senator Benoit and Representative Cournoyer, and State agencies, is endeavoring to play its part, and the Red Cross and Federal Government, pursuant to its mandate under the laws, to cope with emergency situations is working and cooperating to the fullest extent possible. For all these efforts we can be thankful, to the Army engineers, civilian defense, Small Business Administration, and all the rest, and we can be thankful most of all for the indomitable spirit and never-say-die attitude of the good people of Southbridge who have made sure that their community will rise up from this disaster stronger, more prosperous, and finer than ever.

I may say that in Washington we are making splendid progress to date with the efforts which I commenced right after the floods and have continued since that time as chairman of the Massachusetts Congressional Delegation Committee on Flood Prevention and Rehabilitation.

So urgently have we pressed the matter of flood protection in this area in our determination to see to it in every way we can that such a disaster will never be visited upon the people again, that almost within a month from the convening of Congress this year, we were able to secure legislation inaugurating several major flood projects in our area including the major dam at East Brimfield, which is considered by the Army engineers to be the key to adequate protection at Southbridge. That project has been authorized and planning money has been appropriated and we expect that before long construction will be underway. I am also pressing for planning money for the project at Westville which is another important part of the overall protective plan and, in time, I expect that that will also be accomplished although the engineers advise me that from an operational standpoint it would be necessary substantially to complete East Brimfield first.

The point I desire to make, my friends, is that we are moving as rapidly as humanly possible toward the desirable goal of full and adequate flood protection for this community and other areas in our State against the ravages and cruel afflictions of periodic floods. And we have been also moving with all possible dispatch with activities designed to effect stream clearance and stream improvement by the removal of rubbish, debris, and other obstructions and to provide for unimpeded flow of the river and the other streams involved.

In this work, among other features, we must understand two things, first, that it is a cooperative undertaking which involves the concurrence and participation of the local governments, and the State government as well as the Federal Government.

Secondly, we must realize that the major projects in mind are of considerable magnitude and require careful planning and construction activities over a period of time and that they cannot be completed over night.

The main thing to remember is that we are making progress, great progress. We are on the right road, moving in the right direction, and if we continue to cooperate with each other as we have been doing up to this point, I venture the prediction that it will not be very long before we will realize our objectives and the people of this community will be able to feel assured that, insofar as anything that can be done to insure them protection against terrible floods, it will have been done and accomplished by the patience, persistency, ability, and zeal of all those to whom responsibility for this work may be committed.

Then there is the question also of disaster insurance which will enable people and businessmen generally to be insured against floods and other disasters. To those of us in this area the arguments for this proposal are unanswerable. Admittedly there are practical difficulties to be worked out concerning the program, and the committees of the Congress are now considering them with vigor and careful attention, and I am hopeful that we will be able in due course to provide a system of insurance that will go a long way toward indemnifying our people against losses from these great disturbances of nature.

This great organization may feel well pleased and well satisfied with the response its membership has made in time of stress and danger. Dedicated as you are to the welfare, interest and defense of the Nation, determined as you are by reason of your own past service to protect it, I know that it is not necessary for me to urge upon you the continuance of your splendid work.

By all means, let us continue to build adequate protection against floods so vitally needed.

And by all means, let us continue to build adequate protection against the dreadful world conspiracy of communism which threatens our liberties at this hour. That is a particular job for patriotic Americans to see to it that the insidious influences of subversive elements is checked.

And let us see to it also that the cause of the veteran and their dependents of the people who have done so much to sustain this country is protected and advanced in the legislative bodies of the Nation and in every other place necessary. Let us make special efforts to assist our disabled veteran and his dear ones and, indeed, all the veterans with reference to the rights and privi-

leges which the Congress has so fittingly extended to them—the GI Bill of Rights—education, homes, hospitalization and medical care and pensions which must be assured and provided at standards commensurate with the higher price levels and the higher cost of living which obtain in the country. In short, let us keep America strong, militarily, economically, socially and, above all, spiritually, since spiritual strength, belief in our Creator and in the great liberties we enjoy is the greatest weapon we have in combating the evil enemies that would destroy us. Let us stand by our ideals, by the principles of the Constitution and the Nation, the rights of the individual, the rights of our people to advance to a more dynamic way of life and we will not only thus protect and secure our liberties but we will be making the greatest contribution possible to a better, more prosperous and happier America and the cause of lasting world peace.

A Time for Calm Resolution

EXTENSION OF REMARKS
OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include excerpts from an address before the Mississippi State Senate by one of my distinguished constituents, the Honorable W. B. Alexander, State Senator from Bolivar County. Senator Alexander's remarks are worthy of attention as indicative of the views of a responsible leader in Mississippi during this trying period:

Mr. President and members of the senate, when the senate and the house passed the Interposition Resolution without debate in the senate and by unanimous vote in both houses, I suggested from the floor that our presiding officer and the senate itself, for some weeks, indulge us with considerable leniency, so that those members of this body who wished to do so, might at a later date discuss interposition and the problems related thereto, which were forced upon the South by the misguided Supreme Court decision of May 17, 1954, and the later decision implementing that momentous and most important decision. I thank the chair for recognizing me now for that purpose and I shall make my remarks as brief as the importance of the subject will permit, so as not to abuse the distinct privilege accorded to me by the President and the membership of this distinguished body of patriotic Mississippians.

My senatorial district, the 30th district, consisting of Bolivar County only, a county of 63,000 population, should and does feel as strongly on the question of segregation as any other county in our great State, or for that matter, any other county in the South, unless it be a county like Clarendon County, S. C., in which according to the statement of that great statesman and constitutional lawyer, John W. Davis, has 17 colored people to each white person in its boundaries.

* * * * *

THE GREATNESS OF MISSISSIPPI

Mississippi is historically and truly a leader among the 48 States of this Union. In 1819 Mississippi was the first State in the Union to charter an institution for the education of young women. This was Elizabeth Academy located in the town of Washington, near Natchez. This town was for a time, as you know, the capital of Mississippi.

In 1824 Mississippi was the first State in the Union to abolish imprisonment for debt.

In 1832, Mississippi was the first State in the Union to provide for an elected judiciary. Time has shown that this system is much preferable to appointive judges.

In 1884, Mississippi was the first State in the Union to establish a college for women, supported by the State, this being the Industrial Institute and College at Columbus, now known as M. S. C. W.

* * * * *

While we have not had a member of the United States Supreme Court or a member of the Presidential Cabinet in approximately 60 years from Mississippi, and we may not have another such official from this State for decades to come or for the remainder of this century, and while we have lost power and influence in the councils of the Nation due to the ever-increasing influence of minority groups, many of them subversive, upon the political parties of this country, yet the native genius and intelligence and ability of the sons of Mississippi, the State with the highest percentage of native-born population in our Union, is such that a Mississippian is now president of the Chamber of Commerce of the United States, another Mississippian has just finished a term as president of the National Municipal Association, on a recent year a Mississippi boy was elected president of the National Boys' State and a Mississippi girl was elected president of National Girls' State. Many of the large colleges and large industries and large banks of this country are guided by a Mississippian as its head, and Mississippians have won Pulitzer prizes in journalism and in literature and in many fields of endeavor. Our people, after being ground down into abject poverty following the Civil War, have the most eager aspirations for education and for enlightenment according to the official records of the United States Department of Commerce, of which I have photostatic copies in my office. Mississippi stands second among the States of the Union in the percentage of its white population who are attending college, although we stand last in per capita income. Mississippi ranked first among the States of this Union in the percentage of volunteers for the Armed Forces in World War II. The citizens of this State, along with 35 million of their Southern brethren, stand ready to spring to arms if necessary to defend our liberties or in resisting the Communist hordes, domestic and foreign, which seek to overwhelm us. We Mississippians are loyal people. We believe in the principles of constitutional government. We believe in the Constitution of the United States. I feel, along with many of my fellow citizens, that if the trend towards socialism and towards a more highly centralized national government should continue to the left as much in the next 25 years as it has since 1932, that this Government will be one of advanced socialism or perhaps even a communistic government itself. The Southern States, so deeply for generations entrenched in their reverence for constitutional government are the last great bulwark of conservatism which will in time preserve this Republic and enable us to remain free men.

If such an organization as the NAACP is to continue to dominate and intimidate the officials and Supreme Court of this Nation, then we may even before another quarter century has elapsed, be no longer a Nation of free men, but be nothing but slaves to the Federal Government and as such slaves be persons whose only right will be to bare their backs to such lashes as a tyrannous master may seek to impose. We all know from such authorities as Attorney General Eugene Cook of Georgia and many other authorities, that a majority of the board of directors of the NAACP are either outright Communists or have been such, or that they belong to not 1 or 2, but many dozens of subversive organizations. To try to overthrow such organizations as this, is the bounden duty of every sworn public official in maintaining the Constitution and the freedom of this country.

INTERPOSITION

I shall refer only briefly to interposition. We are all familiar with it. The wonderful resolution so carefully prepared by a most able committee of our legislature itself adequately explains the reason for that resolution and the philosophy on which it is based. The greatest and most momentous of all national issues, that of abolishing all separate State supported educational institutions for colored citizens and integrating them into white schools, presents far more than the issue of mixed schools. We believe that the Supreme Court ruling, which reversed more than 100 years of previous decisions of that Court, is an unconstitutional violation of the 10th amendment, which specifically reserves to the States "all powers not delegated to the United States nor prohibited by it to the States." There is nothing in the Constitution which empowered the Federal Government to control the State school systems, and the Supreme Court has in its recent decisions, usurped legislative powers and has in effect begun the writing of a new Constitution. The Supreme Court of the United States has the wrong concept of the Constitution. It is an immutable instrument which can be changed by an amendment voted by the people or the legislatures of three-fourths of the States. Under the common law under which English-speaking people have lived for many centuries, the common law judges as conditions changed, would announce some new principle of law or some social revolution by judge made edict. But this cannot be done with the Constitution, for it is the fundamental, stable, and paramount law of the land, with which no judge can tamper. The doctrine of interposition was first invoked by Thomas Jefferson against the Alien and Sedition Acts, that set our new Nation on its first witch hunting crusade. This was when the Federalists exercised a dominant influence over the Supreme Court. Virginia joined Kentucky in calling on the other States to declare the act to be unconstitutional. In 1859, Wisconsin interposed against the Supreme Court's Dred Scott decision. The act has been at other times invoked by various States and interposition or nullification is an historical American constitutional remedy, invoked more frequently in the North than in the South.

This Government is a union of sovereign States. All rights not specifically granted the Federal union were reserved to the States or to the people, respectively. Where there are two contracting parties, it is never true that one party to the compact has the sole right to construe that compact. The Supreme Court of the United States, as the creature of the Federal Government, does not have the last and supreme right to construe the Constitution, because the States and the people who created that compact are after all supreme.

* * * * *

THE RACIAL QUESTION

It is obvious that we can never rectify the great wrong done us by the Supreme Court if we attack this problem solely from a racial standpoint. It is obvious that having once taken charge of the schools of this Nation, that the Supreme Court will in turn attack all matters of public health, marriage, elections and every activity of the citizen, so that instead of being a citizen of a sovereign State, he will be merely a tiny cog in the Federal scheme of things and we will be lost as free men, and that instrument referred to by James Bryce as the great-

est document ever written by man, will be trampled in the dust. I recall how Lord Macauley said, over 100 years ago, that the American experiment would fail when all of our free lands were gone, and I often wonder if the prophecy of Lord Macauley is about to become a reality through the forces of communism undermining our Government and through the misguided decisions of our own Supreme Court, and through the repeated and successful attacks upon private industry which we have witnessed for the last 25 years, and which we witness to this very day in our own legislature.

The Negro has far more to lose through the destruction of the Constitution than we do. Any minority race will suffer first if that Constitution is destroyed. We have nothing but friendship for good colored people. While of late race relations have been worsened and the efforts of men of good will toward better racial relations have been retarded and the patient progress of many decades has been destroyed, yet we cannot base our fight on anything, but good will toward the colored race. After all, we can recall that not a single suit to force colored people in our schools and colleges has been filed in Mississippi. This is largely because we, the poorest of all States, have taxed ourselves voluntarily to where we pay the highest taxes in proportion to our per capita income and per capita worth, of any State in the Union, and that a larger percentage of our tax dollar is used for education, than in any other State in the Union, and because we are making a determined and costly fight to afford our Negro brethren school facilities, which while utterly separate, will be the equal of those afforded the white man. Two months ago, eulogies were paid to the memory of that great American and southerner, Gen. Robert E. Lee. I attended college in the little town of Lexington in Rockbridge County, Va., at the Virginia Military Institute. There we repeatedly visited the graves of Stonewall Jackson and Gen. Robert E. Lee, where he is interred in the little Episcopal church on the campus of Washington and Lee University. The incident in this great man's life which impressed me more than any other, was the incident of General Lee strolling with a friend in that little town when a venerable Negro passed and respectfully raised his hat to the general, and the general in response raised his hat to the colored man, and upon his friend expressing his surprise that he should do so, the general replied, "Why, my friend, I am sure you would not want me to be exceeded in courtesy by a colored man." I also recall that that very great Virginian and southerner, Stonewall Jackson, who had been a professor of mathematics at VMI most of the time between the close of the Mexican War and the outbreak of the Civil War, devoted every idle moment organizing Negro Sunday schools. Neither man believed in slavery and neither man owned a slave. They embodied the spirit of real gentlemen of the Old South and of the New.

My people have lived in the South for 300 years. My grandfathers and all of my uncles of military age served in the Confederate army. We know the Negro, with all his virtues and limitations. We have an affection for good law-abiding Negroes. Early in life, I learned that a colored person did not like to be called nigger, and my wife has reared all of my five children to never use the word "nigger" or Negro, but to refer to them as colored people. We should not wantonly hurt the feelings of any human being, especially a human being who is less privileged than we are.

Just before the beginning of the great depression, I bought some 6,500 acres of land and subdivided it and built roads and built about 140 houses on these lands. I selected certain sections adjacent to each other for sale to white people, and certain other sections of land adjacent to each other for sale to colored people, and I sold about 75 tracts of farmland to ambitious Negroes who wanted to live as law-abiding citizens and educate their children. These lands are now paid for. I enjoy the confidence of these many Negro friends and hundreds of others in Bolivar County and in Mississippi. I shall always treat these colored citizens as good as they will treat me. I shall always protect them if I can and see that they have the same economic rights and the same evenhanded justice in the courts that any white man has. Nevertheless, like the late Senator Bilbo, I can say in my heart that "I will welcome my colored friend as a brother in Christ, but I will not have him for a son-in-law." We must maintain segregation. It is inconceivable to me that the white race in Mississippi, owning 95 percent of the wealth and 95 percent of the real estate, cannot maintain segregation as long as we have the sincere desire to do so. The Federal Constitution imposes no duty to afford public schools. We will abolish these public schools, if necessary. When the first colored child puts his foot, by court order, into any white school in Mississippi, we will abolish these schools. We will discontinue all appropriations for Negro colleges and universities, for we will then know that we will not need a single Negro teacher or instructor for any school in Mississippi, and we will discontinue the training of these people. However, we must not attack this great problem from a racial standpoint. We must attack it from a constitutional standpoint and thereby secure help from the North. It is said now that the Indiana Legislature is to seriously consider an interposition resolution. We must be conservative. We must be logical. We must be calm.

However, notwithstanding the fact that only 6 Negroes were killed by white people in Mississippi last year, while 8 white people were killed by Negroes and 186 Negroes were killed by other Negroes, we have had the most unfortunate and undeserved publicity of any State in the Union in this regard.

We must be conservative in our talk. We must at all hazards, through such great and patriotic organizations as the Citizens' Councils, prevent any lawlessness toward Negroes. We must be circumspect. We have had a flood of resolutions and bills aimed at preserving segregation introduced in this legislature, many of which were radical and unwise and did not aid in maintaining segregation. We have had many inflammatory statements made, which were unwise and undeserving among a great citizenship such as ours. We must not permit the radical NAACP to goad us into radical and fiery statements.

* * * * *

I do so well recall a few years ago when our Senators in Congress were in a filibuster against the iniquitous FEPC bill, designed to further rape the Constitution, that Senator EASTLAND told me that he was approached by a dozen northern friends in the Senate who were sympathetic to our cause, who assured him that if we would fight this matter out on a constitutional basis and not on a racial basis, that they would give us quiet help and assistance in the fight. Our southern Senators adopted this advice and never mentioned the racial question in any debate and they won the fight. We can win this fight in time, if we restrict it to constitutional grounds and not racial grounds, and if we are conservative, logical and decent throughout our fight.

* * * * *

Then there is the matter of boycotts. In Alabama they indicted 99 Negroes for violating the boycott law in connection with the bus strike at Montgomery, Ala. This strike upon the part of the colored people would have been over for good by now if the officials at Montgomery had not been unwise enough to make martyrs of them. We cannot afford boycotts. We have the problem with us of sustaining and augmenting the tremendous advances we have achieved in the postwar period. Our fondest dream is for a true balance between industry and agriculture and that dream may be realized in a not too distant future. The so-called economic boycotts being conducted against many companies is manifestly unwise. So far as these boycotts in Mississippi are concerned, I am advised that they were pushed and pedaled by an admitted ex-Communist from St. Louis. It is unfortunate that these so-called economic reprisals, commonly known as boycotts, have been injected at the very same time when we are engaged in a death struggle in maintaining a way of life and a philosophy of life we have known in the South for 300 years. We have lifted the banners of bitterness and prejudice above our feeling of commonsense and decency against some people and companies whose records for as long as a half century have been friendly and helpful not only to this State but to the South as a whole. The ramifications of these boycotts are many. Our State, with its 2 million people, contributes to the national economy less than 1 percent. Boycotts have been historically a prime weapon of the Communist Party and are un-American in nature, in that they deny and are contrary to the first principles for which we have been fighting. In the next place, these boycotts are most disturbing because they, in fact, display an unreceptive attitude, and one which everyone knows is untrue toward potential newcomer corporations in our State.

* * * * *

Let us be moderate, but unyielding and determined. Let us be conservative in every act and deed. Let us fight this thing out not on a racial basis and not on a basis of hatred and prejudice but upon a basis of commonsense and reason, upon a constitutional basis, so as to preserve that immortal document which guarantees freedom to us and to our posterity. Let us all serve in this cause and use every lawful means to preserve our way of life. Let us use no unlawful means. Let us follow the example of our Citizens' Council, a very great patriotic organization, in staying strictly within the law in the fight which lies ahead. This is our duty. The great man, General Lee, whom I referred to, said, "Duty is the sublimest word in the English language," and that is the opening sentence of that great book written by Thomas Nelson Page on the subject of Lee, the American.

At the battle of Cressy, it was said that as his army met defeat, the blind old king of Bohemia, unwilling to survive the cries of defeat and disaster, had his chargers tied on either side to the chargers of his companions and that he, though blind, dashed into the fray and was killed, and that night as the pale moon shone down upon 30,000 slain, they found the body of the blind old king of Bohemia with his brow ringed in blood and a small crest upon his head which bore the words "Ich dien," meaning "I serve" and that they took this simple crest and placed it in Westminster Abbey high above all the battered shields and shattered swords and banners of victory which had aided the fighting men of England in a thousand years of conquest in mastering the seas and conquering the earth and that this simple insignia, "I serve," is still the motto of all of England's kings and queens and all of her princes yet unborn, and we in the South in humble imitation and in obedience to the words on this simple crest, may set our face like a flint toward the foe and must never yield. We are not in the fight to protect the constitution 75 percent or 98 percent but we are in the fight 100 percent. We shall never give in. We shall never permit the amalgamation of the races and the destruction of the virtues of both

races at the behest of a power-mad minority in this country. We shall serve and we shall serve to our dying day. We will never retreat. We shall win this fight if we adopt the principles of moderation. "He whom the gods would destroy, they first make mad." We shall grit our teeth and keep our temper. We shall make no intemperate public utterance. We shall introduce no foolish and unwise legislation. We shall fight this fight on a constitutional basis. We shall thus enlist the help of the States of the North because the preservation of the Constitution is just as much to their interest as it is ours. We shall be law-abiding. We shall not let a colored man be kinder to us than we are to him. We shall in the interest of both races unyieldingly maintain segregation, even though we must abolish the public schools to do so. We shall fight a good fight; right and justice and the Constitution are on our side. We shall win the victory. We shall as citizens of this great State be urged and uplifted by the crisis which surrounds us. We shall be a bulwark against communism and radicalism. We shall restore the Constitution to its pristine force and vigor. Mississippi is a natural leader among the States. Her power and political prestige shall finally be restored. I pray that although we have gone far to the left already and our Constitution has been weakened, that we shall never forget that we still have the finest Government ever devised by man. Pray, Almighty God, that we may preserve that liberty and that Constitution for our posterity and as an example of freedom throughout the centuries for all the nations of this earth.

Soviet Squeeze Play Perils United States

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting at this point in the RECORD a timely article by that outstanding columist, Mr. Constantine Brown, who writes in the Evening Star. On Tuesday, April 24, in his column he pointed out that the Soviet propaganda efforts are placing the United States in a serious squeeze with its friends in the free world. The article follows:

SOVIET SQUEEZE PLAY PERILS UNITED STATES—RED GAINS AND AMERICAN LOSS OF FRIENDS DESPITE MONETARY AID ARE COMPARED

(By Constantine Brown)

The main effort of the Soviet leaders these days is directed at squeezing out the United States from the position of world leadership which was thrust upon us after the last war. And Messrs. Bulganin and Khrushchev and Co. are doing a good job of it.

The loss of our illusory leadership would not be a severe blow in itself if it did not jeopardize our security.

Unlike the Western Powers in past centuries, which became world powers for profit through colonialism and exploitation of the lesser nations. America has conceived its new world position as a job in which it assumed obligations without compensation. We spent the taxpayers' money chasing that will-o'-the-wisp, lasting peace, without asking anything for ourselves.

Our leaders of both parties believed in the gratitude of the countries which received our bonanza. They thought that by spending tax dollars indiscriminately they would secure such good will from the recipients that the free world would help create a strong barrier against the rising tide of Communist imperialism.

There were some White House advisers during the war who conceived the idea of a millennium through economic leveling between the haves and the have nots. This was expressed by one of the brain trusters at an informal dinner at the Polish Embassy in Washington which this reporter attended, as follows: "The world peace will have to be assured by America. We shall have to siphon our wealth across both oceans in such volume that there shall be a leveling off between our prosperity and the European and Asian lack of it. When sufficient American substance has been transferred across the oceans we will have less and they will have more. In this manner there will be an economic equality between all peoples which will insure the world free of wars and strife."

Whether this theory, expounded by one of the foremost brain trusters of President Roosevelt, was espoused by his successors is difficult to say. But we are now continuing the policy of siphoning across the oceans American dollars and goods without regard for where they go.

Yet we have not reached the millennium the brain truster expected from this leveling off of economic disparity. Far from it. We are now faced with an international situation that only inveterate wishful thinkers would describe as favorable to peace.

The French are looking to Russia to help them out of their ticklish position in North Africa. Premier Mollet and Foreign Minister Pineau start their pilgrimage to Moscow on May 14. The main purpose is to ask the Kremlin's price for friendly intervention in France's behalf with the Arabs.

The West German Republic has begun discreet negotiations with the Muscovites looking toward German unity. In the Middle East the Russian drive to substitute themselves for the United States is moving rapidly toward successful accomplishment.

This reporter, just returned from a trip to Turkey and Greece, can say that our position in Turkey is becoming precarious, while in Greece the American-supported Tito is taking advantage of the Cyprus and is driving for a Greek-British controversy over new political constellation—the Belgrade-Athens-Cairo axis. The fact that Tito's heart belongs to the daddies in Moscow (and since Stalin's death and dedeification he is closer to the Kremlin than before) does not keep us from pouring tens of millions into his treasury. The argument of our bureaucrats is: "If we do not help him, the Russians will soon have bases on the shores of the Adriatic."

We were, according to statements from the highest in the land, on the brink of war in the Middle East until the Russians told the Arabs last week: "Go easy, boys, for the time being." Only then did fears of an early outbreak subside.

Communism is gaining in the Far East. Only a handful of weak countries still stand by us. The Pakistanis still are loyal, but have become uncertain about our intentions toward them. In the meantime, the Russians are making important inroads in the country and are preparing to increase their support of the republic.

There is an uneasy armistice in Korea. Since it was signed in 1953, the Communists have strengthened their military position far beyond what it was before the truce.

The ridiculous "exchanges of views" between American Ambassador Johnson and Communist Ambassador Wang which have been going on at Geneva since last August are interpreted by the free Asiatics as marking time to pave the way for a conference between Secretary Dulles and Red Premier Chou En-lai.

Only professional optimists can maintain that we are not being squeezed out of our position of leadership in the free world. And this Communist squeeze is a definite threat to our national security.

Public Policy Aspects of Automation

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, several weeks ago it was my pleasure to address a Conference on Automation in Pittsburgh, Pa., cosponsored by the Pittsburgh Labor Education Council and Labor Education Service, Pennsylvania State University. My remarks were directed toward the public policy aspects of automation. Mr. Bruno A. Moski, Director of Industrial Engineering, Yale & Towne Manufacturing Co. presented the management viewpoint while Mr. Nat Goldfinger, economist from the Department of Research, AFL-CIO, presented the labor viewpoint. Delegates from AFL and CIO local unions and from lodges of the Brotherhood of Railroad Trainmen from the western Pennsylvania area attended the conference and participated in the discussion which followed the formal presentation of the various viewpoints on this important subject.

Mr. Speaker, this Conference on Automation was an inspirational example of democracy in action, citizens meeting together to discuss the various aspects of a mutual problem which is of immediate concern to the working people of our country. The conference in Pittsburgh made an outstanding contribution toward the more widespread understanding of the impact which automation will have on our social and economic systems. I congratulate the Labor Extension Service of Penn State University and the Pittsburgh Labor Education Council for their outstanding leadership in making the conference an outstanding success and hope that this type of meeting may serve as a model of similar discussions in other parts of the United States.

The text of my address follows:

Congressional concern over the impact of automation on our citizens, our living habits, and our economy has many different aspects. I would like to discuss some of the more important of them in the brief time allotted me for this initial presentation. Others may come into our discussion as the result of questions following your buzz sessions.

I would like to devote my remarks here today to these major points in regard to automation: (1) Automation in the Federal Government; (2) the broad public policy aspects of automation; (3) the role of the Federal Government in meeting the challenge of automation; and (4) positive steps which should be taken now.

I. AUTOMATION IN THE FEDERAL GOVERNMENT

In our general consideration of automation, we have tended to direct our attention to the application of automation in industrial situations. We have learned of dramatic changes in the production-line uses of automation, whereby hundreds of workers have been replaced by a handful, because of the installation of awe-inspiring machines and electronically controlled operations.

Less has been heard about the impact of automation on various agencies and departments of the Federal Government. A recent article in the Wall Street Journal reported that machines to streamline paper work in the Bureau of Public Debt of the Treasury

Department have reduced the number of employees in that office by two-thirds over the past 10 years. Records divisions of the Veterans' Administration and the Social Security Administration are drastically reducing their number of employees through the use of electronic machinery. The Weather Bureau now has a machine which automatically reproduces the weather maps appearing in our daily papers. Weather data is fed into the machine, and in 8 minutes it performs mathematical computations that would take one man 64 years to complete.

The Post Office Department will perhaps have the greatest use for electronic machinery in the years ahead. Already there are various machines in use which sort mail, and perform other similar mechanical functions. The Wall Street Journal reports that encouraging results have been obtained on tests of a new machine which can read typewritten addresses on letters and sort these letters by city of destination.

The Post Office has also installed a new stamp-vending machine for use in post offices. You drop in coins, dial the number of stamps you desire, and they are automatically dispensed. A recorded voice even says "thank you" to the stamp purchaser.

Thus, you see that all of the applications of automation are not confined to the field of industrial production, but affect workers in the Federal Government as well.

II. BROAD PUBLIC POLICY

In view of the broad social and economic ramifications of automation, what should be the role of the Federal Government? Or to phrase it another way, what are the public policy considerations in the impact of automation on our modern civilization? At the outset I feel that the advent of automation on our modern industrial scene requires us to carefully reexamine our basic philosophy of government, since the concern over the changes automation will bring to our daily lives in the years ahead intimately affects this concept of democratic government.

Our democratic system of government in America is unique because it places primary concern on the individual human being, his wants, his needs, his welfare. All power of government reposes in the hands of the individual citizens. Government is successful in terms of its ability to formulate and carry out policies which fulfill the needs and promote the welfare of the people who delegate certain powers to their government. Government which ignores the needs and welfare of all the people, in order to pursue courses of action beneficial to particular groups of its citizens, is violating our fundamental precepts of democratic government. Good government is responsive to the needs of its people and within its constitutional limitations, acts to meet problems or innovations which conceivably could affect the well-being of its citizens. Such response of government to individual situations may be called public policy. Sound public policy, like good government, must be tailormade to meet the needs of our people and must always keep foremost as its objective the promotion of human welfare and human values. Material progress at the expense of human suffering cannot be defended. This is the way of the totalitarian dictatorships and has no place in our democracy.

These are fundamental statements of fact which we must be aware of in the discussion of automation as it affects public policy. I am sure that most Americans today accept these time-honored philosophies of Government, which were written into our Constitution by the Founding Fathers and implemented by practice over the years.

In searching for a governmental policy to effectively deal with the problems raised by automation, we have certain insights gained by past experience. Automation has sometimes been referred to as the second industrial revolution. What policies were adopted by governments in the past when sudden technological changes appeared?

Most authorities agree that the first industrial revolution took place about 200 years ago, while our country was still divided into colonies of Great Britain. We all remember reading of the violent uprisings in England which accompanied the invention and application of labor-saving machinery in mills and factories. Thousands of workers were thrown out of work in the wave of social and political upheaval. As a result, human suffering under the rule of an absolute monarch caused untold misery and deprivation. Economic justification of the changes, brought about by the first industrial revolution, were expressed by the philosophy that government should not interfere in any way with the right of business and industry to carry out policies, even though they might be detrimental to the public good.

This philosophy dominated the 18th and 19th centuries and extended well into our present century. Certain reactionary elements of our business society even today still cling to this philosophy, which is evident in the lack of social responsibility in the pursuit of their policies.

In America, during the late 1800's, the introduction of mass-production methods brought about a notable acceleration of the first industrial revolution. This period marked the development and growth of giant corporate enterprises of such power as to rival our Government itself. "The public be damned," was the motto of these industrial giants. Their wealth and influence dominated the election of public officials at the State and National governmental levels. Unbridled power and wealth was a corrupting influence on the very foundations of democratic Government.

Resurging public opinion demanded regulation of these monopolistic giants. Antitrust laws, regulatory laws, and court decisions were directed against them, but only a portion of their activities were ever brought under control. Legislation such as the Public Utility Holding Act, and the Securities and Exchange Act, passed during the New Deal years, was a later step to protect the public against further exploitation.

Governmental policy during the period of the growth of monopolistic corporate enterprises was generally one of nonintervention. When the abuses and power of these enterprises grew to such a point as to threaten our form of government, public opinion demanded action. But such action against entrenched economic interests was at best only a checkrein to further abuse.

Some people argue that our material progress during the past 75 years and our present high standard of living could not have taken place otherwise. I am of a different opinion. It was not until corporate excesses began to be curbed that any real advancement of the welfare of the individual citizen took place. Labor was crushed by monopolistic corporate power until the depression and the New Deal afforded working people the legal right to organize and bargain collectively. It has been over the past 20 years that the real advances in our standard of living have taken place, and the role played by organized labor in winning a share of the fruits of corporate wealth is a matter of record.

Here is a lesson which was learned 75 years ago and which is applicable to our present discussion of automation. Government must not surrender its duty of protecting and promoting the welfare of all its citizens, especially in times of economic and technological upheavals. Economic and material progress must never again be permitted to travel a road paved with the bodies of workers, crushed in the mad scramble for wealth and power. Human dignity and the public good must not be subverted to personal greed.

Our Government has a legitimate right to become involved at the very beginning of this "Second Industrial Revolution" so that past abuses will never again be repeated. We, as citizens, should demand such public policies as are necessary to insure that the impact of automation will be intelligently directed toward the realization of benefits which will be enjoyed by all our citizens.

III. THE ROLE OF THE FEDERAL GOVERNMENT IN MEETING THE CHALLENGE OF AUTOMATION

There can be not doubt that the problem of automation is a national issue. By the enactment of the Employment Act of 1946 the Congress of the United States gave legal recognition to the duty of the Federal Government to use its resources to create the conditions making for maximum employment, by fostering and promoting conditions which will afford job opportunities for all people desirous and capable of working.

If the results of automation were to take place suddenly and on a broad scale, millions of workers would be thrown out of work, competing against each other for fewer and fewer jobs at lower and lower pay. Our social and economic system would be in a chaos. Widespread depression and mass unemployment poses a dangerous threat to our democratic way of life. It would be disastrous both in terms of human suffering at home and in terms of the opportunity it would afford to Communist imperialism in its plan for domination of the free world. The stakes in the game are high. Either we adopt public policies to study, anticipate, and channel the course of automation toward human betterment, or like the Frankenstein monster, it may rise up to destroy us.

I am confident that intelligent and informed American citizens will not permit the potential blessings of automation to escape us or be turned against us. We will not permit our Government to stand idly by and await the full impact of automation without preparing ourselves for its effects. We cannot afford the luxury of inaction or failure to face up to the realities of automation. If the administration temporarily in control of the policies of our Government fails to take heed of the impending changes which automation will bring to every phase of our lives, I am sure that a new administration will be elected in its place which will take such action as is deemed necessary.

IV. POSITIVE STEPS NOW

What are some of the ways in which public policy can be effectively directed toward systematic preparation for the social, economic and technological changes brought about by automation?

First, there must be a recognition of automation, what it is, what it means, what we estimate its effects will be, where its impact will be first felt, and other similar fact-finding questions. Meetings such as this are of tremendous importance because these types of questions are discussed. It is also important that the word "automation" and its meanings be made known to the great numbers of our people who do not have the opportunity of attending such meetings and who may not read or hear about automation. There must be widespread recognition and understanding of the problem, not in technical terms but in the basic understanding of what automation means to individual citizens and how the future of all of us depends on the adoption of sound public policy to deal with the problems which automation creates. Government is motivated into particular courses of action by an awareness of its citizens, and their ability to make their opinions known to their appropriate elected representatives who have a role in the formation of public policy.

One way of making your views known is to call the attention of your public officials to

hearings before Joint Committee on the Economic Report. The hearings are entitled "Automation and Technological Change" and contain a wealth of information and statistical data submitted by the expert witnesses who appeared before the committee. A subsequent report on these hearings gives a concise statement of the basic facts of the problem of automation and offers policy recommendations to meet this problem.

Secondly, I feel that sound public policy required that every possible effort be made to strengthen our economy at its foundations so that temporary setbacks resulting from technological change may be compensated for elsewhere in the national economy. By this I mean the enactment of a broad legislative program to place greater purchasing power in the hands of the average citizens. This program would include an increase in personal income tax exemptions; an increase in the minimum wage to $1.25 an hour and an extension of coverage; an increase in social-security benefits, a reduction of the retirement age, and a liberalization of other provisions of the law; liberalization of our unemployment compensation system; assistance to areas of chronic unemployment in the establishment of facilities for vocational rehabilitation, education, and retraining of displaced workers, especially older workers, and the attraction of new industries; an expanded health and medical research program; Federal aid for school and hospital construction; full development of our natural resources, and other similar type programs which will have a long-range beneficial effect on our economy while also meeting the most pressing economic needs of our people.

A dynamic, expanding, full-employment economy is perhaps the best way in which we can prepare ourselves for the impact of automation, and guarantee that hardships to displaced workers and their families will be kept at a minimum. A healthy, expanding economy will be able to absorb displaced workers as well as providing job opportunities for our young people entering the labor market.

Thirdly, it is the responsibility of enlightened management to face up to the broad social aspects of automation and understand and accept their full role in the process of technological change. Industry must be prepared to use part of the wealth and abundance created by more efficient and less costly production in the retraining of displaced workers so that their skills might be utilized in other parts of our economy. Industry has the responsibility of carefully planning and scheduling its production, so that loss of employment and resulting human suffering may be minimized. The institution of new automation machinery must be carefully planned so that due consideration is given to the general state of business so that displaced workers may find new employment more readily.

Fourthly, the impact of automation places on organized labor the responsibility of meeting the challenge of technological advancement. I am proud to pay tribute to the statesmanlike position which the leaders or organized labor have taken in this regard. There will be no machine-smashing riots in the second industrial revolution in America, for the new labor-saving machines offer almost unlimited opportunities for human progress if our technical skill and ability are molded to the needs and betterment of all mankind. This does not mean that labor can afford to sit back and await the fruits of abundance created by more efficient labor-saving machinery. Labor must cooperate with enlightened management in the solution of mutual problems so that the mutual advantages which automation has in store for us may be fully realized. Labor must be prepared to offer constructive recommendations in the application of technological changes to specific situations. Labor must educate its membership to understand automation and mobilize public opinion in the community to a realization of the problems, opportunities and the challenge which we must all meet in this spirit of cooperation.

The horizon is filled with glorious opportunities. A bright new day is dawning, if only we can grasp its significance and adopt policies to meet the challenge of automation.

We look forward to shorter workweeks, more leisure time, greater cultural and recreational opportunities, travel, and an enjoyment of the good things of life with our families.

Men of good will—people in all walks of life, in labor, mangement, and in government—working together in a spirit of cooperation and brotherhood can achieve this goal of freedom, security, and abundance for which civilization has been struggling for thousands of years.

Problems of the Middle East Are Still Unsolved

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. DINGELL. Mr. Speaker, the problems of the Middle East appeared as if they were on the way to a solution according to the jubilant headlines which the papers gave them early last week. Today we realized, with sober reflection, that the basic problems remain unsolved and the threat of a conflict which might blossom into the third world war remains hanging over the world. That the unrest which seethes in that part of the world is unsettled is made evident by the repeated clashes and outbursts of violence along the frontiers of Israel before that cease fire which we hailed so hopefully was a week old.

We in America have not realized that lasting peace will come to that area only when all of the people there have become reconciled to peace and the status quo. And the latter, the status quo, which means the existence of Israel and its present frontiers, is the most important of the two.

Beyond these two paramount ideological and economic conditions for peace are the important considerations of the problems of resettlement of refugees, ending of the economic misery and privation which is so prevalent in that part of the world, the solution of the problems of furnishing adequate water for domestic, agricultural, and economic use, and the furnishing of a decent standard of living to all the people of the area.

As a preludium to any such settlement, we must set about making the Arabs recognize that war is in no wise either practical or desirable.

Present conditions indicate that the Arabs only seek to use the present cease-fire as a period to continue their military buildup until they are either ready to attack themselves or to attempt to goad the Israelis into a preventive war.

I repeat that this impending war may be the preludium to the first atomic war. We in America have a duty to ourselves and the rest of the world to see to it that Israel and the Arabs do not fall into this abyss and drag the rest of the world in with them.

Israel wants peace as badly as do we in America. The Arabs are spoiling for a fight, and their leaders' declarations show they will go to war as soon as the circumstances indicate the success of such a venture.

We in America can delay or prevent the possibility of such a calamity by providing Israel with such of the sinews of modern war as would make her such a sufficiently formidable opponent that the Arabs would not dare to attack her. I have consistently urged that Israel be given the weapons she needs for her own defense, and hope that her need will be soon realized by the White House to coincide with America's own enlightened self-interest.

One of my good friends, Dr. Leon Fram, of Temple Israel, in the city of Detroit, one of our city's most respected clergymen, and leaders in church and civic affairs, recently wrote a letter to the President which expresses the feelings of many of our people here in America their concern for the future of Israel, as well as the peace of the world.

I hope that my insertion of it into the RECORD at this point will call to attention the problems faced by the sister democracies, America and Israel, and their pressing common danger in the Middle East.

APRIL 6, 1956.

To the PRESIDENT OF THE UNITED STATES,
DWIGHT D. EISENHOWER,
Washington, D. C.

DEAR MR. PRESIDENT: As a citizen of this Republic, I am exercising my right to criticize your administration of your office.

You are responsible for our foreign policy. Let me say frankly, then, that your policy on the Middle East is timid and confused, and is, therefore, leading our country inevitably to war and disaster.

You, who have had so much experience with dictators, seem to have forgotten that the one thing dictators despise is weakness, and the one thing they respect is firmness. Instead of dealing firmly with the dictator of Egypt, you are displaying weakness and appeasing him. You are encouraging him in his openly proclaimed project of destroying the State of Israel. You are inviting him to aggression and war by denying Israel the right to purchase those defense weapons which would deter his aggression.

Your betrayal of Israel will only serve to unite the Arab countries in utter contempt of you and the free world. A solid Moslem land mass, including North Africa, will fall like ripe fruit into the palm of Communist Russia. Then both oil and bases will be lost.

The only way to safeguard the American and the free-world position in the Middle East, is by firm resistance to the obvious aggressive designs of the Egyptian dictator.

Like all other dictators, Nasser will not attack where victory is uncertain. Defense weapons for Israel, and a security pact with Israel, are the only sure way to prevent war and assure order, and thus safeguard our oil and our bases.

Sending the Secretary of the United Nations to supervise the Israel-Arab frontiers is a futile gesture. It will not prevent Nasser from attacking when he is ready to use his new Communist jet bombers.

Israel must be protected in 1 of 2 ways—either by free-world forces, or by its own defensive weapons. Since you, Mr. President,

have stated emphatically that American forces will not be available, the only way left to deter aggression is to supply Israel with defensive weapons.

As the Life magazine editorial recently suggested, once the Arab leaders are given to understand that Israel's right to live will be protected, all the other problems of the Middle East will become minor and open to ready solution. With peace will come cooperation, rehabilitation, and prosperity.

I beg you, Mr. President, to apply your knowledge of dictatorship mentality. Instead of appeasing Nasser, give Israel the chance to resist.

Israel will not fail you.

Sincerely yours,

DR. LEON FRAM.

What I Owe My Country

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include 2 of the prize-winning essays in the American Legion essay contest in Ohio. Miss Shellia Gallagher, of St. John's High School, Bellaire, and Mr. Elmer Tope, of Sherrodsville, Conotton Valley High School, were 2 of the 12 winners out of the more than 100,000 high-school students who entered this contest. Naturally, we of the 18th district are very proud of them and I would like to extend my personal congratulations to them. The subject of all the essays was "What I Owe My Country." The American Legion is to be congratulated for sponsoring this kind of citizen-building program. The prize-winning essays follow:

WHAT I OWE MY COUNTRY
(By Shellia Gallagher)

Dear Lady America, gazing from my Ohio home, I behold your hills, not majestic purple mountains, but glorious hills. They are not just heaps of dirt, however, for they furnish homes for your peoples, and they are a masterpiece sculptured by the Greatest of Artists for your admirers. To the farmers they are sloping gardens, and to your miners a vast source of coal, but most of all they are a small portion of your land where was planted the small seed of liberty, which through the years has grown and blossomed into the wealthiest Nation on the face of the earth.

You are a temple of freedom. Our forefathers, your architects, built you from the blueprint of a durable Constitution, supported by pillars of justice and equality. Your windows are stained with the red blood of your citizens who keep you free, with the white denoting your purity of purpose, and with the blue representing the loyalty felt by every American, as he views the misery of the down-trodden held in greedy captivity. You have allowed me to live within your portals, America, and for that I am grateful. To God I owe my existence, to others I owe my consideration (and to the loan company I owe my car). But to you, America, I owe my democratic existence, my loyal consideration, and the right to call a mortgaged car my own and not property of the State. You give me a home, food, recreation and, most important, liberty. Yet you require so little in return. You are supported by taxes for sustenance and defense. But this should not satisfy my sense of debt. I should, instead, desire to dedicate my very being to your beck and call. You have been so considerate of me that I am even ready to lay down my life for my country, should you ever call on my meager services.

My debt to you, America, cannot be counted in terms of dollars and cents. Our democracy is a priceless heritage. All the gold in the world could not purchase my inalienable rights. For no treasure would I trade my freedom of speech, freedom of religion, and freedom of the press. This heritage is the boast of every living American. Only when Uncle Sam and every citizen guards you can each individual be worthy of his democracy. My debt to you, therefore, must be paid by my attitude toward you, by paying my taxes cheerfully, by accepting the new immigrant family that moved in down the block, by voting each year for the most capable man even if he goes to a different church, by obeying your laws because I love and respect them, not because I fear the consequence of breaking them, and by answering your call instead of dodging the draft, can I fulfill my moral obligation to you, the country I love, America! This small voice calls a heartfelt cry, "Thank you, America!"

WHAT I OWE MY COUNTRY
(By Elmer Tope)

I owe my country a great debt as does every American citizen.

I owe thanks to my country for the liberty I have. I am reminded of this liberty when I think of our great Statue of Liberty, forever standing straight and proud, a symbol of freedom, for all those who enter this country.

I owe a feeling of gratitude to the forefathers of my country because they have kept this land free from oppressive rulers, and because they have made it a land of opportunity for any person who wishes to obtain a goal in life.

I owe support to our National Government and to State and local officials who are working for the good of the people. Since our Government on all levels requires financial aid in order to operate, I owe it to my country to pay taxes. Too many people today complain about taxes and deductions from their wages. People like these seldom stop to realize that the privileges that are found in this country far overbalance the amount we contribute to the National Government.

I owe sincere thanks to my country for the education I am receiving free of cost. If education weren't free, far too many people would miss the opportunity of gaining knowledge. Intelligent and educated people are necessary to keep America strong.

I must be aware of the way our Government is run and the purposes the Government seeks to serve so that my mind will not become filled with ideas of communism, which some people right here in the United States are trying to get people to believe. If communistic ideas enter the minds of our people, this country to which I owe so much will decline in greatness and in time the citizens will lose the feeling of pride for their country. I owe it to my country to help to prevent this sort of thing from happening.

I must fight for my country in time of war and insure my preparedness for war by military training.

I owe it to my country to be a good citizen. Being a good citizen does not merely mean a passive acceptance of all the privileges granted to me by the Government, but rather it means taking an active part in the furtherance of our ideals by living a clean, wholesome, and worthwhile life, by getting a good education, by working in local groups for the benefit of the community, by keeping up with current affairs, and by voting in State and national elections. By doing all these things I will be a citizen worthy of the privileges granted to me and will in some measure repay my debt to my country.

All Truth and Fact Must Have Its Day in Court

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. JENSEN. Mr. Speaker, on April 16 my colleague, Congressman QUIGLEY, delivered a speech from the floor of the House of Representatives which appears on pages 5725 to 5727 in the CONGRESSIONAL RECORD, at which time the gentleman made some very scurrilous remarks about Whitney Gillilland chairman of the Foreign Claims Settlement Commission. Mr. Gillilland is a former district judge of Iowa. His honesty, ability, patriotism, and fairness, is not questioned, by those who know him well.

Mr. QUIGLEY saw fit to quote just two paragraphs from a speech recently made by Mr. Gillilland, in an attempt to prove a point.

Therefore, I ask unanimous consent that the entire speech of Mr. Gillilland, from which Mr. QUIGLEY took two paragraphs out of context, be printed in its entirety in the CONGRESSIONAL RECORD for all to read.

The speech is as follows:

REMARKS OF WHITNEY GILLILLAND, CHAIRMAN, FOREIGN CLAIMS SETTLEMENT COMMISSION OF THE UNITED STATES, BEFORE JOINT MEETING OF VETERANS ORGANIZATIONS AT COUNCIL BLUFF, IOWA, ON APRIL 10, 1956

I appreciate this opportunity to appear before you. I have some things to say which very much need saying, saying out loud so that everyone will hear them. They have needed saying for a long time. They involve American GI's who were held prisoners of war by the Communists in North Korea.

Our functions, those of the Foreign Claims Settlement Commission of the United States, in passing on claims is judicial in nature and we have not considered it proper to make public comment while issues affecting the determinations of a claims load remain pending before us. During the pendency of the North Korean claims it has been necessary to remain silent while a great deal of misinformation has been disseminated to the public. Sometimes this propaganda has tended to reflect against our agency. Much more frequently it has been so calculated as to tend to mold public opinion against the American GI's who suffered great hardships and many of whom died as prisoners of the Communists.

That claims load has now been substantially completed, the major issues resolved, and I can now take off some of the wraps. I am going to take this as the earliest opportunity to say some things which need to be said for the good of everybody.

With regard to the first proposition, I will comment merely that if you hear anyone say that he has been deprived of any rights, constitutional or otherwise, in dealing with the Foreign Claims Settlement Commission

you can say for me to him that he is mistaken. Contentions of that kind just are not so and have not happened with us.

Now with regard to the second proposition:

Beginning in the spring of 1953 shortly after "Little Switch," and continuing until now, stories have appeared in the press and elsewhere to the effect that American GI's held prisoner of war in North Korea did not demonstrate the sturdiness that might have been hoped for in resisting Communist indoctrination. Instead of challenging the accuracy of these accounts, critics have apologized for them and belabored the Army and the American educational system, claiming that the GI's were poorly prepared for their ordeal. These stories have no doubt caused anxiety to many people.

A number of these authors or propagandists infer, or outrightly say, that Americans have lost purposefulness and direction and the capacity for success, and that the only persons in this day and age who know where they are going and what they are doing and why they are doing it, and succeed in getting it done, are the Communists. They make it appear that we are a decadent generation and no longer any match for the clever and progressive Communists.

Some of these people in effect present, or actually present, the American GI's as poor, ignorant, miserable, weak creatures, lacking in principle, faith, honor, character, loyalty, patriotism and integrity, incapable of resisting, and who did not resist, the teachings of communism to which they were skillfully subjected.

This is all dangerous talk and it would have been better for the critics to have given more attention to the accuracy of their tales. The fact was well known that at the end of the conflict only 21 Americans held prisoner by the Communists elected not to be repatriated. The fact was also well known that more than 22,000 of the enemy similarly held prisoner by us did not return to the Communist countries. That is one to a thousand. How, if the story tellers had given it thought, could they have reconciled these facts with the statements they were making? And where, if they had looked at the young men about them, would they have perceived deterioration in any of the sturdy qualities they apparently believed the older generations to have possessed?

In 1954, the Congress enacted a law providing among other things benefits to Americans held prisoner of war in North Korea (Public Law 615, 83d Congress). Administration was assigned to the Foreign Claims Settlement Commission. The benefits consisted of $1 per day on which a prisoner of war did not receive proper food and $1.50 for each day he was otherwise mistreated in violation of the Geneva Convention of 1929. Benefits were not to be paid to anyone "who, at any time, voluntarily, knowingly, and without duress, gave aid to or collaborated with or in any manner served such hostile force."

Now it will be noted that anyone who might have been guilty of outright disloyalty, that is, voluntarily, knowingly, and without duress, collaborating with the enemy, would in any even be excluded by either the provisions (1) concerning food and mistreatment, or (2) those precluding payment to anyone who voluntarily, knowingly, and without duress at any time and in any manner served such hostile force. Therefore, it never became necessary to pass on the issue of collaboration and no claim was rejected on that ground. Therefore, no inference is to be drawn that any particular individual denied benefits was disloyal.

On the other hand, it will have been apparent that any collaborators would be included among those claimants denied for the two mentioned grounds and that the total number of collaborators could in no event have exceeded the total number of the claims denied on those two grounds.

A great deal of care has been taken with that claims load. The very best of the staff was put at the task. No one was permitted to participate at the staff level who was not himself a veteran and who did not have security clearance. A full investigation by the appropriate agency of the Government was had on every one of them. It was a good, loyal, skilled, and conscientious staff.

Every bit of evidence available concerning the claims was carefully examined and in many instances that included the benefits of thorough and fair investigations by other departments and agencies.

For the first time on any claims program of ours, the Commission went into the field for oral hearings. This was done as extensively and the hearings conducted as closely to the homes of the claimants as the administrative funds available would permit. As many of these hearings were conducted by the commissioners themselves as it was possible to arrange for. Every single claim involving one of the above matters which had been denied in the first instance by the staff was subsequently reviewed whether review was requested by the claimants or not. The evidence concerning every claim on which review was requested was considered by the Commission itself. When it is borne in mind that we have many claims loads other than this one, and that sometimes over all determinations in the name of the Commission run into the hundreds per day, it will be obvious that the commissioners can give individual detailed attention to only a small proportion. But we did do that here with every one of the hearings of this class. We spent many hours, days, weeks, and months at the task and we came to know, I believe, a good deal about the subject.

We approached this task with much caution and determination that we were not going to talk until we knew what we were talking about. It was our view that if we found the record to be bad it was no part of our function to engage in the injuring of any reputations. Our function was solely to determine upon those persons to whom we should make the awards authorized by the Congress. We therefore made no public announcements. This has been construed as prejudicial to the claimants. I assure you that quite the contrary was intended. However, if on the other hand we found the record to be good, the time to speak was when we could speak with certainty.

The Commission was aware that even in the old days not all soldiers, at all times, conducted themselves with valor. It is frequently said that Benedict Arnold was the ablest American general of the Revolutionary War. He was the hero of the Battle of Saratoga, the turning point of the war. Benedict Arnold defected to the enemy. Soldiers of the War of 1812 ran away from the field of battle. In the Civil War, several thousand Union soldiers held prisoners by the Confederates enlisted in the Confederate Army against their former comrades. Several thousand Confederate soldiers held prisoners by the Union forces enlisted in the Union Army against their former comrades.

It seemed reasonable to expect that we would find the average conduct of our GI's in Korea about like that of their forefathers under similar circumstances. In other words, we expected to find some evidence of defection to the enemy.

What we found was, and I am happy here to tell you, that they actually appear on the whole to have conducted themselves better than their forefathers. Furthermore, while I am not going to express an opinion as to whether the Army or the American educational system might not have done a better preparatory educational job, I will say that I found no comparative basis for adverse criticisms of either one. I did find some basis for favorable criticisms.

An attack on the will to resist of our GI's was made by starvation, exposure to cold through lack of proper shelter and clothing, lack of sanitation, lack of medical care, sometimes outright brutality and even torture. In the first few months following capture, thousands of our boys died as a result of this treatment. Meanwhile, the survivors were subjected to a constant and persistent effort at Communist indoctrination. A favorite tactic in the early days of the prison camps was to stand the poorly clad, filthy, lousy, and starving GI's at attention in cold and freezing weather under threat that they would not be permitted to rest, much less eat, until they gave the party line answers to the questions of their interrogators. Just like a dog—"when you bark I'll give you this miserable food."

I will say to you that the Communists could have taken little satisfaction with the results of their indoctrination efforts.

This claims program has been nearly completed. A total of claims by reason of the imprisonment of 7,626 servicemen were filed under it. The rate of disallowance for all causes has been lower than on any other major program the Commission has administered. It appears that the final number of disallowances which could fall under the two propositions above will be less than 1 percent. If we were to assume that all of this number were disloyal, the record would even then be better than our forefathers. But no such assumption can be made.

Included among the prisoners of war as among all groups of people were to be found some who were ignorant, weak willed, easily persuaded, persons of the type who always follow the path of least resistance. Some of them could scarcely read and write. Such people we always have with us. To the extent that any of them understood the Communist teachings, most of them have long since forgotten it. They are in no event influential with other people. They are of no value to an enemy and no danger to us. I have no doubt that many of them will go through life in this country paying their debts, kind to their families, friendly to their neighbors, praying to God and regarded as good citizens.

There were a few of the "smart boy," the "I'm looking after me" type, who followed the teachings or pretended to follow them in what they considered to be their own self-interest. Their self-interest now lies in the other direction and their loyalty to communism is not likely to prove any greater than it was to the nation to which it rightly belonged.

All in all, the results must have been a sore disappointment to the Communists, for despite all of their efforts, there would have been very few, indeed, among the returning G. I.'s who they could realistically have expected to serve any propaganda purpose in this country or as a nucleus for espionage or to serve any other purpose for them. By and large, our GI's regarded the Communists and their teachings with disgust and contempt, and the Communists came to know it, and that they had not even made a substantial dent in their patriotism. That they recognized the futility of their efforts is evidenced by the fact that long before repatriation the efforts at indoctrination began to subside and general treatment of the prisoners improved.

There are lessons to be learned from these Korean experiences which it would be well for us to keep very carefully in mind. I am going to mention one of them.

It is this: Let's not sell ourselves short. Regardless of how clever, ruthless, and persistent the Communists may be, and they demonstrated in Korea a capacity for all of those things, we also demonstrated in Korea that we were fully capable of standing up to it and surmounting it and prevailing over it. Furthermore, we have the advantage of

being morally right and history has many times proven that in the long run that kind of right prevails.

There is only one kind of right to a Communist and that is what the party line says. It can be one thing one day and an entirely contrary thing the next. Inconsistency creates no perplexity to him because right itself is the party line, nothing else. That is true to the extent that Communists are perfectly capable of using arguments for freedom of speech, freedom of the press, freedom from self-incrimination, confrontation by witnesses against them, even freedom of assembly and of religion—the very things they despise and hate, to gain their own ends. Treasury officials seeking to collect United States taxes from the Daily Worker have just heard the anguished cries that they were interfering with the freedom of the press. Communists will even accuse others of communism in order to discredit them among their fellows and to accomplish their own immediate ends. Such things happened continuously in individual cases in Korea just as they are made to happen every day by Communists who have gained influence with, infiltrated or fostered organizations with high sounding names in this country including some which now attack the administration of this program.

The Communists made every effort to create dissention, disunity, and distrust among the prisoners of war. Members of racial groups and national ancestry groups were singled out for special indoctrination and propaganda, and preferential and preferred treatment, calculated to produce hatreds, jealousies, and suspicion. At the same time officers were forbidden to exercise authority over the men and the men told not to obey the officers. The officers were separated from the men. Groups of men acquainted with each other or who appeared to be developing loyalties to each other were broken up immediately. The men faced strangers in their quarters. They did not know who was spy and who was friend. They became very close mouthed.

A common tactic to bring about disunity would be something like this: A pitiful, feeble GI with a background of witnessing killings and hearing of more, and who had seen his buddies dying of malnutrition and disease would be taken to headquarters on a winter night and ordered to perform some act of Communist propaganda. When he refused he would be stripped of his clothing and compelled to stand at attention naked in the bitter cold until he dropped or his will to resist had been broken. He would frequently be threatened or beaten. Then he would be returned to his quarters to suffer the tortures of remorse for his weakness. When he refused a subsequent request to engage in wrongdoing he would be threatened with exposure as a Communist collaborator. Let it be said to the everlasting credit of many of these so unfortunate people that they did have the will to then resist and face the consequences.

Another method to further suspicion would be for a soldier to be required to go for a walk with one of his captors although in an apparently friendly manner. He might be compelled to remain separated from his fellows for hours, sometimes for days, during which time he would be threatened or even tortured. Regardless of the failure of the Communists in their efforts to interrogate him they would invariably, after his return, go to great length to create the appearance of great and unusual friendliness to him and intimacy with him thereby seeking to give the impression to others that he had subscribed to their doctrines.

Still another and even more insidious method to destroy the morale and the hope and volition of our GI's was in the method of handling the mail. It was made known to the GI's that unless they engaged in some cooperation they wouldn't get any mail. This threat was made good and the GI's who appeared to tend toward defection got his mail while his more sturdy buddy got none—with this cruel exception—if there was bad news from home that letter came through—if there was serious illness, if there was a death, particularly a child, if there was a financial reverse, if his wife was getting a divorce, the mail came through that told those things.

It takes a good deal of fortitude for men living in poorly or unheated, crowded, primitive quarters, with dirt floors, no bunks, no window panes, no artificial lights, few blankets, no soap and water but with plenty of cracks in the walls and bugs and vermin, living on cracked corn and a little rice, I say it takes a good deal of fortitude under such circumstances for men to maintain their equilibrium. Yet by and large our boys did it.

We are, I believe, witnessing the beginning of the breakup of the Communist system. They have repudiated their hero Stalin and now themselves point to him as a wicked man. They are claiming repudiation of the principle of dictatorship by one man. This change in direction will not work. Such successes as the Communists have achieved have been possible only through terriorist policies of one man. Groups of men cannot do that. They demand more and more and constantly expanding authority of their own. More and more men demand a share. The change in direction will either break up by a return to dictatorship and this means revolution, or it will continue to expand until it reaches something having little resemblance to present day communism. Neither eventuality bodes any good for communism as we know it now.

This change in direction will not justify any relaxation in our alertness. On the contrary, it requires even greater alertness. While the monster is dying, he is more dangerous than he ever was.

The change in direction has unquestionably been brought about in large measure by a realization on the part of the Communists that they cannot do a selling job among civilized people unless they assume a much greater appearance of respectability than they have heretofore possessed. Also unquestionably, the American GI's in the North Korea prison camps had a great deal to do with teaching them that lesson.

First Guided-Missiles Conference Being Held by NATO

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. PELLY. Mr. Speaker, according to an Associated Press dispatch from Munich, Germany, the world's first international conference on guided-missile development is being held under the auspices of the North Atlantic Treaty Organization. Dr. Theodore von Karman, an expert in this field and chairman of NATO's scientific research, says, despite feverish activity in worldwide research, it is not likely—in fact, highly unlikely—an intercontinental rocket can be made accurate enough for "guaranteed" push-button warfare.

Meanwhile, certain Capitol Hill experts in partisan-guided political missiles have been firing potshots at the administration. It has been inferred that the long-range ballistic missile is the ultimate weapon and that our Defense Department has been sitting on its hands in the interest of economy. The partisan attack has been to the effect that the Defense Department is guilty of lagging behind and then, second, that an investigation is needed to find out the truth. The verdict is guilty before the trial by investigation is even held.

The technique of preelection frightening of voters with undocumented and irresponsible statements may not be new, but it calls for some rebuttal.

First, however, I should like to point out, Mr. Speaker, that I do not rebut Soviet Leader Nikita Khrushchev's prediction that the Communists would have such a missile soon equipped with the H-bomb. My only comment to this would be to quote our own military men.

Admiral Radford, Chairman of our Joint Chiefs of Staff, has said it is not a matter of matching man for man or missile for missile; rather superiority is a combination of factors and we have, he says, an industry-science-military team which is unbeatable. General Gruenther says, "they would lose the war." Chief of our Air Force Staff, Gen. Nat Twining, has said we are well ahead in all fields. Air Force Secretary Quarles says retaliatory bombing is best, that even if the Soviets had a 1,500-mile guided missile, it would not upset the balance. Sir Frederick Brundrett, head of the British research in the guided missile field, has indicated England might be behind the Soviets, but the United States is definitely not.

One partisan charge has been made that the Nation will get a big defense bill right after election, implying the Republican administration will not be actually balancing the budget. This falls a little flat with the recent announcement that the budget surplus for the year ended June 30, 1956, may be $2 billion. It is becoming fashionable on both sides of the aisle to talk tax reduction but a postponement of costs is a bit fantastic.

However, Mr. Speaker, in all seriousness, there is real danger in the partisan misrepresentations and clamor of demogoguery emanating from the hard core of this ultimate-weapon cult. Our circle of bases in the world requires supply ships and a merchant marine. To maintain supply lines requires a Navy. Unfortunately, some ultimate-weapon leaders would scuttle our Navy. This is serious. This is the same loose and illogical reasoning that some years ago caused the same type of strategists—the very same in one instance—to try and move airplane manufacturers back of the protection, so-called, of the Rocky Mountains.

Certainly, Mr. Speaker, every Boeing Airplane Co. worker who lives in my district, as well as navy yard employees, and all who believe in a strong Navy will view with great alarm inferences to be drawn from the statements on defense and known views of certain political figures who lately have been appearing on nationwide TV programs.

Recently, Secretary Quarles characterized certain public-scare statements and

publicity as highly misleading and damaging. As President Eisenhower remarked on this subject, he was sometimes astonished at the amount of information that others get which he does not.

Now is the time for the American people to beware of the head and headline hunters. The scare technique is not new, but wider communication through TV programs when it comes to politics gives public wisdom and education a most intensive test. Also it requires that the people be given all the facts, not just a few partisan opinions.

We Please Nobody

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. DINGELL. Mr. Speaker, a Republican President, Secretary of State, and assorted Republican press agents and politicians are attempting to have the people of this country believe that the foreign policy of the United States has under their leadership scored important victories in the ideological struggle with godless communism and Soviet Russia because of the recent changes in the policies of Soviet Russia.

No fact could be further from the truth. The fact of the matter is that this change is the greatest peril to the United States from Russia since 1919. True, it constitutes an admission that the expansionist policies of Russia of Stalin's time are not the best way to win over the undecided, to weaken America and separate us from our allies.

The very fact that Soviet Russia recognizes the weakness of her old policy constitutes great peril to America. Such a program based ostensibly upon sweetness and reason, will appeal to many, and induce many others to adopt positions of neutralism in this time of danger. Unaccompanied by any other proof, the defeat of governments friendly to America in Italy, Ceylon, and elsewhere should be adequate proof of the threat posed by this new Russian imperialism. The wave of neutralism sweeping the world should constitute further proof.

Let us cease congratulating ourselves, and commence vigorously forming a new and better foreign policy aimed at making our friends strong economically and militarily, and to make evident to the world that America is still the world's best hope for peace and freedom of all men. We must continue foreign aid, but wisely, not only to make our friends strong, but to help even those who are now engaged in "neutralism" to reach such a point that they realize our intentions are only that they shall be free, economically sound, and independent. All must know that America only wants their freely given friendship in a community of peaceful, prosperous, and independent nations.

Let us not forget in this new era the millions enslaved behind the Iron Curtain. Let us increase diplomatic and economic pressure to see to it that all of those people are soon given the right to free self-determination as expressed in the United Nations charter and in the Yalta agreement. Above all, let us never cease in our encouragement of these subjugated peoples to keep alive their love and hope of freedom by all means, by propaganda, by economic and other means.

We must air the problems of these conquered peoples that the world at large may know that Soviet Russia's policy is only a sham aimed at deceiving the peoples of the world into the trap of Communist enslavement. To fail to do this is for America to ultimately reach a point where we face a neutralist and Communist dominated world, alone, and friendless, when Russia utlimately decides that the time, predicted by Marx, Lenin, and Stalin has come for her to take over the world.

I insert into the RECORD an editorial of the Detroit News of April 15 pertaining to a survey of what diplomats abroad think of our present foreign policy.

WE PLEASE NOBODY

A recent New York Times survey of what diplomats abroad think of American diplomacy came up with the expected conclusion: Nearly everyone thinks we are doing badly, and each has a different reason for thinking so. There were no "Don't knows."

Foreign observers, almost without exception, believe America fails to understand the state of mind of the nations it deals with. Asians say we need to recognize the importance of the drive for national independence and ought to take an unequivocal stand against colonialism. The French feel our anticolonialism is far too unequivocal now and betrays our unfortunate habit of waving moral principles instead of appreciating political realities.

Europeans in general think we are unrealistic in refusing to recognize Red China, but Spaniards complain of our obtuseness in dealing with Franco to the exclusion of the masses of the people who may want a different kind of government.

From all sides come objections to our emphasis on military security, our preoccupation with the Communist threat, our unwillingness to adapt our trade policies to our declared diplomatic goals, our absorption with the American way and free enterprise as universal ideals, our habit of contradicting ourselves in public debate so that no one really knows where we stand.

Some of this criticism is directed specifically against policies which are certainly debatable. In large part, however, it is the reaction of a struggling community of nations to one power among them which seems to have the power to resolve their difficulties. Great Britain is frankly envious of that power and believes naturally enough that she, with her greater experience, could use it better. Most other nations have a sense that out of the ashes of 19th century imperialism a new world might be born if only the United States would midwife it into being.

So far we haven't accepted that responsibility. We are content mostly with keeping the peace and containing communism. For nations concerned, as they must be, with their own development, this use of American power seems much too negative. It is rather like having a bodyguard around the house: Finally you wish he would either go home or make himself useful.

Slaughter of Israeli Children

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. ANFUSO. Mr. Speaker, on April 11, 1956, a group of Arabs infiltrated into Israel and murdered in cold blood several children and their teachers while they were in the midst of prayer at Habad village. The inhabitants of that village are affiliated with a religious and philanthropic movement whose spiritual head is Chief Rabbi Menachem Schneerson, a resident of my district.

I have since received many telegrams of protest from congregations and various religious organizations in my district. Consequently, I have written a letter to Secretary of State John Foster Dulles urging him to take two steps: Condemn those who are responsible for this wanton murder and request indemnification for the families of the victims.

The following is the text of the letter addressed to the Secretary of State:

APRIL 24, 1956.

The Honorable JOHN FOSTER DULLES,
Secretary of State, Department of State,
Washington, D. C.

DEAR MR. SECRETARY: I am writing to you in connection with the massacre committed by Arab murderers who infiltrated into Israel on April 11, 1956, and slaughtered in cold blood a group of children and their teachers at prayer in Habad village. This is a most despicable act of atrocity committed against young and innocent children, who weren't even given a chance to defend themselves.

The children of this village in Israel are associated with the religious and philanthropic movement known as Hassidim, which is headed by Chief Rabbi Menachem Schneerson, a citizen of the United States and a resident of my district.

I have received no less than 49 telegrams from congregations and various religious organizations in my district, bearing the signatures of the rabbis and presidents of these groups, in protest against the massacre at Habad village. These religious leaders implore our Government to take the necessary measures to prevent similar outrages in the future and the needless shedding of innocent blood.

Public opinion is still one of the most effective means of stopping such atrocities in a civilized world. I, therefore, urge you, Mr. Secretary, to take the following two steps:

First, to express in the strongest possible terms our Government's condemnation of those responsible for this act of murder.

Second, to request indemnification for the bereaved families of the victims.

I feel certain that if these two steps are taken it would greatly discourage such inhuman and barbarous acts in the future.

Sincerely,

VICTOR L. ANFUSO,
Member of Congress.

The wording of the telegram from the religious organizations and congregations, signed by their respective rabbis or presidents, is as follows:

BROOKLYN, N. Y., *April 23, 1956.*

Congressman VICTOR L. ANFUSO,
Washington, D. C.:

The children slain in cold blood while at prayer in Habad Village, Israel, last Wednes-

day, belong with numerous congregations and schools in America to the same family of Habad Lubavitch followers of purely religious and philanthropic Hassidic movement headed by Chief Rabbi Menachem Schneerson, American citizen, with headquarters in Brooklyn, N. Y. We are our brothers' keeper grieved and heartbroken at cold-blooded murder of young brothers in Holy Land. We demand our Government take energetic effective steps to prevent similar massacre and assure indemnification of bereaved families.

No Beautiful Blonde Spies—Just Blind Stupidity

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. MULTER. Mr. Speaker, I wish to direct the attention of our colleagues to Mr. Stewart Alsop's article in the New York Herald Tribune of April 15, 1956, which is as follows:

MATTER OF FACT

(By Stewart Alsop)

NO BEAUTIFUL BLONDE SPIES

WASHINGTON.—It is strange how the highest administration officials stubbornly disbelieve what their own intelligence experts tell them. Take, for example, Secretary of Defense Charles E. Wilson's recent testimony before the House Appropriations Committee: "You know, we cannot get very far ahead of them (the Soviets), because we talk so much in this country, and write so many articles, and publish so many pictures and magazine articles that they are always bound to be able to do it. Most of their weapons, of course, really came out of the Western World * * *." No national myth dies harder than the notion that the Soviets are technically backward, capable only of slavishly copying what the West has already produced. But it is really very odd that Secretary Wilson, after more than 3 years in office, should still believe in this comfortable myth. For throughout those 3 years, Wilson has been literaly deluged with evidence pointing in precisely the opposite direction. There is, moreover, nothing particularly mysterious about the great bulk of this evidence—it does not come from beautiful blonde spies. Most of it comes, instead, from such items as a long, profusely illustrated book called Aviation Gas Turbine Engines, by G. S. Skubachevski. Mr. Skubachevski's formidable work was published in Moscow last year, and it is freely available in technical bookshops in the Soviet Union. When it arrived in Washington recently, it caused quite a fluttering in the intelligence dovecotes.

It contained, for one thing, numerous cutaway drawings of something called a split-compressor engine. The split-compressor system is used in the most advanced American jet engine design, and all diagrams and performance data are top secret. Yet, here was a mere textbook, distributed to mere student engineers in the Soviet Union, containing numerous detailed diagrams of the split-compressor engine.

The notion that they get it all from spies, which is a companion myth to the "backward Russians" myth, does not hold up in this case either. The text of the book contains not only a highly sophisticated discussion of the split compressor engine but a number of jet engineering techniques new to American experts. Soviet spies could not have stolen these ideas from us simply because we didn't have them.

Reliable information on Soviet weapons progress, from such overt non-cloak-and-dagger sources as Mr. Skubachevski's book, is not as impossibly difficult to come by as it is often cracked up to be. Last year, for example, the magazine Aviation Week published excellent photographs of the mass flights over Moscow of the new Soviet heavy bomber, the Bison—the same plane which Mr. Wilson had previously opined was a fake, or a mere handmade prototype.

The publication of these photographs caused horror in the Pentagon and the editor of the magazine was called on the carpet to explain where he got such top-secret material. He explained that he had called the New York representative of Sovfoto, the Soviet propaganda agency. Sovfoto had happily offered him as many excellent photographs as he could use, and motion-picture films of the overflights as well.

The notion that all information about Soviet weapons development comes from beautiful but highly untrustworthy blond spies is one reason why such officials as Wilson do not really believe their own intelligence. Another reason is that men like Wilson and Secretary of the Treasury George M. Humphrey tend to regard the intelligence experts as impractical longhairs.

Secretary Humphrey, for example, recently became much exercised when he learned from a British steel tycoon, who had made a tour of the Soviet Union, that Soviet steel mills were as good as the best in Britain. As a member of the National Security Council, Humphrey had been repeatedly told exactly the same thing in intelligence briefings. But he only really believed it when he learned it from a fellow businessman and payroll-meeter.

A third reason is that the Central Intelligence Agency is prohibited from making comparative estimates of Soviet and American weapons development, so that the estimates lack meaning and impact. But there is also another reason why high officials tend to disbelieve or disregard their own intelligence experts. Believing them would inexorably suggest all sorts of highly expensive and highly inconvenient action.

Tribute to Charlie Halleck

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. HILLINGS. Mr. Speaker, the nationally famous columnist, Bill Henry, in a recent edition of the Los Angeles Times, discussed the debate prior to the action of the House in sustaining President Eisenhower's veto of the farm bill. In his column he pays particular tribute to our distinguished friend the gentleman from Indiana, Mr. HALLECK. This tribute is well-deserved. The article follows:

WASHINGTON.—On the theory that you may never have been present when one of those blood-tingling moments of decision takes place in the Congress—most sessions are a dreadful bore—let me tell you about the vote on the veto.

IKE'S VETO

The Democrats, with some aid from farm-belt Republicans, passed a farm bill which even its proponents were not proud of. Economically, it was designed to continue to subsidize the farmer to raise more food than we know what to do with. Politically, it was designed to place the President in the position where signing it would not only be contrary to his principles but would enable the Democrats to claim credit for largess to the landsmen, whereas if he refused to sign it the Democrats would be able to say they tried to do something for the poor farmer but the wicked Republican President prevented

them. Well, the President vetoed the bill, gave his reasons for it, took what steps he could to help the farmer without legislation and the question then was whether or not the Congress would try to muster the two-thirds vote necessary to override the Presidential veto. The Democrats announced they'd vote to override.

EMBATTLED

The bill had been originally passed by a vote of 237 to 181, a decisive majority but not the two-thirds edge required to override the veto. The Democrats had to make a few converts if they were to slap down the man in the White House for his temerity. Chairman HAROLD D. COOLEY, a Democrat from North Carolina, obviously recognized the magnitude of his problem as, with debate limited to a single hour, he announced that he'd give Representative CHARLEY HALLECK a grand total of 10 minutes to speak in support of the veto while the rest of the hour would be taken by the opposition. This brought the remark that "COOLEY believes in 90 percent of parity for his side in the debate as well as in the bill" which may have slightly overstated the percentage but pretty correctly represented the attitude.

ORATORY

To be brutally frank about it, congressional oratory is more "for the RECORD" than for purposes of persuasion. Congressmen like to be able to refer their constituents to a certain page in the CONGRESSIONAL RECORD as evidence of their stand on a given question. Chairman COOLEY led off with a defense of the bill and then turned the rostrum over to his colleague, W. R. (Who's Excited!) POAGE, of Texas, a roundhouse, arm-waving orator who shouted and roared that it was no more fair to give the farmer 80 percent of parity than it was to ask a workman to accept 80 percent of a fair wage.

THE MINORITY

More Republicans than Democrats remained on the floor for the debate but the galleries were packed to suffocation. CHARLEY HALLECK, who is a real red-hot pistol when it comes to floor debate, plunged headlong into his 10-minute argument, seeking to make the most of the tiny share of time allotted to him. He methodically answered the charges of the opposition, annoyed them heartily by quoting Democrat Governor Lausche, of Ohio, applauding the Presidential veto, reminded the Democrats that they had claimed to have supported the President better than the Republicans did—said this was their chance to prove it, and wound up by predicting that the Democrats not only would not get their two-thirds majority to override the veto but that there would be, in fact, a majority favoring Presidential action. HALLECK proved to be not only a good debater but a good seer as well. The Congressmen poured back onto the floor for the vote. It was significant to see the Representatives from my own general area, HIESTAND, HILLINGS, HINSHAW, HOLT, WILSON, and MCDONOUGH, among those voting to support the President, and when the counting was over there were 211 to uphold the veto, 202 to override it.

Highway Bill

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. ROOSEVELT. Mr. Speaker, the House will shortly consider H. R. 10660. I have received numerous communications both from people in my district and from public officials of my State in support of this measure. For the information of the membership of the House and to indicate the breadth of support achieved by this bill, I include three telegrams the signatures on which cannot help but be impressive:

SACRAMENTO, CALIF., APRIL 24, 1956.
Hon. JAMES ROOSEVELT,
House of Representatives,
Washington, D. C.:

We approve and endorse Federal highway bill, H. R. 10660. The allocation formula for the interstate system is fair and equitable and should not be changed. Passage of the bill is vital to California. We urge your favorable support.

Goodwin J. Knight, Governor of California; Randolph Collier, Chairman, Senate Transportation Committee; Lee Backstrand, Chairman, Assembly Committee on Transportation Commerce; Frank B. Durkee, Director of Public Works and Chairman California Highway Commission; George T. McCoy, State Highway Engineer; Charles P. Salzer, President, County Supervisors Association of California; O. W. Campbell, President, California League of Cities; Burton Chace, Chairman, Los Angeles Board of Supervisors; John Gibson, President, Los Angeles City Council.

LOS ANGELES, CALIF., *April 24, 1956.*
Hon. JAMES ROOSEVELT,
Member, House of Representatives,
Washington, D. C.:

Each Congressman, county of Los Angeles, at their meeting on April 24, 1956, the Board of Supervisors of Los Angeles County instructed me to inform you of their full support of H. R. 10660, and their request for your full and aggressive support of this bill, which is scheduled for committee hearings this week.

Very truly yours,
JAMES S. ALLISON,
Chief Clerk, Board of Supervisors,
County of Los Angeles.

LOS ANGELES, CALIF., *April 24, 1956.*
Hon. JAMES ROOSEVELT,
House Office Building,
Washington, D. C.:

We respectfully urge your support of H. R. 10660, the Federal-aid highway bill, in the form recommended by the Public Works Committee. This measure should prove particularly advantageous to California as it places major emphasis upon the improvement of the interstate system and will assist materially in meeting traffic problems in metropolitan areas. It also recognizes the need for a tax rate differential between passenger cars and heavy trucks. We believe the measure will assist materially in the development of our major highways in California.

NORMAN P. THOMPSON,
Executive Vice President, Automobile Club of Southern California.

Congratulations, Mr. Kearns

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. VELDE. Mr. Speaker, I am sure that all good Republicans and good Americans rejoice in the victory of our colleague, CARROLL D. KEARNS, in the Pennsylvania primaries yesterday. Pitted against him in the primary was one of the most formidable Republicans of his congressional district. He won, by unofficial reports, by more than 21,000 votes.

While I am not a native of Pennsylvania and know little about the political situation there, it does seem to me that this election's results indicate that our colleague, CARROLL KEARNS, is well on his road to a higher office in the great State of Pennsylvania. I believe that he would make an excellent governor, and an excellent Senator, should my good friend, Senator ED MARTIN, retire.

My wholehearted congratulations and best wishes go to my colleague, CARROLL KEARNS, for his future successes.

The Free Sons of Israel

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith copies of letters addressed to the President of the United States and to the Secretary of State by Mr. Milton M. Meyer, grand master of the Free Sons of Israel.

This organization is the oldest national Jewish fraternal organization in the United States, having been chartered in 1849. It numbers among its membership over 10,000 families resident throughout the United States. It has been a leader in all worthwhile causes and along with innumerable American organizations is justly concerned about the situation involving the State of Israel and the Middle East generally.

It would seem that organizations and citizens similarly minded should call to the attention of the authorities in this country their own views as well.

The letters follow:

THE FREE SONS OF ISRAEL,
New York, N. Y., April 19, 1956.
PRESIDENT OF THE UNITED STATES,
The White House, Washington, D. C.

SIR: For the past 106 years the Free Sons of Israel, the oldest national Jewish fraternal organization in the United States has been justly proud of our contribution to the American communal scene and has evidenced our single allegiance to our United States by the service and even death of many of our members in her defense. We feel that this background gives us the privilege of speaking.

The executive board of the Free Sons of Israel by unanimous resolution on April 16, 1956, required me to represent to you our firm and deep conviction that the defense and safety of the United States requires the prompt and immediate shipment of defense arms to the State of Israel in order that that bastion of democracy in the Middle East might be preserved against destruction from Communist armament. We also respectfully request that in addition to arms and armament for her defense, the State of Israel,

which by its national sentiment, its political outlook, and its cultural pursuits so emulates the United States, receive such other, necessary, and appropriate action and safeguards from the United States, either alone or in cooperation with others friendly to the State of Israel, that the State of Israel might be preserved.

Aggression has never been Israel's purpose, but her lifeblood will flow in her defense. Communism and its threats are repugnant to Israel's basic heritage and can, with your aid, be forever thwarted in the Middle East.

May I respectfully request, sir, that you use your good offices as Commander in Chief of the United States to carry out our most prayerful request, not by the blood of our sons, but by the sinews of our arms and the concrete resolve of our purpose.

Please accept our sincere good wishes for your continued good health.

Respectfully,

MILTON M. MEYER,
Grand Master.

THE FREE SONS OF ISRAEL,
New York, N. Y., April 19, 1956.

SECRETARY OF STATE,
Department of State,
Washington, D. C.

MY DEAR MR. SECRETARY: For the past 106 years the Free Sons of Israel, the oldest national Jewish fraternal organization in the United States has been justly proud of our contribution to the American communal scene and has evidenced our single allegiance to our United States by the service and even death of many of our members in her defense. We feel that this background gives us the privilege of speaking.

At a meeting of the executive board of the Free Sons of Israel held on April 16, 1956, it was our unanimous resolution that you and the Department of State be urgently requested to promptly ship to the State of Israel arms and armament for her defense and that in connection therewith you take such other, further necessary and appropriate steps as will insure the defense and continuance of the State of Israel.

We respectfully point out that events over the past 40 years weighed on the scale of justice will show preponderantly that the safety, defense, and well-being of the State of Israel weighs more heavily to the advantage of the United States than does the shipment of offensive arms and war materiel to her Arab neighbors. It seems to us that the Arab countries have shown their complete disregard for the Tripartite Pact and that it now behooves our great country in cooperation with the other signatories, England and France, to take those steps which good judgment as well as honesty and decency require and dictate.

We respectfully urge your implementation of our prayerful petition.

Respectfully,

MILTON M. MEYER, *Grand Master.*

Arab Propaganda

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following article which describes the anti-American and anti-Jewish propaganda being disseminated by the Arab radio and press. The article appears in the March 1956 issue of the ADL Bulletin:

CAIRO'S RADIO TALKS 'RED' FOR LOCAL CONSUMPTION IN THE MIDDLE EAST, ARAB PROPAGANDA TAKES A WEST-BAITING, PRO-SOVIET LINE

(Democrats and Republicans are on an equal footing in their eagerness to put the free in chains, and the American, British, and French knights of the free world are cut from the same cloth. (Voice of the Arabs broadcast.))

(We view the parliaments of the democracies as a comical farce. (Voice of the Arabs.))

(It was Khrushchev who announced that the Soviet Union sympathizes with the Arabs, and it was Bulganin who attacked the Baghdad pact and all military alliances, describing them as imperialistic acts in new forms, with only aggressive aims. * * * It is no wonder, therefore, that these dual voices find an appreciative reaction in the hearts of the Arabs. The cause of peace is served by such support. (Cairo Radio's Home Service.))

Today, Arab propaganda speaks with two strident voices. One talks to the East, the other to the West. Were they to confront each other, their words would collide in a welter of contradictions. The Arabs are careful to keep them apart.

In the United States, Arab propaganda has been pointed toward the destruction of American sympathy and aid for Israel. "The removal of Israel from Palestine," say the Arabs, "will start * * * when Arabs succeed in convincing the West that the fruit of this tree (Israel) which it has planted in our countries is harmful to any cooperation and any possible alliance with the Arab nations." This nails down the essential aim of Arab leaders: to bring pressure against the United States Government, and with it the governments of the West.

Frustrated by their failure to destroy Israel, first by war, and then by diplomatic maneuvering, the Arab league states have begun a vast propaganda effort to exploit antisemitism in the United States for their own political purposes. World tensions have developed a propitious climate for such enterprise and they have found willing allies among the professional peddlers of antisemitism operating in this country.

"American Jews," says a book being distributed here by the Syrian consulate general, "give a necessary allegiance to the United States while reserving their first loyalty for Israel. * * * It is time that Americans realize that these teeming masses of Zionists who infest their cities and sit astride the arteries of their commerce are, in every sense of the world, aliens * * * because they render their first allegiance * * * to their own so-called State of Israel. This specter of dual loyalty is echoed constantly by the antisemitic press. "Who are the internationalists?" asks the glib and pompous Merwin K. Hart, of the bigoted National Economic Council. "They are the Marxists and the Zionists. * * * It is highly possible that in a matter of months, drafted American youth will be fighting and dying in the defense of Israel."

The Arab voice that speaks to the East is even more demagogic in its attacks on zionism. But while its lunatic fringe supporters in America persist in equating zionism with Communist imperialism, in the Middle East this has now been changed to American imperialism. And the Soviets have become the great and good friends of the Arab world.

From their propaganda base in Cairo, the Arabs are flooding the Middle East and much of North Africa with anti-American and anti-Jewish propaganda. Their themes achieve a new, high pitch of hostility and incitement against the West, and the lowest depths of antisemitic abuse. Their vilification of Jews is without parallel in the postwar era, matching the most cynical efforts of Goebbels and the most clinical creations of Julius Streicher.

The anti-West tactic represents an abrupt shift in Arab propaganda—and dates from the Egypt-Czechoslovakia arms deal. In their campaign against the free world, the Arabs' chief target is the United States, followed by England and France. And while the Arab masses are subjected almost daily to heavy doses of anti-West hatred, nothing unfriendly is said about the Soviet European bloc and Red China. The western governments have, at different times, protested to Egypt over some of the more provocative outbursts, only ot be rebuffed by Premier Gamal Abdel Nasser, Egypt's strong man, for their interference with Arab nationalism and self-determination.

The most potent outlets for domestic Arab propaganda are broadcasts through Cairo Radio's Home Service and the Voice of the Arabs, which is beamed over shortwave. Both are controlled by the Egyptian Government and their broadcasts have become a force for disruption, stirring up unrest and inciting the peoples of the Middle East and outlying areas against the West and against Jews.

This campaign has been attended by a new orientation with the Communist bloc: the Arabs now serve as a vehicle for pro-Soviet propaganda. As part of this pro-Communist shift, the Arabs no longer link Zionism with Communism—but with the West, particularly the United States—and with colonialism and "capitalistic imperialism." "It is the capitalists who rule [the United States]," said the Cairo Radio, "while the masses are busy chasing dollars and watching baseball games. Everyone knows the Soviet Union is a democratic state and that its rulers come from the masses."

"I never imagined before," wrote a commentator in the Cairo newspaper, Al-Akhbar, "that a day would come when I would defend Russia and attack Britain and America. However, it is with justice and logic that I now defend and not attack Russia and now attack and not defend Britain and America, which have shown falsehood, deceit, fallacy and ill will."

A favorite of the Arab radio is to preach the big, but useful, lie about Zionist control of the press in the United States; how the Jewish vote controls American policy; that American Jews are leading the United States down the road to war. "The poor American public," one broadcaster lamented. "No one outside America is ignorant of the Zionist domination of the press. * * * One wonders what is left for this lost people to read after the Government and the Zionists have done their job." Such quotes turn up in endless variations, in Arab broadcasts, in the Arab press, in official government handouts, in the speeches of Arab diplomats and in the anti-Semitic press of the United States.

Aside from their pro-Soviet twists, Cairo broadcasts reveal little that is new in the Arab propaganda line which has been parroted for some time now by Arab emissaries in this country, and has settled at a point where it is now common property, to be shared on a give-and-take basis by all Arab officialdom and American professional bigots. Their partnership in the exchange of propaganda has been mutually profitable.

Thus, it is no surprise that the Arab radio should comb the writings of the most disreputable American anti-Semites for its broadcast material. When it selected for broadcasting purposes an article by Eustace Mullins, it really hit bottom. Mullins, a frequent contributor to Conde McGinley's Common Sense, was cited in the December 1954, report on Neo-Fascist and Hate Groups by the House Un-American Activities Committee.

But the voice of the Arabs described him as "a great American author," and broadcast

the following extracts from his diatribe in Women's Voice, one of the less subtle among hate sheets:

"The United States is a land for Jews in which they can tell lies and loot as they like. Why then do the Jews hate the United States? The Jews hate the United States because Americans do not try to oppress them. * * *

"The Jews have never felt love for their homeland except in connection with Germany—Germany which suffered for 500 years from the crimes of the Jews. In the Jewish quarter in Warsaw, and in Frankfurt, the Jews lived happily, because they were despised, spit upon, and were treated as the scum of the earth. In our country, Jews receive complete respect from Americans.

"Imagine this Jew, who should be despised and hated, now receiving every respect and consideration in the United States. No wonder, then, that the Jew is happy in the States. * * * The nervous system of the Jew is used to torture. Jews dream of concentration camps and torture centers in Germany. America has nothing of the sort to offer them. The American citizen allows them to deceive him and betray him as they like."

Egypt's press provides Arab broadcasters with a rich harvest of anti-Semitic and anti-American material. This stuff, in turn, is gathered from highly productive anti-Semitic sources in the United States. One example is a new bimonthly, Rissalet Masr (the Egyptian Message), published in Arabic by an organization created and financed by the Egyptian Minister of Information. Circulated throughout the Arab world (estimated: 150,000 copies per issue), it is handed out free, though it has an official price of 3 piasters (8 cents).

The first issue of the Egyptian Message, which appeared in Cairo in December, carried an article by Opal Tanner, long-time professional associate of Gerald L. K. Smith. Here are some excerpts from Tanner's piece, called, Who Is the Most Powerful Jew in Washington?:

"Question. Who is the most powerful Jew in Washington?

"Answer. I can say that the most powerful Jew in Washington today is one of the men who helped conspire in organizing the Federal Reserve bank and who owns the biggest daily newspaper in the city. He is Eugene Meyer. * * *

"Question. Who is the strongest adviser close to Eisenhower?

"Answer. The man who manages the affairs of the White House is Max Rabb. He is a Jew and his original name is Rabinovitch. He is the brain who directs the actions of Ambassador Lodge. * * *

"Question. Is Supreme Court Justice Warren still ambitious?

"Answer. Enlightened observers in Washington believe that Justice Earl Warren still covets the Presidency. This is why he drafted the decision of nonsegregation in the public schools. He thought that by doing so he would gain the votes of the Negroes. Actually, the Negro vote holds the balance of power in America.

"Question. Do Congressmen fear the Jews?

"Answer. Most Congressmen fear the Jew, because of their control of the press, radio, and television."

But in its attitude toward Moscow, the Arab League speaks with all the fervor of a Soviet satellite. President Eisenhower has become the warmongering villian to Khrushchev's hero for peace. Said the Lebanese newspaper Al Jaridah:

"The United States will continue to aid countries fighting Communist infiltration. It will also endeavor to find a solution between the Arab States and Israel, for it is anxious to retain the friendship of both parties—so said President Eisenhower in his state of the Union message. * * * Eisenhower's words sound so hollow now that the Soviet Union has embarked on its 'courageous peace campaign.'"

The editor of the Cairo daily, Al Ahram, became almost lyrical in his appreciation for "the serious outlook on public life of the Soviet people," after his visit there. The Cairo radio applauded French dissidents for having "sided with the Soviet peacemakers [while] booting out the lackeys of the American warmongers." Red China's Chou En-lai is quoted approvingly. The meeting between Nasser and Yugoslavia's Tito was greeted as "a slap in the face of the imperialist hangmen." Nasser's protestations notwithstanding, the Arabs appear to be importing ideology, along with arms, from the Soviet bloc.

Can peace be achieved in the Middle East? If this is the fervent hope of the free world, the Cairo radio chooses to ignore it. "Peace between us and the Jews is impossible," it has broadcast. "As far as we are concerned the problem is a matter of life and death and not a dispute over frontiers or interests. Nor is it a difference over viewpoints which require mediation for settlement. * * * The Middle East cannot hold both of us. It is either we or they. There is no other solution. * * * It is steel and bullets which will realize these objectives."

Broadcasts of this kind—they are beamed constantly to the emotionally charged populace of the Middle East—do not square with Egypt's arguments in the councils of the United Nations that it is accepting Soviet arms as a defensive measure. Nor do its trade agreements with the Soviet bloc—agreements to purchase goods and machinery in which Egypt spurned the lower bids of Western nations to buy from the Communists.

One Hundred Thirty-fifth Anniversary of Greek Independence

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. FERNANDEZ. Mr. Speaker, in commemoration of the 135th anniversary of Greek independence this year, I arranged, at the suggestion of Mr. Peter Chumbris, formerly assistant attorney general of my State of New Mexico, to have Father George P. Gallos, of the Greek Orthodox Church of the Annunciation in Baltimore, invited to offer the prayer at the opening session in the House on Monday, March 26. Father Gallos offered the following beautiful and inspiring prayer:

God of our Father, to Thee, author of liberty, to Thee we pray. On this occasion of the 135th anniversary of Greek independence, we ask Thee, Lord, to bless the Greek people. Keep alive in them the love of liberty for which they bravely fought and sacrificed. Grant that the Greek Nation ever may be on the side of justice, democracy, and freedom.

Lord God of Hosts, we pray for America, this land of ours, on which Thou hast bestowed so many rich blessings. Make us worthy of our inheritance. Let not Thy wrath descend upon us. Save us from new ordeals and tribulations, for wars and rumors of wars are shaking the equilibrium of the earth and heavy clouds are invading the tranquil heavens of peace.

O Ruler of the Universe, preserve in harmony those who govern us. Make them vigilant and keep them from falling into the spirit of sloth, faintheartedness, lust for power, and idle talk. Grant them, rather strength to do Thy will, wisdom to govern well, and make them worthy laborers of Thy kingdom, a kingdom of love, goodness, justice, mercy, and peace.

Lord of Love, who didst command the disciples to pray for their enemies and who didst pray for those who crucified Thee, grant that we, too, may forgive those who hate us and show brotherly love to those who maltreat us. Enlighten us, through the light of Thy truth., O Lord, and guide us in the paths of Thy precepts. Amen.

Mr. Speaker, the sons and daughters of Greece who, like Mr. Chumbris, are devoted to the democratic ideals steadfastly followed by the Greek Nation and our own, have contributed to the greatness of America. They, like all other Americans who believe in and adhere to those democratic ideals, are saddened today at the steadfast refusal of the British Government to grant the people of Cyprus the right to democratic self-determination, so that they may govern themselves or may join with Greece, their mother country, in a common government under a common heritage and culture.

And yet from Father Gallos' mouth we in the House heard these words sincerely offered in prayer:

Lord of Love, who didst command the disciples to pray for their enemies and who didst pray for those who crucified Thee, grant that we, too, may forgive those who hate us and show brotherly love to those who maltreat us.

In our hearts we all pray that the injustices occurring in Cyprus may be righted, and that the British Government and the people of Cyprus may reach a mutual understanding with our Lord's help, guidance and divine light, that will lead to peace and justice for all.

A Well-Deserved Award

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, for his factual, fearless, and exceptionally meritorious work, Clark R. Mollenhoff, of the Des Moines Register and Tribune and the Minneapolis Star and Tribune, has been given the Raymond Clapper Memorial Award.

Many of us in Congress have long realized that Mollenhoff's courage, ability, discrimination, and desire to get and report the facts have over the years given the Members of Congress as well as the public the facts not only in connection with the doings of Wolf Ladejinsky, but that he has been true to what I assume to be the reporter's objective—ascertaining and giving to the public an accurate narrative of the incidents he has been called upon to report.

All too often reporters have forgotten what the public has assumed to be their function—a narration of what actually

was said or happened in connection with a specific incident. All too frequently, reading carefully a news story, one has found himself compelled to reexamine the article, determine if possible where the factual statement ended, where the expression of an opinion—an editorial or commentator's function—began.

Mollenhoff is not lacking in either the ability or the courage to express an opinion, but his writings make it easy for the reader to separate the two when they are joined in the same story.

Few reporters or writers have done more to clearly, accurately lay the facts on the record, expose the misuse of health and welfare funds, the dues and special assessments paid by union members, the violence and lawlessness in which some—fortunately a few—of their officials have engaged. The stories which he has written about these activities have been a warning to sincere union members and leaders, a notice to legislators of the need for sound, courageous action by them.

From the following press notice comes the notification of the award:

MOLLENHOFF GETS CLAPPER AWARD

The Raymond Clapper Memorial Award, given annually for exceptionally meritorious work by a newspaper correspondent in Washington, was won last night by Clark R. Mollenhoff, of the Des Moines Register and Tribune and the Minneapolis Star and Tribune.

Mr. Mollenhoff, 12th winner of the award established in memory of the late Washington correspondent, received a $500 check and scroll in a ceremony at the closing dinner of the American Society of Newspaper Editors at the Hotel Statler.

The judges, five ASNE members, awarded him first prize for his stories concerning Wolf Ladejinsky, former United States agriculture attaché in Tokyo who figured in a controversy over Federal security regulations.

Memorandum Submitted by the Synthetic Organic Chemical Manufacturers Association in Response to a Request by Congressman Thomas B. Curtis Regarding Its Experience With the Committee for Reciprocity Information

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. CURTIS of Missouri. Mr. Speaker, in my supplemental views on H. R. 5550, to authorize United States participation in the organization for trade cooperation, I pointed out the problems that confronted American industrial, labor, and agricultural interests in getting their data and arguments into the hands of the United States representatives who actually negotiated our trade treaties.

I asked during the hearings for various economic groups which had specific information in regard to this problem, and in particular their experience with the Committee for Reciprocity Information, to supply this information for the printed record. A memorandum submitted by the Synthetic Organic Chemical Manufacturers Association came too late to be included in the printed hearing. However, this information should be available to the House for reference in the debate on H. R. 5550. Accordingly, I am inserting this memorandum into the Appendix of the RECORD so my colleagues can consider it:

MEMORANDUM SUBMITTED BY THE SYNTHETIC ORGANIC CHEMICAL MANUFACTURERS ASSOCIATION IN RESPONSE TO A REQUEST BY CONGRESSMAN THOMAS B. CURTIS REGARDING ITS EXPERIENCE WITH THE COMMITTEE FOR RECIPROCITY INFORMATION

Congressman CURTIS inquired of the association's witness, Mr. Sidney C. Moody, on March 14, 1956, of its experience with the Committee for Reciprocity Information under procedures which have been established for the exercise of the trade agreement authority.

Because of the continued importance to the association's members of the tariff policy for the encouragement of domestic manufacture of synthetic organic chemicals which is contained in the chemical schedule of the Tariff Acts of 1922 and 1930, this association has appeared frequently in the public hearings which are a prelude to the conduct of trade agreement negotiations by the President's representatives.

Before discussing the defects in the trade agreements procedure, on which we intend to be quite specific, it is necessary to consider the purpose which Congress had in mind in requiring that the exercise of trade agreement authority be preceded by public notice and an opportunity to all interested parties to be heard.

It is reasonable to conclude from the committee reports concerned with the original enactment of the trade agreements law that this procedure, specified in section 4 of the Trade Agreements Act of 1934, was intended to accomplish the following results:[1]

1. To insure very careful exercise of the trade agreement authority so as not to injure manufacturers or domestic producers;

2. To protect American producers or manufacturers from hasty or ill-considered action without their knowledge and without their being given a chance to present their views.

Four major defects in the operation of the procedure have become apparent which prevent the public notice and hearings specified by section 4 from achieving their intended purpose. They may be summarized as follows:

1. The public notice is inadequate to inform domestic producers that their interests are affected.

2. The procedure is inappropriate to the manner in which tariff negotiations are actually planned and carried out.

3. The public notice fails to advise of the foreign countries with which negotiations on particular products are proposed to be conducted.

4. Interested parties are not advised of nor given an opportunity to rebut the data compiled by Government agencies concerning their products for the guidance of the trade agreement negotiators.

I

Public notice which is given of intention to consider certain articles for trade agreement negotiation is so poorly adapted to the facts of commercial life that it fails to constitute actual notice to the hundreds of domestic producers scattered throughout the United States whose interests are, in fact, affected by the tariff concessions which are contemplated or which may result from the negotiations.

This defect can be illustrated by two examples:

(a) The lists of articles considered for possible concessions at the Torquay negotiations under the General Agreement on Tariffs and Trade comprised items included in some 480 paragraphs and subparagraphs of the Tariff Act of 1930. They embraced approximately 2,800 statistical classifications. The lists themselves were contained in 98 closely printed single-spaced pages of the public announcements released by the State Department. The phraseology used in describing the articles was that contained in the Tariff Act itself or as modified in order to narrow the scope of the dascription contained in the tariff paragraphs concerned. Many of the descriptions were stated in generic language. These provisions in themselves embraced tens and even hundreds of items competitive with commercial articles produced in the United States. Similarly,

[1] When the trade agreements bill was introduced in 1934 (H. R. 8430, 73d Cong., 2d sess.; H. R. 8687, 73d Cong., 2d sess.), it did not contain any provision for notice or hearing. Though the House of Representatives desired that the trade agreement authority be "very carefully exercised so as not to injure manufacturers or domestic producers," (H. Rept. 1000, 73d Cong., 2d sess., p. 13) it failed to correct the lack of a requirement for notice and hearing. In the Senate, however, such a provision was added (sec. 4): "In order to protect American producers and manufacturers, who may fear hasty or ill-considered action without their knowledge and without their being given a chance to present their views * * *." (S. Rept. 871, 73d Cong., 2d sess., p. 3).

Section 4 of the Trade Agreements Act of 1934, as amended, prior to 1951, contained this requirement for notice and hearing and read as follows:

"Before any foreign trade agreement is concluded with any foreign government or instrumentality thereof under the provisions of this act, reasonable public notice of the intention to negotiate an agreement with such government or instrumentality shall be given in order that any interested person may have an opportunity to present his views to the President, or to such agency as the President may designate, under such rules and regulations as the President may prescribe; and before concluding such agreement the President shall seek information and advice with respect thereto from the United States Tariff Commission, from the Departments of State, Agriculture, and Commerce, from the National Military Establishment, and from such other sources as he may deem appropriate."

Under the authority contained in section 4 the President established the Committee for Reciprocity Information by Executive Order No. 6750 of June 27, 1934, to receive the views of interested persons concerned with proposed trade agreement negotiations. A series of Executive orders have refined this procedure. The most recent of these is Executive Order No. 10082 of October 5, 1949. Its predecessor, Executive Order No. 9832 of February 5, 1947, was issued to make "assurance doubly sure that American interests will be properly safeguarded."

The procedure which is followed in the executive department of the Government in exercising the trade agreement authority is described in the Tariff Commission's initial Report on the Operation of the Trade Agreements Program (Report No. 160, 2d series), chapter 5. It is also described in a very recent memorandum by the State Department inserted at Congressman CURTIS' request in the record of the hearings on H. R. 1 before the Ways and Means Committee, part 1, pages 80–84.

the public lists relating to the current negotiations at Geneva comprise more than 450 paragraphs and subparagraphs of the Tariff Act. Eighty pages of description are required to list these items in the public notices.

This form of public notice is least likely to convey an intelligible notion to businessmen of the manufactured articles produced by them which would be affected by imports. It is well to bear in mind that the business organizations whose interests would be affected by the increased imports which the trade agreement program is designed to encourage do not comprise a regulated industry. They therefore are not organized for close attention to Federal Government notices. By habit and inclination they do not regularly pay close attention to Government publications such as the Federal Register, Treasury Decisions, etc., which carry the infrequent notices of the Committee for Reciprocity Information concerning proposed trade agreement negotiations.

Many business organizations belong to trade associations which call such matters to their members' attention. Many others, however, do not. Indeed, many trade associations whose main interests lie in fields other than tariffs give little or no attention to trade agreement matters. The business organizations most likely to be quickly affected by tariff reductions are the many small-business firms located throughout the length and breadth of the United States who in most instances have no means of becoming apprised of the pendency of trade agreement negotiations unless fortuitously the matter is called to their attention by a business associate or an acquaintance.

Even were most of these organizations likely to have the list of articles proposed for trade agreement consideration called to their attention, they in all likelihood would find it difficult, if not impossible, to ascertain whether their products were in fact embraced within the often curiously stated language of the Tariff Act Where general terminology ("basket" clause) is used, it is extremely difficult for the average businessman or, indeed, for many lawyers who do not specialize in the tariff and trade practice, to ascertain whether or not specific manufactured articles of the United States are included.

(b) Domestic companies in the organic chemical industry are possibly better informed than most United States concerns on tariff and trade agreement matters. This association undertakes to distribute to each of its member companies the lists of items proposed for trade agreement negotiation. Yet even our member companies are unable in many cases to ascertain with the public notice before them whether or not their particular products are concerned. For example, in the most recent public notice pertaining to the trade agreement negotiations now being conducted at Geneva, nine tariff classifications of chemicals involving basket clauses were included on the public list. Through the resources of the association, an effort was made to identify the commercial chemicals produced in the United States which if imported would be included within the classifications proposed for tariff reduction. We and our members learned to our surprise that there were nearly 600 organic chemicals produced commercially in the United States which were included within the purview of these 9 paragraphs. We contacted many of our member companies to call their products so affected to their attention. We learned, as we had feared, that they were unaware of the fact that their products were concerned though they had examined the public list.

The time required for this identification and notification necessarily consumed so much of the one-month period intervening between the date of the notice and the deadline for filing a request for appearance with the Committee for Reciprocity Information that it was impracticable for our member companies to collect the accounting data and make the factual investigation within their company required in order to determine whether they would experience serious injury as a result of the reduction in the tariff. Consequently, simply as a result of the ambiguity of the public notice, our companies were powerless to decide whether they should appear and offer testimony in the public hearings.

II

The second major defect is that the procedure is not adapted to the manner in which tariff negotiations have been carried out in the postwar era.

Consider once again the fact that the public lists of articles considered for possible concessions at Torquay embraced approximately 2,800 statistical classifications. To receive the testimony of those parties who were fortunately aware that their interests were affected by the proposed negotiations, the Committee for Reciprocity Information divided itself into 5 panels which conducted hearings for a period of 2 weeks. The mass of information supplied at the hearings, together with the data submitted by the various Government departments, such as the Tariff Commission, the Department of Commerce, etc., was supposedly in some manner reviewed and considered by the Trade Agreements Committee. Since the hearings did not conclude until June and the negotiations commenced in September of 1950, it is obvious that little more than 2 months could have been devoted by the Trade Agreements Committee to a study and determination of the situation disclosed by that mass of data on the thousands of articles included in the 2,800 statistical classifications. Inasmuch as the United States was proposing to negotiate with 24 foreign countries in the Torquay session, the evaluation of data referred to was required not only to be specific as to each imported article but also with reference to the trade situation and competitive status of various of the 24 countries which were or might be pertinent with respect to these articles.

To the extent that any impressions can be gained by organizations outside the Government, it is becoming increasingly apparent that the manner in which multilateral trade agreement negotiations are undertaken in the current era preclude any but the most superficial consideration of the evidence presented on the astonishing range of articles included by the executive department within the purview of each negotiation.

III

Section 4 of the Trade Agreements Act is worded in such a way that it is evident that Congress was considering that the authority given in the act would be utilized by entering into trade agreements with a particular foreign government. The section requires that the public notice advise of the United States intention to negotiate an agreement with such government. This fairly means that it was the intention of the Congress that interested parties be advised not only of the articles proposed for consideration in the trade agreement, but also of the particular foreign government with which trade agreement negotiation on the particular articles would be conducted. In the postwar era the public notice of the proposed negotiations under the auspices of GATT has usually listed all of the foreign governments it is expected would participate in the negotiations. No information, however, is contained in the public notice of the particular foreign government with which negotiations would be conducted on particular articles contained in the list.

During the preparations for the initial negotiations under GATT at Geneva in 1947 the Tariff Commission released its digests of trade data prepared for the guidance of the trade agreement negotiators. This extensive document presented a summary of available statistical information on each classification of articles under consideration. The document also indicated the government with which it was proposed that tariff concessions be negotiated on each classification of articles. This practice, however, has not been followed since the Geneva negotiations in 1947. Indeed, in the case of the negotiations for the benefit of Japan, the public notice did not even list the foreign nations with which the United States would be negotiating in a triangular exchange of concessions for the benefit of Japan. It was impossible for interested parties concerned with articles proposed for consideration in those negotiations to know at all what foreign country the United States would be negotiating with on any of the articles listed.

It is fundamental that negotiations for tariff concessions should be conducted with the principal producing and exporting nation. If this principle were not followed, it would be impossible to limit the extent of the concession granted to an amount which would not harm a domestic industry. Only by knowing the relative advantage of the most important producing country from the point of view of wage and other cost advantages can anyone in Government or industry estimate the amount of a reduction which could be safely made. If the wrong country were selected for negotiation, its relative advantage might be sufficiently different from that of the principal foreign producing and exporting nation to lead to a concession which cuts too deeply to avoid injuring a domestic industry. For this reason the Government ought to announce the country with whom each concession is to be negotiated so that erroneous determinations of principal producing status can be corrected and cost comparisons responsive to the actual competitive situation which is pertinent to the concession under consideration may be presented by domestic industry to the CRI.

IV

The Government withholds from interested parties the data concerning the articles on the list which its various agencies prepare for use by the Trade Agreements Committee. A hearing which does not give interested parties a real opportunity to meet the issues before the triers of fact is of very dubious value. Under the procedure followed for trade-agreement negotiations, the Tariff Commission, the Department of Commerce, and other agencies prepare compilations of data bearing upon the advisability of a reduction on the articles appearing on the list. Interested members of the public come before the Committee for Reciprocity Information without any knowledge of the content of the memoranda which have been prepared for the Trade Agreements Committee by these Government agencies. How is it possible for them to know the type of evidence or information which should be adduced for the Committee for Reciprocity Information when they have no way of knowing the nature of the information which has been laid into the record, perhaps contrary to their interests, by various Government agencies?

There is no conceivable reason why these compilations of data from the Tariff Commission, the Department of Commerce, and other Government agencies should not be made available to interested parties at least to the extent that they concern the products manufactured by those parties. This would give interested parties a real opportunity to present evidence bearing upon the possibility of injury to their enterprise if the tariff is reduced on certain articles and to correct misapprehensions or misinformation placed into the record by Government

agencies, however well-intended it may be. But none of this is available to the citizens and business enterprises whose interests Congress above all desired to protect from injury and for whose benefit the hearings by the Committee for Reciprocity Information are presumably held.

These defects are highlighted by the fact that interested parties are not made aware of the decision which is made by the triers of fact, whoever they may be, or the reasoning on which it is based, as a result of the evidence presented at the hearing conducted by the Committee for Reciprocity Information. The first knowledge that these parties receive relating to the decision is the release of the trade agreement concessions themselves after they have been finally concluded. This alone apprises interested parties of their success or failure in protecting their interests within the procedures established for the exercise of trade agreement authority. Then there is no opportunity to correct any misapprehensions, overcome any erroneous information, or otherwise secure the correction of an error which would be detrimental to the interests of the domestic producers who are concerned. While domestic manufacturers have a right to protect improper classifications under section 516 (b) of the Tariff Act of 1930, as amended, the decisions of the customs court, particularly under the analogous circumstances of cases arising under section 336 of the Tariff Act, would seem to indicate that no review of the determinations is available on the merits. The most that could be hoped for would be a review limited to an ascertainment as to whether the statutory steps have been followed.

In view of the unsatisfactory nature of the procedure as described above, the pertinent inquiry becomes: How can this procedure be modified to accomplish its intended purpose?

The changes which this association might suggest in the trade-agreement procedure are as follows:

1. The public notice of the list of articles to be considered for trade-agreement negotiations should, wherever possible, be broken down into descriptions of contemporary commercial significance with a cross reference to the particular Tariff Act paragraph wherein such articles are deemed to be covered.

2. Hearings conducted by the Committee for Reciprocity Information should be limited to the products of a particular industry at a time; sufficient time should be granted both in the period of preparation for interested parties, and in the hearing and investigation of the Committee for Reciprocity Information to permit full consideration of the evidence presented.

3. At the same time that the notice of the list of articles under consideration is published, each Government agency which has prepared digests of data pertinent to the articles under consideration (such as the Tariff Commission, Department of Commerce, Department of Interior, etc.) should publish such data, or make it available upon request to interested parties. This can be done in a manner which will not violate the obligations of Government agencies to keep certain types of data confidential.

4. Following the hearing by the Committee for Reciprocity Information, the particular committee, whether it be the Trade agreements Committee or a country committee operating under its supervision, which makes a recommended decision on the merits with respect to an article or articles on which interested parties have appeared and presented data should notify each interested party in writing the substance of the recommended decision and the grounds upon which it is based.

5. A sufficient period of time should be provided for interested parties following receipt of the recommended decision on its products in writing to prepare and file exceptions with the Committee for Reciprocity Information and, where desirable, to be given an opportunity to present its arguments orally.

The President's Answer to the Press on the Mediterrenan Crisis

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. MULTER. Mr. Speaker, the New Republic for April 16, 1956, contains the following graphic description of a press conference which was held by the President several weeks ago:

"I GET DISCOURAGED"

Eisenhower was as mad when he answered Sarah McClendon's question last week as we have ever seen him. He was so eager to slap her down that he took an all-out position on getting Congressional approval before sending United States troops to the Middle East. Sarah McClendon may have altered history.

It happened at the press conference. These have been telescoped into half an hour once a week (F. D. R. had two-a-week before the war; no time limit). With 219 reporters on hand it is hard to get recognition. Some vainly rise and sit and get all their week's knee-bending calisthenics done trying to catch the President's eye.

When the President gives the nod the custom is that the reporter first gives his name and paper—a new, dampening effect on reporters who know the TV cameras are grinding away and that his remarks will be recorded for publishers. These rules have two effects: they silence the timid and encourage exhibitionists.

No conference is complete without a question from a woman reporter. Last week the redoubtable May Craig did not rise. She may have sensed the President's mood. Sarah McClendon, of the El Paso Times, however, rose repeatedly. No recognition. Mounting tension. A duel of wills. Finally Sarah McClendon simply popped up and delivered her question, anyway, with a courage—or insensitivity—few men could have mustered. It was a good question in view of the deepening Mediterranean crisis, though it had been asked at various times in the past: Would Eisenhower use our marines in the Middle East without asking the approval of Congress first?

The rash reporter had won her right to be heard, had defeated the President in a game where he made all the rules, and left him angrier than we have ever seen him. "I get discouraged sometimes here," he ejaculated. He started again, flushed, paused, continued with hands clenching and unclenching. Reporters, mindful of his heart, watched with awe.

The President's eyes are a little reddened by conjunctivitis. In his wrath he is a formidable sight. His answer was, in effect, a stronger reaffirmation of his self-imposed limitation against sending troops into battle without specific congressional approval, a position inferentially critical of Truman's quick action in Korea. To some this interpretation of the Constitution seems a dubious restriction on White House authority, typical of a tendency to yield leadership. The issue is red hot, because Britain is now desperately trying to get advance United States commitment to act quickly with her in the Middle East if war starts.

OFF TO GEORGIA

Reporters sometimes get the frustrated feeling at the President's press conference that he does not keep track of what is going on. Asked last week about the Wisconsin primaries, the President prefaced his remarks with "Actually I haven't seen the final figures"; asked to comment on the latest Dulles statement on Russia, he replied, "Well, I don't know exactly what the Secretary of State said * * *"; asked about Sherman Adams' attack on the Democratic record in Congress, he began, "I don't know under what circumstances Mr. Adams made such a statement * * *"; asked about Iceland's strategic value in relation to Russia he said that he had not given "my personal attention" to "this particular question." In fairness it should be said that the President gave answers in each case, though not always precisely to the question asked. Doesn't Eisenhower want to know, and don't they tell him? It's hard to say.

There is a theory in Washington that the details of being President bore Eisenhower. He reserves his decisions for the big issues. These finally reach him at the top staff level. He does not follow them in the papers. There is also a delegation of powers by the President, a growing void of new international ideas as the reservoir left him by Roosevelt and Truman is pumped dry. For the United States things have gone badly in Iceland and Ceylon; the Mediterranean is now a powder keg; the farm bill at home has reached a crisis. And President Eisenhower leaves for a week's golfing in Georgia.

California State Board of Agriculture Resolution Against Freight Rates

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent, heretofore granted me so to do, I present the text of a letter to me of April 19, 1956, from the assistant secretary of the California State Board of Agriculture at Sacramento, with which communication there was enclosed a copy of the resolution by said California State Board of Agriculture dealing with the subject of excessive freight rates. Said text is self-explanatory of the purposes thereof:

CALIFORNIA STATE
BOARD OF AGRICULTURE,
Sacramento, April 19, 1956.

Hon. CLYDE DOYLE,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. DOYLE: The California State Board of Agriculture, at its regular meeting held in Sacramento, Calif., on April 16, 1956, passed a resolution in protest against the recently granted increases in freight rates and refrigeration charges by the Interstate Commerce Commission.

Your consideration of the enclosed resolution will be greatly appreciated.

Very sincerely yours,

ROMAIN YOUNG,
Assistant Secretary.

RESOLUTION RE EXCESSIVE FREIGHT RATES

Whereas freight rates since 1947 have increased by 68 percent, and are now not only becoming excessive to the point of being

detrimental to the $2 billion agricultural industry of the State of California; and

Whereas these rates are actually becoming a deterrent to agriculture of California, being geographically the greatest distance from the large consuming markets east of the Mississippi River; and

Whereas it is nationally conceded that the farmer's income is being steadily reduced, compared with income to industry and almost all other lines of endeavor, including the railroads; and

Whereas industry and other lines of business can pass on increased costs, including transportation charges, to the ultimate consumer, whereas the income from agricultural production is strictly controlled by the laws of supply and demand; and

Whereas the Nation's railroads, in applying for increased rates and charges, have apparently ignored these important factors applying to agriculture; and

Whereas, the California Public Utilities Commission, recognizing the plight not only of California agriculture, but also of California business and industry, joined California shippers by intervening in a recent rate case before the Interstate Commerce Commission, protesting and opposing further rate increases as detrimental to California; and

Whereas the Interstate Commerce Commission, disregarding all protestants, recently saw fit to grant another 6-percent increase in freight charges and 15-percent in refrigeration charges: Now, therefore, the California State Board of Agriculture, at its regular meeting, April 16, 1956, at Sacramento, Calif., does hereby unanimously

Resolve, That they petition the Congress of the United States for a full and complete investigation of the activities of the Interstate Commerce Commission to determine whether the Commission has established reasonable charges for transportation services on agricultural products, without preference or undue advantages or discrimination between localities or geographical areas, and whether increases in rates granted to railroads have been in accordance with law, and what effect such increases have had on the price of agricultural products, and further

That copies of this resolution be spread on the minutes of this meeting and copies be mailed to the President and Vice President of the United States, to the governor of California, all Senators and Congressmen, and to the Interstate Commerce Commission and California Public Utilities Commission, and to the vice presidents, traffic, of the four originating railroads of California.

Display of Courage

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial written by Mr. Lawrence Spraker in the Stayton (Oreg.) Mail on the President's veto of the farm bill:

DISPLAY OF COURAGE

The people, we think, will accept the President's veto of the farm bill as the only logical step that he could honestly have taken.

The Democratic Congress was so intent upon hanging a political noose around the President's neck that it wrote more politics into the farm bill than economics. It is our opinion that the onus for the bill's defeat will rest more upon the Congress than on the President.

Eisenhower, in his veto, displayed courage, a trait that sets well with the American people.

That he is cognizant of the plight of the American farmer is evident from his announced purpose to increase parity rates, permissible under the flexible program, and to urge anew immediate acceptance of the soil-bank provisions of the vetoed bill.

A Scholastic Memorial to Franklin D. Roosevelt

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address of the Honorable Charles H. Silver, president of the Board of Education of New York City, at the dedication ceremonies of Public School 34, in Manhattan, on April 17, 1956.

REMARKS BY CHARLES H. SILVER, PRESIDENT OF THE BOARD OF EDUCATION, AT DEDICATION CEREMONY, PUBLIC SCHOOL 34, MANHATTAN, APRIL 17, 1956

The pride that all of us feel who have had any part in the construction of this school is a very personal thing to me. It is a pride in which every citizen of New York may share. It belongs to all of us—to the devoted teachers, to the parents and to the children who will attend this splendid school.

But, while I speak for your entire board of education in marking this almost sacred moment when their efforts and yours culminate in the dedication of this magnificent building, I find a very special feeling welling up in my own heart. For this, there is a very good reason.

Public School 34, within whose walls we are now gathered, stands in my own backyard. I was brought up right here. I lived and attended public school on the lower East Side within blocks of this very spot. For me, these ceremonies tonight could be called a homecoming except for the fact that I have never really left home. Many of my tenderest associations, my warmest memories and dearest friends are still closely linked with this teeming, growing, vastly improving area of our great city.

Here, in this impressive auditorium, in this bright, modern, handsomely appointed structure, we can all witness dramatic proof of the progress we are making in widening the frontiers of our educational program. And we have only just begun.

A full measure of praise for the planning and execution of this far-reaching program must very rightly go to Dr. Jansen our superintendent of schools, to David Moskowitz, our associate superintendent of Housing and to the small, untiring army of technicians, designers, and workers who have brought this triumph of inspired effort from the blueprint and the drawing board to a dream come true in stone and steel, in beauty and efficiency. I need only look around, and compare what I see with what I recall from my own boyhood days in this neighborhood, to know the vast advances we are making in our public school system.

Let me express appreciation, also, on behalf of the board of education and the grateful citizens of New York to His Honor, Mayor Robert F. Wagner, who has shown in a few short years, by his enthusiastic cooperation and sincere interest in our school-building program, that he intends to make our city's mammoth educational enterprise, not only the biggest in the world, but, beyond any challenge, the best.

The same accolade fits our borough president, Hulan Jack, who has done so much to support the development of our schools by his untiring efforts before the board of estimate. He has assured Manhattan, and especially this too-long neglected area, a large proportion of our school-building program.

More than genius, industry, and devotion have joined to promise a great destiny for this school. It bears the added blessing of a great name. No child who attends these classrooms can help but benefit from preparing for citizenship in a school named for one of our most notable citizens, an immortal spirit of freedom, a deathless symbol of courage, President of these God-loved United States of America, Franklin Delano Roosevelt.

It is altogether fitting that this school be dedicated at this time in tribute to the timeless memory of a man to whom America meant so much, a man whose life and achievements meant so much to America. Out of this school must issue class after class of boys and girls who are themselves predestined to high places in public life, for they will be the custodians of a glorious heritage.

Franklin D. Roosevelt, whose soul is enshrined for all time in this edifice, as it is in the fiber of our democracy and the hope of our Nation's future, passed away eleven years ago, almost to the very day. I remember when the words came over the radio, the shock of disbelief, the sick, numbing news that stopped crowds in their tracks while through all of a world, suddenly gone silent, freedom itself seemed to hold its breath.

How firm he stood for the right. How swift he rose to meet all threats against it. His was a voice that shook the nations and woke the little, peaceful, frightened men to mass their might and overthrow the enemies of mankind.

The children who come to this school will know that he was a friend of children. Some will walk again because he was their friend and fought a grim infimity for them. They will read obout him here in their textbooks and learn about the lean days when he was called to office, days of empty hearts and pockets. They will learn that a man doesn't have to be born in a log cabin to know that ignorance and poverty are evil.

Teach them how he gripped our faltering souls when banks were falling to pieces, when democracy stood threadbare on breadlines and sold apples on streetcorners. Teach them, as he taught us, that : "The only thing we have to fear is fear itself."

Years later, we can look back and realize that what he called a "fireside chat" was more than that. It was the quickening roll of drums rousing us to defend the citadel of honor and decency. It's good that we sat in our living rooms around the loudspeakers. It's good that we listened or, maybe, some of us wouldn't be able to sit and watch the horrors of atrocity newsreels. We'd be in them.

I was fortunate enough to know Franklin Delano Roosevelt. I remember his words, beating like a massive bell on the brink or war: "Having taken up arms, we will not lay them down until liberty is secure forevermore." I think that would be a good motto for this school.

Eleven years have passed since Franklin Delano Roosevelt passed from life as our president into the pages of history. For many of us, the ache of his going has not

grown less. I can see him in this room because he was one with workers and doers, with teachers and children, with mothers and fathers.

He would speak to you in tones you would never forget. Chin high, a friendly wave of a friendly hand with warm eyes smiling reassurance. He would tell you in this room, within the walls of this school where it can be so rightly told, that you need never know again on earth the fear of fear. And he will live as his message will live and stand guard eternally over little children at their lessons and their play, over parents waiting to take their youngsters home, over teachers that will echo his faith in a better day for men of every birth in a world brotherhood of peace and good will. God bless this school.

Looking at Political Facts

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am inserting a report prepared by the Dunn Survey of Greenwich, Conn., entitled "The Political H Bomb." This report was prepared by Mr. Rogers C. Dunn and his associates and it represents his findings on election results based upon the actual vote cast for President and Congress since 1936 up to and including 1952.

Mr. Speaker, this report reveals the political quality of the American people that most individuals would like to believe but have been taught not to believe. It reveals an opportunity of such magnitude and so greatly desired that some will not dare believe it could be a reality. This report, however, is supported in every instance by political facts which cannot be successfully denied.

The report follows:

THE POLITICAL H-BOMB

PART 1

Communism can infiltrate America only as our own ideology becomes dim and appears to be unworkable. Only a few Americans have been given the opportunity to realize that communism is basically an ideology of government—reactionary government.

Socialism is the back-door entrance into communism. Few Americans have knowingly supported either one. But the liberal movement, created in about 1936, has provided a respectable side door into socialism.

The liberal program of today is the same thing as the unwanted Socialist program of yesterday. The Socialist program of today is made the liberal program of tomorrow.

Nevertheless, the national organizations of both political parties are competing to enlarge and extend liberal programs. As long as this continues, as a practical matter the opportunity to escape from an accelerating envelopment by socialism is closed.

Fantastic, but true

There is a flaw fatal to the liberal movement when recognized. Substantial and exacting facts have not established that the movement reflects a public demand, and that liberal benefits have won a gain in votes from various groups, farmers, workers, etc.

The absence of such facts provokes the question: Is the liberal movement being forged by the ballot and desire of the people, or is it a thinly veiled scaffolding sustained by leaders who have misrepresented and misled the people, wittingly or unwittingly?

This report is addressed to the answer to this question, for:

If election facts establish that liberal benefits have not won a gain in votes then:

1. The incentive to win votes, which causes leaders of both parties to compete in accepting and promoting liberal programs is destroyed.

2. The fear of liberal votes which has erroded the leadership of those who wish to oppose the liberal movement would cease; and this leadership would prevail in at least one party.

3. The revelation that the people are not ignorant or greedy groups, but are competent to be master of their Government, would relight the American ideology and make it live.

4. One of the two parties would be forced to become a party in opposition to the liberal movement.

PART 2

Facts

1. Sixteen years of liberal benefits to growing millions of people, and a growing population, did not win a gain in total vote for the Democratic Party which sponsored the programs.

Number of Democratic votes cast for President (in millions): 1936, 27.5; 1940, 27.2; 1944, 25.6; 1948, 26.4;[1] 1952, 27.3.

2. Liberal benefits did not increase the Democratic share of total vote.

Democratic percent of total vote cast for President: 1936, 62 percent; 1940, 55 percent; 1944, 54 percent; 1948, 55 percent;[1] 1952, 45 percent.

3. While the adult population (21 and over) increased substantially, the ratio of Democratic votes to the population did not increase.

Percent of Democratic vote to adult population:[2] 1936, 34 percent; 1940, 32 percent; 1944, 28 percent; 1948, 28 percent;[1] 1952, 28 percent.

These facts establish that if liberal benefits to farmers, workers, and others, won a gain in Democratic votes, the party's policies lost as many or more votes from others.

Who are these other voters? Why have the Nation's leaders chosen not to reveal a fact of such major significance?

Why have the Nation's leaders chosen to promote the view that liberal programs are necessary to gain votes?

Why has the national organization of the Republican party moved closer and closer to the liberal program of the Democratic party when that party failed to increase its vote in 16 years?

These facts and questions are sufficient to challenge those who teach, or believe, that the liberal movement is being forged by the vote and desire of the American people.

[1] Includes vote for Truman, Wallace, Thurmond.

[2] Based on figures of population 21 and over received from U. S. Census Bureau.

The facts which follow reveal why the Nation's leaders never offered substantial facts supporting their teachings that liberal benefits won a gain in Democratic votes.

Labor vote

The facts here deal with one of the largest groups of citizens who have received as great, if not greater, benefits from liberal programs than others.

1. In the labor citadels of Wayne County (Detroit), Mich., and in Allegheny County (Pittsburgh), Pa., as the population and union membership grew, and as the political power of labor leaders grew, the Democratic candidates for President received a smaller share of the vote.

	Year	Pittsburgh	Detroit
		Percent	*Percent*
Before CIO-PAC:			
Roosevelt	1932	56	60
Do	1936	68	68
After CIO:			
Roosevelt	1940	58	62
Do	1944	57	63
After Taft-Hartley:			
Truman	1948	56	59
Stevenson	1952	51	53

2. In the 98 counties which comprised the largest industrial areas throughout the country; as union membership grew, and as the political power of labor leaders grew, the Democratic candidates for President received a smaller share of the vote cast.

	Democratic vote		Union membership (United States)
	Year	Percent	
Before CIO-PAC	1932	57	3,250,000
	1936	65	4,700,000
After CIO	1940	57	8,500,000
	1944	56	13,500,000
	1948	52	15,600,000

3. The following facts are the result of segregating the vote of every labor precinct in 261 (84 percent) of the 310 counties in Pennsylvania, Delaware, Maine, Illinois, Iowa, and Wyoming. These labor precincts cast a total of 1,172,000 votes in 1952.

	1940	1948	1952
(*a*) Percent of Democratic vote for President in labor precincts	55	54	48
(*b*) Number of Democratic votes for President cast in labor precincts	628,000	519,000	559,000

4. The movement of the vote in labor precincts was generally similar to the movement in white-collar, wealthy-residential, and mixed population precincts where there were fewer or no special liberal benefits.

5. The preceding labor vote facts are consolidated here for comparison, and to show the similarity of the vote in labor centers and the nationwide vote.

[Percent]

Democratic vote	1932	1936	1940	1944	1948	1952
	Before CIO		After CIO		After Taft-Hartley	
All United States	59	62	55	54	55	45
98 industrial counties	57	65	57	56	52	
Pittsburgh (Allegheny County)	56	68	58	57	56	51
Detroit (Wayne County)	60	68	62	63	59	53
Labor precincts in 6 States	(1)	(1)	55	(1)	54	48

[1] We do not have precinct figures for 1932. For 3 States we do not have precinct figures for 1936 and 1944 so have omitted totals for these years.

NOTE.—For the sake of clarity and brevity we have omitted reference to the Republican vote. The Republican vote strengthens the weight of the evidence here.

These facts establish that liberal benefits did not win a gain in labor vote for the Democratic Party which provided the benefits.

These facts establish that the Nation's leaders, liberal and conservative, who promoted the view that liberal benefits won a gain in labor votes have, for years, misrepresented and misled the American people.

Farm vote

Billions of dollars in liberal benefits were paid to farmers by Democratic administrations, for 20 years. Political leaders vied to gain farm votes through liberal benefits. Virtually all public leaders educated the people to believe that farmers yielded their votes for liberal benefits.

The facts reveal a shocking misrepresentation.

1. The following figures show the number of Democratic votes cast for President in all farm precincts in 97 of the 99 counties in the farm State of Iowa.

Iowa—Number of Democratic votes for President in farm precincts

1936	293,000
1940	273,000
1944	207,000
1948	215,000
1952	168,000

The total number of Democratic and Republican votes in these farm precincts in 1952 was the same as in 1936. Thus, the decline in Democratic vote cannot be attributed to a decline in farm population.

2. The number of Democratic votes for President declined in the farm precincts in Illinois. The following figures cover all farm precincts in 97 of the 102 counties in Illinois. (We do not have figures for 1936 and 1944.)

Illinois—Number of Democratic votes for President in farm precincts

1940	241,000
1948	176,000
1952	167,000

3. In Wyoming, Maine, and Pennsylvania, and in the other States where tests have been made, the decline in Democratic farm vote is similar to Iowa and Illinois.

PART 3

Taft election exposed liberal movement not supported by public

Commencing in 1941, this survey has presented facts which revealed that the so-called New Deal labor vote was a hoax. In 1946 we reported, in part:

"We believe that there is little labor-union legislation needed in the public interest which could not also be sought for the welfare fo union members. We believe that labor has been exploited by its own mechanism. Therefore:

"We urge that the Republican Party rise up to fight as the champion of the welfare of the rank and file of union members, and of the public, for labor-union legislation which is fair, decisive, and of full measure.

"By this course the Republican Party would aline the rank and file of union members and the public into an irresistible political force.

"The facts lift the rank and file of union members out of the New Deal-labor-leader orbit, and place them alongside of the rest of the American people. But isolated and encircled by the New Deal, abandoned by the Republican Party, the American workingman has had no political champion."

This was the overall campaign which brought Senator Taft his great majority in Ohio in 1950. He knew that liberal programs had not gained the vote of rank-and-file workers, farmers, etc., in Ohio.

An editorial in the Cleveland Plain Dealer, October 1, 1950, revealed:

"Despite the vast favors which labor unions have received from the Democratic Party, despite the party's open alliance with the unions, and despite the feverish election activities of the CIO-PAC, the number of Democratic voters has constantly declined in the principal centers of organized labor since the 1936 heyday.

"To put it another way, fantastic as it may seem, the victorious Democratic Party has not been converting increasing numbers of men to its philosophy, but has been losing followers.

"And also in the principal farm areas of the Nation, fewer Democratic ballots were cast in 1948 than in 1940 despite the enormous subsidies lavished on them by Roosevelt and Truman administrations.

"In factory and on farm, the give-away programs have been losing—not winning—voters.

"We are indebted to the Dunn Survey, of Greenwich, Conn., for pointing out this political trend. We checked for ourselves the official election returns of Ohio, and find that the conclusions both as to farm and factory are borne out. * * *"

With such knowledge Taft could campaign fearlessly for the American ideology. His great majority made a dramatic revelation of the political character of the people of Ohio. But there was little that was new about this except that it was dramatic because Taft was a national figure.

Scores of Members of Congress made similar campaigns each year with but a rare casualty—and these were mostly in years when a "liberal" Republican presidential candidate neutralized the Taft-like campaigns of individuals and their local organizations.

Taft-like campaigns, across the country, had a total result which revealed the lack of public support for liberal programs, even more significantly than the Taft victory.

But the Republican national organization did not exploit these opportunities to reveal that liberal benefits were not gaining public support. Instead, it strengthened the liberal movement by promoting the belief that liberal benefits gained labor, farm, and other mass votes; and it sought to make ineffective facts to the contrary.

Today

Today, the program of a Republican administration is as liberal as the Democratic Fair Deal. This neutralizes the political character and effectiveness of Republicans and organizations who oppose the liberal movement. It leaves them to wither on the vine, one at a time—a movement now apparent.

Today, neither a Democrat nor Republican can vote for his party's national ticket without supporting and accelerating the liberal movement. Voters can choose only the most competent and comforting bedside nurse, while the liberal operation continues.

From the top down

The liberal movement and its programs have originated, and been kept activated, by the national organizations of the Democratic and Republican Parties and by the Federal bureaucracy—not by the public or local party organizations.

To maintain and extend the movement, leaders of these organizations must propagate the view that the public seeks the benefits, and that the vote proves the contention.

When leaders of both parties claim a liberal labor, farm, or other vote, the public naturally believes it. However, for 20 years election facts have not been offered to sustain the contention. There are no such facts.

The liberal movement is a thinly veiled scaffolding sustained by leaders who have misrepresented and misled the American people.

Taft revealed this in Ohio in 1950. The many Taft-like campaigns made by Members of Congress revealed this year after year. The absence of extensive State and local liberal programs reveals this. The actual vote cast in precincts, towns, cities, and States reveals this.

Twenty years of efforts by conservatives

For 20 years conservatives have sought to educate the public to understand and oppose the liberal-socialist movement. They failed to halt the movement. They failed to even provide the opportunity to choose between a liberal and a conservative party.

These failures appeared when, on election days, the people were confronted with no choice but to vote for 1 of 2 liberal candidates for President. They could only vote "ja," or stay home.

For 3½ of the 4 years between elections the public was taught the evils of the liberal-socialist program. But in the few months before election day the same teachers supported, and urged all good Americans to support, their liberal candidate for President.

This contradiction neutralized the 3½ years of educational efforts, as should be expected. This explains why the Republican Party has become a minority party: why a growing number of voters will not affiliate with either party, independents: why fewer than 50 percent of the eligible voters went to the polls: and why there is public confusion and discouragement.

Conservatives have failed to learn that the mind and vote of a majority of citizens has been as ready as their own to sustain the American ideology.

They have failed to learn that the factor preventing voters from registering this ideology at the polls, excepting 1952, has been the national organization of the Republican Party.

The revelation that a Republican administration is as liberal as the Democratic Fair Deal confirms what the political character of the national organization of the party has been for approximately 20 years.

This assures that in 1956 the people can only vote "ja" on the issue of the liberal program. This will give the movement the appearance of having greater public support than ever before, regardless of which party wins the election. And more men who have carried the fight for the American ideology will quit, from discouragement and personal considerations.

Partisan blindness

Some Republicans will discount or resent any reflection against a part of their party. In the interest of briging out the truth, we would suggest that any such man look in the mirror and repeat the reflections he made against the character and intelligence of conservative southern Democrats who disaprpoved of their party's liberal program but continued to support the New Deal.

The one opportunity to win

There is only one means through which the liberal movement can be stopped, and returned to its proper minority position.

Reveal to all Americans that they have been deceived into believing that their fellow citizens are yielding their common ideology and, in growing numbers, given their vote for liberal benefits. From the local level to the national level.

This truth can be revealed through the record of the vote cast by the people themselves. This is a political H-bomb.

Endorsed by many Members of Congress

Twenty-seven Members of Congress, including seven committee chairmen, have examined our methods and precinct vote findings and taken the unusual action of jointly signing a letter which reads, in part:

"We believe your methods and procedures are sound and that the resulting figures open a new field of political intelligence of great value—at the National, State, and local levels.

"When and if the study you have already made in several States is extended upon a national scale, with similar results, we believe the facts will afford the sorely needed incentive to both Republicans and Democrats alike to move away from the welfare-Socialist state, back to the fundamental principles of government outlined by our forefathers in the Constitution." And:

"We believe it is a matter of great importance to the Nation for you to extend your studies of the precinct vote on a nationwide basis, and that you make the results as widely known as possible.

"You have undertaken a great task, an important task. We wish to help and encourage you in your efforts, and to that end we recommend this work of yours as being worthy of support by all who have the future welfare of this Nation at heart."

We ask for your careful consideration of this report. Achievement of the objective stated here depends upon the support we receive. Therefore we ask for your wholehearted financial support at this time.

Comparison of farm and labor vote with other types of population

The following figures are based on the number of Democratic votes cast for President in 1936 representing 100 percent. The 1940, 1944, 1948, and 1952 figures show the number of votes cast (percentage) compared to 1936.

[Percent]

Type of precinct	1936	1940	1944	1948	1952
IOWA [1]					
Farm	100	86	70	73	58
Labor	100	102	91	94	88
White collar	100	106	100	102	99
Wealthy residential	100	100	110	102	105
Mixed population	100	94	81	89	76
PENNSYLVANIA [2]					
Farm	100	78	56	51	64
Labor	100	87	67	62	76
White collar	100	80	68	57	76
Wealthy residential	100	87	76	60	69
Mixed population	100	80	66	56	74
ILLINOIS [3]					
Farm	------	100	------	73	70
Labor	------	100	------	85	92
White collar	------	100	------	81	99
Wealthy residential	------	100	------	89	96
Mixed population	------	100	------	79	85

[1] All precincts in 97 of 99 counties.
[2] All precincts in 25 of 67 counties thus far completed.
[3] All precincts in 97 of 102 counties. We do not have 1936 and 1944 figures. 1940 vote used as 100 percent.

Those Tireless Chandlers

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. HILLINGS. Mr. Speaker, the April 30 edition of Newsweek magazine carries an interesting article concerning Mr. Norman Chandler, publisher of the Los Angeles Times, and the outstanding service to the southern California area which he and his family are rendering. The article follows:

THOSE TIRELESS CHANDLERS

In the brilliantly lighted city room of the afternoon Los Angeles Mirror-News one day last week a chunky young rewriteman turned in his final copy, emptied a gray steel desk, and hurried off to catch an east coast plane. After 3 months on rewrite and features he had been assigned to accompany his boss, Norman Chandler, to the 70th annual convention of the American Newspaper Publishers Association in New York.

For Otis Chandler, 28, a convention trip promised to be about the least taxing job he will ever perform for his father's company. Since 1952 he has put in 18 months as a lobster-shift production man in the morning Times' press room and another 15 as a reporter on general assignment. One week hence, back in Los Angeles, he will move into a low-ranking job in the Times' circulation department. After that he will spend a year or so as an ad man, then work at the Publishers Paper Co. in Oregon City, Oreg., a newsprint mill largely owned by the Times and the Mirror-News. Two years from now he may be assigned to the Hollywood studios of the company's television station, KTTV, Los Angeles. It is, he says, "a long executive training program—probably 10 years."

HOURS AND TALENTS

Otis Chandler will need every minute of it. As any one of the 1,300-odd publishing executives present this week in the corridors and meeting rooms of the Waldorf-Astoria might testify, the newspaper business is far from ready to dismantle its presses. But, if pressed, all of them would also admit that the delightful craft which once was newspapering has become a tough and reasonably scientific business where survival and profits are increasingly a matter of long hours, high-priced talent, and an intimate familiarity with such details as the quality of ink, the price of newsprint, and United States tax laws.

On the surface, 1955 was the most prosperous year in history for the American press. Together, the country's 1,760 dailies sold 56.1 million copies, more than they have ever hawked before. Simultaneously they raked in $3 billion in advertising revenue, also an all-time high. But in this bright year, the increases in publishing costs more than offset the rise in income. Newsprint alone, which can represent as much as 40 percent of the production cost of an average daily, and much more for a large one, jumped almost 4 percent to the record high of $131 a ton. In some areas publishers were forced to buy on the open market at prices ranging above $200 a ton.

A few years ago it was easy for publishers to net 15 percent of their gross revenues. Today it takes considerable effort to make 5 percent, and few do that. Last year one of the biggest, best known, and apparently most prosperous newspapers in the country netted its proprietors only $400,000 after taxes. The average 50,000-circulation daily, on which Editor & Publisher has been keeping tabs since the end of the war, earned only $128,870 after taxes on a gross income of $2.7 million. Ten years ago the same paper pulled in almost $200,000 on a gross of only $1.25 million.

CLIMBER

In the face of such discouraging figures, the record of the Chandler enterprises in Los Angeles over the last 10 years is nothing less than spellbinding. Since the end of the war Norman Chandler has invested almost $29 million in his own properties. His conservative morning Times (circulation 428,300) has moved from 17th to first place in the Nation in total advertising lineage. Last year it published more than 21.5 million lines of news and features, some 2.7 million more than the second-place New York Times.

Chandler's afternoon paper, the Mirror-News, founded in 1948 as the tabloid Mirror (circulation 308,500) has in its brief existence (1) almost single-handedly run the opposition Daily News out of business and (2) saleswise, climbed to within 40,000 copies a day of the rival Hearst Herald and Express. The Times-Mirror television station, KTTV, started in 1949 in partnership with CBS, has become probably the most successful independent in the country. Last year, despite the fact that the Mirror-News was not yet landing regularly in the black (estimated loss since its founding: $5.5 million), the Times-Mirror parent company and KTTV grossed $70.6 million, $14 million more than it made in 1954, after taxes, the company netted more than 6 percent of that.

Under its veteran editor, L. D. (Hotch) Hotchkiss, the Times carries more internation and national news than any other west coast paper. But its lead story is almost always a local one. Its corporate faith in itself as an instrument of southern California's growth has not wavered since Lt. Col. Harrison Gray Otis, Norman Chandler's grandfather bought a quarter interest in the paper in 1882. When Colonel Otis, a Civil War veteran, acquired control of the paper 4 years later, his "general order No. 1" was in the southern California tradition: "Push things."

PUSH FOR LOS ANGELES

Under the colonel and his circulation manager, Harry Chandler (who later became his son-in-law), the Times pushed with a will. It was Harry Chandler who helped the development of the California Institute of Technology, who was one of the original organizers of Western Air Lines, and who, with 10 friends, put Donald Douglas in the business of manufacturing aircraft. Chandler and the Times were also the moving spirits behind the development of the San Fernando Valley, Los Angeles Harbor, the city's modern civic center, and the Hollywood Bowl. Of him and his fund-raising, it used to be said: "It cost $1,000 to have lunch with Harry Chandler."

Today, his son barely finds time for lunch. Born in Los Angeles in 1899, Norman Chandler was put to work in the Times' composing room in 1922, a few months after graduation from Stanford. From the start, he worked harder than any one of his future editorial employees and, probably, for less cash (his first Times job paid $16 a week). He served his apprenticeship in the composing room, the circulation-complaint desk, in stereotyping, as a cashier's clerk, and as his father's secretary. By 1936, he had worked his way up to vice president and general manager of the company. In 1941, he became president and in 1944, after his father's death, publisher of the Times.

There was no real need for him to extend himself in new plans for the Times. The Chandlers—Norman, Philip, and Harrison—are indisputably wealthy, and estimates of their total worth have ranged from $50 to $100 million (the lower figure is probably closer to accuracy). But Chandler threw himself wholeheartedly into the Times, and his apprenticeship paid off. In 1944, when he took over, the paper ranked 34th in ad linage among the country's dailies; 5 years later it was in seventh place. A year later it was in third.

TIMES' TAB

Chandler was not satisfied. Under the postwar influx of industrial workers, Los Angeles was both booming and changing. The heavyweight Times was not necessarily the kind of paper the new groups scattered in the burgeoning suburbs from Palmdale to Santa Ana wanted to read. "There was room," he says now, "for another newspaper. I wanted something completely different from the Times."

The tabloid Mirror he founded in 1948 was indeed different—so much so, in fact, that many old Times hands privately admitted something close to shock. Chandler hired Virgil Pinkley, then general manager of the United Press in Europe, as his editor and publisher and gave him, Pinkley recalls, only two orders: "One, not to favor communism in any way. Two, not to print anything that couldn't go into the American home."

Pinkley took Chandler at his word. For the first few months of its existence, the Mirror's tabloid page 1 was printed sideways. It campaigned against saloons, the black market in babies, and ugly female legs. It started a page of "personals," in which the lonely were allowed to advertise for prospective mates. Under its buzz-saw managing editor, Ed Murray, it sponsored beauty contests, planted "atomic missiles" in vital installations, bombarded the city with leaflets, and broke the unwritten Los Angeles law against mentioning the opposition by attacking both the Hearst papers frequently and loudly.

INDEPENDENT

Most amazingly, for a product of the quiet, stanchly Republican Times, it was politically independent. Where the Times (and Chandler himself) preferred the late Senator Robert A. Taft for the Republican nomination in 1952, the Mirror plumped editorially for Dwight Eisenhower.

At 56, a handsome gray-haired executive, the Mirror-News and the Times' boss is still putting in longer hours at the shop than most of the hired hands. He and his wife, Dorothy Buffum Chandler, a tireless and pretty woman, active in countless civic affairs (and who also acts as adviser on women's news), arrive at the Times' six-story downtown building before 8:30 every morning. Some evenings they manage to get away by 7:30 at night. When they do, Chandler's briefcase is jammed with the details and homework of publishing.

Although active with a round dozen civic and business groups, he spends nothing like the amount of time on them that the last publisher of the Times did. "My father," Norman Chandler says with a smile, "was never around the office. He spent at least 15 to 20 percent of his time on civic affairs and on his ranches. No publisher today can afford such luxuries."

The Time To Help Small Business Is Now

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. MULTER. Mr. Speaker, on April 24, 1956, I had the pleasure of addressing the National Association of Tool & Die Manufacturers at its ninth annual dinner held at the Hotel Statler in Washington, D. C. My address follows:

REMARKS OF HON. ABRAHAM J. MULTER, OF NEW YORK, AT THE ANNUAL DINNER OF THE NATIONAL ASSOCIATION OF TOOL AND DIE MANUFACTURERS

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is nice to be with you again even though this is the first time you have invited me to sing for my dinner. I probably should have declined on two grounds. First, I have no union card, and, second, your very fine entertainers would no doubt refuse to appear on the same program with me properly urging that my talent fell short of their minimum criteria for entertainment.

Nevertheless, I am prepared to leave with you some of my thoughts. I know that at least some of you may disagree with me but controversy is good for the American soul; that is, the political soul—particularly in an election year.

It has been my happy privilege to serve on the House Small Business Committee for many years. It is one of the few committees of Congress which has been truly nonpartisan. I cannot recall a single recommendation coming from that committee which did not have bipartisan support.

Therefore you should bear in mind that anything I say that is critical is deliberately intended to be critical but is just as deliberately intended not to be political.

The criticisms that have come from my committee were always made constructively, never destructively, and always made without regard to the political affiliations of the appointee against whom directed.

I sincerely believe that my Republican colleagues on our committee will endorse what I say.

I will try to relate my remarks directly to your interests.

You will hear more and more as the year rolls on that small business is the backbone of our free-enterprise economy and that big business aided by big business in Government is more and more throttling small business.

While none of you are small in the colloquial sense, you are small business in accordance with our legal definition. Each of you represents a business which is independently owned and not dominant in your industry. That is the new language of the statute, which defines small business.

The Defense Department had an arbitrary legal definition that any firm with 500 or more employees was big business and any firm with less than 500 employees was small.

The reason for the change of the definition is important. The Congress found that small business must be protected against the depredations of big business and of big government and accordingly, enacted into law many aids, safeguards, and even preferences for small business.

These laws were enacted because the facts as developed in dozens of hearings, sustained by volumes of testimony and documentary evidence demanded them.

Similarly, almost a year ago we enacted a law repealing the Defense Department's arbitrary definition and making it mandatory that the Small Business Act definition, which I enunciated before, be uniformly applied in all Government agencies.

Now, I do not care whether that policy has not been implemented and enforced by the Defense Department because Charlie Wilson is big business or favors big business or because his subordinates unbeknown to him have failed to do so for fear of antagonizing the boss. You and I are not concerned with the motives, good or bad. We are concerned that the congressional committees that urged that policy upon him before enactment of the law, were told that the policy was a good one and should be the rule.

We are more concerned with the simple incontrovertible fact that a concededly good doctrine was not voluntarily effectuated and the Congress was compelled to and did mandate it. The same agency continues to ignore and flout the law.

That is typical of how small business is being mistreated by the executive department of the Government.

We get fine speeches from the top echelon about broadening the base, integrating small business into Government procurement, both military and civilian, and about requiring the big prime contractors to subcontract a fair portion of their contracts to small business. They come into our hearings and document their slogans and shibboleths with directives and regulations.

Then we go out into the field only to learn that the complaints from small business have increased both in number and in bitterness.

What do we find?

Except for isolated instances we find the procurement offices fighting small business and making it impossible for them to get into the program, withholding plans and specifications, imposing impossible conditions, putting obstacles in the way of performance, demanding changes and extras without compensation, and delaying their payments interminably.

Our latest field investigations were made during the Easter vacation only a few weeks ago.

We found that it took 6 to 9 months for directives to reach the personnel in the field and then too frequently they were promptly ignored by the people charged with enforcing them.

Our Defense Department is still spending about $40 billion per year. How much of it are you getting? Not very much. All the small business throughout the whole country is only getting 17.6 percent of the prime contracts.

I am amused and at the same time terrified by Government economists who prate about our prosperity and our stability.

Our national gross income is stable they tell us. Of course, it is when you add big business income to farmers' income to small business income. The total of the gross is about the same for 1955 as for 1954.

What they do not tell you is that the gross income of big business is up over a billion two hundred million dollars and the gross income of the rest of our economy is down by a billion dollars.

They tell you that bankruptcies for the whole country are no more than in the previous years. Of course, they are. Big business failures have practically disappeared and those of the rest of our economy have nearly doubled.

They tell you that the number of business firms has remained stable in the last 3 years, that is, it has not changed. They do not tell you that in the prior 3 years our economy grew to the extent of 50,000 new firms a year. What about the manufacturing firms with less than $250,000 in assets? We are getting closer home to you now. They are the bulk of your customers. Their prosperity or lack of it, is directly tied to yours.

In the first 6 months of 1952 they netted profits after taxes of $175 million. Last year for the same period they netted only $60 million. Did you get the difference of $115 million? I doubt it.

From 1952 to 1955 these same firms had 40 percent less funds available for reinvestment and expansion. That means 40 percent less with which to buy your tools and dies.

But neither you nor they need investment capital. Oh, no. You just call up your banker and tell him what you need—and try to get it.

A recent survey shows that 10,000 manufacturing companies, many of them your customers, will need about $100 million this year to fulfill their contracts.

Big business borrows long-term money at low rates from the insurance companies, sells bonds to the banks and investment houses or sells stock to the underwriters and the public.

What do you and your customers do?

If the bankers have not yet told you they will. They will say:

"The Secretary of the Treasury and the Federal Reserve Board are afraid of inflation. They are tightening up on credit. They are raising reserve requirements so we will have less to lend. They are making us buy more Government bonds for the same reason. They are raising the discount rates so we must charge you more interest, so that you cannot afford to borrow."

Congress set up a Small Business Administration which should be able to help you but don't be too optimistic about that. The Secretary of the Treasury and the Secretary of Commerce, both big businessmen control the Loan Policy Board of that Administration. Believe me the Congress wants the Small

Business Administration to succeed in serving you.

But the latest figures do not augur too well. They show an average of 11,000 inquiries a month. During the first 2 years of operation only 395 direct loans had been made.

In the insecure world in which we live today. America must always be alert and prepared. It is essential in order to maintain a defense potential that we stockpile the necessary machine tools needed in any war effort. Therefore, let us look at a program in which you, the National Tool & Die Manufacturers, are vitally interested. An industrial mobilization program was developed after the Korean incident. Under this program it was intended that the Government spend up to $800 million a year for the acquisition of machine tools considered essential to maintain our defense potential. If this program had been followed America's bastion of defense now would contain about $2,400,000,000 worth of long-lead-time machine tools; the large and complex machines that require for their own engineering and building a period of many months. The economy aspect of this policy is striking. It was reasoned that instead of actually producing weapons in great volume and taking the chance that these might become obsolete before they were needed, it would be more economical to mobilize capability of production equipment, build and keep up-to-date numerous machines which would be available for defense tasks when the need arose. Although the administration developed such a program, little has happened under it. Congress appropriated $250 million for that specific purpose. Only $29 million has been utilized.

Long delays, continual procrastination, and failure to plan ahead have resulted in the almost complete failure of that part of our industrial mobilization program. Purchasing was cut short by a pretended economy in the Defense Department after only a negligible volume of orders had been placed. This great failure has caused fears that in the event of war there will be a repetition of the same difficulties, the same problems, the same desperate need for complicated weapons, and the same restrictions that hampered output of vital weapons in the last two emergencies.

Is that business that was intended for you, now being channeled into big business?

I do not know.

But my committee intends to find out unless blocked by the favorite but much abused answer to congressional committees—the information is classified.

There is another aspect of our economy which is very bad and needs attention. Small businesses complain of the inability to obtain steel, steel scrap, aluminum, copper, nickel, lead, newsprint, plate glass, and almost every essential material. They point out that the historical allotment pattern used by the suppliers discriminates against the small business firms because they are unable to obtain greater allotments as their orders increase. If they are new users, they are not able to get supplies at all. As prices of basic materials rise the small businessman is squeezed by the inability to raise the price of its products or to pass the increased cost on to its customer. I do not pretend to know the answer. I can only say that I am not satisfied with the administration's answer that in a free economy there is no remedy.

Criticism without suggested remedy may in turn be criticized as ineffective. My suggested remedies are simple:

1. Tax relief to small business that will permit it to retain as much of its earnings as it needs for modernization, expansion, and working capital.

2. Appointments to high Government positions of men who understand that small business is the backbone of our economy and who will devote themselves to executing our laws in the spirit in which they were intended to operate so as to aid, not hinder, small business.

3. Finally, to the big businessmen in Government who give me a big pain, every time they tell you they, too, were small once, you should say, "big boy, move over and give me a chance, too."

Thank you for listening to me.

Address by Hon. Herbert C. Bonner, of North Carolina, Before the Hampton Roads Maritime Association, Norfolk, Va., Thursday, April 19, 1956

EXTENSION OF REMARKS
OF

HON. PORTER HARDY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. HARDY. Mr. Speaker, recently the distinguished chairman of the Merchant Marine and Fisheries Committee addressed the 36th annual banquet of the Hampton Roads Maritime Association at Norfolk. It was my privilege to present Mr. BONNER to this gathering of outstanding business people in my district.

The Hampton Roads Maritime Association represents the shipping and maritime interests in the entire Hampton Roads area. Although the majority of its members are residents of my district, its membership includes the leaders of this industry in the Newport News community, represented by my colleague, Mr. ROBESON. This association has been a moving force in harbor development and in the stimulation of the movement of overseas commerce through the great world port of Hampton Roads. It has been tremendously effective because of the outstanding leadership provided by its able officials.

Mr. BONNER'S address includes much valuable information which I believe would be of interest to the entire membership of the House, and for that reason I have asked permission to have it printed in the CONGRESSIONAL RECORD.

The address follows:

ADDRESS BY HON. HERBERT C. BONNER, CHAIRMAN, COMMITTEE ON MERCHANT MARINE AND FISHERIES, UNITED STATES HOUSE OF REPRESENTATIVES, BEFORE THE 36TH ANNUAL BANQUET OF THE HAMPTON ROADS MARITIME ASSOCIATION, NORFOLK, VA., APRIL 19, 1956

President Black, members of the Hampton Roads Maritime Association, distinguished guests, nothing could please me more than to have the privilege to speak to you here in Hampton Roads today in celebration of the 36th anniversary of the Hampton Roads Maritime Association. My interest in your excellent port is twofold.

As chairman of the Merchant Marine and Fisheries Committee in the House of Representatives, I feel deeply concerned about the maritime commerce in and out of all the ports of the United States—and their adequacy to serve the needs of the Nation in times of peace and in times of emergency.

In addition, as a North Carolinian, I view with personal feeling the capacity, the health, and the growth of the great harbor of Hampton Roads which provides a vital link between my home State and the other Southeastern States to the markets of the world. I feel a very close affinity with all you gentlemen and your port when I think of the fact that during 1954, out of more than a quarter of a million net tons of unmanufactured tobacco exported from the combined customs districts of the Atlantic and Gulf coasts, shipments from the Virginia ports totaled over 200,000 net tons, representing better than 60 percent of the total.

I have been thinking back over the years since your association was formed, early in 1920, to organize the efforts of this combined community in the development of the port and the area, in bold effort to hold and develop the overseas commerce which suddenly grew during and immediately following World War I. Our great $3 billion wartime ship-building effort was still not quite completed. Private enterprise was beginning to wake up to the possibilities of American-flag shipping. And, remembering the costly and near tragic consequences of our prewar blindness to the importance of participating with our own ships in the development of foreign commerce—remembering the absolute necessity for maintaining an effective posture of readiness on our sea frontiers—that same year saw the enactment of our first legislative program for a merchant fleet in the Merchant Marine Act of 1920. In 1920 Hampton Roads exported nearly 7½ million tons of goods, worth over $226 million, with imports of 331,000 tons worth well over $10 million. Business was good, and the population of about 200,000 was expanding.

The intervening years have seen many ups and downs—years of recessions, depressions, and prosperity—years of hot and cold wars. They have seen the high hopes of the early postwar years fade from the great expansion with the new ships of World War I, when we carried more than 50 percent of our total exports and imports, to 1935, when, despite efforts in Congress and in the industry to carry out our maritime policy, we found our merchant fleet 2d in tonnage, 5th in speed, and 8th in age, among the fleets of the world. In 1939, when war broke out again in Europe, we were only carrying 22 percent of our foreign trade.

By a miracle of coincidence, some of the errors of World War I were avoided as the result of the timely enactment and implementation of the Merchant Marine Act of 1936. This was followed by the tremendous construction program of modern merchant ships during the war, without which the struggle for democracy would have been lost to the Axis powers. After the war we tried to establish a definite and realistic policy for returning our shipping to privately operated peacetime commerce.

Over the years we have made some progress—but not enough. And the signs, again, point to the old pattern which must be avoided at all costs. During the first 6 months of 1946 the United States merchant fleet carried an average of 67.5 percent of our exports and imports. In 1949, we carried 45 percent, and today we are carrying less than 25 percent of our foreign trade.

The diligent and informed efforts of groups such as yours, which have survived the ups and downs of the dramatic—and sometimes violent—events following the First World War, are perhaps more vital right now than ever before. Today your port ranks third on the Atlantic coast, after New York and Baltimore. Exports from Hampton Roads have more than doubled, both in tonnage and value, since the foundation of your association. More impressively, your imports are 8 times the tonnage of 1920, with a value more than 13 times greater. You are the leading coal port in the United States, and commodities of all kinds move through Hampton Roads to and from all areas of

the world. You have modern facilities, excellent shipbuilding and repair yards, good labor relations, and industry of all kinds establishing or expanding plants in the area.

This great development of your port has coincided with the period when we, as a Nation, have adopted a national maritime policy—a policy which, sometimes strongly—sometimes feebly—we have sought to make effective in the interests of our economy and national security.

Yet, with business so good and with the firm bonds of friendship and alliance with the maritime nations of the North Atlantic Treaty Organization, is there a national and economic necessity for our Government to support an American merchant marine?

This Nation had so neglected its merchant marine prior to the outbreak of the First World War in Europe that our ships were carrying only nine percent of our export-import trade. In 1914, while we were still a neutral Nation, we found ourselves without ships for even our basic needs. Our foreign trade was paralyzed, and goods and materials were piling up on the docks.

During that period, much of the foreign-flag shipping upon which we had so heavily relied was withdrawn because of the outbreak of war in Europe. Thus, even before the heavy movement of munitions, ocean shipping rates went up 700 percent. By the time this country entered, these rates skyrocketed to 2,000 percent.

Our experience in World War II was a little better. At least the beginning of a modern American-flag merchant marine had been started under the impetus of the Merchant Marine Act of 1936. Despite the vastly greater demands upon shipping, at no time during that period did American shipping rates rise higher than 70 percent.

Think of where we—and probably the world—would be today if we had not come out of World War II with a strong merchant marine in operating condition, ready to serve in the rehabilitation of the war-torn and weakened countries of Europe and Asia—and thereby provide a bulwark against the insidious advances of communism.

Then we had the years of the Korean conflict, which was supposed to be a United Nations war. At that time, even though the fleets of friendly nations had been extensively restored through purchases of surplus vessels from the United States at bargain-basement prices, it was American ships that supplied better than 80 percent of all ocean transportation to Korea.

I hate to think of what would have happened to ocean shipping rates if there had not been an American fleet to hold the line.

In one sense, it seems incredible that the need for an American-flag merchant marine can still remain a subject for debate. Yet, even today, there are many Americans, including some in high quarters, who fail to realize that a reasonably powerful American merchant marine is more than an arm of our military defense. Of equal if not greater importance, the merchant marine is the protection which provides against a strong enemy on the economic front. It is our guarantee that American exports will reach their markets speedily and in competition with other producing countries of the world. And it is our insurance that we will receive the imports that are so necessary to maintain our economy.

Of 38 critical industrial metals and minerals vital to our industrial society, the United States is self-sufficient in only 9. We import by ship two-fifths of our copper, and nearly one-third of our lead and zinc—all classified as strategic minerals by the Munitions Board. We are almost entirely dependent upon foreign sources for tin, nickel, and platinum. And, of the 20 alloying elements necessary for steel production, the United States is deficient in about a dozen. These facts speak for themselves as to the vital necessity for an American merchant marine.

Less than 2 years ago, the Congress enacted Public Law 664, known as the Cargo Preference Act. I am sure you are all familiar with this legislation. It provides that at least 50 percent of all the United States cargoes given away or sold for foreign currencies must be transported overseas on privately owned United States-flag vessels, if such vessels are available at fair and reasonable rates. Prior to the enactment of the permanent 50–50 law, beginning with the Marshall plan, there was an annual fight each time a foreign-aid bill came up in Congress over the inclusion of the cargo preference clause. This happened no less than 11 times.

This policy has been the salvation of the American merchant marine during these postwar years. Foreign-aid programs have constituted the bulk of our export foreign commerce. These programs have been conducted on a government-to-government basis, and are totally lacking in the characteristics of ordinary commercial practices. Had it not been for this policy of assurance of 50 percent of these cargoes for United States-flag vessels, I am certain that much, if not all, of the freight would have been directed to the shipping of other maritime nations.

In 1955, when the Cargo Preference Act was less than a year old, charges appeared in the press to the effect that the administration's program for selling farm surpluses overseas was "running into a bottleneck because of a ship-American provision in the law." It was alleged that the Department of Agriculture was having trouble finding space on American vessels.

We, on the Merchant Marine Committee, were deeply concerned by these allegations and scheduled an immediate investigation.

After full hearings, the committee found no basis in fact for the charges. There was no evidence that shipments to foreign countries of surplus agricultural commodities were being delayed in any way by reason of the Cargo Preference Act. The plain truth is that the act could not have any such effect.

Despite the convincing and objective record of our investigation into the administration and operation of the Cargo Preference Act, an effort was made to nullify its effectiveness by an amendment to a foreign-aid bill reported to the House in May of last year. After spirited debate on the floor of the House, the amendment was defeated by an overwhelming majority, and the 50–50 principle again received a resounding vote of confidence.

But the attacks upon the law did not cease. They shifted to other flanks, but increased in intensity. Allegations were made during the latter part of last year by farm groups and others that the surplus disposal program under title I of the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480, 83d Cong.) was suffering by reason of the application to it of the 50–50 cargo preference law. It was said that foreign countries refused to enter into agreements subject to the 50-50 shipping provision; that the operation of the law results in American agriculture providing an indirect subsidy to American shipping, to the detriment of the disposal program; and that the existence of the 50-50 law establishes an undesirable precedent in world trade and offers encouragement to countries which are disposed to adopt similar discriminations in favor of their own national flag.

Again, the House Merchant Marine Committee felt obliged to examine the operation of the law in relation to the farm surplus disposal program.

In hearings held over a period of 3 weeks, during which some 38 witnesses appeared before the committee, we heard expressions of every possible point of view. We spent 2 full days receiving testimony from the administrator of Foreign Agricultural Services and other top officials of the Department of Agriculture, in order that we might overlook no fact bearing upon the opposition which the Department had expressed to the application of cargo preference to the surplus commodity program. The State Department likewise expressed objections to the law. This was, of course, no surprise and nothing new for the State Department. Since I have been in Congress they have opposed almost every bill designed to strengthen the American merchant marine. Opposition was also expressed by the International Cooperation Administration. In addition, we invited the testimony of agricultural groups who were known to have expressed objections to the 50-50 principle. We went still further. We took the unusual step of inviting one of the leading shipping men of Northern Europe. He came all the way from Norway and gave us his views. The American shipping industry was called upon to account for its stewardship in carrying out the 50-50 law and of assuring the success of the agricultural surplus disposal programs.

These two exhaustive and objective studies of the operation of the Cargo Preference Act have proved conclusively that it has not, does not, and cannot work any serious detriment to American agriculture. Now, let me say a few words of what it means to American shipping. The implications of it are devastatingly simple.

The Chairman of the Federal Maritime Board brought out some interesting but, in some respects, disturbing figures. During the years 1953–54, American-flag vessels carried only 23 percent of the dry cargo exports from the United States. In other words, this low percentage obtained even with the assistance provided by the 50–50 provision; the loss of those aid cargoes by the removal of 50–50 would reduce our carryings from 23 percent to 19.5 percent.

In the past 2 years the 9½ million tons of aid cargoes produced estimated freight revenues of $142½ million. The Board Chairman concluded that the financial return to the United States from the application of 50–50 far exceeded the small differential of $3 million charged to Department of Agriculture appropriations. Much of this freight revenue was returned to the Government in taxes. Another substantial part was deposited to statutory reserve funds to be used for the construction of new vessels to replace those which are now becoming obsolete. And, of course, bearing in mind the portion of those cargoes carried by American-flag tramps, that segment of our merchant marine was virtually kept in existence by earnings from foreign aid freights. Living in our greatest coal port, you here in Hampton Roads can appreciate the dangerous significance of the loss of those 70-odd Liberty ships that make up our tramp fleet.

I like to think our efforts to bring out the truth about 50–50 have not been in vain. It was reassuring and gratifying when the Senate voted overwhelmingly to strike a provision from the farm bill which would have seriously crippled the 50–50.

I realize I have devoted considerable time to the Cargo Preference Act and its meaning to the American economy and security. I have done so because I believe it is one phase of the problem where we, in the Congress, have been most effective.

If there were such a thing as a free international trade, I, for one, would favor the full, open and fair competition. Unhappily, we do not have today anything approaching free international trade. On the

contrary, we have our vast Government-sponsored foreign aid and rehabilitation programs, a program for the disposal of agricultural surpluses, at reduced prices with payment in foreign currency, and programs for the importation of strategic materials—all conducted outside the normal channels of trade. We are confronted with currency exchange problems in many countries. We are confronted with numerous instances of Government monopolies in foreign countries where nationalistic policy directs transportation on vessels of their own flag. In the face of these overwhelming obstacles, the survival of our merchant marine is heavily dependent upon continuing interest and support of our Government.

We, in Congress, are trying to do our share to develop and maintain the merchant marine which we need. But we cannot do it all.

In my many years with the Merchant Marine Committee, I have been concerned with the expense involved in the Government's support of our maritime policy, and yet each year we seem to be falling behind in progress toward the goals set forth in the Merchant Marine Act of 1936.

Today, more people with higher incomes are creating an expanding market for homes, durable goods, and for many items which were once considered luxuries or nonessentials. Along with all this demand for new goods has come new demands for travel, brought on by paid vacations and a reduction in the workweek. At present the population of the United States is increasing at the rate of almost 3 million persons per year. I have heard estimates that by 1965 it will be one-fifth larger than it was in 1953—while production will be one-half again greater—disposable income per person will be one-third larger—and the hours of work one-tenth less.

These trends are not something which developed this year, or this administration, or the previous one—they have been clearly present for years. Yet, today, this Nation, which prides itself on its greatness—its technical and inventive genius—and its productivity, is able to provide only a small fraction of the means for transporting its foreign commerce, upon which it depends more than any other nation in the world.

At present levels, our export foreign trade is almost three times the monthly average of 1.9 million tons exported in 1938. Our 1955 imports are double the 1.7 million tons imported monthly in 1938.

While overseas passenger traffic is expanding at an unprecedented rate, we have much less than one-third the passenger capacity that we had in 1939. In 1954, American-flag steamship lines, operating their passenger vessels at near capacity, carried only 18 percent of the tremendous passenger movement between the east coast of the United States and the tourist mecca of northern Europe. Today the percentage is undoubtedly even less, in view of new foreign ships which have entered the services.

I am keenly aware that nearby we have one of the greatest shipyards in the United States. So it is particularly appropriate that I refer briefly to a hope—yes, an intense desire—that the members of my committee have entertained for some time. You all know that the flagship and pride of the American merchant marine is the great superliner, *United States*. To watch that ship glide majestically up the North River in New York is a wonderful sight. It is as much a part of America as the Star Spangled Banner.

The trouble is we need another, a sistership, in order to provide a well-balanced passenger service to northern Europe under the American flag. With 1 ship it is like walking on 1 leg. So, it is our hope that before many months go by we will hear the familiar and heart-warming sound of those giant cranes and see the hustle and bustle of activity in the building of another great merchant ship—a new steamship *America*—with all the speed, comfort, and safety of the steamship *United States*. At this time I wish to pledge the full and wholehearted support of the Merchant Marine Committee to the fulfillment of that purpose. If legislation is, or becomes, necessary, I am sure I speak for my colleagues on the committee when I give public assurance of speedy, careful consideration to a feasible proposal.

In the extensive inquiries which the Merchant Marine Committee has made into all phases of our merchant marine, I have seen deficiencies which should be corrected. For example, there are problems in the labor-management field. But I do see hope for improvement in those relationships. There are serious problems in other areas too, that we are struggling to remedy.

I do not mean to imply that all is bad or hopeless. Nevertheless, shortcomings stand out like a sore thumb in every phase of our merchant marine. Part of the reason for this lies in the fact that so much Government money is involved. By the same token, we must all be vigilant and strenuous in our efforts to preserve the merchant marine of this country against attack from both within and without. This means, first of all, cleaning out all the dirty corners, and then, keeping the house in good order at all times.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Barkley, Anderson, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Bible, Neuberger, Laird, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

Appendix

Protection of Jewish Americans in Foreign Countries

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, April 26, 1956

Mr. HUMPHREY. Mr. President, on the floor of the Senate on February 17, 1956, and in the public hearings accorded to Secretary of State Dulles and Under Secretary of State Hoover before the Senate Foreign Relations Committee on February 24, 1956, I protested against the apparent acquiescence of the State Department in the discriminatory treatment by certain countries, especially Saudi Arabia, of American citizens who happen to be of Jewish descent or faith. It has come to my attention that this country faced a similar issue in 1911 in connection with the abrogation of a commercial treaty with Czarist Russia because of its discriminatory treatment of American citizens who were also Jews.

In 1911 it also took a public outcry to correct the passive attitude of the State Department of that day. The most eloquent protest then was delivered by a future President, Woodrow Wilson, in an address at Carnegie Hall in New York on December 6, 1911. President William H. Taft and former President Theodore Roosevelt agreed with him.

Woodrow Wilson's protest is as pertinent now as it was the day it was delivered. I ask unanimous consent that his address be reprinted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS AT CARNEGIE HALL, NEW YORK, DECEMBER 6, 1911

(From the public papers of Woodrow Wilson, vol. I, College and State—Educational, literary, and political papers (1875–1913), by Woodrow Wilson)

Mr. Chairman and gentlemen, the object of this meeting is not agitation, it is the statement of a plain case in such terms as may serve to arrest the attention of the Nation with regard to a matter which is of no mere local importance, which does not merely affect the rights and essential privileges of our Jewish fellow citizens as freemen and Americans, but which touches the dignity of our Government and the maintenance of those rights of manhood which that Government was set up to vindicate.

The facts are these: For some 80 years a treaty has existed between this country and Russia in which it is explicitly covenanted and agreed that the inhabitants of the two nations shall have the liberty of entering any part of the territory of either that is open to foreign commerce; that they shall be at liberty to sojourn and reside in all parts whatsoever of the territory thus opened to commerce in order to attend to their affairs; and that they shall enjoy the same security and protection as inhabitants of the country in which they are sojourning, on condition, of course, that they submit to the laws and ordinances there prevailing, and particularly to the regulations there in force concerning commerce. For some 40 years the obligations of this treaty have been disregarded by Russia in respect to our Jewish fellow citizens. Our Government has protested, but has never gone beyond protest. After 40 years of more correspondence the Russian Government naturally does not expect the matter to be carried beyond protest to action, and so continues to act as it pleases in this matter, in the confidence that our Government does not seriously mean to include our Jewish fellow citizens among those upon whose rights it will insist.

It is not necessary to conjecture the reasons. The treaty thus disregarded by Russia is a treaty of commerce and navigation. Its main object is trade, the sort of economic intercourse between the two nations that will promote the material interests of both. Important commercial and industrial relations have been established under it. Large American undertakings, we are informed, would be put in serious peril were those relations broken off. We must concede something, even at the expense of a certain number of our fellow citizens, in order not to risk a loss greater than the object which would seem to justify.

I for one do not fear any loss. The economic relations of two great nations are not based upon sentiment; they are based upon interest. It is safe to say that in this instance they are not based upon mutual respect, for Russia cannot respect us when she sees us for 40 years together preferring our interests to our rights. Whatever our feeling may be with regard to Russia, whatever our respect for her statesmen or our sympathy with the great future in store for her people, she would certainly be justified in acting upon the expectation that we would follow our calculations of expediency rather than our convictions of right and justice. Only once or twice, it would seem, has she ever thought our Government in earnest. Should she ever deem it in earnest, respect would take the place of covert indifference and the treaty would be lived up to. If it was ever advantageous to her, it is doubly and trebly advantageous now, and her advantage would be her guide, as has been ours, in the maintenance of a treaty of trade and navigation.

If the Russian Government has felt through all these years that it could ignore the protest of American Ministers and Secretaries of State, it has been because the American Government spoke for special interests or from some special point of view and not for the American people. It is the fact that the attention of the American people has now been drawn to this matter that is altering the whole aspect of it.

We are a practical people. Like the rest of the world we establish our trade relations upon grounds of interest, not sentiment. The feeling of the American people toward the people of Russia has always been one of deep sympathy, and I believe of ready comprehension, and we have dealt with their Government in frankness and honor, wherever it appears that the interests of both nations could be served. We have not held off from cordial intercourse or withheld our respect because her political policy was so sharply contrasted with ours. Our desire is to be her friend and to make our relations with her closer and closer.

But there lies a principle back of our life. America is not a mere body of traders; it is a body of free men. Our greatness is built upon our freedom—is moral, not material. We have a great ardor for gain; but we have a deep passion for the rights of men. Principles lie back of our action. America would be inconceivable without them. These principles are not incompatible with great material prosperity. On the contrary, unless we are deeply mistaken, they are indispensable to it. We are not willing to have prosperity, however, if our fellow-citizens must suffer contempt for it, or lose the rights that belong to every American in order that we may enjoy it. The price is too great.

Here is a great body of our Jewish fellow-citizens, from whom have sprung men of genius in every walk of our varied life, men who have become part of the very stuff of America, who have conceived its ideals with singular clearness and led its enterprise with spirit and sagacity. They are playing a particularly conspicuous part in building up the very prosperity of which our Government has so great a stake in its dealings with the Russian Government with regard to the rights of men. They are not Jews in America; they are American citizens. In this great matter with which we deal tonight, we speak for them as for representatives and champions of principles which underlie the very structure of our Government. They have suddenly become representatives of us all. By our action for them shall be tested our sincerity, our genuineness, the reality of principle among us.

I am glad this question has been thus brought into the open. There is here a greater stake than any other upon which we could set our hearts. Here is the final test of our ability to square our politics with our principles. We may now enjoy the exhilaration of matching our professions with handsome performance. We are not here to express our sympathy with our Jewish fellow-citizens, but to make evident our sense of identity with them. This is not their cause; it is America's. It is the cause of all who love justice and do right.

The means by which the wrongs we complain of may be set right are plain. There is no hostility in what we do toward the Russian Government. No man who takes counsel of principle will have in his thought anything but purposes of peace. There need be for us in this great matter no touch of anger. But the conquests of peace are based upon mutual respect. The plain fact of the matter is that for some 40 years we have observed the obligations of our treaty with Russia and she has not. That can go on no longer. So soon as Russia fully understands that it can go on no longer, that we must, with whatever regret, break off the intercourse between our people and our merchants, unless the agreeemnts upon which it is based can be observed in letter and in spirit, the air will clear. There is every reason why our intercourse should be main-

tained and extended, but it cannot be upon such terms as at present. If the explicit provisions of our present agreement cannot be maintained, we must reconsider the matter in the light of the altered circumstances and see upon what terms, if any, of mutual honor our intercourse may be reestablished. We have advantages to offer her merchants, her mine owners, her manufacturers, which her government will not despise. We are not suppliants. We come with gifts in our hands. Her statesmen see as clearly as ours. An intolerable situation will be remedied just as soon as Russia is convinced that for us it is indeed intolerable.

Departments of State and Justice, the Judiciary, and Related Agencies Appropriation Bill, Fiscal Year 1957

SPEECH
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10721) making appropriations for the Departments of State and Justice, the judiciary, and related agencies for the fiscal year ending June 30, 1957, and for other purposes.

Mr. CANNON. Mr. Chairman, in this connection I would like to endorse the low-priced books program of the United States Information Agency. This is one activity where the Information Agency will actually compete with the Soviets. What has been a complete vacuum in the availability of American books at prices people can afford overseas will be filled under the present program. The Agency requested funds for mass editions of some 500 separate titles, which will put into commercial circulation 22 million books, worldwide. Certainly with the threat that confronts us on all sides, this number would hardly begin to scratch the surface. I am assuming this is only a beginning and that an expanded program will be developed. I urge that we make certain that this beginning be pushed to the extent that capabilities will allow and that the Agency be encouraged to expand this low-priced books program to its full potentialities.

According to testimony by United States Information Agency officials before the House Appropriations Subcommittee, Soviet Russia alone turns out more than 50,000 titles a year and more than a billion books in all. This means that 200 million books are available from the Soviet Union alone for free or low-cost distribution worldwide. To meet this, we are asked to support a program, which will yield 22 million books. The figures speak for themselves. Even with this low-priced books program, the Soviet Union will still be distributing almost 10 times as many books as we do.

In my opinion, this threat must be met, and, further, we must reach the point quickly where the Soviet saturation of worldwide markets is neutralized and overcome by our program of making our best books available at 10 cents per copy to foreign readers.

It is interesting to note the warm endorsement of this activity by the Washington Post and Times Herald. I include excerpts from the editorial in this morning's edition:

STRENGTHENING USIA

The House of Representatives is scheduled to take up today the budget request for the United States Information Agency. The Appropriations Committee was neither ungenerous nor undiscriminating in its treatment of the Agency.

* * * * *

We hope that the House will give USIA enough money to insure an expansion of its tremendously valuable program of distributing inexpensive editions of significant books. The House needs to think of the whole USIA program as an important element in the contest going on today for men's minds.

Departments of State and Justice, the Judiciary, and Related Agencies Appropriation Bill, Fiscal Year 1957

SPEECH
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10721) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1957, and for other purposes.

Mr. GRAY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I, too, was going to offer this very important amendment, but out of respect for my senior colleague the gentleman from Illinois [Mr. MACK] I decided to support his amendment.

Mr. Chairman, the amendment just offered would allow the Department of Justice an appropriation of $9½ million to build a much-needed maximum security penitentiary somewhere in the United States.

Under the 5-minute rule, I, of course, will not have time to give all of the many reasons why this amendment should be adopted today; however, the need is imperative. The request comes from President Eisenhower, the Department of Justice, and the Bureau of Prisons, and has been approved by the Bureau of the Budget in their request to the Appropriations Committee. A maximum security penitentiary is needed to relieve the dangerous overcrowding of penitentiaries that house prisoners convicted of serious offenses. Maximum security penitentiaries are now located at Alcatraz, Calif., Atlanta, Ga., Leavenworth, Kans., and the main institution at McNeil Island, in Washington State. The total capacity of these institutions is 5,175. As of April 12 of this year, they were housing 6,304 prisoners, an overcrowding of 1,129 prisoners convicted of serious offenses and who cannot safety be housed in other than maximum security institutions because of their bad records. This proposed maximum security institution would help relieve this situation. In addition to the present need, the Federal courts are imposing longer sentences and increasing numbers of offenders are being committed for more serious crimes. This excess population of over 1,000 prisoners in the maximum security penitentiaries cannot be taken care of at the medium security penitentiaries.

It has been admitted by the Bureau of Prisons that some of their medium security penitentiaries throughout the United States are not at capacity. However, these institutions are definitely not suitable for housing the hardened criminal and, above all, subject him to living with some person who has been convicted of a less serious crime. The hardened criminal definitely must be separated. I am sure no one would propose that we subject some young American boy who has been convicted of stealing an automobile to living in a cell with some cold-blooded murderer such as the one who shot and killed the innocent service-station attendant last week here in Washington.

Overcrowding institutions housing the more serious type of prisoners is one of the major factors for riots and other disturbances. It is folly to wait until the need for this type institution is brought home to us by some major disturbance such as has happened in a number of institutions.

If this amendment is adopted and the money is allowed, it will take 3 years to build this proposed prison. With the already overcrowded facilities and the increase in the number of hardened criminals, we are late in building this institution as the matter now stands.

Mr. Chairman, there has not been a maximum Federal penitentiary built since 1902. Think of that—54 years with the same crowded and outmoded facilities.

The Bureau of Prisons had requested the Appropriations Committee for $17 million which would have allowed the maximum security penitentiary, plus $7½ million for a close custody reformatory for youthful offenders. This institution is also very badly needed; however, as a compromise we have only offered an amendment for the maximum security penitentiary because I believe of the two it is the more important.

I want to be perfectly frank and honest with the committee in saying that if this appropriation is allowed, I propose to try to have the penitentiary built somewhere in my congressional district of southern Illinois, which is near the center of population. However, I want further to be frank with the committee and say that a committee will be appointed to select the best location that can be found. I only feel that we should be in the running when a selection is ready to be made.

Mr. PRICE. Mr. Chairman, will the gentleman yield?

Mr. GRAY. I yield to my colleague from Illinois.

Mr. PRICE. Let me say that I am in support of the amendment. I think the gentleman would have a logical reason to suggest its being built in southern

Illinois because I understand that one of the requirements is that it will be on Government-owned land.

Mr. GRAY. That is exactly right.

Mr. PRICE. And there is an ample quantity of Government-owned land available in southern Illinois.

Mr. GRAY. That is a good point and I appreciate the gentleman's contribution. We have 180,000 acres of Government-owned land in my district. In addition, we have scores of cities that are willing to put up funds to buy a site and donate it free of charge to the Government, on which to build this proposed institution.

I want to say this very, very sincerely, in closing. In the interest of security and to insure adequate facilities to house the hardened criminals and in order to prevent the mixing of these hardened criminals with those who are convicted of less serious offenses and in an effort to assist the good, deserving people of southern Illinois or some other locality, I beg of you to support the Department of Justice and vote in the affirmative on this amendment.

Let me say further in closing that we have in southern Illinois 51,000 people receiving Government surplus food. We are spending a million dollars a month for public-aid assistance. This is only a $9½ million institution. It would employ approximately 500 persons and we could pay for the institution by a saving of expenditures now being paid to relief recipients. I beg of you to support the amendment. Thank you.

Address Delivered by Hon. John Marshall Butler, of Maryland, at Goucher College

---

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, April 26, 1956

Mr. BUTLER. Mr. President, this is the season of mock political conventions in many of our schools, colleges, and universities, and such enthusiasm on the part of our young people is most refreshing, and portends good for the future.

Last Saturday, April 21, 1956, it was my great pleasure to participate in a mock convention at Goucher College, in Towson, Md. Goucher College is one of our State's leading institutions of learning, and we of Maryland are proud of its many graduates who have distinguished themselves in the arts and sciences. The students of Goucher College are indeed alert to the problems of today and tomorrow.

Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD a speech which I delivered at this convention.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, honored guests, members of the convention, ladies and gentlemen, 1956 will be recorded in history as another year of reawakening and resurgence—a year of purpose and action. This climate is not accidental; it is the product of vision, leadership, and determination. It typifies the present strength, unity, and vitality of the American people in support of President Eisenhower and the Republican administration. It offers the opportunity of even greater accomplishments.

Yes, my friends, we can face the future with optimism—with even greater determination—and with even greater dedication to those principles of integrity and of economy and efficiency in government on which our Nation was founded.

The lessons of the past have been fruitful. Unity of purpose and action has developed a cohesive spirit of Republicanism which has been successfully demonstrated in the administration of the Federal, State, and local governments.

I have already stated that this favorable climate did not occur by chance. On the contrary, it has been precisely calculated. It marks a crescendo of energy and wisdom, whose dictating force has been the halting and reversal of dangerous socialistic tendencies at all levels of government. The full volume of this crescendo is unlimited and the promise of the future for our Nation is bright. The national posture of the opposition party has been confounded by a babble of political counsels, resulting in many cleavages. With our critics thus operating in a vacuum of confusion and discord, the solidarity of purpose within the Republican Party assumes greater significance.

You might ask—and the people of America might rightfully demand—"What are the accomplishments of the national administration, under President Eisenhower's leadership, which justify a continuation of Republican management in government?" The record of the past 4 years is truly filled with undeniable successes of lasting impact, and a few of these historic milestones are deserving of special emphasis.

The Eisenhower administration is to be commended for its constructive achievements. It has dispatched the public business with efficiency. It has restored the people's confidence in the integrity of their Government. No longer are we compelled to tolerate the miserable displays of arrogance, scandalous behavior, waste, and inefficiency which characterized 20 years of the New Deal and the Fair Deal.

The sacrifice of American lives in Korea has been ended. Russian imperialism and Communist aggression have been confronted with our firm determination to safeguard freedom and attain genuine peace. The devious Communist conspiracy, as inspired and carried out by the Kremlin, has been exposed in its true, ugly light. Without any weak-kneed surrender of basic principles, the Eihenhower administration has met this threat to freedom and liberty with a determination of lasting vigor. We shall not, and must not, lose sight of our cherished heritage and our pledge to freedom-loving people everywhere.

Today, able men and women are striving to undo the damage created by the incompetency of the unrealistic foreign policy of the New Deal and the Fair Deal.

Our national-defense program has been reorganized and strengthened by policies capable of providing long-range security at substantial savings and without disruption of the national economy.

Unification of the armed services has been effectively advanced through efficient management and careful coordination.

We have taken decisive action to safeguard the Nation from enemies within its borders and to remove Communist infiltration and subversion from all phases of our society. This serious threat has been illuminated to the extent that there is now wide public awareness of the potential menace to our traditional American way of life.

The trend toward destructive socialistic tendencies in Government has been arrested by the encouragement of private competitive enterprise, thrift, and the self-reliance of our people. Labor and private enterprise have been urged to solve their own problems without Government interference.

The States have been encouraged to meet their proper responsibilities. Their inherent rights to develop submerged lands and other resources within their boundaries have been restored, and we have rededicated ourselves to the concept of States rights.

The fundamental belief that Government should do only those things which the people cannot best do for themselves has been restored to its rightful ascendency in our way of life.

The difficult transition from war to peace has been successfully bridged without disrupting the Nation's economy. National controls of prices, wages, and rents have been ended, freeing American enterprise from undue Government interference. The nation's economy has been stabilized and the value of the dollar strengthened, ending the cheating of our people by inflation and avoiding the distress of deflation, while employment, production, wages, and earnings have remained high. The solvency of America is one of our greatest weapons in combating those forces which are bent on destroying our free way of life.

Under this prudent administration, taxes have been cut, thereby reducing income-tax payments, excise taxes on goods consumers buy, and providing substantial benefits in other deductions and allowances for individuals and enterprises.

All Americans look to the day when their individual and collective tax burdens will be reduced. For the first time in many years, the Eisenhower administration made possible a tax cut of some seven billion dollars.

For the first time in almost 80 years, our internal-revenue laws have been broadly revised. The continued economic growth of our country has thus been stimulated.

By way of contrast, let us look at the record of the Democratic Party. Since 1913 there have been 15 income-tax increases. All but one of these were voted by a Democratic Congress.

On the budgetary side, in the 1932–52 period, our Government lived within its income on only three occasions. Two of these three times, the budget was balanced only as a result of action by the Republican 80th Congress.

The Republican administration has acted courageously to end the shameful waste of farm surpluses, to reduce the high cost of subsidies, and to provide farmers with a long-range program for an independent, self-reliant agriculture, with Government providing a shield against destructive forces beyond farmer control.

Political courage, the likes of which have seldom been witnessed in our history, best describes President Eisenhower's action of last week in vetoing a hodge-podge, unworkable farm bill.

It has continued and enlarged the program to meet human needs, to strengthen civil rights, to aid our veterans to become established in civilian life and to provide adequate care for the disabled, to expand social security, and to assist the aged, the blind, and dependent widows and children.

In these and all other respects, the Eisenhower administration has fostered the forward progress of a free nation under a government without favoritism, without corruption, without waste or extravagance, but

efficient, economical, trustworthy, and fair to all.

The essential task of removing New Dealers, Fair Dealers, and their ilk, from policymaking and confidential governmental positions, has progressed steadily. I prefer to describe this group as "Cryptosocialists."

They seek to subvert the American system of limited government, free enterprise and democracy and to replace it with a system hostile and alien to our traditions as a nation. In striking at this cancer, which is gnawing at the very vitals of our government, we must, and shall, continue to rid the Federal payroll of those "crypto-socialists" and other political hacks. In spite of efforts by the previous administration to preserve these purveyors of destruction and scandal, their replacement by competent men and women has accelerated and continues rapidly.

The evidence of accomplishment by the Eisenhower administration cannot be disputed. The record is clear and positive. Even our severest critics must concede this. The Nation and the world can give grateful thanks to President Eisenhower for his forceful leadership. If the accomplishments of the Republican Party are to continue in the service of the American people, President Eisenhower needs a stronger Congress through the election of Republicans this fall.

Why a Republican Congress?—you might ask. In the political sense, the legislative and executive branches of our Government must respond to the voice of the people. I have already recited some of the main accomplishments of the executive branch under the leadership of President Eisenhower and the stewardship of the Republican Party. But, these attainments have not been realized without a considerable amount of legislative frustration activated by the party in opposition. It has long been true that for effective and continued progress, the legislative and executive branches of our Government must function like two gears in a finely balanced, expensive timepiece. Much can be said on this point.

It has been my very great privilege to represent the people of Maryland in the United States Senate for nearly 6 years. Thus I have been a part of 3 Congresses—the 82d, the 83d, and now the 84th. The 82d Democratic-controlled Congress had such a wretched record that the voters, in their indignation, cast the Democrats out.

Much different indeed were the legislative achievements of the 83d GOP Congress, the record of which will long be regarded as one of the finest in history. Unfortunately, and to our sharp regret, a good job in acquainting the people with those achievements was not done. Candidly, we lost by default.

Strange as it may seem, many of these Democratic Senators and Representatives campaigned for office on a promise to support President Eisenhower. Luminaries in the party of Andrew Jackson mesmerized the people into believing that they would give the President more cooperation than he received from the Republicans.

The results of that duplicity are self-evident in all quarters. The 84th Congress has truly become the Congress of obstruction. The Eisenhower legislative program has been roadblocked. It is a legislative program designed to build upon the successes already forged with vision, leadership, and determination since 1952. Yet, in the United States Senate, at this session, only four major bills have been completed. They are the Upper Colorado River project, the natural gas bill, extension of corporation and excise taxes, and the farm bill. Two have become law. Two were vetoed. The record of the House of Representatives is equally unimpressive. A deliberate political conspiracy seems to exist to deny the American people the benefits of President Eisenhower's great leadership. And quite obviously his farsighted and constructive program for the good of the Nation will not be achieved until the legislative branch is again controlled by the Republicans.

I predict that the American people will remove this roadblock to national progress by overwhelmingly reelecting the President in November, and further by giving him a Republican Senate and House of Representatives. The American people will no longer tolerate a Congress that wastes its time and the taxpayers' money on partisan political speeches. They want deeds not words. They want action not excuses. But above all, they want a Congress whose Members will subordinate personal political ambitions to the common good of all of the people of the United States of America.

Now, I am not going to tell you that we have reached that long-sought utopian state—or that all of the ills of our Nation and the world have been solved. Indeed not. Peace, prosperity, and progress are well on the way. But there is still much to be done. It is going to be a long, difficult, and trying journey. But as an ancient sage once remarked, "The longest journey begins with a single step." It is my firm conviction that we have taken the first step.

With your help, and God's blessing, we can face the future with continued optimism—with even greater determination in providing honest government, better government, and more economical government to the people of our Nation.

Thank you very much.

Bill of Rights for National Fitness

EXTENSION OF REMARKS

OF

HON. JAMES H. DUFF

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 26, 1956

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address delivered by Dr. Joseph B. Wolffe, president, American College of Sports Medicine, at the closing session, third annual meeting of the college, Sunday, March 25, 1956. Dr. Wolffe's program calls for a bill of rights for national fitness.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY DR. JOSEPH B. WOLFFE, PRESIDENT, AMERICAN COLLEGE OF SPORTS MEDICINE, AT THE CLOSING SESSION, THIRD ANNUAL MEETING OF THE COLLEGE, MARCH 25, 1956

The wide gap which exists between our progress in medicine and the status of fitness in our country calls for some bold, new planning, especially with reference to the 37 million Americans of tomorrow who fill our schools. What we need is a "bill of rights for national fitness," backed by Government resources and by a pooling of America's creative brainpower in medicine, education, and related sciences. And since true fitness is total fitness, our approach to the problem must be holistic, not superspecialized.

Total fitness is the ability to do one's chosen work in life effectively, happily, without undue strain or fatigue, and to be capable of meeting normal, everyday stresses, even unexpected stresses, without losing mental, emotional, or physical balance. National fitness means building a nation whose citizens are as physically sound as they are brainy, as socially useful as they are technologically advanced, as happy as they are strong.

A bill of rights for national fitness should assure the following 12 objectives:

1. Every child's schoolday during the vital skill-learning and habit-forming years of 5 to 17 should include at least 1 full hour of supervised physical education. Today, the average time for this educational activity is between 80 and 90 minutes out of a whole school week. Less than 50 percent of high school students take such courses even in schools where they are given. School curriculums should be reevaluated to provide better balance between intellectual and physical activity.

2. We need more emphasis on play, and less on display. Fewer than 5 percent of our elementary schools have indoor gymnasiums, most of which are large enough for basketball only. Many stand idle, with sports equipment unused for hours, except when school teams are using them. Members of the cheering section need education for fitness even more than members of the varsities, and competitive sports are desirable only if youngsters are taught the joy of competing to improve and not merely to prove.

3. The quality of the physical education profession is high, but this group has been too long the stepchild of the educational sciences. There are too few male physical education teachers in the elementary schools; the shortage of female instructors in high schools is even more marked. Many more could be attracted to the profession if teacher training institutions were upgraded; salary schedules were raised, and more training opportunities were provided (as is being done for science teachers).

4. Out-of-school activity is vital, for physical, social and emotional fitness. Yet, out of 17,000 communities in the United States, only 1,200 have full-time recreation leadership. In 1955, there were 3,000 jobs to be filled—and only 600 recreation graduates. More training opportunities are imperative.

5. We can and must reclaim the physically under-privileged child for as full and as productive a life as his peers. For youngsters who are subpar or who have physical defects, or who stay out of activity for psychological reasons, the scientific and educational professions must cooperate in developing adapted physical education programs, guiding and reeducating them into normal activity patterns.

6. On the medical level, every child should receive, either from his family physician or from a clinic, a complete checkup annually, before entering or returning to school. We are compelled by law in many States to obtain inspection and approval for the fitness of our automobiles. Is the fitness of our children less important?

The statistics of preventable health defects among our school-age population are a national disgrace. It is estimated that 9 million children have defective and uncorrected vision; about one-third of a million children have hearing defects; more than a million are estimated to have orthopedic defects; rheumatic and other forms of heart disease affect more than one-half million; 75 percent of American children need dental care. Our school medical services, cooperating with family physicians, need to be made adequate to meet a large part of the challenge of these statistics.

7. More than 40 States have statutes on the books calling for minimum physical education programs in schools. In most instances, these regulations are not enforced, mainly because of shortages in facilities, equipment, and personnel. State aid by Federal welfare sources is mandatory or our concern for fitness is mere lip service.

8. Total fitness of the adult population is an integral part of the picture. Community centers, school gyms and playgrounds after hours, backyard activities involving whole families, along with neighbors, should be made available, under trained recreation leadership, to encourage the social and emotional, as well as the physical benefits of

fitness-building activity. This also is the best prevention medicine known against the diseases which strike in middle life.

9. Cooperative research is vitally needed, with scientists in the various branches of fitness pooling brains and experience to provide authoritative answers to many unanswered questions. We need to know what kind, and how much activity a given individual may indulge in, according to his capacity. We need multiphasic tests, not merely isolated tests of specific parts of the body, to determine overall fitness. We must know enough, authoritatively, to be able to allay fears, and to encourage fitness reeducation at all age levels for normal and so-called abnormal individuals. And much study is needed to determine the immediate and long-range effects of strenuous physical activity on the growing as well as the mature human.

10. A reasonable portion of the funds recently authorized for Government health, and particularly heart research, should be earmarked for programs to enhance the fitness of our people before disease strikes. A fraction of what we give to strengthen backward countries overseas (a highly commendable program) would fill the gap in our own fitness needs, in and out of our schools.

11. We need an effective fusion of creative brainpower to devise means of making the Nation truly preventive-medicine minded. We need, in short, to launch a program of mass education, using all media at our command, to make fitness fashionable.

12. President Eisenhower is respectfully urged to appoint a Special National Commission on Fitness, composed of leading medical, physical education and other scientific and welfare authorities on Federal and State levels, to put the facts of the Nation's fitness together, to hammer out a practical program to correct the correctable, and to prevent the preventable, and to ask Congress to authorize the funds to do the job. In the long run, this investment will save the country untold treasure in human, as well as material resources.

All Aboard for the Atomic Age

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, April 26, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "All Aboard for the Atomic Age," which I wrote for the April 1956 issue of Steelways magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALL ABOARD FOR THE ATOMIC AGE?—A PROPOSED ATOMIC LOCOMOTIVE MAY FORESHADOW A NEW ERA IN RAILROADING

(By JOHN MARSHALL BUTLER, United States Senator from Maryland, participant in last year's Atoms-for-Peace Conference and sponsor of proposed legislation to build an atomic locomotive. Senator BUTLER is especially qualified to write this article, an exclusive for Steelways)

The age of the atom has only begun and no one knows what exciting developments may yet unfold from the atomic research now in progress or already completed. But from the vantage point of the United States Senate, and as a member of the delegation to last year's Atoms-for-Peace Conference in Geneva, one fundamental hypothesis has been reaffirmed in my mind: that the understanding of the atom brings great promise of good. That, having faith in the future of man and of America, its potential for good far outweighs its potency for destruction

Nuclear reactors are already in operation here and abroad generating electricity for peaceful uses, and the powerplant aboard the submarine *Nautilus*, while placed in a warship, points the way toward the use of atomic power in our national transportation system.

To aid further in speeding the development of "atoms for peace" a bill of my sponsorship has been introduced in the Congress this year calling for immediate construction of an atomic powered locomotive. Of this proposal, Senator CLINTON P. ANDERSON, chairman of the Joint Committee on Atomic Energy, has said: "A railway locomotive, where weight is not such a problem, seems to offer more and more promise as our reactor technology advances."

Such a locomotive can serve two purposes. First, it could furnish the motive force to pull an "atoms for peace" train to every corner of America. Such a train would carry varied exhibits showing peacetime applications of atomic energy and would vividly emphasize the benefits which atomic energy is bringing, and will continue to bring to all Americans.

Second, there is a coldly practical purpose in building such a locomotive. It would indeed be a pioneering step. The knowledge and experience so gained would spur the economic development of commercial atomic energy by private capital and assure its growth and utilization in keeping with the traditional American free enterprise system.

Since the construction of the atomic locomotive has been proposed, two questions are often asked: Is it possible and practical to build such a locomotive now * * * and can it be designed so it will not expel dangerous radiation or disintegrate like an atomic bomb?

The answer to both is an unqualified "Yes."

The explosion in an atomic bomb is an uncontrolled reaction: the reaction which produces nondestructive atomic energy, as in an atomic locomotive, is a controlled one. More than 50 safety devices can be employed to maintain this control, and special rods activated by the force of gravity would automatically neutralize the locomotive's reactor in event of sudden acceleration or deceleration. Furthermore, it is envisioned that the reactor will be sheathed in a sealed housing of four-foot-thick laminated steel to absorb radioactive rays.

As for its feasibility, engineering studies have already been completed which show us how to go about building an atomic locomotive today. Work is already progressing on the actual manufacture of many of the component parts which would be needed. Engineers and other experts from locomotive manufacturing companies, steel companies and operating railroads are working together on specific design problems. The artist's drawing of an atomic locomotive on these pages is taken directly from practical engineering diagrams: it is not a futuristic dream.

Even now, we know enough about the problem to say that an atomic locomotive would be no heavier or longer than the present-day giant diesels, and therefore suitable for use on any major railroad. And, by its very nature, it would possess certain advantages. Like the highly efficient electric locomotive, the atomic counterpart would be capable of tremendous overloads of energy for short periods. And this means a real economic reward on roads where quick starts and stops with heavy loads spell the difference between profit and loss.

At the same time, an atomic locomotive should prove itself equally efficient operating at high speed over long distances since refueling will be necessary only every few months. Such refueling would be accomplished by skilled technicians at a central point and thus atomic rail power may ultimately eliminate today's complex of fueling stations, just as the diesel locomotive made obsolete the extensive watering stations required in the days of steam power.

If such a locomotive is practical today, what, then, is the future of atomic power on our Nation's railroads? Certainly none of us expects to see atomic energy revolutionizing rail operations overnight. More accurately it will be the continued evolution of man's ingenuity.

The price of atomic fuel is still high and the cost of the initial unit, not even including developmental costs, will exceed $1 million. Yet experts predict that the railroads can have their first atomic locomotives in operation by 1960, and by 1970 they should be justifying their existence, economically, in long-haul, high-speed service. Not long thereafter they should be able to compete with conventional locomotives under all heavy-duty operating conditions.

The atomic locomotive is only a glimpse into one facet of the future being shaped by the atomic age; one glimmer of the effects it will have on our economy. Certainly the ever-increasing peaceful uses of this energy source will attract tremendous private capital investment, thus expanding the entire economy. In industry, in agriculture, in medicine, in countless ways, the energy of the atom will serve mankind.

The application of atomic energy to rail transportation may, in a sense, be symbolic, for this new age can usher in an era of solidly expanding prosperity which will rival or surpass the great period of expansion which the railroads brought to America in the last century.

Relations With the Soviet Union and the Communist World

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 26, 1956

Mr. HUMPHREY. Mr. President, a stimulating article by Chalmers M. Roberts, entitled "We Can't Seem To Square Up to New Red Stance," appeared in the Washington Post and Times Herald on April 15, 1956. I ask unanimous consent to have this article inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE CAN'T SEEM TO SQUARE UP TO NEW RED STANCE

(By Chalmers M. Roberts)

The Eisenhower administration is in the throes of a major internal argument over what the United States posture should be for the years ahead in its relations with the Soviet Union and the Communist world.

Today there is no all-embracing posture nor are there even any firm guidelines for such a posture. American policy is ambivalent. There is confusion in Congress and in the Nation. America's allies and its friends in the so-called neutralist nations abroad complain that there is no American leadership of the free world in the changed con-

text of the continuing struggle between freedom and tyranny.

The contrast becomes sharper every day because the Soviet Union's collective leadership has taken a new Communist stance and is acting upon it with determination in every corner of the globe.

In Washington, however, there is no clear policy on East-West trade, and the administration and Congress have tangled violently on that subject. There is no policy on exchange visitors with the Russians, and Justice and State are often at odds. There is no policy on foreign economic aid, and much of Congress is hostile to its continuance.

There are, of course, policies for all of these problems, but they are hangovers from the cold war years, inescapably modified by the necessity of facing the new Soviet stance. The basic fact is that there is no new American posture—again to use a word which the President himself so often employs.

Today, National Security Council policy papers are often so generalized as to be meaningless because the President's subordinates cannot agree and generally have not put the issue squarely to him. One competent administration critic sees the United States today as a great sleeping volcano which usually sits quiet, important because of its sheer bulk, but which now and then rumbles and looses an eruption which affects the world around it.

At this moment, Mr. Eisenhower is in Augusta, Ga., going over the drafts of a speech he will make here next Saturday. A check of some key spots in the administration indicates that, as of now, at least, the speech will not state a new posture or new guidelines. But it may give some clues to the current process of policy evolution.

Just what is the problem? About the best definition is one offered by a State Department official who has been struggling with some phases of it:

"What do you do when Khrushchev sticks out his stubby right hand, puts on that big smile and says, 'Let's co-exist and let's compete now that we've agreed fighting is out'—but you know that in Khrushchev's other hand, held behind his back, are the strings to an evergrowing and plenty tough Soviet military machine?"

Two things may be said at once about what to do with the Khrushchev proffer:

A democracy such as the United States cannot, and should not, attempt to put down indefinite terms an all-embracing, detailed policy. Mr. Eisenhower has said that many problems have to be played by ear. Gen Walter Bedell Smith, former Under Secretary of State, once set 4 years (from the beginning of a new administration) as the practical limit on long-term foreign policy planning.

There can be no free world feeling of American leadership in the East-West context until at least new American guidelines, well accepted by Congress and the Nation, have been clearly established and every responsible administration official is forced to act within them. Such guidelines will not be generally accepted until they have been offered by the President himself and the country has had opportunity to debate and judge them.

Policymaking in any administration naturally depends on the views of its most powerful figures, albeit nudged and supplied with ideas by working-level officials. Testimony from various sources about Mr. Eisenhower's mode of operation tends to stress two points: He has strong visceral reactions, as one person puts it; but he hates to have to resolve major conflicts of views among his most trusted subordinates.

A story will illustrate the first. During a discussion of the foreign-aid problem at the National Security Council table, Treasury Secretary George M. Humphrey, the conservative bulwark of the administration and in many ways its second most powerful figure, expressed the view that the United States should do nothing to encourage socialism (i. e., Government ownership) in its aid to such nations as Indonesia.

Mr. Eisenhower's reaction was to say that if he were running that country, he would build up government-owned enterprises just as the Indonesians are doing. The President said there was no other way to do it because Indonesia lacks capital to develop private enterprise as Humphrey would have it do.

But the President did not upset a compromise reached between Humphrey and his allies, such as Under Secretary of State Herbert Hoover, Jr., and those who wanted a much larger foreign economic program. The result was a boost of only $200 million for fiscal 1957 over the current expenditure, including $100 million for long-range projects.

The President has yet to say to Congress and the Nation what so many, both within and without the administration, believe to be a fact: that the United States must continue for the indefinite future to spend large sums of money abroad to aid the economic development of many free nations regardless of whether or not they are allied to America.

Partly as a result of his not having taken such a posture, and explaining the reasons for it, the foreign-aid program is on the defensive in Congress and something less than even the limited amount being asked is likely to be voted in the end.

Confusion over a sense of direction for American policy may also be seen outside the Government. President George Meany, of the AFL–CIO, terms India's Jawaharlal Nehru an ally of communism. But Vice President Walter Reuther says that it is in America's interest to give India massive aid so she can develop within a democratic framework regardless of Nehru's nonalinement policy. Yet both men would agree that, as Meany puts it, "we have nothing to fear from peaceful competition" with the Soviet Union.

The ambivalence of American policy today is this: On the one hand, the United States, from the President on down, takes the position that the Communists have not changed their basic aims and hence America must above all keep ahead in every possible phase of the arms race. Our military budget is being increased for the coming fiscal year.

On the other hand, the President, Dulles and some other—but by no means all—administration leaders accept at least to some degree the idea that Russia is changing internally; over the years it may be possible to help turn Russia's course away from the fanaticism of international communism.

Dulles has spelled out this thesis at some length. The President approaches it gingerly. Others resist it strongly and, as some of their opponents put it, sabotage efforts which might further such a trend. The internal battle over exchanges of groups and individuals between the two nations is one field of such controversy.

The President himself led the way to setting the stage for the current situation. In October 1954, he declared that there is "no alternative to peace." And at the Summit Conference last July he said that he had talked with every member of the Soviet delegation and added "I believe they are earnestly desirous of finding peace, as we are." The spirit of Geneva meant, in essence, a tacit Russo-American agreement that nuclear war was too risky for either side.

Against this new backdrop on the world stage, fully concurred in by Mr. Eisenhower, the Soviets rushed ahead with a change of face for their troupe and a new act to boot. The American have accepted the new stage setting but haven't gotten out of the dressing rooms.

The Pentagon comes forth with a document called Militant Liberty, designed to help the Armed Forces and other Americans evaluate and assess freedom—in other words, to know what America is all about. Its oversimplification and naivete repel the diplomats.

The United States Information Agency backs the Advertising Council's "People's Capitalism" exhibit to show the world how the American version works. Foreign correspondents are critical of it. And Mr. Eisenhower says a little wistfully that he "would like to have seen some kind of adjective put between 'people's' and 'capitalism' "; if not "democratic," then " 'competitive,' or something of that kind."

Yet how do you compete with a fellow you figure has the power to clobber you, even though you can clobber back a fellow who says his aim is communism all over the globe?

"Competition" is a word, if there is any word, which expresses the American mystique, whatever the exceptions in American life. Yet there has been no spelling out of competition with Russia, in part because the Soviets have drummed the phrase "peaceful competitive coexistence" so hard as to create suspicion of a boobytrap in the very idea.

On April 16, 1953, in the first memorable speech of his administration, the President told the same group he will address next Saturday the American Society of Newspaper Editors; that the United States was ready "to dedicate our strength to serving the needs, rather than the fears, of the world." In a series of questions, Mr. Eisenhower asked: "What is the Soviet Union ready to do?"

Moscow has given its answer in its own way. It has not been an affirmative answer on those political issues the President mentioned. But, to much of the free world, it is a partially or fully convincing answer.

The time is rapidly approaching for the President and the United States to answer the question: What is the United States ready to do? And, the fears of world war having abated, what posture does America propose to take toward the free world now so intent on having its needs served?

Report of the Women's Congress on Housing—Part I

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mrs. ST. GEORGE. Mr. Speaker, the Women's Congress on Housing have just left Washington and it is my pleasure to place their report at this point in the RECORD.

Housing and Home Finance Administrator Albert Cole had the original idea of bringing these women, the homemakers of our country, to the Nation's Capital, to consult with them and issue a report on their recommendations and findings.

Mr. Speaker, it is to be hoped that this is but the first of many reports to be so issued, for better homes and better housing by the true experts in this matter—the women of America:

The Women's Congress on Housing, called in Washington this week by Housing and Home Finance Administrator Albert M. Cole, today closed its 3 days of meetings with a pencil-sharpening report that took the things they would like to have in a modern home and cut them down to pocketbook size.

The reports were made by 10 leaders of geographically related discussion groups, in which 103 American housewives for 2 days at the Washington Hotel had compared and discussed their desires, their preferences, and their practical judgments on the modern home for modern family living needs.

Expressing their thanks to the Government and the HHFA Administrator for the opportunity of developing their views on the home, the American homemakers from all parts of the country came up with a number of basic agreements on the home of today, along with a wide variation of preferences and tastes as to arrangement and detail, varying according to climate, background, and individual ideas.

The mass of detailed information and judgments assembled during the 2 days of discussion will be analyzed and correlated for a more complete report on the conference to be issued later. The main lines of the housewives' thinking, however, were given in summary reports at the final session by the leaders of the 10 discussion groups.

After the earlier discussions had brought out a wide range of desires and preferences, the delegates later settled down to trim these preferences to a feasible cost figure for most middle-income families.

All the leaders asserted that the women did not want a uniform style or plan of house to serve all people but, on the contrary, wanted individuality and flexibility within the scope of essential family functions. They called for more individuality in lot placement, exterior style, and internal arrangement for modern homes.

The home on which the groups finally based their proposals ranged, among the groups, from a $10,000 to $15,000 house, with a living-space area of 1,200 to 1,500 square feet.

In what one of them described as the painful process of bringing the cost of their theoretical home down to practical levels, the items that most of them decided to sacrifice to keep down the cost were garages, separate dining rooms, dens, and utility rooms, and one group which preferred no basements, accepted them to gain space at lower cost. Proposed lot sizes ranged from 7,500 to 11,000 square feet.

All of the groups, however, considered 3 bedrooms, 1½ baths, ample closet and storage space, and a family room closely related to the kitchen area as minimums for modern family life.

They left generally to personal or local preference the question of 1-story and 2-story houses and the style of architecture, but the preference for traditional styles of architecture was strong in New England States, while that for contemporary and 1-story homes was more pronounced in the Midwest and Southwest. Most of them, however, did not want extremes in architectural design.

Most wanted garages, but in facing cost factors, the garages were often eliminated in the original house, although one group wanted a driveway included for a planned garage later at the rear.

Some of the things that the groups largely agreed on were:

Outdoor play and living space in the backyard, which was given greater emphasis in the South and less in the North.

Backdoor entrances with "mud-room" and half baths for the children and family to use.

Curvilinear streets and sidewalks with a planted space between the walk and the curb.

They wanted only essential appliances included with the house, and preferred to get their own as they were able, preferring "more space in the home and fewer gadgets."

All agreed strongly on the need for much more storage space in the modern home, and called generally for at least 5 feet of hanging closet space per person. The groups presented various proposals for increasing storage space on a planned basis.

All wanted the home plan basically divided into a family or noisy area and a living room that furnished a quiet and adult area, and all wanted to eliminate cross traffic between different areas of the house.

While most would like a separate dining room, they were willing, for economy purposes, to accept a dining space provided it was in the "L" of an L-shaped living room, and all wanted at least a small space for eating in the kitchen or family area.

Nearly all wanted the kitchen to the rear of the house with a window facing the backyard, although one group preferred to have the house turned around, facing to the rear, and another group was willing to have both interior kitchens and bathrooms.

Many of the groups preferred traditional windows, but wanted them removable and easy to clean, and all felt that picture windows should be used only when they had a desirable view.

They differed on placement of closets, specific arrangement of family room, kitchen, eating area, and recreation space, on location of laundry facilities, and on bedroom size, one group wanting larger bedrooms, others willing to accept small ones with built-in storge walls and furniture.

All wanted to do their own landscaping, except for sodding which they want the builder to provide, and all wanted builders to save trees wherever possible instead of clearing the lot before construction.

The father's needs got varied attention in the form of a den, or workshop, or quiet area. One leader, however, reported that her group discovered they had pushed father completely out of the house, and in order to let him back in, they agreed to let him share the utility room with his workbench, tools, and other equipment.

Report of Women's Congress on Housing—Part II

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part II of the report of the Women's Congress on Housing:

DISCUSSION TABLE NO. 1

Mrs. Robert C. Baldridge, Cedarhurst, Long Island, N. Y., discussion leader for Connecticut, Maine, Massachusetts, New Hampshire, upper New York, Rhode Island, and Vermont, reported:

The group felt that the bathroom is at once the most important and archaic part of today's home. Her group expressed a desire for complete streamlining of bathrooms, with rounded corners for easier maintenance and cleaning, sinks at more convenient heights, a bathtub separate from the shower, and a free-standing water closet.

The New England delegates, Mrs. Baldridge reported, had devoted their time to planning a house with 1,350 square feet of space. There was no unanimous agreement on the favored architectural design of the house, but the group was agreed on the need for better arrangement of living space which would provide for two distinct areas of activity—the noisy and the quiet. They were also in agreement on their preference for a full basement; medium-pitched roof; a kitchen with eating space and with a south or southeast exposure overlooking the children's outdoor play area; three bedrooms; a utility room for laundry, sewing, and cleanup purposes; a separate dining area; and a separate living room for decorous living.

To get the price of the house down to a more practical middle-income level, the group decided that it could forego for the time being a garage, separate dining room, and den, although they agreed that these were desirable.

The New England housewives preferred traditional windows which would permit adequate ventilation, and picture windows only if they looked out on a view. Expressed lot requirements included a minimum of 7,500 square feet, a lawn provided by the builder, curved streets but sidewalks were not felt to be essential, underground powerlines because of the danger of hurricanes in their region, and walking distance from schools, shopping, and churches. Except for the lawn, the delegates preferred to do their own landscaping, their object being planning for utmost outdoor privacy.

DISCUSSION TABLE NO. 2

Miss Janet Shair, New York City, discussion leader for New Jersey and lower New York State.

The leader reported that the delegates from these States were not too much concerned with the physical characteristics of a house. They did not plan an ideal house, but declared in favor of a house that would free the homemaker from drudgery and give her more freedom, leisure, and greater opportunity for harmonious family living.

Her group was not against mechanical gadgets and laborsaving devices as such, but felt that these should be installed in the house when needed and when the money was available. They all agreed on the need for an abundance of storage space all over the house.

This group felt that the house should conform to existing community patterns. The landscaping should blend with the natural surroundings.

She asserted that the women of her group felt that when they returned to their communities they would continue to work in the interests of good homes that would reflect the desires of individual families, would be an expression of modern living, with close attention to family budgets for the home and the budgeting of family time to serve both the community and the home.

DISCUSSION TABLE NO. 3

Mrs. Edmund Bacon, Philadelphia, Pa., discussion leader for Pennsylvania, Delaware, Maryland, Virginia, and the District of Columbia, reported as follows:

Her group planned a $10,000 house. They came up with a minimum house and saved the ideal house for some later time.

This house contains a kitchen-family room large enough to accommodate the family "in a pleasant full eating situation." The dining area would be separate from the kitchen equipment. The family area would include the TV set, cupboards for games, and family work-play equipment. The dining room table might serve also as a ping-pong table, a sewing table, and for other uses. There would be a pleasant entrance to this area (not the old back door). It would be close to the utility room in which would be located laundry tubs and places to put the children's coats, boots, and baseball equipment. This should be adjacent to a half bath.

The living room would be the quiet room—a place for "gracious living." This would be the room for books, music, and special belongings. It must not be in the traffic ways of daily living and house care.

The bedrooms would be accessible to the family room without going through the living room.

The group emphasized it did not want a standard house; that it wanted compatibility without uniformity.

The group did not want fences around its house, saying that fences did not promote neighborly feelings and did not keep children in.

It did not want a large glass area looking out on the street. It wanted a picture window "only if there was something to look at."

The house should be at least 25 feet from the street. The group wanted as large a front footage as possible and was willing to sacrifice depth of lot for greater street frontage.

The group stressed the importance of zoning.

The group was opposed to increasing the size of the house at the expense of adequate outdoor yard space, feeling that the underlying land constitutes the basic value of the home and that the care given the exterior of the house is indicative of the interior quality and care in the neighborhood.

DISCUSSION TABLE NO. 4

Mrs. William Clancy, of Jackson, Miss., reporting for Mrs. Clara Louise Meyers, Columbia, Mo., discussion leader for Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee, and Kentucky:

Mrs. Clancy noted that, owing to climatic and other differences between these States, there were divergencies of opinion on home design. Nevertheless, the delegates agreed on a basic house within the $10,000-$15,000 range. It included an L-shaped living room with a dining area separated by folding partitions, a family room, three bedrooms, and one and one-half bathrooms.

A picture window was wanted only if there was a picture but the main emphasis was on as much space as possible—space was preferred to gadgets. There was also emphasis on garden space, especially at the rear of the house. Minimum lot size was put at 75 feet by 140 feet. Sidewalks were a must.

On behalf of the delegates the spokesman called the congress an unforgetable experience.

Report of Women's Congress on Housing—Part III

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mrs. ST. GEORGE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include part III of the Report of the Women's Congress on Housing:

DISCUSSION TABLE NO. 5

Mrs. Mary Thinger, Topeka, Kans., discussion leader for Michigan, Minnesota, and Wisconsin, reported as follows:

"A house that is cozy but not cold," was the expressed preference of these delegates. To get their planned home within moderate income limits they had eliminated the garage, separate dining room, and utility room, although these were considered very desirable.

This group agreed on the need for planned placement of rooms so that there would be no unwanted cross-traffic, and a kitchen in the rear of the home. They felt that the design of the rooms and the house in general should be best left to the individual taste, although the general preference seemed to be for a house that would combine both contemporary and traditional features.

They also agreed on a pitched roof, a minimum lot size of 60 feet by 120 feet, 20 feet between houses, a set-back of 30 feet from the front lot line, and more privacy for the individual home, perhaps through alternate placement on the block.

The delegation urged builders and architects to save existing trees on lots, but if this were not possible, they preferred to plant their own. Some favored fenced-in yards, but all agreed that utility lines should be placed underground or at the rear of the lot, sidewalks should be provided, streets should be curved, and that schools, shopping facilities, and churches should be within easy walking distance. They felt that primary schools should be no more than six blocks from any home, high schools no more than a mile away.

DISCUSSION TABLE NO. 6

Mrs. Stanley Anderson, Lake Forest, Ill., was discussion leader for the group from Illinois, Indiana, Ohio, and West Virginia.

This group felt they were in the highest-cost areas of the country. The majority wanted a traditional house within the means of the family, but a substantial minority favored a contemporary house. The house should be convenient to schools, shopping centers, and community facilities. They favored facilities for teen-agers, but sponsored and financed by the community.

Their house would be on a lot 75' x 150', with 15 feet on either side. It would contain at least 1,200 square feet, with garage or carport only if family can afford either. The house should have a basement because of the necessary depth of footings and to get more space at lower cost. Trees should be retained whenever possible. They were not too much concerned with outdoor living space, but wanted a backyard.

This house would be 2 stories, with 3 bedrooms. The master bedroom should be larger and the other two of adequate size. They stressed the need for at least 5 feet of clothing-hanging space per person. The bathroom should contain 2 feet more than present minimum. Stairs should also be a little wider than current minimums.

They want conventional windows throughout the house, so that children may look out with ease.

They want extra wiring installed at time of construction to permit future installation of appliances, etc.

The group favored adequate space off the kitchen for laundry equipment, storage, etc. There should be a guest closet and one-half bathroom near the kitchen.

The kitchen should be in the rear of the house, and should be a working room only, with sufficient space for light meals. The kitchen should overlook and be separated from the L-shaped family room by a 4-foot divider. In the kitchen the group wanted rounded corners on fixtures, as well as a built-in chopping block and bread board.

The family room which would be entered from a small vestibule would include bookcases and a fireplace if budget permits.

DISCUSSION TABLE NO. 7

Mrs. Everett Sugarbaker, Jefferson City, Mo., discussion leader for Arizona, Arkansas, southern California, Louisiana, New Mexico, Oklahoma, and Texas, gave a brief report, explaining that many of the points her group favored had been covered by previous discussion leaders.

She said that the women in her group felt strongly against "row on row housing" and thought builders ought to let the prospective home owners do some of their own planning in order to achieve individuality.

They also thought builders should be discouraged from taking out all trees when they clear the land for a new development.

Her group emphasized the importance of developing community life as much as possible in order to keep children off the street and interest them in the home. They would like a small community center in a new development, even in older developments if not too late to provide for them. They don't want schools "miles away" and favor the present trend of more and smaller schools—not large secondary schools with 2,500 pupils.

Her group said that sidewalks on both sides of the street were a must. They also want curved streets with cul-de-sacs.

Mrs. Sugarbaker urged the delegates to let the zoning and planning commissions know what they want by making themselves heard. She added that one of the important results from this congress will be that when the delegates return to their cities they will become a "center of activity" in disseminating information received and conclusions reached at the meeting.

DISCUSSION TABLE NO. 8

Mrs. Helen Gant, of Kansas City, Kans., discussion leader for Iowa, Kansas, and Missouri, said that the group had agreed on a "modified contemporary" basic plan for a house in the $15,000 range. It would have a low-pitched roof, plenty of storage space, 3 bedrooms, a family room, separate quiet living room, 1½ bathrooms. Mrs. Gant got a loud laugh from the audience when she said that the original plans of her group had "pushed father right out of the house." They brought him back, she added, and put him in a utility room where he could putter around, but she got another laugh when she added this would also be a mud-room or rough-room.

Again there was emphasis on space rather than gadgets. The acceptable lot size was put at 150 feet by 70 feet.

DISCUSSION TABLE NO. 9

Mrs. Grant Hess, Boise, Idaho, discussion leader for the western States of Colorado, Idaho, Montana, Nevada, North Dakota, South Dakota, Utah, Wyoming, Nebraska, and the eastern part of Washington.

These delegates were agreed that (a) the emphasis in design for the modern home should be on family living and family living areas, both indoors and outdoors, and (b) both interiors and exteriors of homes should have the utmost in individuality.

Mrs. Hess said that her group felt that both homes and lots can have adequate individuality at moderate cost. They believed that curved streets, more space between houses, and varied lot sizes could help achieve the desired individuality.

This delegation was agreed that today's minimum standards for homes are too low, particularly with regard to room sizes, storage space, wiring, bathrooms, and kitchen cupboards. They felt that adequate storage could be provided at no additional cost to the homeowner if it were properly planned.

The group considered a 1,200-square-foot home. These housewives didn't mind if bathrooms or kitchen had no outside exposure, provided the rooms were properly ventilated. They were unanimous in condemning curbstone sidewalks because of the danger to children, but favored sidewalks set back from the curb.

DISCUSSION TABLE NO. 10

Mrs. Rosalie Ehart, Miami, Fla., discussion leader for a special mixed geographic table, including northern California, Florida, Oregon, Texas, Missouri, Long Island (New York), and western Washington.

This group favored a house flexible in cost and not of extreme design, with 65-by-100-foot lot size. They felt that the cost of a larger lot would reduce the amount of housing that could be built.

This house would have 3 bedrooms, a 10-by-14 kitchen with dining area, and no laundry facilities in kitchen. These facili-

ties would go in a combination laundry-utility room. There would be a half bath near the kitchen. They want a side entrance to the house.

They wanted 8-foot-high flat ceilings and no exposed beams to catch dust. The children's bedrooms should be for sleeping only.

If funds are limited, they preferred a tub instead of a shower stall.

They did not want an attic or basement. They favored an oversized garage with overhead storage platforms for baby carriages, bassinets, etc.

They want outside electrical outlets for Christmas-tree lighting, etc.

The Changing Scene and Higher Education

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, April 26, 1956

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important address entitled "The Changing Scene and Higher Education," delivered by the Honorable Virgil M. Hancher, president of the State University of Iowa, on March 21, 1956, before the Southwest Iowa Bar Association.

The cost of printing the address has been estimated by the Public Printer as $260.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHANGING SCENE AND HIGHER EDUCATION

I

If one were to describe the dominant characteristic of the present age, one would be forced to say that it is an age of irresistible and accelerating change. It is a characteristic which is worldwide, and one which affects the most ancient and immutable of institutions and ideas.

The nature of our economic and social life has been completely altered in the last 150 years. It has been said that the life of George Washington at Mount Vernon more closely resembled the life of a Roman Senator in the days of the late Roman Republic than it resembled the life of a leading citizen of this Republic in the year 1956.

At its beginning the United States was predominately an agricultural nation. Once its people were 90 percent rural and 10 percent urban. Today the figures are reversed. About 13 percent of our people live on farms and 8 percent in cities or towns. In the course of this change farming has become a new and different occupation. Once it was the calling of the unskilled and the untrained. Today it is closely linked to botany, to genetics, and to the research departments of our great land-grant colleges. Once farming was the calling of the poor and the impecunious. Today the farmer is, and must be, a capitalist. The equipment reasonably required for the up-to-date operation of an Iowa farm is estimated to cost $20,000. The average actual cost is approximately $16,000 on a farm averaging 173 acres and having an average value per acre of $197. Thus the average investment for machinery, land, and buildings on the average Iowa farm is $50,000.

At the same time, the number of farms is decreasing, and their average size is increasing. There are about 700,000 fewer farms in the United States than there were 5 years ago, a decline of about 10 percent. In the 10 years from 1940–50, the number of farms in Iowa decreased by 10,000, or approximately 5 percent. As you might expect, the decrease in the number of Iowa farms means that the average size is increasing at the rate of approximately 1 acre per year. During the same 10-year period, from 1940 to 1950, the number of Iowa farms decreased in every category up to 180 acres, and increased in every category beyond that figure. Specifically, the group from 180 to 159 increased from 40,000 to 42,000; the group from 160 to 499 increased from 2,400 to 2,800; the group over 1,000 acres increased from 201 to 254. It has been reported that in 1 Iowa county, 138 houses, formerly farm homes, stand vacant because of the consolidation of farm holdings. The long-range implications of this trend are clear.

So much for agriculture. The changes in transportation and communication have been no less dramatic. From stagecoach to railroad to supersonic air transportation are the developments of three generations. The telegraph, the telephone, the radio, and television are the developments of two generations. Telephoto, facsimile, and other electronic devices are in use and await further development. Intercontinental ballistic missiles are on the drawing boards. Trips to the moon or to Mars are discussed seriously. An earth satellite is projected for early launching. In fact, the head of the department of physics at my own university, the State University of Iowa, is the chairman of the committee on instrumentation of the proposed earth satellite.

Everyone is aware of the tremendous growth of industrial, manufacturing and processing activities, and of the substitution everywhere, even in agriculture, of machines for men and natural energy for human energy. Now automation promises to augment that change by enabling machines, in certain selected situations, to be used for the management and control of other machines and mechanical processes.

These developments, in conjunction with increased agricultural production, have enabled us to sustain a vastly increased population. It is well that this is so, because the facts of population growth are in themselves surprising, if not terrifying. When the Constitutional Convention was held in 1787, the population of the United States was less than 4 million. Monday, March 19, 1956, it was reported that our population has passed 167 million. It is predicted that in 1975, 20 years from now, it will reach 220 million, and that in the year 2000 it will reach 300 million. The year 2000 is only 44 years away. That is not of direct concern to you and me, but most of the students now in our colleges and universities, and substantially all of those in the elementary and secondary schools, will live to see the year 2000. They will be expected to know how to live amicably and efficiently with 300 million compatriots where you and I find it difficult enough to get along with a little more than half that number. Here are facts, or reasonable predictions, which to me, at least, are quite as shocking and quite as devastating as the development of the A bomb or the H bomb. With 300 million people driving automobiles or riding in airplanes, the congestion we now complain about may resemble the wide open spaces of the last century. With a population of 300 million, the people of the United States may find it necessary to substitute cremation for burial, as the people of India have done. Or, perhaps, the eagle, our national symbol, which is in danger of becoming extinct, may find itself supplanted by the rabbit, which is in no such danger.

The advent of great new populations, as well as the pressure of old ones, is forcing us to seek new sources of energy and of food. The peaceful utilization of atomic power is at hand—and, although industry is reluctant to assume the full risks involved, full utilization of this source is bound to be accomplished in the public interest. Recent announcements indicate that we are coming closed to the capture of solar energy, an apparently inexhaustible source of energy whose primary costs will be for conversion and storage. The development of atomic energy and solar energy is being watched with great concern by newly created states, such as Pakistan, whose industrial hopes and ambitions far exceed their natural resources. We are told, also, that there are great new reserves of energy in ocean water. Because civilizations have flourished on new sources of energy, the possibilities and vistas opened to us by these new discoveries far exceed the imaginings of only two decades ago.

Vast portions of the earth, which were once rich and fertile, have become deserts, and water is in short supply in many regions which once enjoyed an abundance. Experiments have been carried on now for approximately a decade on the extraction of salt from sea water in order to make it available for drinking purposes and for irrigation. These processes, at last reports, had not yet become commercially practicable, but progress has been made and here, as in invention, necessity may well be the mother of progress. At the same time experiments have been conducted in the production of protein through a process involving sunlight, ocean water and deep sea algae. Here, again, the process need further refinement, but they are reported to be in limited use in Japan where the pressure of population is great and protein is in very short supply. This suggests that the centers of population in the future may be in the coastal regions adjacent to the oceans, or in any event adjacent to large inland lakes or seas.

Another event of the first magnitude in this changing scene is the emergence of Asia. As late as the end of World War I, the great nations of Asia were still quiescent. They had scarcely aroused from their long sleep. They exercised little influence in world affairs then, and it was not clear when, if ever, they would exercise a powerful influence. That situation has altered completely. China with her 400 million people; India with more than 350 millions, southeast Asia and Indonesia with more than 100 millions, and the whole Arab world extending from the Gates of Hercules on the west to East Bengal on the east, are on the march. The goal of these nations is equality, and perhaps dominance, in world affairs. We are face to face with a wholly new factor in world affairs, a factor to which we must adjust and to which we will find it difficult to adjust. This adjustment may be as difficult for us as it has been difficult in recent decades for the British to adjust to the idea of a strong and powerful United States.

Here, in brief, are some of the factors which make our age an age of irresistible and accelerating change. These factors, or others like them, as far as we can judge, will dominate our age for a long time to come, and will continue to make irresistible and accelerating change its outstanding characteristic. It is against this background, it is with these factors in mind, that education must prepare young men and women for competence and responsibility in their daily lives.

II

By any set of standards, I suppose that the late Alfred North Whitehead would be judged one of the great men of our age. Jointly with Bertrand Russell he was the author of Principia Mathematica. At the age of 63, he left his native England, came to the United States, and embarked upon a career of philosophy where again he achieved exceptional distinction. Often, as I pause to reflect upon his wise insights and sayings, I am reminded of the American Indian, a

descendant of tribes, who for generations had sent messages by smoke signals across the valleys and deserts of the great American Southwest, on the day when the first atomic bomb was set off, the Indian was standing on a high ledge at the edge of a valley. The impact of the bomb knocked him to the ground. It almost knocked him into the valley. He was much shaken up and considerably frightened. Slowly he got up and turned around just in time to see the giant atomic cloud rising like a mushroom toward the heavens. He surveyed this enormous smoke signal for a moment in undisguised astonishment, and then said, "I certainly wish I could have said that."

Whitehead has said many things that those of us who read him wish that we might have said. He was aware of the impact of accelerating change and in one of his writings he pointed out that up to about a hundred years ago, education was primarily concerned with the preparation of youth to spend their lives in a society not unlike that in which their parents and grandparents had lived. On the basis of prior experience, there was little reason to believe that the next generation would be required to adjust to radically new or altered conditions as a predictable certainty. But, beginning about a century ago and moving forward at an accelerating pace, education has been increasingly aware of the need to prepare youth for the inevitability of change and to endow them with the resilience and toughness of spirit which would enable them to adjust to inevitable change. This is a wholly new and difficult assignment.

The late Prof. John Dewey was a figure around whom much controversy centered. He was and is condemned by many people who never read his works, and for the excesses of his disciples rather than his own. He was, in fact, educated in the classics. I do not propose to present a brief for him on this occasion. On the other hand, his was one of the first American voices, and by all odds the most persuasive and powerful one, to point out that the best way to prepare young people to live in the real world was to simulate, as far as possible, the conditions of real life in the schools. He and Whitehead, who differed at so many points, were agreed that inert ideas are the most useless things that can be stuffed into a child's mind. Each believed that the only education of value is that which induces the student to take hold of something and make it his own. Vital education does not consist in the acquisition of facts or inert knowledge, but in the development of the ability to solve problems, in the development of the mental powers and discipline of students so that they are enabled to master the knowledge which they acquire and to put it to use constructively in solving the problems which they will encounter in an age of irresistible and accelerating change.

III

The task of education would be burdensome enough if it were merely called upon to meet the expanding needs for the professional and social services adequate for a population of 300 millions in the year 2000. Unless current population trends are radically altered, those are the needs which our educational system must meet.

The rising tide of students is already visible. This is nothing for which the schoolmen can be blamed, although they are face to face with the consequences. Nearly 40 million young people are in schools, colleges, and universities this year. This is the 11th consecutive year of increased enrollments, and enrollments will continue to rise sharply for another 10. Last autumn the elementary schools had 1,300,000 more pupils than in 1954; the high schools had 258,000 more, and colleges and universities were up 10 percent. There were 2,840,000 college and university students in 1954–55. It is predicted that there will be 3,950,000 in 1964–65, an increase of 1,100,000. In Iowa the increase in 1970 is predicted to be 157 percent over 1953. The latter youngsters are born and growing up. There is no crystal-gazing in this part of the problem. The only question is whether the children now in being will ever get to college. This projected increase does not mean universal higher education. The projections assume only a slightly higher ratio than now exists. Will there be teachers, buildings, and budgets adequate to provide them with higher education? Will the United States be a land of opportunity for them, as it has been for us? Will you be happy to see your children or grandchildren excluded from the opportunity which you enjoyed?

This problem goes hand in hand with another one. We know that a very high percentage—perhaps one-third to one-half—of our ablest high school graduates never go to college. The causes are complex and obscure. Often they are more social than economic. But the fact remains that here is an enormous wastage of human talent. Can we afford this wastage? Put at the lowest level, can we afford it in view of Russia's determined and evidently successful effort to recruit and develop talent at every level in society?

There are those, of course, who say that we are providing higher education for too many young people, that higher education should be given only to the intellectually elite. Being a graduate of Oxford University, I believe that I understand fully that point of view. But I do not agree with it. The most penetrating and convincing exposition of the merits of our broader system of higher education, of which I have any knowledge, was made by President Cornelius de Kiewiet of the University of Rochester at the annual meeting of the American Council of Education last autumn.

Dr. de Kiewiet was born in Amsterdam, Holland, and received his baccalaureate degree at the University of Witwatersrand in the Union of South Africa. His Ph. D. degree was taken at the University of London, and was followed by study in Paris and Berlin. For 12 years he taught at the State University of Iowa, where he first came to know an American State university. Later he served as teacher, dean, provost, and acting president at Cornell University which, as you know, is a combination of a private, endowed university and publicly supported land-grant college. More recently Dr. de Kiewiet has been president of the University of Rochester, the great private university endowed by the late Mr. Eastman. Few men have equalled Dr. de Kiewiet's experience as student, teacher and administrator in public, private, and mixed public and private universities on three continents. Out of that experience he pays tribute to the American dual system of higher education not only because it educates an elite, but also because it educates a very large number of extremely competent people who would not be educated if we had followed the European concept of restricting education to an intellectual elite. Because British university education has never been extended to this second level of competence, he believes that Britain has suffered industrially and financially. Because France has never extended university education to this second level of competence, he believes that France has suffered politically and socially. Because the United States has provided university education for this second level of competence, as well as for an elite, he believes that we have created a vast reservoir of competent men and women who, in politics, economic life, education and in many hundreds of specific pursuits and callings, have helped to create the unique political, social, and economic system which is indigenous to the United States. In my judgment this is a sound analysis of the facts. We need captains and majors and colonels, as well as generals, in the intellectual and professional life of this country. As I see it, both our present status and future condition are dependent upon our dedication to the American dream of equality of opportunity, and upon our insistence that neither in politics nor business nor education shall the doors be open only to a privileged few. This American dream of equality of opportunity, however, is under attack from many quarters, and it will be no easy task to preserve it for those who follow us.

It is a task so great that the combined resources of privately controlled and publicly supported colleges and universities will be required to meet it. This is no time for rivalry or for feuds. One encouraging fact is that in many States, public and private institutions are jointly surveying the needs and resources of their States and areas. This work was begun in Iowa by the Association of Iowa College Presidents, and will be continued by a committee representing the private colleges, the junior colleges, and the State institutions. The cooperation which is developing is a new and heartening phenomenon in American education.

Neither private nor public colleges and universities will be able to perform their tasks unless they can recruit and hold faculty members of high ability. Teachers are notoriously underpaid. A part of this arises from the belief that "those who can do, those who can't teach." I have heard that old wheeze come from the lips of men who could have told all they knew in one class-hour, and would have been mentally bankrupt had they been forced to face a second. Again, there is a curious dichotomy in our thinking. I have seen a parent willing to pay any fee to the best neurosurgeon obtainable to prevent or repair injuries to the brain of a son hurt in an automobile accident, and I have seen the same parent quite indifferent to the salary or quality of the teacher charged with the educational task of developing the mental skill and ability of that son. Teachers often teach from a high sense of dedication, but they can't pay their rent or grocery bills with it. And the tragic fact is that college and university teachers have lost ground in the economic changes of the last 15 years.

In a recent report prepared by Beardsley Ruml for the Fund for the Advancement of Education, entitled "Teaching Salaries Then and Now, a 50-Year Comparison With Other Occupations," he points out that serious relative changes in economic status have occurred in the compensation of university teachers of the highest professorial rank, and of educational executives at all levels. In 1908 top professorial salaries of $5,000 were not uncommon. Today's equivalent, merely to restore the 1908 status, would require $19,200. The study shows that the average salary received by professors in a select group of large State universities in 1953 was $7,000 per year, and that this salary deflated back to 1904 levels of real purchasing power would be the equivalent of $1,956. Wages and salaries rose in all parts of the American economy during the 50-year period 1904–53. Relatively, salaries in the field of education rose less than salaries in other occupations and callings with the result that the economic position of people in education has deteriorated over the years, after allowing for income and social-security taxes and changes in the cost of living. The study shows that, taken as a whole, the professors in the group studied actually lost 2 percent in real purchasing power in the 50-year period, while associate professors and assistant professors gained only 6 percent and 3 percent, respectively. Contrast this with the increased percentages of the 50-year change in real purchasing power for workers in automobile manufacturing, 140 percent;

workers in bituminous coal mining, 163 percent; workers in electrical manufacturing, 131 percent; workers in furniture manufacturing, 137 percent; and railroad firemen, 137 percent.

The deterioration at the top is so great that it affects the attractiveness of the academic career as compared with other professions and occupations. The ablest young men and women eligible for graduate work and professional study will not be attracted to education as they once were and as the Nation's needs require. The implications of all this are summed up by Mr. Ruml in the following statement:

"The American society is deteriorating in the sector most critical for future progress and well-being. The quality of education depends on its top leadership. The best talent of the younger generation finds that education is not as highly valued by its seniors as law, medicine, advertising, or many technical skills. The response of the talented members of the younger generation is rational and what might be expected. The talented members of the younger generation choose to enter law, medicine, advertising, the mechanical vocations, or the arts.

"Our society is in a period of rapid change. We face increasing complexities and hazards, both technical and moral. It is imperative that we bring into education a sufficient share of the highest talent of each generation so that each succeeding generation will be the better prepared to deal with the old and new challenges of its own time. Quality in teaching breeds quality in students."[1]

What you as citizens and taxpayers and donors to private supported institutions are willing to do about the facts obtained in the Ruml report is the measure of your regard for the educational future of this country. In the last analysis, the people and the people alone will determine whether or not we are to restore the relative economic status of top-flight educational leadership which was given to it as a matter of course in the early years of the present century.

Earlier in these remarks I mentioned the emergence of Asia. If we had no higher level of concern for education than the safety of our own skins, we might well be concerned with the reports coming out of Russia. Two of our unique contributions to western civilization have been our widespread opportunity for education and our technological developments. Recent studies—one a study of Soviet professional manpower sponsored by the National Science Foundation and performed by the Office of Scientific Personnel of the National Academy of Sciences; another by former Senator William Benton, based on his 1955 visit to the Soviet Union and its satellites, and the more informal report of Dr. Homer Dodge and his son; all agree upon the tremendous Soviet advances in education and technology. Benton reports that:

"The massive educational program, still expanding in Russia, under which today nearly twice as many students are enrolled above the high-school level as in this country, is one reason for the extraordinary confidence expressed by Soviet leaders at the recent 20th Congress of the Communist Party. The Soviet educational system is geared to win the cold war. The Soviets are now challenging us frontally at what have historically been two of our strongest points, technology and mass education.

"In some fields, notably technological, the Soviet Union is producing graduates who compare favorably both in number and quality with those in the United States. Indeed Allen Dulles, head of the United States Central Intelligence Agency, and Admiral Lewis Strauss, Chairman of the Atomic Energy Committee, say the Soviet output of engineers and technical specialists may exceed that of the United States by as much as 50 percent. This figure becomes the more startling when one recalls that the Russian economy is probably no more than one-third the size of that of the United States and thus, presumptively, the demand for engineers internally should be far less than in the United States."[2]

Benton says that the surplus of engineers and technicians will be assigned to carry our technical assistance in every uncommitted country of the world. Moreover, while getting their scientific training, they are thoroughly indoctrinated in the Marxist-Lenin line and are taught English, French, or German to give them a fluent working knowledge of the language they are likely to need when they are sent abroad to do a technical and a propaganda job. It is this combination of indoctrinated zeal with technical proficiency that is so ominous for the West.

One grave question for the men in the Kremlin is this: Can they provide the Russian people with the highest and best in technological education and still keep them indoctrinated with the Marxist-Lenin line? One grave question for us is this: Can we stand up to the tremendous threat of Communistic power and still retain our faith in the right to pursue and to teach the truth?

When, amidst Prussia's tribulations under Napoleon, the basic pattern of the University of Berlin was being fashioned, Wilhelm von Humboldt made it a prime requisite that teachers in that university should be free to pursue and teach the truth. It is this freedom which has contributed so greatly to the accelerating changes of the modern world. Yet 125 years after Humboldt's decree Hitler and his Nazis destroyed that freedom and with it the University of Berlin.

Could the same thing happen here? Are public universities free from the danger of laws and regulations which would curb their efficient operation or impede their intellectual freedom? Are private universities free from the danger of laws and regulations which will reduce or destroy their tax exemptions or pressures from alumni or Government which will impede their intellectual freedom?

We dislike the Nazis and the Communists, but it is not clear how much freedom our fellow citizens believe in. Is free speech designed to protect only the kind of speech that I like to hear? Does it also protect the speech with which I disagree? Will the lessons of Nazi Germany and Soviet Russia be lost upon us? The cult of freedom is a difficult one. Its price is eternal vigilance, and no small annoyance and inconvenience. Its relation to educational institutions has been well put by Ralph Barton Perry:

"I am not unaware of the difficulty which the creed of freedom creates for educational authorities who have to worry about financial support—whether from a legislature or from alumni. There is, however, only one solution of this difficulty—the only ultimate solution, and the only American solution: namely, to educate those who provide the support, so that they can better understand what it is that they support. At present, the privately endowed institutions enjoy, in this respect, an advantage over the State-supported institutions. Whereas the latter are governed by regents, legislatures, and the electorate at large, privately endowed institutions are governed by trustees and alumni, who can be assumed to feel a closer sympathy with the purposes and principles of higher education.

"But this is an ephemeral and at best a relative advantage. The State electorate is composed more and more of alumni of State colleges and universities; the alumni of privately endowed colleges and universities are dispersed and absorbed in the electorate and tend to be of the same mind. In self-defense, as well as to fulfill their obligation of public service, all institutions of higher education must, therefore, educate not only their own students, but the people at large, to value such institutions for that unique service which they alone are qualified to render."[3]

IV

What are the unique services that institutions of higher learning are qualified to render? For the universities, at least, the matter has never been put more clearly or powerfully than it was put by Sir Richard Livingstone when he said:

"If you wished to destroy modern civilization, the most effective way to do it would be to abolish universities. They stand at its center. They create knowledge and train minds. The education which they give molds the outlook of all educated men, and thus affects politics, administration, the professions, industry and commerce. Their discoveries and their thought penetrate almost every activity of life. The technique of the doctor and the miner, the pronouncements of the pulpit, and even of the press, the measures of governments are dictated or at least modified by these distant nerve-centers of intelligence, and on their health and vigor and well-being of the whole modern world depends. They add nothing to the amount of natural intelligence existing, but they refine and perfect what exists and fit it to serve purposes and take stresses which in its raw form it could not meet. Their influence is increasing and will increase unless there is a collapse of modern civilization."[4]

Universities are vital to our civilization. Upon you, and those like you, rests the responsibility for interpreting them to those around you who do not know or understand them. Upon your support and leadership depend the solution of the problems, the almost insolvable problems, which they face. And, I urge you to give that support and leadership so that, in the words of the prayer book, "knowledge may be increased among us, and all good learning flourish and abound."

Departments of State and Justice, the Judiciary, and Related Agencies Appropriation Bill, Fiscal Year 1957

SPEECH

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10721) making appropriations for the Departments of State and Justice, the judiciary, and related agencies for the fiscal year ending June 30, 1957, and for other purposes.

Mr. HOPE. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, this is the wrong way to amend legislation. I think every one of us will agree to that. The gentleman from New York [Mr. KEATING], a distinguished lawyer, has said that he did not like this way of approaching the

matter, and I do not believe any lawyer or any Member of the House for that matter would believe that this back-door method is the right approach.

But I am not going to talk any more about that. I want to go to the merits of the question which is basically involved here. It is charged that there are a lot of small farmers who are being criminally prosecuted and fined because they grew more than 15 acres of wheat.

That is not the fact. These are civil cases to collect penalties from farmers who have exceeded their marketing quotas. The law, as a matter of fact, is very generous. It provides that any farmer who has never grown a bushel of wheat on his land before may grow 15 acres of wheat without paying any penalty whatever. Members know that with the use of fertilizer this means from 400 to 500 bushels of wheat that may be grown even with moderate yields. This provision was placed in the law to protect the noncommercial wheat growers. It does protect him adequately. Do not tell me that a man who grows more than four or five hundred bushels of wheat is a small farmer who is not engaged in commercial operations.

In addition to that, he may grow all the corn, and all the rye, and all the barley, and all the oats that he wants for food and livestock feed, because there are no marketing quotas on any of these crops. So no one is suffering; no one is being persecuted. No criminal offense is being charged, nor can there be. These are simply civil suits and you would be surprised, perhaps, if I told you, in view of all the furor that we have had here today, that there were only 1,219 of these cases in 1954 and only 680 cases in 1955 out of over a million and half wheat growers in the United States. By this I mean that, according to figures furnished the Committee on Agriculture by the Department, there were only this number of cases in each of these years in which marketing quota penalties were incurred where all the wheat produced on the farms was used solely for food, seed, and feed. In most of these cases the penalties have been or will be collected by administrative action. As of March 1, 1956, only 143 suits had been filed. In all probability most of these cases will be settled without trial since the law is clear.

Now, in order to prevent the United States district attorneys from doing their duty under the law, this amendment is suggested to save a few farmers from paying a civil penalty because they grow more than the 15 acres of wheat which the law permits them to grow without any penalty when marketing quotas are in effect. Why adopt this method which everybody agrees is the wrong way of approaching this matter in order to save a few farmers from paying the penalty which they have incurred. Is this fair to the more than a million and a half farmers who grew wheat and stayed within the provisions of the law. In my opinion, if you adopt this amendment, it will mean an entire breakdown of the wheat program.

Let me call attention to the fact that we do not have such a provision in the case of any other commodity under marketing quotas. Producers of cotton, tobacco, rice, and peanuts cannot exceed their allotments in the slightest degree without paying a penalty, but a farmer may grow 15 acres of wheat where he has no allotment at all.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. HOPE. I yield to the gentleman from Oklahoma.

Mr. ALBERT. Under this proposal, what would keep a grower of 10,000 acres of wheat from qualifying?

Mr. HOPE. Nothing in the world. It would break down the program.

Mr. ALBERT. This is not a little-farmer's amendment. It is a big-farmer's amendment.

Mr. KEATING. Mr. Chairman, will the gentleman yield?

Mr. HOPE. I yield to the gentleman from New York.

Mr. KEATING. These 3 million farmers to whom the gentleman has referred, and those referred to by the gentleman from Oklahoma [Mr. ALBERT] would be subject to this amendment if they fed all of that wheat on their own farm. This amendment is limited to those who use all of that feed on their own farm, and that, in general, would be only the relatively small farmer.

Mr. HOPE. It would have the effect of breaking down the entire wheat program and I think you might be surprised at how many large growers might take advantage of it.

Mr. POAGE. Mr. Chairman, would the gentleman yield?

Mr. HOPE. I yield to the gentleman from Texas.

Mr. POAGE. Is it not a fact that anybody who is going to feed four or five hundred bushels of wheat in his farm as feed must be in the commercial feeding business? He has probably a flock of 40,000 chickens. He is not feeding simply the old lady's hens with 500 bushels of wheat. And he is not grinding up 500 bushels of wheat to feed the kids flour, either; because there are not any such mills in this country. People buy their flour from commercial mills. You will not find flour being ground in this country to make biscuits and light bread any more. It is a commercial proposition if a man is selling more than the product of 15 acres of wheat.

Mr. HOPE. This in the main is a proposal to bail out a few large poultry growers. That is where most of the support for this proposal comes from. This amendment should be voted down, not only because it is the wrong approach to the matter but because the basic proposition itself has no intrinsic merit.

Seasonable Consistency

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 26, 1956

Mr. GOLDWATER. Mr. President, an editorial published today in the Wall Street Journal is further recognition of the Democrats' desperate search for issues. Their present plight is somewhat akin to the cat chasing his own tail, and proves, with the analogy of Mr. Reynolds, that the Democrats really are not interested in solving any issues, but only in creating them.

I ask that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEASONABLE CONSISTENCY

This being the season when political campaigns are budding all over, you can expect to hear a lot from the outs about how the ins are ruining us with policies full of inconsistencies and contradictions.

Mr. Adlai Stevenson, for instance, has been demanding that the administration stop letting us just drift and present us with some policies to deal with the cold war that will be clear and consistent.

On Saturday last he accused the administration of being niggardly with our defense program, thus letting the Russians outstrip us in military power. He also said the United States needed a more consistent peace program to impress the world and counteract Communist propaganda.

So he proposed that we outwit the Russians propagandawise by halting all our atom bomb tests to show our peaceful intent. Just what this would do to our defense program, he didn't explain.

However, he took care of that on Tuesday after Mr. Khrushchev claimed that the Soviets are developing intercontinental atom bomb guided missiles. Mr. Stevenson demanded that the administration step up its guided missile program to counteract this Russian threat. It wasn't quite clear, though, what kind of warheads we would put in those missiles since, presumably, we are to stop atom bomb experiments.

Then on the domestic front the Democrats in Congress have been giving the administration what-for about the farm program. The Democratic Senate leader made a speech telling the farmers that when the President vetoed the farm bill he was taking millions of dollars out of the farmers' pockets this year.

So now the Democrats are in favor of quick passage of the soil-bank bill which would pay farmers for not growing things. But at the same time they are fighting very hard against a provision in the bill which would permit farmers to draw part of their soil-bank payments in advance. They don't want the farmers to get this $500 million in their pockets this year—before the election.

Oh, well, we have long since ceased to marvel at these little flowers of political consistency, these biennials that bloom in the spring. We glimpsed our first one, years ago, when Robert R. Reynolds was trying to unseat Senator Morrison down in North Carolina.

Mr. Reynolds went about the State making a pitch that Senator Morrison was a penny-pinching old fogey who wouldn't spend a nickel for the good of the poor folks. After quite a bit of this, Senator Morrison got his dander up and pointed with pride to the many occasions in the Senate when he had voted for larger appropriations than Mr. Hoover's Republicans had proposed.

Whereupon the undaunted Bob Reynolds let fire with a broadside at Cam Morrison for sitting up there in Washington spending the people's hard-earned money like a profligate.

Which may help explain why the political outs today aren't going to be hobbled by any hobgoblins of consistency. After all, Bob Reynolds won.

Politics Should Be Fair

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I desire to keep the record straight.

I do not refer to the CONGRESSIONAL RECORD but to the record of my distinguished colleague, the Honorable HARLEY STAGGERS, of the Second West Virginia District.

Mr. Speaker, in the heat and stress of interparty political primary battles for party preference, some individuals often distort the facts. Some even resort to half truths and still others are not averse to using untruths in their desire to win political advantage.

I do not subscribe to the old axiom, "Everything is fair in love and politics." It is not a question of whether you win or lose but a question of how you played the game. In this instance, it is a question of keeping the record straight.

Practically every newspaper in my State of West Virginia, both daily and weekly, find their way to my desk. These include the papers from the counties and cities in the Second West Virginia District represented by my colleague, Mr. STAGGERS.

Political news from this area points to systematic and well-planned campaigning by his political opponent to discredit and belittle the record of Mr. STAGGERS on farm and conservation issues. A large part of Mr. STAGGERS' district is the Monongahela National Forest area which is the pride of all West Virginians.

The charge is being made that Mr. STAGGERS has neglected to properly safeguard the interests of this and other forest areas in his district. This I want to disapprove.

I, too, am interested in conservation. Every year since Mr. STAGGERS became a Member of the Congress he has personally accompanied me in appearances before the appropriate House committees interested in conservation and pleaded for increased amounts for improved facilities for both the Monongahela National Forest and the George Washington National Forest within his district.

Some years ago we appeared before the House Appropriations Committee and secured an item of $36,000 for improvements on Camp Horseshoe at Parsons, within the national-forest area. In recent months Mr. STAGGERS accompanied me to a hearing and joined in a plea that the item for replacement of physical facilities and campsites on our national-forest lands be increased by approximately $9 million. This increased amount was approved and is a part of the current budget which will be made available for fiscal 1957.

In 1955 the gentleman from the Second West Virginia District accompanied me before the House committee to secure $1,800,000 increase for fire protection on State and privately owned property surrounding the national forests so as to better remove a hazard in the national-forest holdings.

The charge has been made that the Monongahela National Forest "is being permitted to run to rack and ruin," and that "money for upkeep has been cut drasically and money for improvements has been cut off entirely." Let us look at the official record of the Forest Service. This shows that during Mr. STAGGERS' tenure in Congress—1949 to 1956—the funds appropriated and made available for expenditure on this national forest were increased from $294,000 to $482,000, an increase of from 60 to 70 percent, or an average of almost 10 percent each year.

The charge has been made that "forest roads and tourist facilities are so run down that they are of little, if any, practical use." As a matter of record, the road and trail construction and maintenance funds for the Monongahela National Forest have increased from $110,000 in his first year in Washington to $236,500 during this year, an increase of 114 percent within 8 years.

The charge has been made that the national forests of New England and the Western States have received an unfair share of the national forest recreational funds at the expense of our Monongahela Forest. Forest Service officials in Washington have assured me that the recreational use funds appropriated to the Forest Service are distributed among their national forests based on a careful and impartial analysis of actual use and the number of recreational areas and facilities.

One of the untruths I refer to above is that while the Forest Supervisor at Elkins and his crew on the Monangahela National Forest are doing a good job, one cannot trust the Forest Service officials in Washington in their distribution of funds. All year-long Forest Service officials in Washington—from Chief McArdle on down—are career, technically trained men devoted to their job. I know many of them personally and hope that this will clarify the unfair statements and inferences made which reflect on the fairness and ability of our Forest Service officials whether at Elkins or at Washington.

HARLEY STAGGERS has honestly and efficiently served his district for 8 years. His untiring efforts in behalf of his constituents must not be sacrificed by unfair and unethical political tactics.

One-Party Press?

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, April 26, 1956

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Where Is the One-Party Press?" published in the Scottsbluff (Nebr.) Daily Star-Herald of April 22, 1956. The editorial gives a correct and objective evaluation of the clamor about the so-called one-party press which clamor is sounded in election years. I commend the writer of this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

We are becoming increasingly irked over the Democratic National Committee's wholly unsupported and unwarranted charges of a one-party press.

Implied is a situation that only news of the Republican Party finds its way into the news columns of the Nation's newspapers, and that there exists some unspecified prohibition against routine Democratic Party news or reports of Democratic viewpoints on national matters.

This situation simply is not true, either in this newspaper or in the vast majority of newspapers of the Nation.

We do not attempt to control news, nor to create it.

News events happen, and newspapers print their accounts of such events as nearly without bias or coloring as is humanly possible.

The wire services, chief among them the Associated Press and the United Press, maintain high standards of journalism. They cannot be bought by either party, Republican or Democrat, and they scrupulously report, and local editors use, the news of political and State matters, regardless of political origin.

The number of newspapers, daily and weekly, which vow allegiance to the Republican Party are in the majority, it is true. The editors of such newspapers reflect the Republican viewpoint in their editorial columns, as is their right, but not in their news columns, if they are worth their salt.

They permit the expression of political viewpoints of all shades in their "Letters to the Editor" departments. Within limitations of space, the newspaper can become a forum of political opinion.

As to other major media of communication, we know little except for the fact that radio and television industries engage in practically no editorial activities. They sell their time, first come first served, but attempt to make their facilities equally available to both parties.

Perhaps, it might be proper to call the South an area which a one-party press exists, because Democratic editors predominate. We think the charge would be unfounded, although Demo bigwigs might be more satisfied with the editorial tone there.

We think that editorial climate is all right, because it reflects honest and sincere opinion.

The Democrats should hunt for some other whipping boy.

Victory for Congress

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper editorial:

VICTORY FOR CONGRESS

The ruling by the full bench of the United States court of appeals in the case of John T. Watkins, a former organizer for the United Automobile Workers, reflects a salutary respect for the right of Congress to func-

tion within its proper sphere without judicial interference.

Last January a divided three-judge panel of the court had reversed the conviction of Watkins for contempt of the House Committee on Un-American Activities. The majority on that panel, Chief Judge Edgerton and Judge Bazelon, held that the committee had no authority to ask a series of questions which Watkins had refused to answer. This brought a vigorous dissent from Judge Bastian. He said this: "I suggest that this decision puts us in the position of a court of appeals over the Congress and its committees, allowing us to pass upon questions relating to legislation and limiting the scope of such inquiries to what this court thinks that scope should be." The five other appellate judges (newly appointed Judge Burger did not participate) now have agreed with Judge Bastian's view on the legal question involved. The earlier decision is set aside and the right of the committee to ask the questions is affirmed.

The issue turned on a rather narrow point. Watkins, a forthright witness before the committee, did not seek to invoke the fifth amendment. He readily answered questions pertaining to his own Communist associations, and said he would answer questions about any others whom he still believed to be Communists. But he refused to answer when asked whether, in past years, he had known some 30 individuals as Communists. His basis for this refusal was that he did not think the questions were relevant to the committee's investigation, but were designed, instead, to expose these individuals This view was accepted by Judges Edgerton and Bazelon

But the full court was in emphatic disagreement. "The purpose of the committee's hearing," it said, "was to aid it in its study of a proposed amendment to the Internal Security Act of 1950. That amendment was in fact enacted into law 4 months after appellant's refusal to testify. * * * This is a proper example of the exercise of a legitimate legislative purpose. * * * Congress has the power of exposure if the exposure is incidental to the exercise of a legislative function."

This is an important ruling. For, if it stands up on appeal to the Supreme Court, it will tend to lift from the congressional power of investigation a severe and, in our judgment, an unwarranted restraint imposed by the earlier ruling.

Freedom for Slovakia

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. PRICE. Mr. Speaker, on behalf of myself and at the request of many of my constituents of Slovak descent, I wish to urge the Congress to approve House Concurrent Resolution 231, resolving that it is the sense of the Congress of the United States that the Slovak Nation, is entitled to and should no longer be denied the right of national self-determination. I introduced this resolution in the House on April 12, 1956.

The Slovak Nation lost all possibility for its freedom and independence when the Soviet troops marched into Slovakia early in 1945 and when the so-called people's democracy was introduced in that unfortunate country, before the coup of February 1948, totalitarian communism became the ruler.

Since that time Slovakia suffered as much as any other enslaved nation or even more, behind the iron curtain. But there is no country in the Soviet orbit which has a better underground movement than heroic Slovakia, resisting communism through its two underground organizations; the Liberty Legion and the White Legion.

The stirring cry for the freedom of the Slovak Nation has the sympathy and friendship of the American people who have always been ready to assist the downtrodden and the oppressed. Since the Slovaks stand on self-determination and since they demand free elections or a plebiscite under United Nations supervision, as clearly stated on many occasions by the leading Slovak exiles and as confirmed by the leading Americans of Slavok derivation, in order to choose their own form of government and to reestablish their own state or its association, if any, with other nations.

We place the Slovak nation in every respect on the same basis of equality enjoyed by any nation of Central or Eastern Europe whether they are Poles, Rumanians, Hungarians, Lithuanians, or Bohemians. Each of them has the basic right for self-determination and the right to set up its own government.

We urge the Foreign Affairs Committee and the Senate Committee on Foreign Relations and the President of the United States and the Secretary of State to give favorable consideration to this resolution in order to formulate a practical program of assistance to the oppressed Slovak Nation, and to direct the United States Representatives at the United Nations to demand that free elections or plebiscite be held in Slovakia under police supervision of the United Nations so that the Slovaks may freely decide their national future without any outside pressure.

We shall not fail the Slovak Nation in its struggle for the same freedom and independence we enjoy. From every viewpoint the Slovak Nation is entitled to the enjoyment of full freedom and independence. World peace is unattainable without granting the Slovak Nation freedom and independence, the basic and elemental right of every Nation.

Federal Aid For School Construction

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, April 26, 1956

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Local Control Maintained," published in the Scottsbluff (Nebr.) Daily Star-Herald of April 19, 1956. The editorial affords the views of Nebraskans—and I am sure the views of many other Americans—on the issue of Federal aid for school construction. I offer my sincere compliments to the author of this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Apparently the disagreement among Banner County residents over the proper program of school operation has been resolved in Tuesday's special election.

Unofficial returns show that over 60 percent, more than the 55 percent required minimum, favored issuance of $500,000 in bonds to finance construction of a central school plant operated by a single county-wide district.

Actually, the chief point at issue was whether or not the county should reestablish the old district boundaries and operate several schools, as opposed to the idea of a single district with a modern school.

But, to a disinterested outside observer, another and more important issue could have been at stake, too.

That issue hinged on the principle of local self-determination of school problems.

Banner County people, like people everywhere in the United States, could have voted down the bond proposal and, because of a failure to solve their own local and peculiar problems, could have awaited the entrance of the Federal Government, or the State, or some other foreign authority, to tell them what to do and to supply the cash for improvements determined by some outside agency to be necessary for the maintenance of adequate school facilities.

Such a procedure is proposed, to a degree, by the advocates of Federal aid to education.

What's happening, in contrast, is that Banner County people have met their own problem head-on and are going to handle it themselves.

As a matter of principle, they are going to finance and administer their local schools. The majority have recognized a need and, by the exercise of democratic processes, have determined the method of meeting it, free from outside influence.

Furthermore, it is our guess that they can afford and can pay for the improvements they propose to make. They will have a school plant and auxiliary facilities that answer community needs and in which they can take pride.

The situation, in some ways, is repeated all over the country. The pressures for additional school facilities is unremitting.

Whatever we must do to meet it we should do on a local basis. That is the important point. Unless we want Federal control of schools, financed by an uneconomic and more costly system, we will follow Banner County's example, and decide our own local problems on a local basis.

United States Information Service Features Suffolk County News in Report From America Program

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. WAINWRIGHT. Mr. Speaker, I should like to direct the attention of the Members of the House to a very interesting and significant article which ap-

peared in the New York Times on April 2, 1956.

It is particularly significant to me because the smalltown newspaper selected by the United States Information Service for this program Report from America is the Suffolk County News, located in Sayville, Long Island, N. Y., which is in my congressional district.

It is my firm opinion that this is the sort of public relations that really shows the way in which American people live—unadorned by the screen sets of Hollywood and the razzle-dazzle of the film world.

The United States Information Service should be commended for the excellent job it is doing. If this is the approach adopted by our Government in the field of public relations, then I believe we are on the right track.

The editor of this smalltown newspaper, Joe Jahn, should be congratulated for his untiring efforts and cooperation:

BRITISH TV SHOWS EVERYDAY UNITED STATES LIFE—CRITICS CALL DOWN-TO-EARTH SERIES POWERFUL ANTIDOTE TO HOLLYWOOD FILMS—NOTE SIMILAR PROBLEMS—AUDIENCE SAID TO BE GIVEN FIRST REALISTIC PICTURE OF ORDINARY AMERICANS

(By Thomas P. Ronan)

LONDON, April 2.—The existence in the United States of ordinary people with basic human problems is being brought home to Britons through a new television series called Report from America.

It is not that the British think the United States is inhabited by ghosts or supermen. But the picture many of them have is colored by the distortions of Hollywood and by the emphasis given by some newspapers here to the more sensational side of life in the 48 States.

Motion pictures like Blackboard Jungle and Rebel Without a Cause have convinced many Britons that most United States children are maladjusted and often brutal delinquents. Other Hollywood efforts have left the impression United States adults are gangsters or millionaires.

Report from America, presented by the British Broadcasting Corp. in cooperation with the United States Information Agency, is showing that there are other types, much like people in Britain.

The emphasis is on everyday life, with typical Americans portrayed in typical situations. Few, if any, actors are used and the accents are pure American.

TRAFFIC PROBLEM DEPICTED

Dealing with traffic problems in large and small communities, the first report depicted motorists driving round and round in an endless quest for parking space, a salesman trying to make a sale against a parking meter deadline, truck drivers sipping coffee and chatting about their problems at a roadside restaurant.

The topic of the second report was a smalltown newspaper—the Suffolk County News at Sayville, Long Island. Through the eyes of this newspaper, with a circulation of about 4,250, Sayville was portrayed as a town where people chipped in to build a new Lutheran church when the old one burned down and to supply an ambulance service manned by volunteers; where a community forum is provided for the discussion of local problems and where civic leaders fought to save the famed Blue Point oyster when pollution from duck farms threatened its extinction.

"This program did a little to kill the Hollywood-created myth of the American way of life by showing that people in small towns lead lives and have interests similar to our own," the Yorkshire Post said.

The Glasgow Evening News concluded that life in Sayville was not so different after all from life "in our own little burgh." The Eastern Evening News of Norwich found this film a refreshing insight into the less spectacular side of that "way of life" so well publicized by the cinema.

SIMILARITIES NOTED

Of the Suffolk County News, the Sheffield Star said: "How little it differed, in both function and production, from many weekly newspapers in this country. In fact, how little the people of Sayville and their problems varied from thousands of small town dwellers here."

Maurice Wiggin, television critic for the Sunday Times, found the reports "a valuable corrective to the picture of America which a viewer might pick up from other sources of entertainment."

"What is finest about these fascinating reports is the integrity that is written all over them," he said. "America speaks for herself, through undoctored pictures of her streets and the untrained voices of the men in them."

After having viewed the traffic film, the critic for the Bristol Evening News remarked that it was astonishing "what a great disservice the majority of American films do to their native country; how inaccurately they portray the American way of life."

HOLLYWOOD VERSION CITED

The Liverpool Evening Express said Hollywood had told of only two kinds of United States weekly newspapers. The first was printed by hand in a one-horse town in Kansas. The editor carried a .45, took his orders from the local bad man and devoted his columns to libeling the hero. The second was put out in a small Southern town by a right-thinking editor who refused to be bribed by the local gangster and whose fast-talking, hard-fighting reporters ranged the underworld blowing the top off vice and corruption.

The critic continued: "Really, the American weekly newspaper is very much like ours in Britain. It fights the little fights of the small-town people it serves. It tells them about their neighbors."

The program was conceived by Leonard Miall, former BBC correspondent in Washington and currently head of its Talks Department, as a television counterpart to the radio report from America broadcast weekly by Alistair Cooke, a Manchester Guardian correspondent in the United States.

With the enthusiastic endorsement of W. Bradley Connors, head of the United States Information Service here, the project was approved in Washington. Mr. Connors and his aides worked with the BBC in selecting topics.

The films, made by the National Broadcasting Co., with Don Cash as director and producer, have been praised highly for technical brilliance. Joseph C. Harsch of the Christian Science Monitor has won critical plaudits as the relaxed, unobtrusive narrator.

That the United States Information Agency and its hard-working staff here have a tremendous job before them is evident in the review of Rebel Without a Cause, by C. A. Lejeune, film critic for the Observer. This picture dealt with juvenile delinquency in a California community.

"When I was a child my books taught me to love America," she wrote. "I don't remember ever thinking of American stories as 'foreign' stories. Today I still read and relish American books. I like their fast hold against the deadly bloat of 'comic' strips, their nice appreciation of the gravity of words.

"I admire American writing very much indeed; and often wish that I could emulate it. But I no longer want to visit America. I think I should be unhappy there. The films from Hollywood have taught me to expect a dangerous country full of violent, maladjusted people; unhappy in their home lives and politically inflammable.

"Commonsense tells me that this picture is untrue; but the picture has been too often drawn; the harm is done."

The third report in the series on the United States will show how Pittsburgh beat the smog problem. Now, if Mr. Cash can only find 4 or 5 American children without police records.

SAYVILLE GETS REACTION

SAYVILLE, LONG ISLAND, April 7.—America's most widely publicized smalltown newspaper these days is the Suffolk County News of Sayville.

The reaction of British TV viewers to the community service projects of this typical weekly on Long Island's south shore is reflected in the many letters the paper has received from the British Isles.

Typical is the comment of Mrs. Gwyneth Rowland, of Monmouthshire, who said she and her husband were "enchanted with the whole portrayal and thought your shops quite wonderful." Terence Harlow of North Harrow, Middlesex, asserted: "It appeared to me that North Harrow and Sayville have a lot in common as people and problems go."

The News was selected by the United States Information Agency because of its many community service projects in recent years, several of which are highlighted in the film report. Since the film was shot on location here in Sayville, the News has been nominated for a Pulitzer prize in public service, a rare honor for a smalltown weekly.

Tour of the Middle East by Walter Reuther

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 26, 1956

Mr. LEHMAN. Mr. President, there has just returned to this country after what can only be described as a triumphal tour of the Middle East, and especially of India, Mr. Walter Reuther, president of the United Automobile Workers of America, and former president of the CIO. Mr. Reuther is now an international vice president of the AFL-CIO and director of the industrial department of that great organization.

I have read several newspaper accounts of Mr. Reuther's tour and of the reception he received. None has impressed me more than an article in the Christian Science Monitor issue of Saturday, April 21. The account is written by a reporter whose name suggests that he might be an Indian. If the impressions reported by this correspondent are accurate, and I have no reason to believe that they are anything other than accurate, we all owe Mr. Reuther a deep debt of gratitude, a debt which it is unnecessary to pay, because Mr. Reuther, whom I am proud to call my friend, has always served his country without thought of reward.

Mr. President, I ask unanimous consent that this very interesting article, entitled "India Hails Diplomacy by Reuther," which appeared on page 1 of the Christian Science Monitor of April 21, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIA HAILS DIPLOMACY BY REUTHER

(By Sharokh Sabavala)

BOMBAY.—In a year of Soviet propaganda successes in south Asia, the visit of Walter Reuther to India is a notable victory for western democracy.

The progress through this country of the vice president of the AFL–CIO American labor organization is shaping up into a minor triumph.

Mr. Reuther is spending a fortnight in this country at the invitation of the Indian National Trade Union Congress—the workers wing of Prime Minister Jawaharlal Nehru's ruling Congress Party. But interest in the visit no longer is confined to trade-union circles, as the guest tells his widening audience the story of the American worker, his joys and sorrows, his successes and failures.

Hitherto this story has remained untold. For the average Indian the United States is a faraway, fabulous land peopled by owners of shiny automobiles and mysterious television devices, where poverty is almost forgotten and wealth—not its lack—is the main problem.

So overwhelming are these impressions that very few people in this country take time off to wonder and think about the hard work and effort that has gone into making the United States the world's most prosperous nation.

Mr. Reuther, perhaps, is the first American to make Indians think along these lines. And the net result, to date, appears to be a drawing together of two peoples who are sympathetically made aware of each other's problems.

In New Delhi and Calcutta, his audiences undoubtedly were impressed by the fact that the vice president represents 15 million workers. In a country where the trade-union movement is in its infancy, this demonstration of massed and organized strength holds out a promise of what can be achieved here also.

AUDIENCE ASTONISHED

To be given proof that the United States is essentially a nation of workers is surprising enough. But to hear that these workers still have to fight for their rights against a few remaining reactionary bosses causes astonishment.

At a meeting of members of the Mill Mazdoor Sabha, a textile workers union, Mr. Reuther stated that competitive coexistence should mean competing for better living standards and fighting against poverty, hunger, and social injustice.

As this was translated into simple Hindi, word for word, a member turned to another saying, "This sahib (gentleman) makes sense. He says what we are thinking."

In New Delhi, a similar reaction was noticed when he addressed a more sophisticated audience, the members of the Indian Council of World Affairs. Many of them thought they had assembled to listen to a foreign demagog's peroration.

Instead, what they heard sounded so strikingly familiar that many went away wondering why there was so much talk of Indo-American differences.

At yet another get-together, Mr. Reuther was heard to say that freedom's struggle in Asia would be won on the ricefields and not on the battlefields. "He's got it right first time," murmured a listener, "the ricefield is the battlefield."

PRAISED IN PRESS

Summing up the first crowded week of the visit, the Hindustan Times, which is edited by the son of Mohandas Gandhi, said, "He has helped renew our faith in American democracy. Considering his background, we would like to think of him as a true voice of America."

From Calcutta, a leading Bengali newspaper writes, "From the land of Abraham Lincoln to the land of Mahatma Gandhi comes a man to tell us that neither peace nor freedom can be secured in an age of nuclear giants and moral pigmies. We agree."

Unlike other visitors, who have spoken to Indians against the backdrop of their high moral heritage, Mr. Reuther wades in to bluntly emphasize the fact that Indians are no better or worse than other people.

For 8 years, since the beginning of Indian independence, it has been the tradition to praise and pity this nation as something which is unique, both as to its achievements and its problems.

Now along comes a foreigner to explode this myth, to point out that his nation also is susceptible to the same strains and stresses and capable of equally great, if not greater, achievements.

And his Indian audiences are applauding him vigorously, while embassies in New Delhi hastily revise the rules governing what not to say in this country.

The visit's apparent keynote is a policy of enlightened self-interest. Tell Indians that millions of dollars are being poured in each year to save them from communism and they are inclined to shrug their shoulders.

But tell them, as Mr. Reuther has been doing, that the American achievement cannot be made secure as long as there is want, poverty, and social injustice in any part of the world, and United States aid falls into more comfortable perspective making the receiver less beholden to the giver.

A part of the Reuther success here also is due to his own approach to the problem of colonialism. When United States Secretary of State John Foster Dulles recently tried a similar approach, he seemed to fail to carry conviction.

But when Mr. Reuther, openly disagreeing with some of Mr. Dulles' pronouncements—on Goa in particular—says the overwhelming weight of United States opinion is on the side of freedom from domination of all subject peoples, Indians are more inclined to listen.

Dollar Foolish and Time Foolish: Must Our Air Force Be Second Best?

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. PRICE. Mr. Speaker, the investigation of Air Force strength began this week behind closed doors. When it is over, we hope to be given an answer to this major question: "Are the present and planned strengths of the United States Air Force adequate to preserve the peace through the deterrence of aggression?"

In this week's issue of Look magazine—May 1, 1956—Mr. Trevor Gardner, until recently Assistant Secretary of the Air Force for Research and Development, begins a series of articles on what may justly be called the guided missile mess. During the last 2 years, we have had to face the problem of learning to fly and fight at four times the speeds of World War II and at altitudes so high there is literally no air left. During these same years, we have been confronted with indisputable evidence that the Soviets have made great scientific advances in air weapons and are possibly already ahead of us in the development of guided missiles. Whether the Soviet progress is due to invention or theft, it is equally astounding. But we continue to squander time as though we had invented a way of replacing it. Mr. Gardner says that we are being "dollar wise and time foolish." We are being both dollar foolish and time foolish when we fail to realize that with every tick of the clock the Soviet Union is moving closer to the capability of knocking us out; and yet we continue to do nothing about it.

We go on with a business-as-usual attitude, not realizing that the only resource we cannot afford to waste is time. Because we have a business administration with highly successful businessmen in control, the Air Force budget has been whittled down below the figure Air Force leaders consider adequate. General Twining has testified before the Congress that "137 is just a number" and that "this increase in combat readiness is a goal we are aiming at, not a reality." And General Twining and Secretary Quarles have both admitted that the cuts made in the 1957 budget are one-time cuts which cannot be made again if we are to achieve even the 137-wing goal on schedule.

Mr. Trevor Gardner recently resigned as civilian manager of the Air Force Research and Development program in an honest and basic difference of opinion with the Secretary of Defense as to whether budget balancing or airpower was the more important. With some cynicism, Mr. Gardner calls the budget now being considered by this Congress as "the supreme accomplishment of men who believe in saving dollars even if you have to waste time." Unless we give America the air might America needs to deter Soviet aggression and to build an Air Force adequate for national defense, we can be sure of only one thing: that is, that if the Russians should take this country after defeating us in a cruel atomic war, they will find the budget balanced when they arrive.

Mr. Speaker, our Strategic Air Command needs missiles and planes. The rapid development of both types of weapons by the U. S. S. R. intensifies the need. But in the face of adequate and convincing evidence of this need, the administration continues to juggle defense funds for research and development in an effort to beguile the public with a budget balanced on paper, balanced in appearance, but not balanced against national defense in the scales of history's judgment.

Mr. Speaker, with the consent of my colleagues, I wish to insert in the CONGRESSIONAL RECORD the first of Mr. Trevor Gardner's articles which he has promised to follow with a plan of action to overcome the dangers that face this Nation. Mr. Gardner's article from the May 1 issue of Look is as follows:

MUST OUR AIR FORCE BE SECOND BEST?

(By Trevor Gardner)

With every tick of the clock, the Soviet Union is moving closer to the capability of knocking this country out. Intercontinental airpower and missiles are the new double-edged sword of destruction, hanging by a hair over us all.

The danger America faces has not been apparent to the general public because it has not been revealed. The disturbing facts about the major delays in our continental air defense, the story behind the 137-wing Air Force fantasy, and the accurate account of how Russia is outpacing our country in ballistic missiles have been withheld.

These facts should no longer remain the exclusive, private property of a few Government executives whose main mission in life is to balance the budget. All of us share these dangers. The facts must be known and understood by all.

There is no time for business as usual. We face a crisis as grave as any we have ever confronted in our peacetime history. Its gravity requires President Eisenhower to take the people of this country into his full confidence. He should disclose openly and realistically what threatens our homes and our very lives.

We cannot avert our peril unless we insist upon, and are prepared to pay for, the finest Air Force in the world without further waste of time. This is attainable. The unrealistic obstacles of dollar cost and budget balancing must be brushed aside by decisive leaders capable of understanding that while money is an important commodity, time is priceless. In fact, time is the only resource we cannot afford to waste.

The tragedy in Washington today is that we are being dollarwise and time-foolish. If we abandon our present business-as-usual, time-consuming, committee-ridden approach, we will make a few of the budget types unhappy; but this is a very small price to pay for the kind of national security we need.

Whether we like it or not, our plans for tomorrow's Air Force are being determined just as much—if not more—by the Kremlin as by the Pentagon. We cannot overlook this fact. This is true because in Russia, as well as in other parts of the world, scientific advances are being made with the speed of light while in Washington bureaucracy continues to move like a turtle. Because we refuse to face the facts, Russian realism is prevailing, and Soviet efforts to fully destroy the thin airpower advantage we have threaten to succeed.

This need not happen. But it will, unless we do two things. First, we must provide adequate funds. Second, we must junk the creaking, decentralized reviewing and rereviewing machinery we now so foolishly look to for decisions. In place of this bureaucratic Noah's Ark, we urgently need a streamlined mechanism capable of responding to new dangers as quickly as they become known.

Our Air Force must lead the world both in the quality and in the quantity of its weapons.

In the status of the race for superior quality is a particular disturbing one. It started in the World War I era. In 1917, the United States ranked only 14th in world airpower. Soviet aeronautical science ranked even lower and was—in comparison—still in its swaddling clothes. But the infant Soviet science possessed remarkable vitality. By 1940, it established its own vigorous, independent maturity. This growth was accelerated during World War II and has continued at tremendous speed. During the past few years, the rate of Soviet technological progress has challenged the comprehension of even our most advanced thinkers.

One of the most underplayed facts about the growth of Soviet science is that Russian leaders have established an extraordinarily consistent record of announcing their technical advances.

On November 6, 1947, Foreign Minister Vyacheslav Molotov stated that the secret of the atomic bomb had ceased to exist. Very few people took this seriously. Two years later, on September 23, 1949, President Truman announced that an atomic explosion had just occurred in the U. S. S. R. For a time, this fact stunned many of our leaders, since nearly everyone believed it would still take Russia many years to develop this weapon. However, we soon returned to a comfortable state of national complacency. This again was temporarily shattered on August 20, 1953, when the Russians announced, and the Atomic Energy Commission confirmed, that the Russians had tested an H-bomb.

During the past 6 months, there have been new Russian statements portending ominous things for our national security. On July 30, 1955, 1 day after a White House announcement that the United States had begun development of a space satellite, the U. S. S. R. announced that the Soviet Interplanetary Commission had been formed 3 months earlier, and that rapid progress was being made on space vehicles. This commission includes one of Russia's greatest physical scientists, Dr. Peter Kapitsa. In August, Prof. G. I. Pokrovsky announced that, "not far off" in the future, Russia would be launching space ships on regular schedules. Four days after Christmas, 1955, Prime Minister Nikolai Bulganin greeted the New Year with the statement that rocket missiles had already been under development for several years and were now becoming intercontinental weapons. On February 18, 1956, Marshal Georgi Zhukov stated that if attacked, Russia would hurl atomic bombs at American cities with large airplanes and "mighty missiles."

Based on past performance, these announcements cannot be regarded as mere hollow boasts. Many of Russia's earlier claims were frighteningly validated at the 1955 atoms-for-peace convention in Geneva. There, the representatives of the Western World were startled by the quality of the technical papers presented by the Soviet scientists, and by the understanding of electronics and nucleonics implicit in the Russian exhibits.

This sweeping, fundamental scientific advance has been reflected in the quality of Soviet air weapons. Within a single year, the Russians have shown us six new types of advanced aircraft. All compare well with the most advanced types now in operation here. These new aircraft are powered by six new types of engine, two of them of extremely advanced design. Their intercontinental turboprop bomber, known as the Bear, discloses Russian advances in at least one technical area which we have only belatedly explored. For a backward nation that became acquainted with modern technology less than 40 years ago, this progress in the quality of Russian aeronautical science is astounding. It is equally astounding, one might add, whether Soviet progress is due to invention or theft.

Perhaps even more disturbing is the Russian ability to produce large quantities of air weapons. This brings us to the race for quantity. No one can walk away from the fact that the Russians have demonstrated an impressive mass-production capacity. They actually display substantial quantities of new aircraft in what has come to be known as their annual "May Day flyby"—the military demonstration they make on their equivalent of the Fourth of July.

OUR FLIERS SAVED US IN KOREA

They have done something even more impressive. They have exported, by gift or sale, large numbers of IL-28's, MIG-15's and MIG-17's.

These exports are full of bad news for us. The MIG-15, for example, gave the best American planes we then had (like the Sabrejet) quite a surprise in Korea. It was the quality of our fliers that saved the day. We know that the MIG-17 is an even better airplane than its predecessor. It is a radar-equipped fighter with better engines and capable of higher altitudes than even the MIG-15. And these are the planes the Russians are giving away.

This speaks most eloquently for both the quality and the quantity of their planes. It also telegraph the distasteful fact that their supporting factories are running in such high gear that they can treat a lot of complicated, hard-to-make items as surplus. This includes the armament, electronic, navigation and gunnery systems associated with the planes they now export. Any nation that can afford to treat these associated systems as "spares" has licked some of the most sophisticated mass-production problems of our day.

The best testimony on the quantity race is by Gen. Nathan F. Twining, chief of staff of the United States Air Force. He says the United States now has many thousand fewer jet aircraft than the Russians. The brutal fact is that we now clearly outnumber the Russians in only one class of airplane, the B-47 medium jet bomber. In all other categories, they either do or can outnumber us.

Today's Air Force was bought 3 years ago. It is behind the Russians in quantity. Its quality lead is also slipping dangerously. Obviously, since the Russians have already begun to outpace us, we must find a way to pick up and maintain enough additional speed in the race, not only to close the gap, but to forge ahead of them.

No one questions the patriotism of the civilians who think the way to pick up this kind of speed is to slow down on men, money, research and planes. But there is every patriotic reason to challenge their judgment.

Although our airpower is lagging, the American people have actually been lulled into believing that by July 1957, we will have achieved the goal of 137 wings of combat aircraft. This is a tragic illusion. Nothing could be less realistic. It is well known by responsible Air Force leaders that the 1956 and 1957 budgets can only adequately support a 120-wing Air Force.

Any serious effort to support 137 wings under these budgets would compel the Air Force to postpone modernization of the striking force. The training of personnel would have to be reduced. Additional units would have to be squeezed onto existing airbases, thereby increasing their vulnerability to attack. Finally, expenditures for maintenance and supplies would have to be slashed, thereby jeopardizing the safety of American airmen. To support a 137-wing Air Force, without downgrading already austere Air Force standards, the air budget would have to be increased at least $4 billion over its present $16½ billion level. Without this increase, it is impossible to achieve 137 combat wings of modern aircraft.

When General Twining recently testified before the Congress that "* * * 137 is just a number * * *" and that "* * * this increase in combat readiness is a goal we are aiming at—not a reality," the cat was out of the bag.

Unhappily, this fact is much better known to the Russians than it is to the American people.

The Soviet Union has arrived at its threatening qualitative and quantative posture in the air by pursuing, with unswerving determination, the goal of technical supremacy over the West.

Traditionally, our American attitude toward support of research and development has been anything but consistent. Prior to World War II, research and development for airpower were the business of private concerns.

As World War II approached, defense budgets for research and development did increase. This, together with industrially sponsored work, allowed us to wage that war with modern equipment. Even so, the astonishing technical developments by the Germans of the turbojet, rocket propulsion, ballistic, and other guided missiles left us no

room for complacency. This was soon forgotten, however, and the peak Air Force research and development budget of 1946 was cut in half in 1947.

It was not until 1951, during the Korean war, that the Air Force research and develcpment budget again reached its 1946 level. During this 1947–51 period, priceless opportunities were lost and not a few of the seeds of our present peril sown.

MISSILE RESEARCH DANGEROUSLY DELAYED

The guided-missile programs which were initiated in 1946 could not be vigorously prosecuted. Our scientists were mostly confined to studying what we might build if money should become available. During some of these years, no money was available at all for intercontinental ballistic-missile development, or even for research in this field. The B–52 was carried, during this period, on a similar basis. Study was confined to a number of hypothetical possibilities before money became available in 1951.

The Korean war scare caused a temporary increase in research and development funds, which was promptly reduced again in 1953. Since that year, Air Force research and development funds have been maintained essentially constant at a figure 20 percent lower than the 1953 cut. We appear to have entered an era quite like that of 1946–51, the consequences of which will only be fully realized 5 or 10 years from now.

During the past 2 years we have had to face the problem of learning to fly and fight at four times the speeds of World War II, and at altitudes so high there is literally no air left. This involves new problems in aerodynamics, electronics, and powerplants, problems not just 4 times as complicated as those of World War II, but more like 40 times as complicated.

America's scientists clearly understand the challenges confronting them. They are acutely aware of the deadly implications of Russian progress. They cannot comprehend, therefore, why we have been prevented from seriously examining a number of fascinating and promising new scientific discoveries. These are called technological breakthroughs. The real reason is simple enough. The answer is the financial limitations which have held us down.

These same shortsighted limitations have also hamstrung the financial support we may allot to vital basic research, the discovery of fundamental, new scientific facts. This is one of the greatest mistakes of our time.

Had the same business-as-usual attitude prevailed in 1941, no money would have been available for the fantastically costly basic research project sponsored by Albert Einstein. No Manhattan project would have come into being to unravel one of the great cosmic mysteries. The logic of budget balancing would have supported the continuing development of bigger and better TNT blockbusters.

How differently the race for world power would have turned out if the Russians had discovered the secret of atomic energy first. Today we are faced with exactly the same kind of decision. But now the budget balancers are in control, and basic research is being sacrificed in favor of the improvement of old ideas. This will look good on today's budget books. Tomorrow's history books may well say that, at this point, the United States gambled irrevocably with its future and passed the dreaded point of no return.

The lack of funds in the 1957 budget also prevents us from capitalizing on many proved developments. An example is our recent experience with the F–84D fighter airplane. We successfully proved our ability to zero-length-launch this aircraft. This means that, with slight modifications, we can shoot this airplane and possibly others into the air like a rocket, with no runway or airfield required. This manned airplane is capable of delivering nuclear weapons at high speed within enemy territory. A few hundred of these aircraft, stationed around the Russian periphery in the countries of our NATO allies, fully equipped with fuel and bombs and with their crews on a 24-hour alert, would constitute a formidable additional deterrent to the Russians. Our NATO allies would then be really equipped to help carry out a realistic policy of massive retaliation. Unfortunately, because of the lack of funds, our military planners are precluded from even considering such a simple improvement.

Take the relatively elementary question of providing our Air Force with enough bases to operate effectively, and to protect itself from devastating attack. Our Strategic Air Command is now crowded onto 33 bases throughout the continental United States. It is also deployed on many overseas bases which might be denied to us in the event or threat of war. Therefore, we now depend very largely on elements of the Strategic Air Command situated on bases within the continental United States.

The Air Force planners within the Strategic Air Command and the Pentagon have repeatedly requested more bases, not only because the Russians have been expanding their base system in Eastern Europe, in the Far East and in the Arctic, but because crowded bases are booby traps. They needlessly endanger both men and planes and jeopardize our ability to retaliate against surprise attack.

The Air Force has also repeatedly asked for funds to train more men, modernize its planes and increase the force of combat-ready aircraft. It has petitioned again and again for more B–52 bombers, one of the few planes that will give us a quality advantage in air power. Our Air Force generals have requested more of these planes because they know the Russians not only have a counterpart in their Bison, but also because they know the Russians have more Bisons than we have B–52's.

Although the State Department for the last 18 months has proclaimed a policy of massive retaliation, the Bureau of the Budget has ignored the pleas of the Air Force for the means to execute it. The ability of the Air Force to retaliate massively is dependent upon:

1. The ability to detect a surprise attack.
2. The capacity to absorb whatever destructive portion of the attack we cannot destroy.
3. The possession of enough remaining strength after we have been hurt to mount a decisive retaliation in the air.
4. Above all, the ability to maintain an overwhelming lead in airplanes and missiles, and the base structure to support them.

Within the Defense Department, the response to these needs has been to maintain a business-as-usual attitude, reduce the budget and limit our expenditures. Meanwhile, the budgeteers have insisted that the research-and-development effort, the force responsible for the strength we have, is wasteful and duplicative.

Both the procedure for establishing the level of expenditure, and the arbitrary manner in which cuts are applied, reflect the same complacency on the part of the civilian leaders in the Pentagon today that provoked Gen. Billy Mitchell's revolt against the defense planners of his time.

Secretary of Defense Charles Wilson has vitalized this wing-collar complacency into a procurement policy known as "fly-before-you-buy." It is the supreme accomplishment of men who believe in saving dollars even if you have to waste time.

TEST MODELS NEVER WON AN AIR WAR

The fly-before-you-buy policy means that each new airplane must be procured in small quantities initially, and be thoroughly tested over a protracted period of time before large-quantity commitments are made. From a budget point of view, this is an excellent precaution. It not only reduces the chances of error but also defers heavy expenses to later years. In the development of automobiles and telephones, this is a necessary and sound business practice. Unfortunately, no battles will be won by hurling one test model of the world's best airplane into the air when the enemy attacks. Such a policy is dangerous to the point of being suicidal. It only assures the Russians that should they take this country over, they will find the budget balanced when they arrive.

During the past 2 years, we have known enough about many advanced aircraft to abandon our supercautious attitude with a negligible degree of technical risk. We must recognize the threat confronting us and adopt the policy of buy—then fly them.

The point is illustrated by the development of one of our most advanced fighter aircraft, the Lockheed F–104. This air weapon was conceived by one of this country's most brilliant aeronautical engineers, Clarence E. (Kelly) Johnson. In 1952, Johnson decided that it was time to develop an extremely high-performance day fighter which could clearly outperform any imaginable Russian air weapon.

He sold his idea to the Air Force and was awarded funds for research. With this money, he proved his theory, and by early in 1954 had a prototype of this magnificent new air weapon in the air. Under the fly-before-you-buy policy, his company, Lockheed Aircraft Corp., obtained a pitifully small order for seventeen 104's. Had a production order been given in 1954, we could have had these airplanes today in operational quantities.

Instead, we recently placed a cautious order for a small production quantity which calls upon less than one-fourth of Lockheed's capacity. These planes will not be operational until the end of 1957. Should we become involved in a little or a big war before then, our airmen will have to be content with something less than the best—a dangerous business in this H-bomb age.

As a nation, we have been extremely lucky that so many of our jet-aircraft experiments have worked. We have a large selection of advanced aircraft to choose from. But, unfortunately, the tragic story of the F–104 has been repeated through a wide range of aircraft weapons. We continue to squander time as though we had invented a way of replacing it.

The F–101, a high-performance fighter, the F–102 and the F–105 all must have their production rates dramatically increased to modernize our fighter Air Force at the winning rate. For in this business of airpower, winning is our only aim.

In the field of bombers, where the production rate of the Russian Bison is clearly ahead of the B–52, we must begin to win by procuring approximately 500 additional aircraft, and by doubling or even tripling the present production rate during the next 15 months. Similarly, we must increase the production quantity and rate for the B–52 companion piece, the KC–135 jet tanker.

These are all large, expensive but necessary steps if we are to meet the growing threat of Russia's air force.

Beginning early last June, the annual dismal, bureaucratic procedure of budget preparation was begun in the Pentagon. Air Force officers charged with the preparation of this budget were concerned about the effectiveness of our existing Air Force. They feared that we might lose the airpower race with the Soviets.

The Air Force reflected its concern in early September with a budget which called for $20 billion of new money for 1957. This budget request was met with an order which said in effect: "You can have no more than $18.8 billion. We don't care what you eliminate to meet this figure—but that is all you're going to get." This was bad, but the worst was yet to come. Between October 10 and December 21, the Air Force was ordered to make 11 separate revisions in its budget.

This abnormal series of revisions and cuts finally hacked the 11th version of the budget to a flat $16 billion for airpower.

Dismayed, several senior members of the Air Force management team finally prevailed upon the Secretary of Defense to increase the 11th version by one-half billion dollars. The 12th and final version of the Air Force budget, calling for $16½ billion, was submitted to the Congress. However, a great price was exacted in return for even this inadequate increase. The civilian leaders who accepted it were committed to "hold still," to forbear from pleading their case to the public or the Congress.

In the face of this, a concerned chief of staff, torn between his earlier endorsement of a much higher budget and his dedication to the principle of civilian control, characterized the budget before Congress as "austere" and capable only of meeting "our most essential needs on a minimum basis." Lest there be any doubt remaining about the real meaning behind his statement, General Twining significantly added, "To keep this minimum program going and to reach and support 137 wings will require an increased budget in 1958."

Prior to writing this article, I resigned as civilian manager of the Air Force research-and-development program over an honest and basic difference of opinion with the Secretary of Defense as to whether budget balancing or airpower was the more important. I believe that with all the facts available the people of this country should not be subjected to the dire consequences of possessing the world's second-best Air Force.

Modern Seapower

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mr. QUIGLEY. Mr. Speaker, my attention has been invited to a speech delivered by Adm. Arleigh A. Burke, Chief of Naval Operations, more than a month ago in Baltimore. As a veteran of the Navy during World War II, I found the remarks of Admiral Burke to be extremely interesting as well as reassuring. I am certain they should prove equally interesting to other Members. Admiral Burke's remarks follow:

ADDRESS BY ADM. ARLEIGH A. BURKE, UNITED STATES NAVY, CHIEF OF NAVAL OPERATIONS, BEFORE THE BALTIMORE EXECUTIVES CLUB, BALTIMORE, MD., MARCH 19, 1956

It is good to be back in Baltimore again. Baltimore is home to a lot of Navy men past and present. Baltimore will be home to many Navy men in the future. Many of us remember Baltimore as the big city through which we passed on the last leg of our journey to enter the Naval Academy. In fact, Baltimore is considered by many as the home port of the United States Naval Academy, and some of the Naval Academy's major home athletic events are staged here.

Baltimore is home to the Navy for another reason. Its history is steeped in naval lore. Many famous naval commanders came from Baltimore. Adm. Raymond A. Spruance, one of our greatest combat commanders of World War II, was born here. Joshua Barney, another son of Baltimore, participated in the gallant defense of his homeland against the British in 1814.

It was here in Baltimore under the supervision of Thomas Truxton that *Constellation*, one of the great ships of our history, was built at the cost of $314,000. *Constellation* was one of the first men-of-war authorized by Congress. Her exploits gave courage to our struggling Republic at a low point in our history. The famous Baltimore clippers were fitted out here by the merchants of Baltimore. Those were the ships which exacted such a heavy toll of merchant shipping right under the guns of the powerful British Navy.

The city of Baltimore has suffered from the sea; she has also profited from the sea. Baltimore is one of our great seaports today. She is the third leading port in the United States in import-export commerce. From the point of view of a sailor, there is no limit to the future of Baltimore as a great seaport. Baltimore today is one of our country's gateways to the world. Anyone who observes the flags of many nations flown by the ships moving in and out of this great seaport must realize that Baltimore is a nextdoor neighbor to every seaport in the world by way of the sea.

The influence of the sea on the growth, the prosperity, and the security of Baltimore has been great in the past. Its influence will be even greater in the future.

The importance of the seas to prosperity and security of the entire United States will continue to increase. One need only glance at a globe to see why. This earth of ours is covered by a world-encircling ocean. The principal land areas, that is, the continents, are actually large islands in this great world ocean. The oceans provide deep waterways into the very heart of the continents—waterways like the Mediterranean Sea, Chesapeake Bay, the Gulf of Mexico, and many others. These waterways provide access to the important economic and population centers of the world.

Traffic on the oceans and seas of the world is very heavy. Ocean traffic has been increasing year after year. Today, for example, from 2,000 to 2,500 ocean-going ships are at sea in the Atlantic Ocean areas plying the trade routes transporting the immense traffic of civilization—traffic which increases in volume year by year. This ocean traffic is the lifeblood of civilization. It is the lifeblood of many nations. Cut off this traffic and nations die. Protect this traffic, keep it moving, and nations live and continue to grow and prosper. This is the reason that in time of war, the great oceans become a giant, interconnected battlefield. The victor on this giant oceanic battlefield gains access to the majority of the populations and the resources of the world. He who has command of the seas can, in his own time, assemble and motivate these vast human and material resources against the land of his enemy. The loser on this oceanic battlefield stands isolated, cut off from the resources and help of others. He must prepare himself as best he can for an isolated, last-ditch defense in and over his own homeland. Once control of the seas is lost, he can do little more than postpone the inevitable defeat which he faces.

As the years go by, the violence of warfare increases. This is true on and over the land; it is also true on, over, and under the seas. A hundred and forty years ago, Baltimore's Fort McHenry was bombarded from the sea. In those days, the citizens of Baltimore looked out over the water and saw the danger that confronted their city. The range of the naval weapons of those days was 2 or 3 miles. The destruction power of those early weapons was relatively small. The range of naval weapons of today and tomorrow are many, many times greater. The power of modern naval weapons is increasing by leaps and bounds. Navies are moving ahead into the age of nuclear power, nuclear weapons, and supersonic aircraft. In this nuclear age, it becomes of vital importance to every man, woman, and child in the United States that the United States Navy be able to control what goes on out at sea. Where our forebears were concerned only with what was happening within a radius of 2 or 3 miles of their homes, as was the case in the bombardment of Fort McHenry, we must now conecrn ourselves with what is happening 100 miles at sea, 500 miles, 1,000 miles, 1,500 miles, and beyond. The immense power and range of modern naval weapons has presented new problems to the Navy, new problems to the people of the United States—problems which must be faced and solved if we are to survive and prosper.

The importance of navies is increasing as we move ahead into the nuclear-missile age. The importance of control of the seas is increasing. Most of our friends and allies are located across the seas. The free world is actually an oceanic confederation. The free world depends for its existence upon the sea communications which bind it together. Cut off our sea communications, and many countries of the free world will find themselves isolated, without help, without reinforcements, and at the mercy of some totalitarian aggressor.

Our Government recognizes the importance of sea communications to our security. We know this because one of the cornerstones of our foreign policy is collective security. We have mutual defense treaties with 42 nations, and other commitments with 20 more nations—all overseas. These treaties would not be worth the paper they are written on if the United States Navy should lose control of the seas, even temporarily.

We know, of course, that our Government has no intention of giving up control of the seas under any circumstances. To prove it, we have backed up our vast overseas commitments by keeping large detachments of our Army, Navy, Air Force and Marine Corps deployed on three continents across both the Atlantic and Pacific Oceans. We have developed over the years a huge overseas investment in foreign aid programs, in a worldwide system of air bases, in stockpiles, in the thousands of men we have deployed overseas. Unless the United States remains supreme on the seas, our overseas forces and bases, our overseas interests, our allies, will face capture or destruction. If we should be cut off from our overseas forces and our allies, we in the United States will be isolated and will face eventual military defeat.

Today, the Navy has tremendous responsibilities. These responsibilities are increasing as our overseas interests increase and as the threat to our control of the sea increases.

The Navy has tremendous responsibilities in the cold war as well as in limited war and all-out nuclear war.

Let us consider these responsibilities only briefly. Take all-out nuclear war first. In case of an all-out atomic surprise attack, naval forces ready for action at sea will be among the first to retaliate. Perhaps after both sides have made their initial strikes, the United States' ability to take further action will depend on the mobile striking power we have dispersed at sea.

The Navy's responsibilities in case of limited war are also very important. It would have been impossible, for example, to stem the Communist attack on the Republic of Korea in 1950 if the United States Navy had not been ready, nearby, and on the job. It would not have been possible to destroy the Communist offensive poyer by the Inchon landing if the United States Navy and the United States Marine Corps had not been on the job ready for action on relatively short notice.

Let us now consider the Navy's cold war responsibilities. The United States Navy is carrying the load today in the cold war. Our powerful 6th and 7th Fleets are guarding the interests of the United States in the principal trouble spots of the world. Today, those trouble spots just happen to be in the western Pacific and the eastern Mediterranean. Tomorrow, the trouble areas may shift elsewhere. But wherever trouble is brewing, the United States Navy will be first at the scene, ready for action. Our ships will stand guard in troubled waters in a quiet, unprovoking manner, as long as it is in the interests of the United States to do so.

Here is something else that is important. Those who serve overseas in our 6th and 7th Fleets promote a feeling of confidence, good will, and friendliness toward the United States among the countries they visit. This sort of good will cannot be measured in terms of dollars or military hardware.

Now, just a brief word about our competition. If the aggressor can destroy the unity of the free world, he will have gone a long way toward achieving his goal of world domination. The Communists are working hard today—very hard—to destroy free world unity. They are using every political trick, every economic maneuver, that they can possibly think of to destroy free world unity. Their political and economic strategy is isolate and destroy, divide and conquer. Once unity is destroyed, they will be able to gobble up the free world in bite-size chunks. This same strategy of divide and conquer carries over into the military field. In case of war, the aggressor will attempt to isolate the areas which he desires to absorb and then destroy or capture, isolate and destroy, divide and conquer. This is the basic strategy of political, economic and military aggression. This is the strategy with which we are faced today; a strategy being pursued by a strong, determined, persistent Communist police state. This strategy will fail if the free world stands together. The free world can stand together if the United States Navy can do its job.

There is no question but that the Communists recognize the importance of sea communications to the free world. They have been engaged in an unprecedented naval building program since World War II. They have allocated critical materials to this program—critical steel, electronic equipment, fire-control equipment, and manpower—which they could ill afford unless they considered this project extremely important. They have allocated resources far beyond their purely naval defensive needs. They have a powerful submarine fleet, it is still growing. They are building new cruisers, new destroyers, at a very rapid rate. They are expanding their naval aviation, they are expanding their overall air capability to attack and destroy vital shipping. This is the isolate part of their basic military strategy of isolate and destroy, divide and conquer.

The Communists have made and are still making, rapid progress in nuclear weapons, guided missiles and electronics. Many of their new developments have surprised us in the past. We could be surprised again.

The threat to the United States' control of the seas is growing, but the United States Navy is not standing idle. We have a tough problem, but we are determined to meet the threat; we are determined to meet our world-wide responsibilities for control of the seas, come what may. We are determined to meet our day-to-day cold war commitments as well.

The United States Navy is ready today. It must be ready to fight and win today or tomorrow if we are called upon. We must be ready to fight with today's ships, with today's aircraft, with today's weapons. We must be ready to defeat today's aggressor today, if necessary. However, while we maintain our readiness today on our far-flung oceanic frontiers, the United States Navy is also moving rapidly and confidently into the nuclear-missile age.

We are shifting to nuclear power as fast as we can. The performance of the submarine *Nautilus*, for example, has been far beyond our expectations. We are moving ahead with a comprehensive program for nuclear-powered attack submarines and guided-missiles submarines. We are preparing to build a nuclear-powered missile cruiser, and are designing a nuclear power-plant for an aircraft carrier.

Nuclear power in our ships will give us tremendous advantages, many of which are only now becoming apparent. Nuclear power will greatly increase the endurance of our ships, the mobility of our ships. It will cut down a major logistic problem—the problem of frequent refueling. In the nuclear-powered ship, top speed also becomes the sustained cruising speed. This is particularly important in smaller ships which now must be refueled so often. Nuclear-powered ships will not need boiler uptakes or smokestacks. This will give them more room for the new aircraft and the powerful new weapons we have coming along. We will be able to design our nuclear-powered ships primarily around their powerplant and the weapons they carry rather than around their fuel-carrying capacity as is the case with present ships. We will be able to design ships with much greater resistance to atomic blast, heat, and radiation. Even today's ships have greater resistance to atomic weapon damage than almost any other type of structure or military hardware. Our new ships will be even tougher.

Naval aviation is moving rapidly into the supersonic age. We will soon be operating supersonic planes from our new attack carriers of the *Forrestal* class. We are developing faster, better attack aircraft. We are developing high-performance fighter aircraft.

The new jet seaplane which is being constructed here at the Martin plant in Baltimore has tremendous possibilities. It looks like a natural. It is fast. It has long range. It carries a heavy load. It will be able to operate from sea areas all over the world using submarines or surface ships for bases. Nuclear power for aircraft will be here some day. When that day comes our seaplanes will have nuclear power.

We are shifting from conventional power to nuclear power; we are shifting from guns to guided missiles; we are shifting from subsonic to supersonic aircraft. We are increasing our capability to detect and knock down attacking aircraft from very high altitudes and at very long range. We are increasing our ability to sink submarines at long ranges. We are developing long-range, surface-to-surface missiles that will greatly increase our Navy's long-range offensive power. We are developing amphibious techniques that will enable our Marines to land from the sea against all types of enemy coasts and all types of enemy opposition. All these things we are developing simultaneously.

So you can see that the science of naval warfare is advancing at a very rapid rate. It is therefore more important than ever that the citizens of our country be kept up to date on the increasing power of new naval weapons and upon the increasing importance of the Navy. The United States needs the most powerful, modern Navy that science can devise if we are to maintain our naval supremacy in the nuclear-missile age.

Keeping our Navy supreme on the seas is everybody's job. Everyone in the United States Navy, from boot seaman to admiral, is working hard at the task of making a better, more effective Navy. We also need the help of every citizen in the United States. What we need, more than anything else, from our citizens is their understanding of the tremendous problems we face. The Navy needs your enthusiastic support in our efforts to stay on top of these problems.

We know that our job is difficult. But we know that we are improving; we know that we are moving ahead; we know that we have the best Navy in the world today. We know that it will be better in the future. With the understanding and support of the people of our country, we know that we will be ready to do anything that our country requires of us.

Supreme Court Chisels Away at States Rights

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a very important article by Mr. William Henry Chamberlin which appeared in the Wall Street Journal on Monday, April 23. The editorial is entitled "Eroding Rights," and in it Mr. Chamberlin points out that in three recent cases the Supreme Court has embarked upon an increased and undesirable trend to diminish the authority and responsibility of State and local agencies of Government, especially in the field of legislation dealing with the Communist conspiracy.

Mr. Speaker, this is a very important analysis of the Supreme Court's action, and it is high time that Congress moves to prevent this usurpation of legislative authority.

The article by Mr. Chamberlin follows:

ERODING RIGHTS—THE ASSAULT ON STATE AND LOCAL AUTHORITY CONTINUES, AS SOME RECENT INSTANCES MAKE ABUNDANTLY CLEAR

(By William Henry Chamberlin)

There have been three recent instances of an increasing and undesirable trend to diminish the authority and responsibility of State and local agencies of Government—notably their power to deal with Communists.

One was the Supreme Court's annulment of State laws against sedition on the ground that the Federal Government has preempted this field. This makes the uncovering of the hidden roots of Communist conspiracy more difficult, and some State legislative committees and law enforcement agencies have performed useful services in that regard.

The ruling also diminishes the general authority of the States, which has been steadily declining in proportion as the Federal bureaucracy has been expanding in power and numbers. Many expected the present Administration to reverse this trend, but its achievements so far have been disappointing.

A second hint of the erosion of local rights is Attorney General Brownell's suggestion, not yet enacted into law, for eliminating the existing requirement that all State administrative and judicial remedies be exhausted before access can be had to the Federal courts. The affront to State sovereignty in this proposal is obvious.

OVERRIDING A RIGHT

Finally, there is the Supreme Court decision which overrides the right of New York

City to dismiss employees who invoke the self-incrimination provision of the fifth amendment to avoid answering questions about their official conduct put to them by a properly constituted authority. The case at issue was that of Professor Harry Slochower, who refused under the fifth amendment to answer the question of a Senate investigating committee about alleged past Communist affiliations. Under a New York City regulation he was automatically dismissed.

This Supreme Court decision was given by a 5-to-4 majority. In other words, considerations of law and equity were pretty evenly balanced. What was good law to 5 justices was bad law to 4.

And indeed the ruling that Slochower was unjustly treated and entitled to reinstatement seems questionable on 2 grounds. State and municipal authorities possess the right to take measures against Communist infiltration in schools. And they have a right to exercise reasonable discretion in establishing terms of employment.

The dissent framed by Justice Reed with the concurrence of Justices Minton and Burton (Justice Harlan entered a separate dissent on a slightly different basis) contains an incisive statement on the implications and limitations of the fifth amendment:

"Cities, like other employers may reasonably conclude that a refusal to furnish appropriate information is enough to justify discharge. Legally authorized bodies have a right to demand that citizens furnish facts pertinent to official inquiries. The duty to respond may be refused for personal protection against prosecution only, but such avoidance of public duty to furnish information can properly be considered to stamp the employee as a person unfit to hold certain official positions."

Justice Harlan, in his separate dissent, backs up this line of reasoning with the following observation: "I think that a State may justifiably consider that teachers who refuse to answer questions concerning their official conduct are no longer qualified for public schoolteaching, on the ground that their refusal to answer jeopardizes the confidence that the public should have in its school system."

REFUTED VIEW

These considered opinions, delivered by high legal authorities, are calculated to refute the view that no inference may properly be drawn from the resort to the fifth amendment in cases involving communism and corruption. The fifth amendment, it is true, specifies that no individual may be compelled in any criminal case to be a witness against himself. But it does not specify that this individual shall enjoy the same esteem and confidence in the eyes of his neighbors, of the general public, of his employer, whether public or private, after he has invoked the amendment.

A university so well-known for its broad and tolerant conception of academic freedom as Harvard has pronounced members of its faculty who invoked the fifth amendment before congressional investigating committees as guilty of misconduct, although not so grave, unless aggravated by other circumstances, as to warrant dismissal. Other universities and colleges have treated the resort to the fifth amendment as cause for dismissal.

The overwhelming majority of the American people are opposed to Communists in Government offices and also to Communist teachers in schools. And this is not, as doctrinaire libertarians would have us believe, because of prejudice against a small group with unpopular views.

It is because Communists and Communist sympathizers in Government employment have habitually betrayed their trust and used their positions for purposes of espionage and for influencing policy decisions in favor of the interests of a hostile foreign power. It is because Communist teachers are bound by party discipline to abuse their positions for purposes of indoctrination.

ANOTHER BLOW

In view of these considerations, it does not seem that the New York City regulation, upset by the Supreme Court ruling, was unreasonable or out of line with public sentiment. What does seem clear is that this ruling, like that on sedition, is another blow to local rights and responsibilities.

In a Nation so large as the United States and so varied in social and economic traditions and conditions, complete centralization of power in the Federal Government is undesirable and probably unworkable. It would be well to consider carefully the implications not only of the fifth but also of the tenth amendment: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."

You're Wonderful—In a Changing World

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. CANFIELD. Mr. Speaker, I was fortunate to be a guest at the closing luncheon meeting of the First Women's Congress on Housing here in our Nation's Capital and I was impressed by all I saw and heard.

Here were 100 women from all parts of our country, a large proportion of them mothers of big families, giving their Government their views on housing. The delegates at my table were most enthusiastic. One said she wished the sessions could be continued for a longer period; another added she had become so impressed by the approach of our housing people in Washington she felt better about paying taxes.

There was one speaker of the day and she was Mrs. Joan Wade Rindlaub, a New York advertising expert, and her theme was You're Wonderful—in a Changing World. She complimented the delegates on their obviously sincere efforts to be a part of the solution, not a part of the problem.

Her address follows:

YOU'RE WONDERFUL—IN A CHANGING WORLD

Hello, all you nice people. I know why you're here and it seems to me a fine thing. High time somebody got around to asking women what they want in their world—what have we been waiting around for all this time anyway?

You see I write advertising. In my business we have to know all about women. So we go out and ask questions. Golly, we've learned a lot about you by asking questions. The nicest things. And the darndest things. We find out that you're kind of afraid to make cake—cakes don't come out so good for you—so someone goes out and comes up with a cake mix so woman-proof that anyone can make it and we can guarantee it will come out perfect every time. And it does—and you love us for it—things like that. Or we find out that you aren't afraid of cakes but frostings are your problem, couldn't you just sort of throw on a sauce—so we think up a lot of sauces for you to throw on—things like that. Goes on all the time. You'd think everybody knows when people eat—breakfast, lunch and dinder, that's when. Or is it? Nope. More food is downed in this country at a fourth meal that's kind of snuck up between 9 o'clock and midnight than between 6 and 9 in the morning. Or so you tell us when we ask questions. You'd think everyone knows where people eat. In the diningroom, that's where. Yes—if you're not eating in the kitchen or out on the terrace or down in the game room or on the living-room floor. What do people eat? Now it gets really complicated. I could take a long time to tell you all about you on that one—there's only one thing that really matters though. You're eating a lot better, all of you, than you did even as short a time as 10 years ago. So you see why we have to keep asking questions to keep up with your changing world.

I've been thinking about this midcentury of ours. Think of the life of a boy born in 1900. Could his mother have foreseen the changes ahead for that bit of humanity—from the horse and buggy to the car and plane and jet—from slow-mail to wireless and telegraph and telephone and the Atlantic cable and radio and television. From 10-day boats to the Queen Mary—(just this year, for the first time, more passengers flew the Atlantic than crossed by ship.) From gas lamps to indirect lighting. From red flannels to nylon briefs. From sulfur and molasses to sulfathiazole. From the music box to hi-fi. From palm-leaf fans to air conditioning. From coal stoves to electric ranges built in the wall. From cold cellars to home freezers. From lantern slides to cinerama. From radios with earphones to portables for your purse. From outside Chic Sales to bathrooms with twin tubs. From the ear trumpet to the transitor. Whee! That was a half century! The boy of 1900 lived in a house that had never known an electric washing machine, dishwasher, vacuum cleaner, toast, iron, range. It had never seen a soap flake or detergent or a bug bomb—nor frozen foods or canned milk or baby foods—nor cake mixes or brown-and-serves or ice cream packed in dry ice. Not one of all that gay array of things in boxes and bottles and cans. The department store his rocking horse came from had never sold a radio or a TV or a sunlamp or a zipper or a wrist watch. The dressmaker who came to the house to outfit the family knew nothing of rayon or nylon or orlon or dacron. A man could buy a suit of sorts, but a woman would find it hard to buy a ready-made dress or a permanent wave. Mother got along, who can tell how well, with no more cosmetics than a little rag she called "My shammy." The old man manned the office minus bookkeeping machines and electric typewriters and ballpoint pens.

Don't let me bore you. This is your world. You've lived through it—through the tranquil years of the early 1900's the war years, the mad twenties, the sad thirties, the turbulent forties, and the constantly demanding, challenging, stand-your-world-on-end years since the Second World War.

In a Fanny Farmer cookbook at the turn of the century there was a prophetic statement. "There's a new-fangled kind of yeast that comes in a little compressed cake and some women have found that it is perfectly safe to use it." There have been new-fangled yeasts afermenting in a thousand and one fields through the half-century just past and some women and some men, too, have found them more than perfectly safe—they have been richly profitable. New-fangled yeasts. They've fermented in your life, too, I'm suspecting. I know they have in mine.

Do you have a little more money to spend than your mother at your age? Do you spend it a little more freely? You're right at home in the changing world. Have you traveled more? Everybody's doing it.

Do you have a little more education? Will your children have a little more than you? Changing world. Today's customer has been around more. She's moving more. Five million moves a year—4 moves to a family in the last 10 years. No wonder men want to know what you want in your houses.

There are more women with jobs in today's world—1 in every 2 women in the labor force is married. More than 1 in 4 mothers manages an outside job. More children in school. More people over 65. These facts color our wants and our needs.

And other forces stretch and widen our imagination and our taste. For today's customer has read more—more books, more magazines, more serious reading. She's heard more and better music. She's enjoyed more art. She's seen more of the world on TV. She's been more involved—in clubs and churches and community activities. And so the people who go out to ask you questions and the people who sit at home and study the answers agree on a great many things—today's customer, they report, not only has more money and more leisure and more children and more work and more play but—you will like this one—she has more sense. This, I think, is a fine thing. Fine thing for men to find out. Of course, we've known it all the time. But the new awareness of women's basic intelligence and good sense has had a wholesome influence on today's advertising and selling programs. It is one big reason for things like this conference. There's a new maturity in a lot of the programs and products intended for you these days—because men know that, because you have more sense, your picture of the good life has changed a little.

This year in my business we are all beginners, finding out afresh all about our customers and their good life. For you make your buying choices, says the 20th Century Fund's study, America's Economic Resources, you choose the kind of a life you wish to lead, according to your own picture of the good life.

This is important—to Government and to business. And it's easy to show you why. Suppose for a minute you picture the good life as a free, untrammeled, outdoor life, a casual life. You can see for yourself that a cosmetic manufacturer would need to know that—he has to look for ways to give you loose, easy curls, not tight, city-looking hairdos. And a food manufacturer would want to come up with quick and easy convenience foods, not slow and complex recipes. And a clothing manufacturer would want to dream up slacks and separates and play clothes and pay less attention to formal gowns. And an automobile manufacturer might build new station wagons and bring out his cars in gay country colors. And an electrical manufacturer might come up with ways for you to take electrical conveniences along outdoors—outdoor cooking equipment, picnic equipment—or might develop new ways to cut your time in the house so you can have more of the good life as you want it.

So you see it all begins with you. You dream up your good life and we work to make your dreams come true.

What is it like, this good life, as American customers picture it—and live it—today? It's a spending life, the books tell us. It's a spending life, this good life. The 20th Century Fund says, rather grandly, today's customer has "a propensity to spend." Men used to call it money burning holes in her pocket. You are ready to pay for the good life as you see it. You've been buying more durables—things that last, like houses, refrigerators, new stoves, new cars. You've been spending more, deliberately more, for food. You've been spending less for movies, more for television. You've been buying less clothes. Clothes don't seem to be the symbol of the good life that they used to be any more.

The good life is a family life. You've been marrying younger, having first babies younger, second babies younger—confounding the experts by having more children than they expected.

The good life is a country life. You got off of the farm and into the city and learned a few things, and now you're heading back for the country, or at least for the new suburbia, as fast as you can say "split level ranch house with a first and second mortgage."

The good life is a homesome thing—a stay-at-home life. It's a do-things-together life. The Overstreets call it "togetherness"—and they take a pleasant view of it. "The new Adam," they say, "is not embarrassed to be seen drying the dishes or attending a PTA meeting. He is the right sort of companion for the new Eve, the many-sided, resourceful, yet feminine woman of today." What are Adam and Eve up to in their new togetherness? You know. You're cooking together. You're down in the workshop together. You're praying together in the greatest revival of religion this country has ever known. You're playing together—active sports, parlor games, community activities. You're taking trips together—going on picnics together—bringing up the children together. Who's putting on wallpaper these days? Paperhangers? Nope. Sixty percent of all wallpaper going up in America is put on by Adam and Eve. Eve soaks the strips of paper, Adam puts them up. Who's laying linoleum? Adam and Eve. Who's doing the dishes? Adam and Eve—or sometimes poor, lone Adam.

I was riding on a bus on New Jersey's route 4 recently. The bus stopped at the New Jersey side of the George Washington Bridge and a young couple came aboard. The little wife sat down near me. Her tall, blonde husband paid the driver and came on through the bus. "Come on back, honey," he told his wife quietly. "There's a better seat back there together." They weren't going far. Just across the bridge. Five minutes. But 5 minutes or 5 years—they had found a deep secret of the good life—the secret of togetherness.

I've been telling you some of the reasons why we know good things about you. Explaining, I hope, a little bit of why American government and American business are both working harder today to understand you and your present and your future.

To keep this booming civilization of ours on an even keel, it is not enough for government or business merely to meet your wants and needs. We have constantly upon us the obligation to be out in front of you—to help broaden your picture of the good life—that you may profit by the new abundance.

That you may profit by the new abundance. That, I think, is the keynote of much of the thinking in government and business today. And a lot of people are working at it. The electrical industry is working at it.

At the beginning of this century less than 2 percent of the homes in the United States were wired for electricity. Today we've reversed that—98 percent are wired.

Today electricity can heat our homes, warm our blankets (and baby's bottle), supply us with limitless hot water, cook our meals, and wash and dry the dishes afterward. Electricity can cool our homes, freeze our food, cool and dry and circulate our air, make ice cream, and give us a limitless supply of ice cubes. Electricity can wash, dry, and iron our clothes, clean house, entertain us, and light our homes so they'll glow with charm and cheer.

Sounds like a wonderful world to live in, doesn't it? But is it? Nope. And you know why: Half of all the homes in the United States were built before 1925. In those days homes were wired for lights and the 15 appliances then available. The annual electrical consumption of the average home was 400 kilowatt-hours. Today there are 54 electrical wonders on the homeowner's list of things to buy—the average consumption figure has jumped to more than 2,700 kilowatt-hours. But what about the wiring? Fuses are popping like champagne corks all over the land.

It isn't only older homes that suffer. New homes—millions of them—being built today are being equipped with minimum electrical power. (Oh, the poor benighted unimaginative minimum.) The cost difference between the minimum and the ideal is small, but when new homes are built on a let's-save-every-penny-possible basis the wiring suffers and many homes are sold today with wiring that's obsolete even before the first owner moves in.

A lot is being done about this. A lot is being done to educate the millions of perspiring, pillow-punching, sleep-hungry people who plank down hard-earned money for an air conditioner—only to find that their home doesn't have the "housepower" to make the thing perform. A lot is being done about the millions who save and save and finally buy mother that shiny efficient rotisserie—only to find that when it's on, and the refrigerator starts up, the fuse blows and the whole house is plunged into darkness. A lot is being done to tell appliance buyers that in order to live better—electrically—they need three things, enough power (service entrance) from the electric utility company; enough circuits and outlets at convenient places all around the home; and the wonderful electrical products and appliances that roll off our factory assembly lines in mouth-watering decorator colors.

A lot is being done by the makers of building materials to give you things that you want—more space, or the effect of more space, in your houses, more color, more texture and textured materials, more soundproofing, more informality in design and colors, more practical interior surfaces—easy-to-clean-floors, washable walls, more freedom from housework, more time for your family. A lot is being done by the makers of modern living fibers to give you rugs and curtains and slip covers and draperies that are easy to wash and quick to dry and practical and beautiful, too. A lot is being done to understand you better—your need to love and to be loved, to be understood and respected and liked. You are hungry, and you want to be fed with a minimum of trouble and a maximum of satisfaction. You are weary, and you want to be housed with a minimum of work and a maximum of comfort. You are busy and you want to be clothed with a minimum of trouble and a maximum of good appearance. You are lonely islands, you want understanding and things that will help you to be understood. You get up in the morning and work hard all day and you come home tired and there's always something to worry about, somebody is mad or somebody is sad or somebody is broke or somebody is blue. You have big worries and little worries and the days go by and the years go by and things don't work out the way you hoped. We who ask questions, we who plan programs, we who write editorials and advertising, we know these things about you. More and more we are trying to be helpful, to be understanding, to give you new ideas to make your lives gayer or brighter or simpler or in some definite fashion more livable. We are trying to satisfy your deep-down needs.

For just as the world has grown in the last 50 years, so I think that every individual must grow bigger, stronger, deeper, grow in understanding, grow in awareness, grow in stature, to meet the mixed-up world's demands.

I ran across a question the other day—Are you part of the problem or part of the solution? The Government is trying, and manufacturers are trying, to be part of the solution to your problems—not to make more

problems for you. But I think you will want to try, too. Try to be part of the solution of the safety problem—this is something only you can do. You can make a safety tour of your house, as a mother, as a father, as your home's safety engineer. You can get the whole family into the act, march around the house and have every member of the family think up ways to make the place safer to live in—bigger ashtrays, less trash, no oil-soaked waste. A safety tour of the upstairs and the downstairs and the backyard and the frontyard and the cellar and the attic, with everybody working on how to beware of the flying rug and the glassy tub and the too-hot coffee and the too-cold family, because the accident-prone are the lorn and the lone. These are your problems—you can help in their solution. Try a comfort tour of your house, too—are the lights where you need them and the ashtrays where you want them and the pillows plump and the chairs inviting? Is your house a comfortable place to be, are you a comfortable woman to be with? Are you problem, or solution?

Are you making your house a home where your children can put down roots? Are you filling it with the good things that will give them wings—the books, the paintings, the music, the laughter, the love, above all, the love. I heard a story the other day about a 5-year-old who sent a message to her grandmother. "Give Granny all my love," she told her mother. And then, overcome by the enormity of the gift, she stopped short and thought it over. Then her face cleared. "It's all right," she said. "I can make more by morning." The home where love is in endless supply, where you can always make some more by morning—that is a good home to live in, whether or not it measures up to all these dreams you've been giving your Government. And I suspect that all of you are such deep down wonderful people that you will go home and warm it with your own glow so that your house, on your street, in your town, in your State, in your Nation, may forever, under God, be part of the solution, not the problem. May God bless you, as the prayer book puts it, in your innocent endeavors—and may you have a safe trip home.

Now Pass It

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago American of Tuesday, April 24, 1956:

NOW PASS IT

The American people are on the verge of having their highway congestion problems settled. The House Committee on Public Works has produced an excellent highway bill and the House soon will pass judgment on it.

The Hearst newspapers urgently recommend the passage of this legislation.

Its fundamental provisions—the allotment of Federal aid to the several road systems of the 48 States and the tax schedule which will finance that aid—have been intelligently prepared and are almost unanimously approved by everyone who understands the highway problem and its solution.

Other provisions, the fringe provisions, are more controversial because of the special interests concerned, but in no case do they warrant a vote against the bill.

In the opinion of the Hearst newspapers, which have carefully followed and enthusiastically supported this legislation from its inception, the passage of this bill is in the national interest.

Any reasons that still exist to oppose it are based on such petty, narrow, self-serving reasons that those Representatives who vote against it become subject to appraisal as petty, narrow, self-serving individuals.

We believe they will be so appraised by the public they are elected to serve.

Out of our knowledge of this subject may we say this:

A vote against this bill is a vote for chaos in the highway field.

A vote for it is a vote in the national interest of the people of the United States.

Forest and Woodlands Recreation and Wildlife Use Legislation

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. ENGLE. Mr. Speaker, I am today introducing, along with a number of my colleagues, legislation which has as its broad objective assuring greater public multiple resource use of more than 160 million acres of public domain lands in the United States and Alaska classified as commercial forest areas and woodland areas, and administered by the Department of the Interior.

These vast areas of public domain—whether known or unknown in all respects, and whether developed or undeveloped—contain valuable public resources: land and water resources, mineral and material resources, timber and grazing resources, fish and wildlife resources, recreational, scenic, and wilderness resources.

PRESENT RESOURCE DEVELOPMENT

The public land laws provide for entry on these areas for resource utilization. The Secretary of the Interior has authority to permit harvesting of timber; the lands embraced within the proposed legislation contain an estimated 411 billion board feet of timber, nearly half of it—199 billion board-feet—located on lands classified as commercial forest land. The bulk of the lands covered in the bill—125 million acres—are located in Alaska, but 22 States contain a total of 4.1 million acres of commercial forest lands and 13 States contain nearly 30 million acres of woodlands.

Grazing is presently permitted on substantial acreages of the lands covered by the bill through operation of the Taylor Grazing Act; water resources development is authorized under the general reclamation law; the Flood Control Acts assure necessary activity in the field of navigation and flood control; and watershed management and development is assured through joint activities of the Departments of the Interior and Agriculture. The lands are, in the main, subject to entry under the general mining law, Mineral Leasing Act, and the Materials Disposals Act.

NEED FOR THE BILL

Notwithstanding the foregoing, I feel, as do many of my colleagues, that there is not presently clear-cut and sufficient enough authority in the Secretary of the Interior to assure full utilization of certain other resource values on these lands, nor are sufficient funds made available.

Congress, through enactment of public land laws now on the statute books, has provided for substantial multiple resource use of Interior-managed woodlands and forest lands, but has not to date authorized expenditure of funds for maximum public recreational uses, for improvement and maintenance of wildlife habitat values, and for providing adequate safety, sanitation, and health measures and facilities.

The legislation introduced today, would, in my view, remedy the present situation, and at the same time would permit continuation of present multiple resource utilization under the general public land laws. As introduced, the bill would authorize the appropriation of not to exceed $3.5 million annually, from the share of the United States' receipts from these lands, to carry out the program envisaged.

WHAT THE BILL WOULD NOT DO

Before turning to an analysis of what the bill will do, I should like to make some brief observations of what I intend the bill to not do.

It is not intended that the bill operate to disturb or diminish the share of receipts from the lands involved which are presently credited to the States and counties; the basic funds to be expended would come from the share of the United States.

It is not intended that the recreational program or wildlife habitat development program authorized shall interfere in any respect with presently authorized development and utilization of these areas under existing public land laws. In short, the newly authorized programs would have to go forward compatible with presently authorized activities; mining, mineral leasing, and materials development; timber harvesting; grazing; water resource utilization; and related activities.

It is not intended that the legislation interfere with, or modify, operation of present laws providing for the selection of lands by States under the school land selection, lieu selection, and related laws.

It is not intended that the legislation, as proposed, be construed as authorizing the Secretary of the Interior to levy charges and fees not presently authorized by law.

Finally, it is not intended that the legislation proposed be construed as authorizing further land acquisition by

the United States; on the contrary, the bill explicitly prohibits land acquisition.

WHAT THE BILL WOULD DO

There follows an analysis of the provisions of the forest and woodlands use legislation introduced today; there is also included information indicating the statistical scope, by States, of the legislation:

SECTIONAL ANALYSIS

1. Section 1 constitutes a congressional policy declaration that—

(a) All of the resources of the public domain shall be so managed, conserved, utilized and developed as to assure maximum public use thereof.

(b) Public use for purposes of recreation is a beneficial use of public domain forest lands and woodlands.

(c) Development and maintenance of such areas for maximum safety, sanitation, and wildlife habitat values, and the concurrent maintenance of timber, wood, and forest values, including sources of water, is a proper function of the Federal Government.

2. Section 2 would authorize an annual appropriation of not to exceed $3.5 million in any year, such sum to be made available to the Department of the Interior—which administers the forest lands and woodlands areas covered by the bill—until expended as provided in section 3.

The moneys authorized would be appropriated from the United States share of the receipts from these lands; the intent of the language is to assure that the share of such receipts presently earmarked for States and counties will not be diminished or affected by this legislation.

3. Section 3 directs the Secretary of the Interior to prescribe such regulations governing the expenditure of the funds authorized as will assure—in accordance with current and prospective public mutiple use—

(a) development, maintenance, and operation of public domain forest lands and woodlands for recreational use;

(b) improvement and maintenance of wildlife habitat thereon; and

(c) provision for adequate safety, sanitation, and health measures and facilities.

A proviso in this section would prohibit expenditure of funds appropriated by the legislation for land acquisition.

4. Section 4 relates to use fees and charges collected by the United States for improved forest lands or woodlands recreational areas, and provides that amounts so collected shall be set aside as a special fund to carry out the purposes of the legislation, and in turn set off against any amount in excess of the $3.5 million annual appropriation authorized.

ESTIMATED AREA OF PUBLIC DOMAIN FOREST LANDS AND WOODLANDS ADMINISTERED BY THE BUREAU OF LAND MANAGEMENT, DEPARTMENT OF THE INTERIOR [1]

Twenty-two States contain a total of 4,136,190 acres of commercial forest lands administered by Interior, and covered by the proposed legislation; 13 States contain a total of 29,985,000 acres of woodlands, covered by the proposed legislation.

Alaska alone has 40 million acres of commercial forest lands and 85 million acres of woodlands, administered by Interior, and within the scope of the proposed legislation.

Total United States and Alaska, forest lands, 44,136,190.

Total United States and Alaska, woodlands, 114,985,000.

[1] Source: Table 10, p. 14, Report of the Director of the Bureau of Land Management, Statistical Appendix, 1955.

Acreage breakdown, by State, of areas affected by proposed legislation

State	Forest lands	Woodlands
Alabama	23,000	
Arizona	3,000	1,329,000
Arkansas	124,000	
California	275,890	1,500,000
Colorado	605,000	2,709,000
Florida	19,000	
Idaho	381,000	1,070,000
Louisiana	7,000	
Michigan	10,000	
Minnesota	93,000	
Mississippi	15,000	
Missouri	(1)	
Montana	604,000	210,000
Nevada	100,000	10,000,000
New Mexico	91,000	1,974,000
Oklahoma	300	3,000
Oregon	533,000	1,722,000
South Dakota	6,000	10,000
Utah	633,000	8,755,000
Washington	182,000	46,000
Wisconsin	5,000	
Wyoming	426,000	657,000
Alaska	40,000,000	85,000,000

Federal Assistance to Depressed Areas

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following extracts of a statement by Mr. Solomon Barkin, director of research, Textile Workers Union of America, before the House Banking and Currency Committee.

Mr. Barkin's remarks are succinct and to the point and need no elaboration by me:

STATEMENT OF SOLOMON BARKIN, DIRECTOR OF RESEARCH, TEXTILE WORKERS UNION OF AMERICA, AFL–CIO, BEFORE THE SUBCOMMITTEE OF THE HOUSE COMMITTEE ON BANKING AND CURRENCY ON ASSISTANCE TO DEPRESSED AREAS, APRIL 23, 1956

We are much encouraged by the present interest in providing Federal assistance to depressed areas. This concern for the well-being of the people in the chronically distressed communities has been slow in coming. But we are heartened by the fact that the representative of both parties have finally determined that Federal action is timely and imperative. The local efforts are insufficient. The principle of Federal responsibility in the field of local economic recovery is now clearly recognized even though there are major differences in approach and in the amount of Federal assistance, guidance and monies which the proponents of the respective plans are willing to grant for this project.

We are troubled by the conviction that the philosophy underlying and the provisions of H. R. 8555 will frustrate efforts in this field rather than provide the help that is truly needed. Hope will be awakened among the distressed communities that real assistance will be offered and that the Federal Government is starting an all out drive to help them in their economic rehabilitation. But the provisions of the bill are not sufficient to back up this promise.

We are anxious to see such changes in this bill and that of the Douglas bill (S. 2663) which will guarantee an effective workable program of assistance and leadership to the distressed areas. We have previously been assured of Federal assistance but the Government failed to implement these promises. Candidate Dwight D. Eisenhower assured the citizens of New England and particularly Lawrence, Mass., in 1952 that the communities would be helped. The Federal administrations since 1950 have issued several administrative and executive orders designed to give preferential considerations to the needs of these communities. But few practical results followed.

Gestures in the direction of assistance are not enough. We must end the wastage of human and national resources. We can ill afford to continue this traffic in human hopes. An effective program must be substituted for vague promises and generous speeches. The program must be an effective one which will help in the practical economic rehabilitation of these areas. H. R. 8555 is insufficient to accomplish this purpose. It must be modified so that its philosophy and provisions more nearly reflect those incorporated in S. 2663.

We need effective legislation to offset the disillusionment which has set in from the failure of administrative action to help in the rehabilitation of these areas. Congress can redeem this Nation's record through positive action. We believe that the program of economic reconstruction for depressed areas must occupy as significant a place on the calendar of congressional action as the programs of aid to foreign countries. The latter are designed to rebuild the economies of our allies and neutral nations so that they can better fend off external and internal communist and totalitarian aggression. Programs for domestic reconstruction of depressed areas will help create the economic resources from which the funds for such assistance can be derived.

Both H. R. 8555 and S. 2663 recognize the true nature of the problem presented by the depressed area. The former declares that these areas are characterized by "substantial and persistent unemployment * * * (which) causes hardship to many individuals and their families and detracts from the national welfare by wasting vital human resources." In S. 2663 there is recognition of the "present existence of excessive unemployment in certain areas of the Nation is jeopardizing the health standard of living and general welfare of the Nation." Our goal for our domestic economic program must be at least as high as that for our foreign assistance program. The President of the United States declared in his message on the mutual security program that we seek to develop "a society marked by human welfare, individual liberty, and a rising standard of living." Only an effective program of assistance to the distressed areas can help realize this objective.

FEDERAL LEADERSHIP VITAL

Two basic deficiencies are evident in H. R. 8555. First is the refusal to provide Federal leadership and adequate financial aid in these programs. The second is the determination to make this a subordinate program by rejecting the principle of an independent administrative agency and placing this activity in an established agency devoted to very different functions. The existing departments have shown little determination or inclination to promote an all-out program of economic rehabilitation, nor have they any sympathy for Federal leadership in this area. We have great fears that the assignment of this responsibility to present agencies will severely limit the activities, and enthusiasm, and imaginative initiative required for effective work in this field.

Federal leadership is vital in promoting the economic rehabilitation of the distressed areas. Unfortunately the H. R. 8555 does not recognize this principle. As a matter of fact,

it is constructed on a very different principle. In the words of President Eisenhower it seeks to assist "communities to help themselves." The "major responsibility in planning and financing the economic redevelopment of their communities must remain with local citizens."

The dependence on local initiative, we contend, is insufficient and even unsound. We have relied upon such efforts in most communities now considered distressed and they are inadequate. Such local efforts have been so limited that the challenge of economic rehabilitation of distressed areas has become a national problem. Would it have become a national issue if local efforts were sufficient?

The continued emphasis on local efforts reflects an inadequate grasp of the difficulties and the size of the problem. H. R. 8555 represents blind rejection of the lessons we have learned during the last 10 years on the need of Federal leadership. It suggests that the authors were more intent on providing a cynical gesture of interest rather than a real program of assistance. The need is to supplement or substitute for inadequate local efforts or the absence of local efforts because the greater national interest dictates that the continued distress is destructive of the national well-being and at variance with the commitment under the Employment Act of 1946 that "it is the continuing policy and responsibility of the Federal Government * * * to coordinate and utilize all of its plans, functions, and resources for the purpose of creating and maintaining * * * maximum employment."

We do not have maximum employment while we have chronic unemployment in these distressed areas. The Federal Government cannot escape responsibility by merely passing the onus to the inactivity of the local group. It has an obligation to provide leadership and assistance to assure their economic rehabilitation through direct intervention and leadership when the local communities fail. The broader national interest dictates that such positive steps be taken.

We cannot endanger our entire economy through the deficiencies and inadequacies of sectors thereof. We are recognizing this challenge in the field of agriculture.

Setbacks in this area are endangering our stability and progress. We similarly must face up to the seepages in our economic structure occurring in the distressed areas and demand immediate Federal action to avoid the economic reversals of broader magnitude.

We are suspicious of the motives of H. R. 8555 because its spokesmen have defined the problem as well as the proponents of broader action. But they have not constructed a program which is equal to the needs. Mr. Arthur Larson, Under Secretary of Labor, declared that the "Federal Government should concentrate on aiding localities where the situation is of long duration." The program is then to be directed to meet not minor recessions or difficulties but basic structural ones in areas suffering from persistent unemployment and economic inactivity. Palliatives and temporary relief are insufficient but broad programs of assistance are needed. The shortcomings of H. R. 8555 will become even more evident if we spell out the characteristics of an area beset by these long-run problems.

CHARACTERISTICS OF DISTRESSED AREAS

First it is an area which has lost historic locational advantages. The losses in employment were far-reaching so that large pools of unemployment have persisted for long periods of time. The reasons for these reversals tend to be most fundamental. Vast economic, social or competitive factors have disturbed the stability of the prevailing industrial and employment structure. Plants have been closed; and older employments have virtually disappeared. The newer industries and employers have not recognized advantages which would encourage them to move into or be established in the area.

The disappearance of locational assets may have been due to many factors well beyond the control of the community itself or the very employers who were forced to contract or close their operations. In the majority of cases, the plant closing has not been accompanied by migration. They represented a contraction of operations. The closings and shrinkage may well have been due to the exhaustion of mineral or natural resources, changes in consumer habits which have diverted demand from this to other products; shift in market locations; newer technologies and materials which may have made existing sources uneconomic and processes obsolete; tariff policies which originate in Washington or Geneva which may make it impossible for the local plant to compete with imports; or subsidies or differential inducements offered by other communities which would include tax exemptions, aids in financing construction or machinery, attractive terms for expansion or vigorous anti-union policies.

We may incidentally note that the new technologies are likely to increase the rate of plant closings, since the benefits to be obtained from new plants designed to incorporate the latest technological developments are so huge and the economies of new plant construction methods and materials are so impressive that management may find it more economic to abandon older plants and substitute newer structures for them in different areas. The problem of distressed communities resulting from such abandonments is likely to be intensified and become an integral part of the normal experience of industrial areas.

The problems of a distressed community are structural rather than superficial. A solution must look to the redevelopment of the area and the careful promotion of new locational advantages which can become the neuclei of economic growth. A new economic structure has to be built to encourage new enterprise. The construction of a new plant site or the rehabilitation of an industrial property is not enough. Real economic redevelopment requires prolonged exploration and planning for long-term growth. Such a project the local communities have seldom undertaken and are not prepared to launch. Only a Federal agency with these specific objectives in mind can provide the initiative, technical help, and financial assistance which will encourage this type of growth.

We have enough experience to know that private enterprise can do this job if it is so minded and can see specific advantages for itself in a specific area. Our problem is not with the communities and areas where private enterprise is doing or can do the job. Our task is to stimulate and assure the consummation of programs for rehabilitation in areas where private enterprise and local endeavors have been insufficient. These exist in the chronically distressed areas for which the present legislation is designed.

Second, it is an area where local enterprise and initiative have usually been smothered and repressed by the existence of persistent and chronic unemployment, or may not even have been encouraged. Areas suffering from prolonged unemployment are like individuals who have been physically ill or unemployed. They lose heart and courage. They become resigned and discouraged. Their spirit has been knocked out of them. Their physical energies have been drained. The failure of the previous efforts tends to discourage newer efforts. They cannot be relied upon to act for themselves. They are like unemployed persons who need the outside help of a professional agency dedicated to correcting this attitude and providing them with specific guidance and courage and assistance. Outside assistance can only come from the Federal Government.

Many depressed communities have been without experience in successful independent local enterprise. The communities, like those in the textile and coal industries, have usually been single-industry towns and areas where a single group of employers, usually absentee in character, have dominated the area. The communities have been governed, dominated, and directed by the managements and representatives of these absentee owners. They have not encouraged independent action. They are not likely to have many civic organizations, or professional or middle classes with the initiative and daring, or trade unions with the experience to undertake so vast an effort at economic rehabilitation. These small communities have been so accustomed to having the lives of their people and their economic destiny directed by these representatives of outside interests, and they have been left without the resources for self-assertion in a crisis. The lessons of the present distressed areas should not be missed by the prospering communities in our country which are characterized by similar conditions at the present time. It is important to change these characteristics and to eliminate this industrial domination while there is a chance and while the crisis is not upon them.

We can offer many illustrations of textile communities where the people have been unprepared for the distasters which have befallen them because they have had no past experience with stimulating local enterprise or economic opportunities. The fault does not lie with these people. The large outside enterprises repressed them and prevented opportunities from arising. Low wages had long kept the people submerged. The best proof that the human material is rich, and that it is the climate created by these enterprises which prevented initiative, is that many more venturesome individuals have left these communities and established impressive successful businesses in other parts of the country.

Any program, therefore, which assumes that all communities can initiate and undertake the responsibilities for local economic rehabilitation is starting from a wrong premise. Moreover, it is punitive in its conception, since it would penalize the more submerged communities which need the greatest amount of outside help.

Third, it is an area which has low financial resources and is, therefore, least capable of raising the capital required for these long-term, bold programs for rehabilitation. The very fact that unemployment has persisted and become chronic has meant that the community's tax rolls have suffered and its financial resources have been drained. It is not as capable of financing its own programs as are the more prosperous communities. The philosophy underlying the present program seeks, therefore, to withhold help from the needy and reward with assistance the less critical areas.

H. R. 8555 has not faced up to the economic realities of the distressed areas. The authors have begrudingly accepted the principle of assistance, but have not recognized that the economic reverses have left these communities least financially capable of acting. They need investments in public services and facilities, investigation, model projects and the planting of nuclei industries. These cannot be provided, or even adequately conceived, by the distressed community which has been left stranded by economic reverses.

Fourth, an economically distressed area is seldom a single community. It extends beyond a political subdivision and includes a geographical region. It is usually coexist-

ent with a full labor market. If economic assistance is to be provided, it must be conceived on a larger pattern than a specific municipality. The program must be planned for an entire area. The distress affects the entire area since people are recruited from different parts of the labor market area. It cannot be localized to a limited area, as is proposed in H. R. 8555, section III (A and B).

S. 2663 has a broader definition in that it sets no such restriction and the area which can be selected for the organization of local committees may more truly correspond to the economic bounds of the full region. In continuing the present practice of relying on restricted, existing political subdivisions, the failings in the present programs will be perpetuated. The purpose of the legislation will be largely negated.

Three deficiencies of present programs require special mention. First, many of them are modest because they are conceived in terms of a small, local development for local residents, whereas the actual employees formerly engaged in other employment may reside in other political subdivisions. Second, the plans invite competition among political subdivisions, which often encourages an emphasis on subsidies rather than constructive programs. Third, they prevent full exploitation of the economic resources of the area and the opportunities for constructive redesign of the locational characteristics, since such broader programs often involve sites outside the immediate political subdivisions eager to solve their problems. Only by dealing with the area as a whole can adequate programs be developed to meet the challenge.

DEFICIENCIES OF STATE GOVERNMENTS

One of the basic deficiencies of H. R. 8555 is contained in section 106 (8) which requires programs to be approved by the State or any agency, instrumentality, or local political subdivision thereof, which would have to make a positive finding that the project for which financial assistance is sought is consistent with such program.

All of us who have followed the procedures adopted by State governments know that this proviso is fatal to the entire program. Many State governments have no interest in industrial development. In fact, we can run up a list of States which have resisted such programs or have shown little interest in them. The agricultural complexion of many State governments has biased their executive and administrative personnel against such undertakings. Development commissions have become advertising bureaus for their lakes and vacation resources rather than planning bureaus for industrial development. It would be fatal to this entire undertaking to enable them to veto efforts in this field.

The Journal of Commerce in an editorial on April 5, 1956, declared that the administration is not entirely consistent in requiring State approval of projects under the area aid bill, for it proposes to bring the Federal housing law into the plan, including provision for sewage, water facilities, and the like and these do not require State clearance. Dealings are directly with appropriate local entities as in the case for urban renewal programs, except in situations where State-matched funds are involved. Two State governors, the newspaper further adds, declarled tnat the States ought not to be permitted to veto it or to exclude the otherwise eligible labor-surplus areas in their borders from benefiting, once the plan is adopted by Congress. Governor Leader, of Pennsylvania, suggested that the Federal Government should work through States which were themselves working effectively in the field, but where they were not, the Government should reserve the privilege to work with appropriate local entities.

The basic fact is that there are States as well as local communities which will discourage or will refuse to take action or receive assistance. The dominant leaders of the areas may refuse to act. They are often able to take this position by diverting local attention from the true issues and using smokescreens to hide their motives for refusing such action. Our national economic interest and the well-being of the thousands of innocent victims demands that neither the backward State nor the community should stand in the way of needed economic recovery.

H. R. 8555 will allow State and local groups to veto the intent of the economic rehabilitation of distressed areas. While these provisions remain basic to the program, we can only declare that we suspect the motives of the supporters, for they must know that they cannot effectively rehabilitate communities if they face this hurdle.

LOCAL RESISTANCE TO ADEQUATE PROGRAMS DEMANDS FEDERAL LEADERSHIP

Your own committee has had sufficient evidence that many local development groups are led by men determined to hide their community's problems from the public's gaze. They are concerned with sick economies but refuse to acknowledge them. They are laboring under the impression that if they seek new businesses quietly and entice companies to move from existing sites that they will solve their problems.

This "conspiracy of silence" has been fostered by shortsighted realtors who seem to dominate these local development boards. They are accustomed to dealing with small-business problems rather than the challenging tasks presented by a depressed area. They are seeking minor additions to employment as relief rather than programs for long-term growth. They are so blinded by their dogmatism in economic philosophy that they are sacrificing the economic well-being of the communities which they pretend to represent. Instead of pressing for economic growth, they are obsequiously seeking businesses to locate in their midst. Therefore, they fall prey to intimidations by strong outside powers.

The business community in many of these depressed communities have as a result carried on a campaign against Federal assistance. The best example is that of New England, where the New England Council decided to oppose these bills. It took the position that the responsibility for the development of employment opportunities should remain primarily at the local level. The irony of this position is that New England is one region in which many communities have remained on the distressed list for years, and many of them are still on it. Local committees and assistance have proved inadequate because the conceptions and personnel have been insufficient. Yet the New England Council, presumably speaking for the business interests, is refusing to endorse programs which would bring new light and assistance to relieve the desperation of the tens of thousands of unemployed people whose despair continues to deepen with the passing of the months.

While the New England Council speaks of local initiative, plants continue to close, employments disappear, and thousands of new persons continue to be added to the labor force; older persons are being forced out of the market because of the insufficiency of jobs. Its offices being located in Boston, it is dominated by the financial interests, real-estate promoters, and public-utility spokesmen. They sit by smugly while human wants cry out loudly for satisfaction. Since their own economic interests are not being adversely affected, they have no sense of urgency. The New England Council, composed of the region's business interests, again is adding to the evidence of its incapacity to lead the region and is dampening the efforts of those who wish to bring assistance to it.

These attitudes of the business and realtor interests have produced this conspiracy of silence when broad-scale action is required. They have coerced public officials into making statements explaining their refusal to obtain Federal assistance while their communities remain chronically depressed. No greater evidence of subservience to dogmatism and indifference to public interest and human needs can be paraded before any congressional committee.

UNITED STATES CHAMBER OF COMMERCE OPPOSITION CLOAKS ITS DESIRE FOR INACTION AND BUSINESS DOMINATION OF OUR POLITICAL AND SOCIAL STRUCTURE

One has but to read the pamphlet entitled "Getting and Holding Good Employers," published by the committee on economic policy of the United States Chamber of Commerce, to understand the long-term purpose of this opposition to Federal programs. The emphasis on local action is not born out of a conviction that the local communities are adequate to handle the problems and the challenges of a depressed area. It is rather intended to capitalize on the distress to create what the committee calls a better climate for business and jobs everywhere. This thought is further emphasized in the conclusion that "though the plight of the depressed areas is most dramatic and pressing, it should not blind us to the need for a better climate throughout the country."

At a time when the present administration boastfully declares that it rescued the economy and claims credit for the good time we enjoy today with its unprecedented prosperity, the United States Chamber of Commerce is carrying on its fight for basic economic changes in tax laws, government operations, and regulations of unions, because it wants to improve the climate for American business. One wonders how much profit business wants; how much of the tax burden does it wish to shift to the consumer; how much wantonness is desired in the operation of our business economy.

The policy statement is more of an attack on labor legislation, taxes, and the refusal of communities to heed the United States Chamber of Commerce policies than a prescription for the growth of local communities.

In the chronically distressed areas we are concerned with unemployment and the disappearance of jobs because of the fundamental changes in our economy and the loss of historic locational advantages. Cringing local attitudes may bring in low-wage employers seeking to exploit a cowed work population. But they provide no real answer.

We have seen that happen in New England. The realtors who have taken over empty mills have secured new tenants. Many fled from other communities to get lower rents, tax concessions, or in some cases, to avoid unions. Many may be counted among the lowest wage payers and have held their rates well below those previously prevailing in the community.

More than a business climate is required in these communities or areas which have to be economically rebuilt. They must get new strong businesses within them. This result is not accomplished primarily by climate; success demands careful planning and the development of new locational advantages. This challenge the chamber of commerce does not meet nor treat in its pamphlet.

FEDERAL LEADERSHIP IS VITAL

Opponents of effective Federal leadership and assistance to distressed areas have begrudgingly acknowledged that we are faced with a serious problem of economic distress. But, in formulating a program, they have been hampered by their dogmas and preju-

dices and have not faced up to the primary problems of finding methods for reconstructing the economies of entire areas. These same men know how much thought, imagination, study, and investment are required to start new industries or to revive old ones. Cannot they realize that equally large efforts and funds are required to accomplish the same for distressed regions? The present administration has affirmed that such programs are needed in undeveloped countries. Are we not entitled to similar efforts and appreciation for our distressed communities in our own country?

Private enterprise is the backbone of our entire economy. But we realize what public investment and efforts must often precede and lay the foundation for later private endeavors. The very basis of the urban renewal movement is Federal Government nationalization of real-estate losses to allow for profitable local private redevelopment. The New England Council and the administration favor these programs. Why cannot they conceive of using this technique on a broader, area basis to assure redevelopment of an entire distressed area? Why shrink from the use of the very instruments which the administration itself proposed for limited use for local projects?

What is at stake is the economic well-being of millions of people. We cannot afford to be halfhearted in our efforts.

AN INDEPENDENT AGENCY IS VITAL

The present Federal agencies providing assistance to local communities are, we are all agreed, inadequate and too modest. They are primarily located in the United States Department of Commerce. Mere expansion and increased personnel are not enough. A new spirit must suffuse the people engaged in this work. It is a dedicated task to help plan and develop programs on a broad scale, equal to the needs. It requires a conviction among the administrators that the Federal Government properly can utilize the general welfare clause in the Constitution to aid communities and that it is in the interests of the Nation that it be done.

Unfortunately, the continuance of the program in the Department of Commerce, as is contemplated by the bill, would perpetuate the unfriendly, tight-fisted and casual attitudes which have hitherto pervaded their activities. The present agency has published a few pamphlets, sent its employees to deliver some speeches, and led realtors to distressed communities to extend messages of sympathy, but to provide no real assistance.

The responsibility for the stimulation of the economic recovery of depressed areas is so vital to our national economic existence that it should stand on its own and be directly accountable both to the President and the Congress of the United States. It should not be subordinated to the administrative functions of existing executive departments. The problems are so specialized and pressing that they require the attention of an independent agency devoted solely to the promotion of the economic recovery in these areas.

Still Time To Stop a Steal

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. FEIGHAN. Mr. Speaker, it is expected that we will complete consideration and vote on the highway construction bill tomorrow. The vote on one of the amendments which will be offered tomorrow will determine who will pay for relocating utility facilities. It is my hope that every Member of Congress will, before voting on the amendment, read carefully the editorial which appeared in the Cleveland Press yesterday, entitled "Still Time To Stop a Steal."

The editorial follows:

STILL TIME TO STOP A STEAL

However you measure it, $1,500,000,000 is a huge gob of money, especially when it comes from our pockets as taxpayers.

But that's an estimate of how much the highway bill, about to come to a vote in Congress, would hand over to public utilities who get free use of highway rights-of-way.

This is the bill which lays out a $51 billion 13-year road program—principally over the 40,000-mile interstate system.

The people will pay for these roads, and the rights-of-way to go with them. They will pay, for years and years, in higher taxes on gasoline and tires, in special taxes on buses and trucks.

But the House Public Works Committee has turned out a bill which would compel the people also to pay for relocating utility facilities—pipelines, wires, poles, etc.—which use these rights-of-way, rent free.

This violates all historic State practice. The States for years have resisted utility efforts to unload these costs on motorists. The rule is nationally established. The bill now before the House would wreck that rule.

Nine of the 34 members of the Public Works Committee were so outraged by this giveway they filed a blistering separate report with the House.

They said utility interests lobbied this gimmick into the bill, that it is opposed by every State highway official in the country, that it violates State laws and contracts, that it would throw the whole cost estimate of the road program out of whack.

In a few days, this bill will come to a vote in the House, with amendments permissible. This is the time for another lobby to go to work—the taxpayer lobby. With an amendment to rip out the utility windfall.

This is supposed to be a highway program, not a free rights-of-way program for utilities.

Philadelphia's Concern Over Archbishop Makarios and the Cause of Freedom in Cyprus

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. GRANAHAN. Mr. Speaker, recently 2 events occurred in Philadelphia in protest over the brutal treatment of Archbishop Makarios of Cyprus. One was an official protest by the city of Philadelphia, by resolution of the city council. The other was a resolution adopted at a justice for Cyprus rally attended by 2,000 citizens of our city.

In both instances—through official channels and through the right under the Constitution for our citizens peaceably to assemble and to give expression to their views—the people of Philadelphia have made it clear that we are on the side of freedom and of decency and are opposed to high-handed and oppressive actions in Cyprus.

The resolution adopted by city council, Resolution No. 39, protesting the exiling of the archbishop and expressing the indignation of our citizens at the actions of the British Government, is as follows:

Resolution expressing sympathy and indignation on the occasion of the exiling of Archbishop Makarios, of Cyprus, by the British Government

Whereas the people of Philadelphia cherish the democratic form of government under which we live and particularly the guaranties of individual freedom from arbitrary police action and the guaranties to a fair and just trial under both the Constitution of the United States and the Constitution of the Commonwealth of Pennsylvania; and

Whereas we acknowledge that to exile a man from his country is cruel and harsh treatment in the extreme; particularly a prelate whose life has been dedicated to the service of God, and who by exile is separated not only from his home, family, and friends, but from his spiritual children and his work in the service of his Maker; and

Whereas we are thankful to Almighty God for the guaranties in our form of government against such acts in wanton disregard of the most basic constitutional rights; and

Whereas on or about March 9, 1956, on the isle of Cyprus, his eminence, Bishop Makarios, archbishop of the Greek Orthodox Church of Cyprus, was seized by the British Government and, without the substantiation of any charge against him and without the opportunity to refute or even to hear his accusers, was exiled from his home, his country, and his archibishopric of over 400,000 souls: Therefore

Resolved by the Council of the City of Philadelphia, That we hereby express our vigorous indignation at the high-handedness of the action taken by the British Government, as aforesaid.

Resolved, That we hereby express our sincere feelings to the members of the Greek Orthodox faith in terms of our deepest sympathy for the grievous wrong which they and their spiritual leader, Archbishop Makarios, have suffered by reason of the aforesaid acts.

Resolved, That we hereby reaffirm the sentiments of the city of Philadelphia in behalf of freedom and liberty-loving Greece and the embattled and valiant people of Cyprus, who are fighting for the freedoms for which we fought in 1776.

Resolved, That certified copies of this resolution be forwarded to the President of the United States, the Secretary of State, the Royal Greek Embassy, the United States Senators from Pennsylvania, and the members of the House of Representatives from Philadelphia.

And following, Mr. Speaker, is the resolution adopted by the Justice for Cyprus rally, sponsored by the Justice for Cyprus Committee of which Gregory G. Lagakos is chairman:

RESOLUTION ADOPTED BY JUSTICE FOR CYPRUS RALLY AT TOWN HALL, MARCH 28, 1956

Whereas we, citizens of the United States, assembled in the main auditorium of Town Hall in Philadelphia, Pa., on Wednesday evening, March 28, 1956, have in overflowing numbers of over 2,000 met in a huge rally to voice the unanimity of our heartfelt belief and conviction that the arrest and deportation of His Beatitude Archbishop Makarios of Cyprus is a violation of the basic concepts of the dignity of man and respect for religion, and is an uncivilized act which freedom-loving people of this city strongly protest; and

Whereas we have gratefully witnessed the vigorous and active concurrence of feeling by our fellow Americans so eloquently expressed tonight by the Honorable Richardson Dilworth, mayor of the city of Philadelphia; Hon. Roy E. Furman, Lieutenant Governor of Pennsylvania; Bishop Germanos Constantinou of the Greek Orthodox Archdiocese of North and South America; Rev. William Dunphy, rector of Christ Church, Ridley Park, Pa.; Hon. John G. Thevos, deputy attorney general of the State of New Jersey; as well as many other distinguished Americans who have so greatly honored and inspired us tonight with their presence and participation at this rally; and we being further inspired by the resolution enacted unanimously by the City Council of Philadelphia on March 22, 1956, proclaiming the vigorous indignation of the Council of the City of Philadelphia at the highhandedness of the action taken by the British Government in the kidnaping of Archbishop Makarios; and

Whereas the people of Cyprus have contributed so magnificently to the cause of world freedom and so eminently deserve the blessings of self-determination: Now, therefore, be it

Resolved, That we, in rally assembled, respectfully petition the State Department to request the immediate return of Archbishop Makarios to his home, country, and people of Cyprus, and that the British Government should be urged by our Government to permit the people of Cyprus to determine their own political destiny and freedom; and be it further

Resolved, That copies of this resolution be filed forthwith with Dwight D. Eisenhower, President of the United States; Hon. John Foster Dulles, Secretary of State of the United States; Hon. Henry Cabot Lodge, United States Delegate to the United Nations; Hon. H. A. Hammarskjold, Secretary General of the United Nations; Hon. Edward A. Martin, United States Senator from Pennsylvania; Hon. James H. Duff, United States Senator from Pennsylvania; and all Members of the House of Representatives of the United States from Philadelphia.

The Coal Industry and H. R. 5550

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

THE COAL INDUSTRY AND H. R. 5550

H. R. 5550, authorizing United States participation in the Organization for Trade Cooperation, has been favorably reported out of the Ways and Means Committee by a vote of 17 to 7, and will shortly come before the House of Representatives. This memorandum sets down some facts about the American coal industry and why it has everything to benefit from United States membership in OTC, and nothing to lose from the passage of H. R. 5550.

Although representatives of the coal industry were opposed last year to the enactment of H. R. 1, the 3-year extension of the Reciprocal Trade Agreements Act, no spokesmen either from the management or labor side of the coal industry came before the Ways and Means Committee to oppose enactment of this bill. This shows that even though the representatives of the coal industry were opposed to further reduction of tariffs, that they recognize that H. R. 5550 will not lower tariffs by one iota, but would, on the contrary, help to get the greatest benefits for American export trade from foreign countries.

This is so because OTC would be an organization to administer the General Agreement on Tariffs and Trade. GATT is the multilateral trade agreement negotiated in 1947 by which 33 other free world countries have committed themselves to reciprocal tariff reduction in exchange for the tariff reductions that we have made under the reciprocal trade agreements program. OTC would help get effective reciprocity for us from the GATT trade agreement.

The American coal industry has already experienced great benefits from export trade and will experience even greater benefits if it can have assurance of stability in the treatment that American coal receives in foreign markets. In 1955 we saw a great improvement in coal production in the United States. Bituminous coal production reached a level of about 470 million tons in 1955. This was an increase of 73 million tons above the level of production in 1954. Increased exports accounted for over one-quarter of that increase in production. In 1955 exports of bituminous coal amounted to 51 million tons, an increase of 20 million tons above 1954 exports. In dollar terms, the value of bituminous coal exports in 1955 was $436 million as compared with $253 million in 1954. Thus, the bituminous coal industry depended on exports for the sale of 11 percent of its total production in 1955 as compared with 8 percent in 1954.

GATT has helped achieve this good export record, and OTC, by making GATT more effective, will be even more helpful. For example, in the last 2 years there has been remarkable progress made by Western European countries in eliminating import quotas which discriminated against the sale of American goods in Europe. Whereas in 1953 only 2 of the 13 Western European governments had liberalized their restrictions on imports from the United States to any extent, today 8 of these governments have completely removed quota restrictions on more than 50 percent of their imports of goods from the United States. As a result, American exports to Western Europe in the last couple of years have been booming, and the coal industry has participated in that expansion.

In addition, by using the machinery of GATT, we were successful last year in getting Belgium and Germany to reduce their restrictions against United States coal. In the case of Belgium the situation was that late in 1953 Belgium began to reduce the tonnages of American coal permitted to come into that country. Belgium had been a very important market for United States coal. In 1952, for example, Belgium imported 711,000 tons of American coal, valued at about $7 million. The United States, therefore, tried to get these restrictions that were imposed in 1953 eliminated by Belgium, but Belgium refused. The United States then placed its complaint against Belgium on the agenda of the ninth session of GATT in October 1954. We pointed out that Belgium was not living up to the terms of the GATT trade agreement. By negotiating with Belgium we were able to get her to agree to permit larger imports of American coal. At the present time, American coal is moving into Belgium virtually without any control whatsoever. As a result of that, coal exports to Belgium amounted to over a million tons in 1955 compared to about a quarter of a million tons in 1954.

In the case of Germany, the United States, in the ninth session of GATT, drew attention to certain German regulations which had the effect of reducing imports of coal from the United States. It was the view of the United States that these restrictions were inconsistent with the obligations of West Germany to the United States under the GATT. Consultations between the two governments followed. West Germany began to relax its restrictions and permit the entry of more United States coal. As a result, in 1955, coal imports of the United States into West Germany amounted to 7.7 million tons as compared to 1.4 million tons in 1954.

Thus, taking these two cases of Belgium and Germany together, it can be said that through the GATT the United States succeeded in having these countries remove restrictions on imports of United States coal that resulted in an increase in our coal exports to these countries by over 6 million tons in 1955.

The thing that has troubled the American coal industry so far as its foreign markets are concerned has been the instability that has existed in these markets. There has been a feast or famine situation in exports, but what we can accomplish through GATT, and what can be accomplished even better through OTC is to remove that instability by getting foreign countries to agree to treat American coal fairly and in a stable way. The accomplishments of GATT to date will be multiplied in the future if OTC comes into being.

The coal industry has much to gain from this. For example, the Wall Street Journal for April 19, 1956, carried an article on a statement by George H. Love, president of the Pittsburgh Consolidation Coal Co., made at its annual meeting. The Wall Street Journal says, "Mr. Love predicted soft coal production in 1956 will reach or slightly exceed 500 million tons, compared with 470 million tons in 1955. * * * Mr. Love predicted coal's usage in the energy market could well double in the next 10 years."

For the long run, therefore, the coal industry has a great stake in expanding exports. OTC will help to see to it that American coal will have a fair chance to be sold in the markets of the world without discriminatory restrictions being imposed against it.

Since H. R. 5550 would not involve any tariff reductions, would not require any change in United States laws, would not in any way affect the ability of the Congress to legislate on matters of trade and tariffs, would not in any way affect the safeguards of our domestic legislation, such as the escape clause and the peril point, it can be concluded that the coal industry has nothing to lose and everything to gain from its passage.

The Nickel Situation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include a letter I wrote to Dr. Arthur S. Flemming, Director of the Office of Defense Mobilization, regarding the nickel situation.

Mr. Speaker, a number of reputable businessmen complained to me that they were caught in a squeeze whereby they were forced to pay 300 percent of the market price of nickel—64.5 cents—in the black or gray markets or go out of business.

With the assistance of some of these individuals, I wrote to Dr. Flemming, Director of ODM, on January 11, 1956, and asked him 11 questions—see CONGRESSIONAL RECORD of March 15, 1956. It was necessary for him to get informa-

tion on some of the questions from other agencies, chiefly, I presume, the Departments of Commerce and Defense.

Yesterday, I received a classified document from Dr. Flemming's office which I understand contains the answers to my questions. Since one bit of classified material in a document renders the whole classified, I have returned it, unopened, to Dr. Flemming with the request that it be declassified as much as possible as I want to place it in the RECORD for the benefit of all of those concerned. My letter of April 26, 1956, to Dr. Flemming, follows:

APRIL 26, 1956.

Dr. ARTHUR S. FLEMMING,
Director, Office of Defense Mobilization, Washington, D. C.

DEAR DR. FLEMMING: On January 11, 1956, I wrote to you concerning the current nickel situation in the United States. The letter propounded 11 questions several of which had been suggested to me by responsible business concerns who are directly affected by the situation which has developed in obtaining nickel for industrial purposes. On March 15, 1956 I placed my letter with the questions in the CONGRESSIONAL RECORD because of the widespread interest in the subject. Yesterday, April 25, 1956 I received a classified document from you which I understand contained the answers to my questions. I have, however, returned the envelope to you unopened since I consider that this subject generally is a public matter and would be restricted from making available any portion of your answers so long as the material is classified. Furthermore, I much prefer not to have classified material in my office files.

Inasmuch as there are a large number of business concerns and others in the United States who are interested in the answers to the questions I propounded I planned to put your answers in the CONGRESSIONAL RECORD for the benefit of all concerned. Will you be so kind as to send me a letter which is declassified as much as you consider proper in order that I may place it in the RECORD?

I do not wish you to consider my return of the classified material as being critical of your action but I firmly believe that the current nickel situation needs a healthy, effective public scrutiny and comment to the greatest extent possible. I believe that the confusion and suspicion caused by unnecessary classification leads to an unhealthy situation.

The Big Business Administration

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. MULTER. Mr. Speaker, permit me to direct the attention of our colleagues to the following incident which points up the manner in which a big business administration operates. The incident is reported in the April 9, 1956, issue of New Republic:

WHERE POWER LIES

Early in the life of the Eisenhower administration Clarence Davis, then Solicitor and now Under Secretary of the Interior Department, was visited by a friend, a registered power lobbyist named Herman C. Kruse from the Pacific Gas & Electric Co. The company had appeals before the Department. According to Davis' own testimony he asked Kruse to get him a detailed proposal for changes in Federal power right-of-way regulations—a crucial matter over which Pacific Gas & Electric Co. then had appeals pending. Nobody else was at this Davis-Kruse meeting; neither then nor subsequently were the farm cooperatives and municipally owned utilities consulted although they were deeply involved.

The private power corporations got together and drew up a 13-point list of changes. These were put down on an anonymous paper. The utilities gave the document to Kruse; he gave it to Davis, who gave it to a Department Solicitor of his own appointment named James Geissinger (now regional Solicitor at Denver) for study. Geissinger testified under oath before the House Public Works and Resources Subcommittee (whose report has now just been published, March 28), that Davis had told him he "didn't know" where the document came from. On August 11, 1954, the Interior Department put all these lobby recommendations but one into effect; 10 of the 13 were adopted as the power trust wrote them, another had a minor word added, another was paraphrased with the meaning unchanged, and one was rejected.

The incident occurred and is documented. Most of it Davis admits. The changes made were important and were written without consultation with the other parties affected. Federal regulations seem to have been disregarded which forbid private consultations between Government employees and parties-at-interest. Well, this is how a big business administration operates.

The efforts of an oil lobbyist in trying to slip $2,500 to a Senator in the fight over the natural gas bill created a national sensation; but here is a case where a lobbyist was brought in by the administration and told to write his own ticket, and did. You can't steal things where they're given away.

Politics in Farm Bill Veto

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, the cost of Wisconsin feed prices under vetoed H. R. 12 has been given much publicity in our State.

Following is an article from the April 23 issue of the Madison (Wis.) Capital Times on this subject. It was written by Miles McMillin of the paper's staff.

POLITICS IN THE FARM BILL VETO
(By Miles McMillin)

A card from Stevens Point charges that Walter H. Ebling, statistician for the Wisconsin Department of Agriculture, is the man behind the arguments used to back up the President's veto of the farm bill. It suggests that he is a civil servant who is supposed to be nonpartisan and that, by golly, something ought to be done about it.

The card seems to have been inspired by the hoopla raised by Governor Kohler and six Republican Congressmen from Wisconsin in behalf of the veto. The arguments used were presumably based on information provided by the State department of agriculture. I don't know whether Ebling had anything to do with it and I have no notion what his politics are.

There is some authority for the statement that the six GOP Congressmen—DAVIS, BYRNES, WITHROW, LAIRD, VAN PELT, and SMITH—took some liberties with whatever statistics were provided them by the Department. They wired the President that the vetoed farm bill would provide only $14 million in dairy supports but would increase feed costs to dairy farmers by $26 million.

They told the President that they had checked the figures with the Department. Somebody else made a check, too, at the Department and found out some interesting things regarding the kind of a political game being played with farm legislation.

Le Roy Gore dropped in to ask about the figures. The people in the Department disclaimed any responsibility for the figures used. They told Gore that there was no way to accurately determine what the farm bill would have meant financially to Wisconsin dairy farmers. According to Gore, "One official said the Congressmen had apparently grabbed a handful of figures out of the air and aimed them at the moon."

The incident illustrates the political schizophrenia which has beset some of the Republicans in the State. On the one hand, there is the inviting comfort of Eisenhower's coattails and on the other is the result of presidential primary which showed that Ike is not the popular man he used to be among Wisconsin dairy farmers.

A situation like that can make a man pretty frantic, particularly when there is a job at stake in which the job holder has just voted himself a 50 percent increase in salary, as the Congressmen did in 1955, jumping themselves from $15,000 to $22,500. It was not surprising, therefore, to hear them charge that the bill the President vetoed was a stab in the back to Wisconsin dairy farmers. Governor Kohler called it a disgraceful bill.

These charges do not only hit the Democrats who voted for it. They hit the two Senators, WILEY and MCCARTHY, and Representative ALVIN O'KONSKI, Republicans, who came to the conclusion that the farmers of the State could do more for them in an election showdown than Ike can do.

Tribute to Adm. Richard E. Byrd

EXTENSION OF REMARKS
OF
HON. JAMES H. DUFF
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 26, 1956

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Adm. Arleigh A. Burke, United States Navy, Chief of Naval Operations, in honor of Rear Adm. Richard E. Byrd, United States Navy, retired, delivered in New York on Tuesday, April 3, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ADM. ARLEIGH A. BURKE, UNITED STATES NAVY, CHIEF OF NAVAL OPERATIONS, IN HONOR OF REAR ADM. RICHARD E. BYRD, UNITED STATES NAVY, RETIRED, NEW YORK, N. Y., APRIL 3, 1956

Mr. Duke, Admiral Byrd, Mr. Chairman, distinguished members of the International Rescue Committee, ladies and gentlemen, it is an honor and a privilege to participate with you in this testimonial for Admiral Byrd.

Admiral Byrd is an outstanding public figure. In fact, he is the world's foremost living explorer. His reputation as a geographer, a philosopher and aerial navigator is

outstanding. He is also one of the Navy's most famous flag officers.

Many of us are fortunate enough to know Admiral Byrd personally. Others have read of his many accomplishments since the turn of this century. My own admiration for this pioneering naval officer goes back many years. It is a particular pleasure on this occasion to recall with you some of the highlights of the career of the fellow mariner, whom we honor here tonight.

Admiral Byrd graduated from the United States Naval Academy at Annapolis with the class of 1912. His class was one of those which supplied our country with a large number of outstanding officers.

As a midshipman, Admiral Byrd suffered a severe leg injury as a result of his enthusiastic participation in athletics. During his first 4 years of active commission this injury was aggravated. As a result he was transferred to the retired list. Prior to his retirement he had served admirably on six ships and was twice cited for bravery. Fortunately, his retirement was only a temporary loss to the Navy—because he came back to active duty immediately to train recruits in preparation for our entry into World War I. Here he demonstrated exceptional ability in organizing an effective training program.

In 1918, after completing a course of instruction at the Naval Air Station, Pensacola, Fla., Admiral Byrd was designated a naval aviator. Meanwhile, he began to develop plans for a trans-Atlantic flight of the Navy's famous Curtiss flying boats, which were then being made ready. With this in mind, he began intensive study of the many new problems connected with aerial navigation. He developed the drift indicator and the bubble sextant. Improved versions of these instruments are still standard navigation equipment for oceanic flights. Admiral Byrd is recognized today as one of the greatest of the Navy's aviation pioneers.

The years immediately following World War I were lean ones for naval aviation. The times were so critical that Admiral Byrd had to forego the trans-Atlantic flight because his talents were badly needed in the Navy Department. His efforts and influence in this new assignment were largely responsible for the creation of a separate bureau for naval aviation, which we now call the Bureau of Aeronautics.

Admiral Byrd organized and commanded the naval flying unit which in 1925 accompanied the polar expedition of another famous American arctic explorer—Mr. Donald B. MacMillan. This achievement won him a commendation by the Secretary of the Navy for meritorious service.

In 1926, Admiral Byrd made the first flight over the North Pole. He was assisted in this great undertaking by Floyd Bennett, chief machinist mate, United States Navy. As a result of this history-making flight, Admiral Byrd was awarded the Medal of Honor and the Distinguished Service Medal.

Not satisfied with his pioneering achievements of 1926, Admiral Byrd prepared to conquer new frontiers. Only a few weeks after Lindbergh's historic crossing, Admiral Byrd made the first successful nonstop crossing of the Atlantic by a multiengined aircraft. For this notable and historic achievement, Admiral Byrd was awarded the Distinguished Flying Cross.

In 1928 he organized and commanded another polar expedition—this time to the Antarctic. It was here that he established the now-famous Little America base. On November 29, 1929, he made the first successful flight over the South Pole. For this extraordinary and hazardous achievement he was awarded the Navy Cross and the Byrd Antarctic Expedition Medal.

These successive achievements, each equal to or greater than the one preceding, fired the imagination of the entire world. In response to public acclaim, and on behalf of a grateful nation, Congress promoted Richard E. Byrd to the rank of rear admiral on the Navy retired list. This was done in spite of the personal objections of Admiral Byrd who in all modesty believed that such a great honor was not warranted.

From 1933 to 1935, Admiral Byrd organized and headed the second Antarctic expedition. Most of you are familiar with some of his extremely hazardous experiences which he has recounted so skillfully in his numerous articles and books. For his achievements during this expedition, the second Byrd Antarctic Expedition Medal was authorized by Congress and awarded to Admiral Byrd.

In 1939 he returned to active duty and assumed command of the United States Antarctic Service. While serving in this capacity, he established two Antarctic bases 1,500 miles apart. For this great service he received a letter of commendation from President Franklin D. Roosevelt and was awarded a Gold Star in lieu of a second Distinguished Service Medal. He was also awarded the Antarctic Expedition Medal for the operations from 1939 to 1941.

From this duty, he reported to the Office of the Secretary of War as a consultant for the development of all types of cold-climate, military clothing. In 1942, he again returned to the Bureau of Aeronautics and energetically analyzed the effectiveness of overseas base planning in all World War II theaters of operation. His tireless energy, unusual foresight, and superb leadership contributed immeasurably to the success of many phases of World War II planning. He was awarded a letter of commendation, with ribbon, by the Secretary of the Navy. In addition, he was awarded the Legion of Merit and a Gold Star in lieu of the second Legion of Merit.

Admiral Byrd commanded the 1946–47 Navy Antarctic expedition which was under the tactical command of Rear Adm. Richard H. Cruzen. This expedition was the largest ever to go into the Antarctic. The purpose of this operation was to train naval personnel and test standard Navy ships and equipment under extreme conditions of cold weather. Valuable scientific information was obtained on this expedition for use in the Navy's development programs.

One of Admiral Byrd's important accomplishments was in the advancement of the science of weather observations. He was among the first to recognize that basic weather originates in the polar regions. His pioneering research in this field has been invaluable to the Navy and to the entire world.

Today Admiral Byrd is in command of the naval forces engaged in Operation Deep Freeze. Rear Adm. George J. Dufek is his tactical commander. Operation Deep Freeze is a 4-year project in which the Navy will support the many United States agencies taking part in the international geophysical events from 1957 to 1958. The scope of this operation is greater than all of the previous expeditions combined. Under Admiral Byrd's experienced leadership, we can be sure that the Navy's missions in Operation Deep Freeze will be accomplished in an outstanding manner. The United States, and the United States Navy in particular, are extremely fortunate to have the services of Admiral Byrd for this gigantic, international scientific endeavor. We expect to obtain additional scientific material of vast importance, and we expect to explore the few remaining frontiers of the Antarctic, which constitutes an area almost the size of the United States and Europe combined.

Of necessity, only a few of Admiral Byrd's many citations have been mentioned. There are many, many more, both military and civilian—national and international. He has received all of the highest awards that a grateful nation can bestow.

Admiral Byrd has already made his niche in naval history. His wholehearted devotion to duty, his rare combination of imagination, planning foresight, and his organizational ability make him one of the truly great officers in the history of our Navy. No officer has contributed more to the United States Navy than Adm. Richard E. Byrd. No officer has contributed more to his country. When the history of this era is written, there is no doubt that Admiral Byrd will take his place alongside the traditional heroes of the Navy—the Deweys, the Farraguts, and the John Paul Joneses—to inspire the man generations of naval leaders yet to come.

Admiral Byrd's career is like the mighty oak tree; it has many branches. Its shadow passes over a large area. He is now serving as honorary chairman of the International Rescue Committee. This great organization has rescued many thousands of liberty-loving people from totalitarian oppression since 1933. You have aided more than 100,000 Iron Curtain refugees alone. Your appreciation of Admiral Byrd's further contribution to humanity through your great organization is evidenced by this testimonial dinner which you have sponsored.

Admiral Byrd has already completed over 30 years of active naval duty. It is, therefore, too late for him to change a habit of a lifetime. Hence, it is quite possible that as he sits here among us tonight, he is thinking of new frontiers to conquer. I shall not be surprised to see him commanding the first naval expedition to the moon. If he does command the expedition, we can rest assured that he will get there successfully, and accomplish what he sets out to do.

Isthmian Canal Policy of the United States: An Evaluation—Part I

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, April 26, 1956

Mr. MARTIN of Iowa. Mr. President, among the important issues that for some years have confronted the Congress and the Nation is the question of the formulation of future Isthmian Canal policy.

The initial step in this direction was the enactment of Public Law 841, 81st Congress, approved September 26, 1950, which resulted from the recommendations growing out of an inquiry into the financial operation of the Panama Canal enterprise under House Resolution 44, 81st Congress. This law brought about the first reorganization of the Panama Canal agency since 1914. It was aimed at placing the enterprise on a self-sustaining basis.

Since that time, however, the management of the canal project has been under close scrutiny by responsible agencies of the Government, and further changes in its administration have been deemed necessary. Measures designed to effect these changes were introduced in the first session of this Congress. In the Senate there was S. 2167, introduced by the Senator from Washington [Mr. MAGNUSON]; and in the House H. R. 7239, H. R. 7305, H. R. 7393, and H. R. 7564, introduced, respectively, by Representatives CECIL R. KING, JOHN J. ALLEN, JR., WILLIAM S. MAILLIARD, and GEORGE P. MILLER, all of California.

The next great step in the evolution of isthmian canal policy is the determination of the form and character of increased facilities for the future Panama Canal, which with question the calculation of transit tolls is definitely related. A third step involves consideration of canals at other isthmian locations. For these last two tasks, which carry serious diplomatic, economic, engineering and marine implications, adequate means do not now exist.

To provide such facilities, Hon. CLARK W. THOMPSON of Texas, an impartial and thorough student of interoceanic canal problems, and I introduced identical measures, H. R. 3335 and S. 766, respectively, early in the present Congress to create an independent and broadly constituted Interoceanic Canals Commission. Its function would be to investigate and review all aspects of the subject and to submit to the Congress and the President recommendations for a logically developed isthmian canal policy.

As a practical aid in the congressional and public consideration of this question, Representative THOMPSON prepared an extensive bibliography, which was published in the CONGRESSIONAL RECORD of March 23, 1955, volume 101, No. 52, page A2049, entitled, "Isthmian Canal Policy of the United States—Documentation."

The most recent addition of significance to current literature on interoceanic canals is an article by Capt. Miles P. DuVal, United States Navy, retired, published in the March 1955 issue of the United States Naval Institute Proceedings, volume 81, pages 263–275. Also in the same issue, as a historical supplement to the indicated paper, there was an instructive pictorial section prepared by Prof. Gerald E. Wheeler, United States Naval Academy.

Accompanying the article was the following biographical sketch of its author, Captain DuVal:

Graduating from the United States Naval Academy in 1918 (class of 1919), Captain DuVal has had extensive naval service, including duty from 1941 to 1944 as captain of the port, Balboa, C. Z., in charge of marine operations in the Pacific sector of the Panama Canal. From 1946 to 1949 he was Navy Department liaison officer and coordinator of the Isthmian Canal studies, under the Chief of Naval Operations. He is the author of two books on the canal, And the Mountains Will Move and Cadiz to Cathay, published by Stanford University Press, and is now completing a third volume in his trilogy.

At this point, it may be pertinent to comment, in connection with the biographical sketch, that the article of Captain DuVal included in these remarks, like his other extensive writings on interoceanic canal history and problems, is objective, and reflects the comprehensiveness of a broad background of experience, and exhaustive study.

The Naval Institute Proceedings is the leading forum of naval thought in the United States. As such, it is dedicated to the advancement of professional, literary and scientific knowledge in the Navy, and has wide circulation in governmental and professional circles.

To make the subject statement convenient for ready reference by the Congress, the Executive, and the people at large, I ask unanimous consent to have printed in the Appendix of the RECORD the full text of parts I and II. I am informed by the Public Printer that the article is estimated to make 3½ pages of the RECORD, at a cost of $280.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

ISTHMIAN CANAL POLICY: AN EVALUATION—PART I

(By Capt. Miles P. DuVal, U. S. Navy (retired))

ISTHMIAN CANAL POLICY ROOTED IN HISTORY

The Panama Canal, opened to traffic on August 15, 1914, is an interoceanic public utility for the transit of vessels of commerce and war of all nations on terms of equality as provided by treaty. The history of this undertaking is epic.

The idea of its construction traces back more than four centuries. The development of it includes extensive explorations, grave crises, and weighty decisions. Out of these the Isthmian Canal policy of the United States gradually evolved. Yet, despite the vast literature on the canal question, nowhere are the principles of this policy comprehensively stated in one place, and they are not adequately understood. For these reasons a knowledge of key episodes of this important historical subject is essential.

The advantageous geographical position of the American isthmus was recognized by the early Spanish who, within an incredibly short time after their arrival in 1502, explored its regions and reduced their fields of investigation to four main areas: Tehuantepec, Nicaragua, Panama, and Darien-Atrato.

Because of the lower continental divides at Panama and Nicaragua and penetration of the jungles there by river valleys, these two avenues quickly became the great rivals for transisthmian commerce. They are still potential rivals.

At Panama, mountainous terrain and torrential rivers, notably the Chagres, at first represented insuperable barriers to the construction of a canal. At Nicaragua, the existence of a large lake, with the then navigable San Juan River flowing from it into the Atlantic, reduced the magnitude of that undertaking simply to cutting across the narrow strip separating the lake from the Pacific. These facts undoubtedly supply the basis for the initial predilection of the United States in the 19th century for a Nicaraguan canal.

Eventually, the control of the Nicaragua route became a focal point of international conflict, with Great Britain and the United States in a diplomatic deadlock. This difficulty was not removed until 1901, when the Hay-Pauncefote Treaty superseded the earlier Clayton-Bulwer Treaty of 1850, which had deprived the United States of exclusive control of any Isthmian canal.

Pattern of Isthman canal issues evolves

Meanwhile, French interests under the dynamic leadership of Ferdinand de Lesseps had decided to construct a canal across the Isthmus. An International Congress for Consideration of an Interoceanic Canal met in Paris in 1879. There, this Congress wrestled with the difficult questions of selecting the best site and deciding on the best type. De Lesseps, the hero of Suez (a simple sea-level canal), lent the full force of his prestige and his genius toward securing appovral of a sea-level undertaking at Panama—a wholly different problem.

One engineer, the only one in that Congress who had adequately studied the geography of Isthmian regions and grasped their significance, when he saw the trend toward decision for the sea-level type, rose in strong protest.

He understood the topography at Nicaragua and how its elevoted lake, 105.5' high, would contribute toward the construction and operation of a canal there. He knew the surface features at Panama—the continental divide about 10 miles from the Pacific, the torrential Rio Obispo-Chagres flowing into the Atlantic, and the smaller Rio Grande into the Pacific, both through contiguous valleys suitable for the formation of lakes. Interpreting these elements in the light of maritime as well as engineering needs, he recognized the lake idea as offering the solution of the canal problem.

Then, with the vision and simplicity of true genius, he proposed a practical plan for the Panama Canal, here summarized: "Build a dam at Gatun and another at Miraflores, or as close to the seas as the configuration of the land permits. Let the waters rise to form two lakes about 80 feet high, join the lakes thus formed with a channel cut through the continental divide, and connect the lakes with the oceans by locks. This is not only the best plan for engineering but also best for navigation." Essentially, that was the plan for the Panama Canal eventually adopted in 1906. The man who conceived and presented the plan was Adolphe Godin de Lépinay.

The applicability of this plan—the only one which at that time could have had any chance for success—was not understood. De Lépinay's great idea was ignored. His conception of this plan, however, and its dramatic presentation before the Paris Congress of 1879 establish him as an architectural and engineering genius—the originator of the plan from which the Panama Canal was eventually built.

The French, despite De Lépinay's timely warning, launched upon their ill-fated undertaking. Ten years later, in 1889, their effort collapsed and the Isthmus returned to the jungle. Yet, before the failure, the French, to save time and money, were forced to change their plans from sea-level to a modified high-level lake and lock type.

Thus, as the 19th century closed, the pattern of interoceanic canal's focal political and engineering issues had evolved: First, a struggle among competing interests in the choice of route; and, second, debate as to the type of canal, with final decision for the high-level-lake and lock type at Panama.

Panama wins the battle of the routes

In 1899, after more than half a century of exploration, including a number of naval expeditions, the United States started serious investigations by means of an Isthmian Canal Commission for exploration, 1899–1902, of which Rear Adm. John G. Walker, a distinguished line officer of the United States Navy, was president.

After an extraordinary political struggle, known as the "battle of the routes," the Congress authorized the acquisition for the United States of a canal zone in what was then a part of the Republic of Colombia, the purchase of the French holdings, and construction of a canal at Panama, with provision for the Nicaragua canal as an alternate project, if suitable arrangements could not be made for one at Panama.

To this end, the Chargé d'Affaires of Colombia, Dr. Tomás Herrán, a graduate of Georgetown University and well acquainted with American governmental leaders, succeeded, after many months of arduous labor, in negotiating what was considered a most favorable canal treaty for his country—the Hay-Herrán Treaty of January 22, 1903, which was ratified by the United States Senate on March 17, 1903.

Unfortunately, this treaty became involved politically in Bogota. The Colombian Sen-

ate, called into special session on June 20, 1903, for its ratification, rejected the treaty on August 12, 1903, against urgent pleadings of Dr. Herrán in Washington and United States Minister Arthur M. Beaupré in Bogotá.

Panamanian leaders, fearing that after all Panama still might lose the canal to Nicaragua, set out to prevent that possibility. Under the leadership of Dr. Manuel Amador, the state of Panama seceded from Colombia on November 3, 1903, and declared its independence. This was quickly recognized, first, by the United States, and appropriately, second, by France, the country that started the waterway. Then followed the Hay-Bunau-Varilla Treaty of November 18, 1903, which was ratified first by Panama and then by the United States.

In this treaty the Republic of Panama granted to the United States "in perpetuity" the "use, occupation, and control of a zone of land and land under water for the construction, maintenance, operation, sanitation, and protection" of the Panama Canal—and as if the United States were the "sovereign" of that territory. The ratification of this treaty sealed the choice of the Panama route.

The technical justification for this fundamental action was supplied by the Isthmian Canal Commission, 1899–1902, which, under the direction of Rear Admiral John G. Walker, explored all canal routes. He also headed the first Isthmian Canal Commission for the construction of the Panama Canal (1904–05) under which the Canal Zone was acquired, the Canal Zone Government organized, and preliminary work started. These achievements place him in history as a principal architect of Isthmian Canal Policy.

Battle of the levels and the great decision

Work under the United States control started haltingly, with increasing uncertainty as to the type of canal that should be constructed—the high-level-lake and lock type of a canal at sea level. Each proposal had strong advocates.

Fortunately, when the time for decision approached, President Theodore Roosevelt selected the great railroad builder, explorer, and business executive, the late John F. Stevens, as Chief Engineer of the Isthmian Canal Commission.

Mr. Stevens' qualifications were unique. He had read everything available on the proposed Panama Canal since the time of Philip II, built railroads in the Rocky Mountains, and supervised open mining operations in Minnesota. Thus, in his experience he had witnessed what occurs when the balances of nature are altered, and understood the hazards involved in excavating a navigation channel through mountains.

Arriving on the Isthmus on July 25, 1905, at the height of a crisis, he had matters under control within 24 hours. Experienced as he was in large undertakings, he promptly provided housing for employes, organized commissaries, encouraged sanitation, ordered equipment, planned the transportation system, and formed the basic enginering organization for building the Panama Canal. Indeed, so rapid was his progress that he found himself hampered by having to wait for a decision as to the type of canal, then being considered by an international Board of consulting engineers.

In its report of January 10, 1906, this board split—8 members, including 5 Europeans, voting for "sea level"; and the 5 remaining Americans voting for high-level-lake and lock. The naval member on the Isthmian Canal Commission at that time was the chief of the Bureau of Yards and Docks, who, in a minority report, favored the "sea-level" plan as "affording greater immunity from hostile injury."[1]

Footnotes at end of speech.

Meanwhile at Panama, Stevens had walked through the entire length of the canal route and studied the topography. Interpreting it in the light of navigational requirements as well as construction, he decided upon the high-level-lake and lock plan, with the Atlantic terminal dam and locks at Gatun. For the Pacific end, he favored placing its locks in one group south of Miraflores at Aguadulce, just as he planned to do at Gatun.

Testifying in Washington before Congressional committees in January 1906, with a conviction for the high-level plan that no one could shake, he voiced his determined opposition to the "sea-level" idea.

But one appearance was not enough. In June, he was again in Washington, still leading in this memorable struggle, later described by Col. George W. Goethals as the "battle of the levels." On this occasion, Stevens even more forcefully and fearlessly urged the high-level-lake plan as the logical solution.

In the end, with the support of President Theodore Roosevelt, Secretary of War William H. Taft, and the Isthmian Canal Commission, the recommendations of Chief Engineer Stevens prevailed. Congress, by the Act approved June 29, 1906, adopted the high-level-lake and lock plan as proposed by the minority of the international board of consulting engineers. That was the great decision in building the Panama Canal, for the second time completing the pattern of interoceanic canal political and engineering debate.

Here it should be noted that when making his recommendation to the Congress for this action, President Roosevelt did so after evaluating all available evidence of relative vulnerability and operational effectiveness of the two types. Although he understood that the sea-level type would be slightly less exposed to damage in event of war,[2] he recommended the high-level plan because of its economic and operational superiority.

The transit from 1914 through August 31, 1954, in both peace and war, of more than 230,517 vessels of various types has completely established the wisdom of that decision. Moreover, it secured Chief Engineer Stevens, who was primarily responsible for bringing it about, his great fame as the basic architect of the Panama Canal.

Civilian control replaced by military

Though the high-level plan, as approved by the minority of the International Board of Consulting Engineers, provided for placing all Atlantic locks at Gatun, it also specified separation of the Pacific locks into two groups. Chief Engineer Stevens, who had had railroad operating experience, recognized the operational inconvenience of this arrangement and never favored dividing the Pacific locks.

Eventually, on August 3, 1906, Stevens tentatively approved a plan developed by William Gerig. The proposal placed all Pacific locks in 3 lifts south of Miraflores with the terminal dam and locks between 2 hills, Cerro Aguadulce on the west side of the sea-level section of the canal and Cerro de Puente on the east side, on a natural perimeter that would have supplied the same arrangement as at Gatun. This plan, had it been followed, would have enabled lake-level navigation from the Atlantic locks to the Pacific with a summit-level anchorage at the Pacific end of the canal to match that at the Atlantic end.

Regrettably, Stevens was under great pressure to start construction. Advocates of the sea-level proposal, stung to the quick by their defeat in Congress, were poised ready to take advantage of a major change in the approved program as evidence of weakness in the high-level plan. Opponents of any canal at all were also seeking some means to delay the enterprise. These two forces together

Footnotes at end of speech.

represented a political and economic strength that could not be disregarded.

Stevens' foundation explorations, necessarily made in great haste, proved unsatisfactory, and he did not dare to jeopardize the project by further delay. Twenty days later, on August 23, 1906, still confident that this important question would rise again, he voided his plan marking it, "not to be destroyed but kept in this office," and proceeded with the approved plan for separating the Pacific locks.

In 1907, after having brought construction to a point where the success of the project was a certainty, Stevens resigned his positions as chief engineer and chairman of the Isthmian Canal Commission, to which combined offices he had been appointed by President Roosevelt in recognition of his contributions. He was succeeded by Col. George W. Goethals under whose able direction the work was carried forward.

Panama Canal opened for traffic

Notwithstanding this shift in administrative control of the canal enterprise from civilian to military in 1907, the Stevens proposal to combine the Pacific locks did not die. Col. William L. Sibert seriously studied it and, on January 31, 1908, formally submitted a definite plan that reflected his appreciation of marine needs as the basis for navigational planning.[3] But, unfortunately, the Sibert proposal likewise was not approved for reasons then deemed adequate.

In this connection, it is pertinent to comment that after the resignation of Rear Admiral Walker in 1905 there was no experienced navigator on the Isthmian Canal Commission. Thus, one can only ponder what might have been the result had such a person been readily available for consultation with Stevens and Sibert on marine planning. In the light of later operational and engineering knowledge, developed in 1941–44, when there was such consultation between experienced engineers and marine operating officials, it is indeed regrettable that the Stevens-Sibert proposals were not adopted.

Colonel Goethals headed the project to the end, making a number of important but nonbasic changes, which included a widening of Culebra (Gaillard) Cut and the locks. He developed the first permanent operating organization under the Panama Canal Act of 1912 and, as the first Governor of the Panama Canal, opened the canal to traffic on August 15, 1914, and overcame the early slide crises. He and his associates won great fame as builders of the Panama Canal.

In this connection, it should be explained that the original concept of the functioning of the canal enterprise as a civil agency under the Panama Canal Act was dual: in peace, as an interoceanic public utility under a governor; in war, under the supreme control of the Commanding General of the United States Army on the isthmus. In either status, the operational mission of the waterway remained as the transit of vessels under the obvious assumption that the Panama Canal, like other transportation facilities in the United States, would serve in war as well as in peace.

ISTHMIAN CANAL POLICY: AN EVALUATION—PART II

(By Capt. Miles P. DuVal, U. S. Navy (retired))

DEFENSE CONCEPTS BECOME ASCENDANT

After the opening of the canal to traffic, the great builders left the Isthmus; operation and maintenance became matters of routine, and the project was uncritically accepted. The rapid development of the airplane and other modern weapons following World War I, dramatized by periodic fleet exercises off Panama, made considerations of defense

Footnotes at end of speech.

matters of increasing concern; those of marine operations became secondary.

In the excitement preceding World War II, the Congress authorized construction of a third set of larger locks, primarily as a defense measure,[4] known as the third locks project, at an authorized cost of $277 million. The proposed layout placed a new set of larger locks (140 by 1,200 feet) near each of the existing locks but at some distance away to afford greater protection through dispersal and increased lock capacity for large naval vessels. The new locks were to be joined with the existing channels by means of bypass channels.[5]

Significantly, the plan included a number of construction features for future changing of the canal to "sealevel." Thus, discerning students recognized the third locks project as renewing the old "battle of the levels" in a new form—that of "conversion."

The third locks project layout at the Atlantic end of the canal, which duplicates an operationally sound arrangement at Gatun, is likewise sound. At the Pacific end, however, the proposed new channel layout contained three sharp bends—29°, 47°, 37°—in succession from north to south. The latter, if it had been completed, would have created operational problems and navigational hazards of the gravest character.

Construction started in 1940 and was pushed vigorously until suspended in May 1942 because of shortage of ships and materials more urgently needed elsewhere for war purposes. No excavation was accomplished at Pedro Miguel; that at Gatun and Miraflores was substantially completed. Some $75 million was expended.[6]

War experience inspires plan for canal improvement

The suspension of the third locks project, however, afforded an opportunity, while there was still time left to make such a study, for its re-examination in the light of operational needs demonstrated by marine experience. This was at a period when the Panama Canal was the scene of many military and naval expeditions on their way to and from combat zones in the Pacific. This, it should be also noted, was before the advent of the atomic bomb.

These studies conclusively established that the principal marine operational problems of the existing Panama Canal are:

1. Dangerous traffic bottleneck at Pedro Miguel and lack of a Pacific summit anchorage.

2. Double handling of vessels at separated Pacific locks.

3. Effect of fog in Culebra (Gaillard) Cut on capacity and operations.

4. Lockage surges in Cut caused by operating Pedro Miguel locks (3 feet maximum amplitude).

5. Limited operating range of Gatun Lake water level (87–82 feet).

6. Navigational hazards in the restricted Cut (300 feet minimum bottom width).

7. Inadequate dimensions of present locks for largest vessels (110'×1,000').[7]

From the nature of these inadequacies, it is obvious that locating the Pedro Miguel locks at the south end of Culebra (Gaillard) Cut, where it created a traffic bottleneck and other problems, was the fundamental error in operational design of the Panama Canal.

Under the basic assumption that the prime function of the Panama Canal is the safe and convenient transport of vessels, it is self-evident that the wide channels of Gatun Lake afford safer and more convenient navigation than can any necessarily restricted channel at sea level. Moreover, the advantages of unrestricted lake navigation outweigh the minor hazards and time lost by passage through locks. Thus, the best operational solution is not provided by lowering the Gatun Lake water level to sea level, or to some intermediate level, but by raising it to its highest feasible elevation.

The obvious economic operational solution thus is a major improvement of the existing canal according to what is known as the Terminal Lake-Third locks plan, which includes the following program:

1. Removal of the bottleneck Pedro Miguel locks.

2. Construction of all Pacific locks in continuous steps near Miraflores.

3 and 4. Elevation of the intermediate Miraflores Lake water level (54 feet) to that of Gatun Lake to serve as an anchorage during fog periods and to dampen surges.

5. Raising the summit water level to its optimum height (approximately 92 feet).

6. Widening Culebra (Gaillard) Cut.

7. Construction of a set of larger locks.

These modifications will remove the traffic choke at Pedro Miguel, correct present operational dissymmetry, and simplify canal control, increase channel depths, and improve navigation, mitigate the effect of fog, reduce marine accidents, decrease transit time slighlty, conserve water, and increase capacity. Thus, the plan supplies the best operational canal practicable of economic achievement.

This plan was publicly revealed by its author on May 20, 1943, in an address before the Panama section of the American Society of Civil Engineers, under the title, "The Marine Operating Problems, Panama Canal, and the Solution."[8] Attended by high Army, Navy, and Canal Zone officials, the presentation aroused the interests of the commandant of the 15th Naval District, Rear Adm. C. E. Van Hook, who was present. He later submitted the plan to the Navy Department. On September 7, 1943, the Secretary of the Navy forwarded it to the President. Subsequently, this proposal was approved in principle by the Governor of the Panama Canal for the major modification of the existing canal. According to the report of a 1949 congressional investigation, it can be accomplished at "comparatively low cost."[9] Moreover, no doubt exists as to its soundness because a similar arrangement at Gatun has been tested since 1914 and found eminently satisfactory.

Atomic bomb resurrects sea-level plan

The spectacular advent of the atomic bomb in 1945 injected a new element into the canal picture. Under the force of its impact, canal officials sought authority to conduct an "overall review" of the entire interoceanic canals question in the light of the then newest developments in the military and physical sciences.[10] This was before the hydrogen bomb.

Accordingly, the Congress in 1945 enacted legislation[11] authorizing the Governor of the Panama Canal to make a comprehensive investigation of the means for increasing its capacity and security to meet the future needs of interoceanic commerce and national defense. The law also provided for a restudy of the third locks project, a study of canals at other locations, and for consideration of any new means for transporting ships across land. Thus was launched the second major canal crisis in the 20th century. It served to resurrect the corpses of the 1902 "battle of the routes," and the 1906 "battle of the levels," with a rehashing of all the main arguments of the earlier struggles on the basis of the newer term, "security," rather than the older one, "vulnerability."

Under a far more extreme interpretation of the "security" factor of the statute than was intended by the Congress that enacted it, the investigation was directed toward obtaining authorization for a sea-level project at Panama, with the security and national defense factors as paramount, and money costs not a governing consideration.[12] In line with the 1905–06 precedent, the naval representative on the Board of Consulting Engineers for the greater part of this engineering investigation was the Chief of the Bureau of Yards and Docks.

In the ensuing public hysteria centered on the dangers of the atomic bomb and other modern weapons, the long-range and fundamental mission of the Panama Canal to provide efficient and economic transit of vessels was generally overlooked.

The report of the 1946–47 Isthmian Canal Studies[13] recommended only the sea-level project for major canal construction at Panama, initially estimated to cost $2,483,000,000. With the exception of the two terminals, this project provides for constructing a virtually new Panama Canal of 60-foot minimum depth in navigation lanes and of 600-foot width between sloping sides at a depth of 40 feet on a new alinement somewhat removed from the present channel, which it crosses several times. The project includes a tidal lock (200 feet by 1,500 feet) and a navigable pass at the Pacific end, many miles of dams for flood-control reservoirs on both sides of the projected canal, diversion channels and other structural features. This program would result in abandonment of the greater part of the existing waterway and the investment that it represents.

Although the 1947 report contained studies of plans for a terminal lake-third lock project, which it did not recommend, it offered a relatively minor program for improvement of the present canal installations "to meet the needs of commerce" as a preferred alternative to the major improvement of the existing waterway as recommended to the President in 1943 by the Secretary of the Navy.

Transmitted by the President to the Congress on December 1, 1947, and without Presidential approval, comment or recommendation, the report promptly encountered sharp opposition. The Congress took no action on this report. Instead, in 1949, it authorized an investigation of the organizational and financial aspects of the canal enterprise,[14] for which study Representative CLARK W. THOMPSON, of Texas, a retired Marine Corps Reserve officer, served as chairman. This investigation resulted in the first basic change[15] in the permanent canal operating organization that was established in 1914.

The new act requires that transit tolls be established at rates that will place the operation of the canal enterprise on a self-sustaining basis—a new principle in Isthmian Canal policy with far-reaching implications affecting the future economic management of the Panama Canal and interoceanic commerce. This subject is now under further congressional study.[16]

Clarifications restore operations as basis for planning

Meanwhile, in the Congress, the security and national defense premises, on which the recommendation for the sea-level project was primarily based, were vigorously challenged.

As to the atomic bomb, Representative Willis W. Bradley, a retired naval officer, summarized his views: "As far as I can ascertain, the greatest authorities on modern weapons of war who have given this subject serious attention hold uniformly that any canal would be critically vulnerable to the atomic bomb, regardless of type; that a sea-level canal would be in the same security class as a lake canal; that a sea-level canal could be closed for prolonged periods of time beyond any hope of speedy restoration; and that a sea-level canal cannot be considered secure in an atomic war. These same authorities also agree that the atomic bomb is irrelevant as a controlling factor

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

in the planning of operational improvements for the Panama Canal.[17]

Representative, now a Senator THOMAS E. MARTIN, of Iowa, a retired Army officer, developed the national defense clarification, repeatedly stressing that protection of any type of canal, wherever located, is an overall governmental responsibility and that its defense, like that of the seaports, airports, railroads, highways, and productive centers of the United States depends upon the combined industrial, military, naval, and air power of this Nation as obtained in both world wars, and not upon passive defense measures, such as may be embodied in inherent characteristic of canal design.[18]

Here it should be stated that leading atomic warfare authorities, who studied the problem of Canal Zone defense in 1947, considered that arguments as to relative vulnerability of types of construction are entirely without point and that the sea-level project would, in effect, constitute a Maginot Line. This view has been greatly strengthened by the later development of the hydrogen bomb, which is measured in mega-tons of TNT equivalent as compared to kilo-tons for the atomic bombs.

In the course of extensive discussions of the sea-level project recommendations,[19] congressional and administrative leaders often stressed the point that this project, if justified primarily for national defense, would divert both funds and resources from projects and programs in the United States that are far more essential to national security. The combined effects of the defense clarifications have been toward eliminating the concept of inherent resistance to attack as the governing consideration in planning at Panama. Thus, it appears that the only justifiable security design feature is adequate protection against sabotage, which is chiefly an administrative function.

Eventually, a group of engineers and others associated in building the Panama Canal submitted their views in a memorandum to the Congress. This memorial challenged the official cost estimates in the 1947 report, charging that the sea-level project would cost several times its initial estimate—$2,483,000,000—and that the third locks project adapted to the principles of the terminal lake proposal (widening Culebra Cut excepted) can be accomplished at relatively low cost as compared to that of the sea-level project—estimated as under $600 million.

The statement also criticized the 1953 program for repair and alteration of present lock structures as makeshift in character and without sufficient merit, pointing out that it will delay the fundamental and long-overdue solution of the problems involved. It stated that the Governor's recommendation of none but the sea-level project for major increase of canal facilities served to exclude what may be the best solution when evaluated from all angles.

Included in an address to the House by Representative EUGENE J. KEOGH, of New York,[20] this memorandum was promptly recognized by the engineering profession.[21]

Strong appeals for the creation of a wholly American, independent, broadly based, predominantly civilian, strictly nonpartisan and objective Interoceanic Canals Commission, composed of able men who may not be dominated or unduly influenced by Federal executive agencies, have been made by responsible congressional leaders as the best means for developing a wisely reasoned isthmian canal policy.[22]

The consequences of prolonged arguments, in and out of the Congress, have been toward restoration of economic thinking and an increased appreciation of fundamental planning concepts so well expressed during the 1905–06 "battle of the levels" by Gen. Henry L. Abbot, the great student of the Chagres, member of the Comité Technique of the French Panama Canal Co. and the International Board of Consulting Engineers, and an advocate of the high-level type. His words were: "The true criterion is ease and safety of transit, and * * * this test leaves no doubt as to which type of canal should be preferred at Panama."[23] This standard, both obvious and simple, is as true today as it was when written in 1905. Moreover, it is applicable in evaluating not only canal proposals at Panama but also those at other locations.

Diplomatic implications

The juridical basis for the Canal Zone rests with the Hay-Bunau-Varilla Treaty, which authorized a zone 10 miles wide extending 5 miles on each side of the center line of the canal. After extended diplomatic discussions, the boundaries of the Canal Zone were later fixed in the Price-Lefevre Boundary Convention of September 2, 1914.

An examination of the general plan of the proposed Sea-Level project discloses a number of features not covered by current international agreements. Among these are: a new main channel alinement substantially removed from the existing channel from which Canal Zone boundaries are measured; flooding of additional territory in the Republic of Panama in the Chagres River Valley downstream from Madden Dam (Alhajuela); diverting the Chagres River from its present path west of Limon Bay to a new path east of the bay that crosses a Panamanian highway; and draining the central portion of Gatun Lake. The last features would disrupt present navigation channels to Panamanian settlements on the lake and uncover large and forbidding swamp areas with resulting health and sanitation consequences.

These aspects of the sea-level undertaking would undoubtedly bring a demand from the Republic of Panama for a new treaty covering the specific conditions for its construction. What concessions such a treaty would cost cannot be predicted. But, based upon previous experience in such diplomatic negotiations, these costs would be far greater than earlier ones, inevitably adding to the total estimate and increasing tolls.

Furthermore, such negotiations would be fraught with considerable uncertainty in the relations of the United States with Panama and other nations of Latin America, not to mention threats to the security of the enterprise through the process of its internationalization, for which there have been persistent demands.

In contrast, the terminal lake-third locks plan, being merely an enlargement of the existing facilities[24] that does not call for additional land or waters or authority, will not require a new canal treaty. This, it must be obvious, is a truly paramount consideration.

The construction of a canal at another location would introduce an entirely new diplomatic situation, which would be just as complicated as that at Panama.

The salient elements of this situation, however, are: that the 1947 report does not present these significant diplomatic involvements; that the need for negotiating a new treaty with Panama to cover the sea-level project was not submited to the Congress; and that the Congress has not authorized such negotiation as was done in the Spooner Act of 1902 for the original construction of the Panama Canal.

Isthmian Canal policy must be redetermined

The evolution of Isthmian Canal policy has been slow. Its principal objectives have long been the best type of canal at the best site for the transit of vessels of commerce and war of all nations on terms of equality as provided by treaty—and at low cost of construction, maintenance, operation, sanitation, and protection.

Often beset by bewildering confusions of ideas, the progress of fundamental concepts has, at times, deviated from their logical courses. Yet events have thus far conspired to avert irretrievable error. Now, with the main arguments clarified, the interoceanic canal problem in its national relationships is coming to be better understood and attention is focusing on the true objectives of securing requisite capacity and operational efficiency. Nevertheless, the evolving situation is of such grave concern that it must be protected by ceaseless vigilance and fully matured objective judgment.

The Panama Canal is now entering its fifth decade of operations. Its navigational inadequacies have been established. The canal as completed contains fundamental errors in operational design centered on the location of the Pedro Miguel locks. These can be corrected only by the major reconstruction of the Pacific end of the canal as contemplated in the Terminal Lake-Third locks proposal.

Commercial traffic through the canal has reached the highest volume in history. The Navy has vessels that cannot transit. Issues raised by questions of security and national defense have been formally submitted but never accepted. The principle of economic operation of the canal has ben embodied in law.[25] Yet, in a physical sense, the shipway is still esentially what it was in 1914. Thus, the time has come to provide, without further delay, the additional interoceanic transit capacity and operational improvements to meet present and future needs.

The solution of this problem is not the simple proposition that it may appear. Instead, it is a highly complicated one of the greatest national importance, rising above purely personal and group considerations. It involves questions of fundamental operational and engineering planning, the decisions on which will affect the welfare of the United States and other maritime nations through the indefinite future.

These facts call for a further reassessment of the entire interoceanic canals problem[26] based on realities, with a comprehensive restatement of isthmian canal policy as derived from a reasoned line of action. This is the task that sooner or later the Congress and the Nation must meet.

Atomic Energy and the Power Industry

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD the following article titled "Atomic Energy and the Power Industry" which appeared in the April 26, 1956, issue of the Public Utilities Fortnightly and which was written by Franklin H. Cook, professor of economics, College of Business Administration, the Pennsylvania State University, University Park, Pa.

Professor Cook, who is a constituent of mine, discusses the economics of three types of electric power generation, namely, hydro, steam, and atomic reactor.

His article follows:

ATOMIC ENERGY AND THE POWER INDUSTRY

(By Franklin H. Cook)

In the latter part of January 1956, the citizens' panel on the Impact of the Peaceful Uses of Atomic Energy told the Congress of the United States that by 1980 atomic energy should be able to produce more electricity than is now generated by conventional means.[1] Specifically, the panel looks for an increase in annual capacity from our present 115 million kilowatts to 600 million kilowatts. Of this latter figure, 135 million kilowatts would be produced by atomic energy. Steam generation would be up 60 percent from today.

The panel's report seems to be predicated upon the assumption that atomic fuel will ultimately replace fossil fuels as a primary source of power. This affirmation is not based upon fear that coal, oil, and gas reserves will be depleted, but that atomic energy will be a cheaper form of energy than competing fuels.

Also, the panel narrowed the field of possible applications of nuclear power. Employment of the atom in reciprocating engines was dismissed as impractical at the present technological stage of development. The use of atomic energy in airplanes was similarly repudiated because of hazard to persons on the ground in the event of a crackup. Generation of electric power appeared to be the most feasible area in which nuclear energy could be utilized, replacing conventional fuels for steam generation.

This hot capsule, peaceful use of the atom, has now been offered to the electric power industry by the Government. Political authorities had three possible approaches to industrial use of the atom. First, under guidance of a public power-minded administration, the State might have reserved the development of nuclear power as a government monopoly. Secondly, it could have turned the entire project over to private industry. Present world political and military conditions negate this possibility. Lastly, it might effect a compromise between the two positions by licensing the fuel to private industry, and encouraging risk capital to carry on the economic growth of the energy singlehanded or with Government aid. The latter position has been chosen.

The selection of the electric power companies as the representative of private industry in the evolution of atomic power has benefited common stocks of engineering and manufacturing firms connected with nuclear energy or the manufacture of electric generating equipment. The electric power companies and the coal producers have not been so elated. Without the capital reserves of a nonregulated industry, the electric utilities hesitate to burden their stockholders with the risk of being the first to venture into this new frontier. Nevertheless, international politics, Government sanction, and public expectations prod them onward.

Inroads of nuclear energy upon the electric power field will be gradual, for the peaceful uses of atomic fuel are tied in with the steam turbine. Today, approximately 1 out of 4 kilowatts generated comes from a hydro plant. Further, a large number of consumers in the United States do not buy directly from a company that generates electric power, but from a purchasing company that buys either hydro or fuel-generated electricity from a wholesaler. Investors in the hydro and purchasing company may never have to worry about a change to atomic power.

The influence of nuclear energy can be assessed by studying the effect of atomic generation upon the three types of companies: purchasing, steam, and hydro. A company fits into a classification if it secures over 50 percent of its power from one of those sources. Each type of company has a different plant investment and expense pattern. For example, the purchasing company has a large percentage of plant invested in its distribution system, and low total plant investment in relation to operating revenue, whereas the hydro company shows a large plant investment in terms of operating revenue with practically no fuel costs. The steam company lies somewhere between the purchasing and hydro companies.

In 1953 before deduction for depreciation reserves, the median purchasing company had $2.70 invested in total utility plant for every dollar of operating revenue; the steam company, $4.20; and the hydro, $5.30. Chart I, illustrating the percentage of plant devoted to production, transmission, and distribution by the three types of companies, demonstrates that the purchasing company has the highest number of dollars invested in distribution facilities; the hydro, in production plant; and the steam company has almost an equal investment in production and distribution equipment, the latter being slightly more than the distribution plant of the hydro company.

(Chart omitted.)

Transmission lines owned by the purchasing company are negligible, although representing a greater percentage of total plant than generating assets. Because of the location factor the hydro company might be presumed to have a heavy investment in transmission lines, but the investment is only slightly greater than for the steam company.

Only by the relocation of existing generating facilities would nuclear energy affect any company's investment in distribution and transmission equipment. The stockholder in the purchasing company has practically no generating plant represented by his investment. In fact, the present trend for these companies is away from the ownership of such assets. Therefore, atomic energy will enter his deliberations only when the management of the company considers the addition of generating properties to the plant. On the other hand, the investors in the stream and hydro companies are going to face the problem of nuclear investment more quickly. Whether it is adopted, and when, depends upon two factors: the future demand for electricity from a particular company and the competitive cost with other fuels as a source of energy.

A presently generating plant, steam or hydro, will add atomic energy units either as replacement of existing facilities or as supplemental units. Where a company is already generating by steam it would be very easy to replace present mineral fuel boilers with atomic units, for only about half of the production plant is represented by boiler apparatus. Because its existing generating resources are not readily adaptable to production by atomic energy, a hydro company would not be likely to supplant its present dams with nuclear boilers.

However, if a steam or hydro company is located within an expanding market and high plant and load factors make additional units imperative, undoubtedly, atomic units would be given consideration if the cost of production per kilowatt-hour was competitive with existing steam plants. An additional atomic unit could be easily tied into a steam-generating system, making use of much installed equipment; and, if it is a large steam-generating company, the construction of additional plant is a recurring problem.

Management of a hydro company requiring supplemental units because of demand would have three possible solutions: make greater use of hydraulic power; purchase power; add a steam-generating unit. It would be unlikely to choose the first, expand hydro facilities, for available waterpower sources are decreasing rapidly in the United States. Within the last decade hydro production increased about 50 percent; fuel, over two times; and gas and oil generation quadrupled.[2] Because expansion by steam generation would be a

---

Footnotes at end of speech.

Footnotes at end of speech.

new type of production for the personnel and management of the hydro company, the addition of a new generating unit either fuel fired or atomically heated would not be a first choice. First choice would be an attempt to purchase additional power needs. Thus, for the hydro company, steam generation by coal, gas, oil or atom would be a last choice. A company experienced in steam will more readily adopt atomic fuel than a purchasing company or hydro company that does not possess the adaptable equipment nor personnel acquainted with steam generation.

Whether a purchasing, steam, or hydro company contemplates the use of atomic energy, a paramount factor in reaching that decision is the cost of production of such power. This cost is made up of two items: fixed and variable costs. The main element in the first group is the depreciation on the plant. Labor and fuel are the chief variable items. Today, it seems the effect of atomic fuel will be to increase the percentage of fixed costs through greater plant investment. In 1953 the median purchasing company had $51.50 invested in production plant for every kilowatt of capacity; the steam, $132; and the hydro, $178. Contemplated atomic energy plants are expected to cost between $230 and $290 per kilowatt.[3] This makes the outlay greater than for the hydro plant, and if coupled with an accelerated depreciation rate, the result is a greater annual depreciation charge than for the hydro plant—at least 10 percent of operating revenues. However, in terms of production cost, added depreciation on generating plant is an infinitesimal part of total cost of power at the generator. The variable items represent a more significant component of production cost.

In 1953 production cost, exclusive of depreciation, was 1.23 cents per kilowatt-hour for the purchasing company, mainly for purchased power; for the steam company, 4½ mills; and for the hydro company, slightly over 2 mills. According to Mr. Morehouse[4] the generating cost of nuclear energy per kilowatt-hour is estimated to be between 6.7 and 9 mills. If that figure includes depreciation on production equipment, it would compare with 1.3 cents for the purchasing company, slightly over 5 mills for the steam, and about 3 mills for the hydro. If depreciation on production plant is added to the production expense per kilowatt-hour it amounts to about 1 mill per kilowatt-hour for all 3 types of companies and would approximate that figure for the atomic energy plant. The operating statement characteristics of a nuclear fuel plant would lie somewhere between that of a steam plant and a hydro plant.

Table I below shows a vertical analysis for the income and earned surplus statement of the purchasing, steam, and hydro companies. For the atomic plant to compete, depreciation would approximate that of the steam plant, and production expenses would lie somewhere between the 24 percent of the steam company and the 16 percent of the hydro.

TABLE I.—*Comparative common-size expenses for purchasing, steam, and hydro companies*

	Purchasing	Steam	Hydro
Average selling price per kilowatt-hour ..... cents	2.7	1.9	1.3
Depreciation ..... percent	5.6	9.8	9.2
Taxes ..... do	12.5	22.3	25.5
Production expense ..... do	45.9	24.3	16.1
Transmission expense ..... do	.3	1.3	1.7
Distribution expense ..... do	8.9	7.9	7.3
Customer and accounting expense ..... do	3.9	3.2	2.9
Sales promotion expense ..... do	1.4	1.9	.8
Administrative and general expense ..... do	6.9	7.3	8.8

Medians based on companies having all operating revenue from sale of electricity, "Statistics of Electric Utilities in the United States, 1953," Federal Power Commission, Washington, D. C.

The only conclusion that can be drawn from the analysis of the electric-power industry in terms of the application of nuclear fuel is that at the present time the atom is not in a competitive position with existing fuels in terms of production cost per kilowatt-hour.

A look at the trend line of production costs for the three types of companies since 1948 may be helpful in determining when and where nuclear energy may first be found economically profitable in the electric-power industry. From 1948 to 1953 production expenses for the purchasing company have gone up from 43 to 46 percent of operating revenue. Nevertheless, the companies have been able to keep their average selling price per kilowatt-hour in line by dropping it from 2.8 cents to 2.7 cents for the same period. Among the purchasing companies there is pressure from the increasing production expenses.

However, both the steam and the hydro companies have had a decrease in production expenses for this period, the steam moving from 34 to 24 percent—a decline of 10 percent in the period from 1948 to 1953, inclusive. Undoubtedly, this was effected by the introduction of more efficient equipment, requiring less fuel and labor per kilowatt-hour. Hydro companies dropped about the same amount from 25.6 percent in 1948 to 16 percent in 1953. The average selling price per kilowatt-hour of the steam companies held steady during this period at 1.9 cents, whereas the hydro companies dropped from 1.4 cents to 1.3 cents between 1952 and 1953.

An examination of average cost per kilowatt-hour[5] for all three types of companies shows resistance against increased expenses. The purchasing company had costs of 2.5 cents per kilowatt-hour in 1948 and the same in 1953; steam, 1.5 cents and 1.4 cents; hydro, 1.2 cents and 1.1 cents. Over the 5-year period steam and hydro companies have managed to reduce their operating revenue deductions per kilowatt-hour by 1 mill. The trend-cost picture of these three types of companies does not seem to be significant in ascertaining which type of company will be the first great user of atomic energy.

The introduction of nuclear energy to the electric power industry will not make present plant investments obsolete. As the use of atomic power spreads through the electric-power field, management in replacing existing facilities or adding new units will be governed by cost factors in integrating the atom to their system. Chief stumbling blocks to the purchasing and hydro companies will be the addition of new and different generating units, which objection would be present if the new additions were fossil fired. If the cost trend per kilowatt-hour for nuclear fuel is downward and for other fuel upward, then prior to 1980 some plants will have found it advantageous to change to atomic power. They will be purchasing, steam, and hydro companies for whom the transportation of coal, gas, or oil makes such fuel consumption so costly that nuclear heat may be used advantageously.

Since 1925 the progressive rate of decline in the consumption of coal per kilowatt-hour has not been rapid. From 1920 to 1925 the rate dropped from 3 pounds of coal to 2 pounds of coal per kilowatt-hour. From 1925 to 1954, 29 years, the rate declined to 1 pound.[6]

Technologically, atomic power is in its infancy; as it matures it should have a greater increase in efficiency than coal has shown in the last decades, particularly if the hydrogen or fusion process is released to private industry.

In the main, because of adaptability of equipment, personnel, and management, atomic energy will slowly enter the electric-power field as unit additions to steam plants. The transition will be gradual. Nuclear force is not powerful enough to shatter in one moment ancient hindrances to change; obstructions that now and in the past keep purchasing companies from changing to hydro or steam generation, hydro companies from adding steam units, and steam companies from installing more efficient steam plants.

A Critique of Social Security

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mr. OSTERTAG. Mr. Speaker, like every other Member of this House, I receive a steady flow of mail from people who are concerned for one reason or another about social security. Often their concern stems from misunderstanding of what the system is, what it is intended to do, what it is capable of doing, and how it is financed. From time to time I have brought to the attention of this House certain of these letters which highlight these misunderstandings and some of the inequities of the system.

There is now published by Henry Regnery Co., of Chicago, a book entitled "Social Security—Fact and Fancy," in which the author, Mr. Dillard Stokes, presents a series of instances of hardship and unequal treatment of persons affected by the social-security system. He also suggests an alternative. Whether one agrees or disagrees with Mr. Stokes' analysis and proposals, one

must concede that he has performed a useful public service in highlighting some of the inconsistencies and shortcomings of the present system. Any system of such magnitude as social security should be under constant public scrutiny and evaluation, in my judgment. To say that it is by all odds the largest and most generous system in the world is not to say that it is perfect, or that it cannot and should not be subjected to analysis and review.

Two of our great New York newspapers, the New York Times and the Wall Street Journal, have published criticisms of Mr. Stokes' book, the former by the distinguished Under Secretary of Labor, Dean Arthur Larson, and the latter by the noted literary critic and political commentator, John Chamberlain.

Under leave to extend my remarks, I include in the RECORD these two reviews:

[From the New York Times of April 3, 1956]

PAYMENTS AND PENSIONS

(By Arthur Larson)

Veryl Ribble was a foreman in a tool and die shop, making $4,800 a year. With his wife Agnes and four small children, he just managed to make out. Everything Veryl could save he put into life insurance. Then one day, when Veryl was on a trip, a friend offered him a ride home in a small private plane. Veryl was so anxious to get home to his little family that he accepted. The plane crashed and Veryl was killed. When the insurance man came round, Agnes naturally thought that he was going to pay them the $40,000 in insurance that Veryl had scraped and saved to buy. But she was wrong. She didn't get a penny. It appeared that a clause in the contract make it inapplicable to death resulting from flights in a private plane. "But who gets the money we paid in?" cried Agnes. "We do," sneered the agent. And the insurance company kept all the premiums.

If someone were to write a book about private insurance introduced by 36 vignettes of fine-print tragedy along the lines of this hypothetical example, the reader might well form a pretty low opinion of the insurance business. Dillard Stokes has used this technique at the expense of social security, in support of the thesis that the entire system is a fraud. He has methodically dug out almost every conceivable combination of circumstances that could produce an apparently inequitable result under social security, and then has found, or more often invented, a touching human story, told as if it had actually happened. Wherever a line is drawn in the Social Security Act, he constructs his set of facts just on the wrong side of the line, so that his characters just fail to qualify.

All of his shocking examples can be classed under two simple heading: policy limitations and transitional inequities.

By policy limitations is meant the simple fact that in any such system, public or private, there is always a stated set of limitations, such as Mr. Ribble's private-airplane clause, governing payment of benefits. The more limitations, the cheaper the policy. A $50-deductible collision policy is much cheaper than a policy with no deductibility. A social-security system which pays nothing to people who each over $2,160 after retirement costs much less in contributions than one which pays pensions to everyone over 65 regardless of earnings. Certainly social security could be amended to pay benefits without any of the limitations that produced the author's poignant examples. But this would mean either that people now entitled to benefits would get less, or that the cost of the system in contributions would be sharply increased. As of the present, the American people through their representatives have decided that they want the policy they have got.

The second class of examples arises out of the transitional period social security is going through. To get the system started, some people were given much more for their contribution dollar than most people will get when the system is mature and when the members have contributed throuhgout their working lives. There is nothing startling about this. The same thing will be found in many private employer pension plans, under which a man aged 60 at the time the plan takes effect will sometimes be given a substantial pension at age 65, far out of proportion to any contribution.

The alternative, which the author, a lawyer and former newspaperman, suggests, is to have everyone get exact dollar-for-dollar benefits, which means that almost no one would get a full pension comparable to Social Security until about 1990. The $200-a-month man and wife, after 10 years, would draw a monthly pension of $14.80 to $22.20, instead of the present $117.80. For good measure, the author proposes to destroy survivors life-insurance benefits. Meanwhile the rate of contribution, to finance these geratly reduced pensions and nonexistent survivor benefits, is to be immediately doubled, to 8 percent. And $30 billion is to be spent to bring about the changeover. It is unlikely that the proposal will catch on.

[From the Wall Street Journal of April 3, 1956]

THE BOOKSHELF: EXAMINING THE SACRED COW OF UNITED STATES SOCIAL SECURITY

(By John Chamberlain)

The idea of compulsory social security has become such a sacred cow that few politicians care to question it, certainly not on fundamental principle. In these touch-me-not circumstances Dillard Stokes may have difficulty getting a hearing for his "Social Security: Fact and Fancy," which is pitched at the politicians as well as at the general reader.

Mr. Stokes is, however, so very far from being an enemy of the compulsory-old-age-insurance idea that it is only in our present Alice-in-Wonderland atmosphere that he would ever deserve a citation for bravery in criticizing the workings of present legislation.

The current law, says Mr. Stokes, is a radical departure from the original Social Security Act of 1935. To Mr. Stokes' way of thinking, the first act was on an absolutely sound basis: People paid for what they got and got what they paid for. And nobody was required to support anybody else.

Mr. Stokes' objection to the present law is that it mixes old-age relief with the old-age-insurance principle. It serves in some measure to redistribute the wealth. It is precisely as if the Metropolitan Life Insurance Co. were to offer a policy which would take money out of John Brown's premiums in order to pay for those of John Smith.

Moreover, the survivors of John Brown and John Smith may never see a penny of the paid-in insurance if death comes before the money has been collected by the original purchaser. Families no longer get social-security insurance as a matter of right, but only under certain conditions that vary haphazardly under a confusing system that can only be deciphered by lawyers with trained eyes for the finest of print.

Just how arbitrary the whole affair has become is the substance of most of Mr. Stokes' book. To bring his meaning home to those who dislike coping with statistical abstractions, Mr. Stokes has assembled a revealing number of short biographies of people who thought they were adequately insured under the law which had been taking money every year out of their paychecks.

For example, there was Luigi Bellini, who thought his enforced savings were providing a measure of protection for his little son Tony. Tony would have got the insurance if he had been adopted by a stepparent or by a close blood relative. But he happened to be adopted by a cousin, so the payments stopped. The curious thing is that if Tony had lived on to the age of 18 in the cousin's house on an unadopted basis the money would have continued to come in.

Millie White, who lost her right arm in the gas explosion that killed her husband, would have received benefits for her little son Charlie. But Charlie, who had been hurt by falling timbers in the same explosion that killed his father and maimed his mother, died after weeks of valiant struggle. Hence Millie will get none of Mr. White's enforced savings until she reaches the age of 65—which is 25 years from now. If she dies before then the money will be kept by the Government.

So it goes in Mr. Stoke's biographies, some of them real, some of them hypothetical constructions based on legal interpretations that have determined real instances in the past. The Belin and White cases are only two of a multitude too numerous for mention here.

Perhaps the strangest injustice is the one which allows a person with income from investments to get social security benefits without question while another person who continues working after age 65 gets little or nothing, depending on the amount of his wages. Mr. Stokes tells of people who voluntarily step down from high-wage jobs to low-wage jobs at 65 to qualify for benefits. In that way they maximize their total take from Government and industry.

In the legislative attitude which encourages this weird practice, no thought is given to the consequent loss of skill to industry. And the man who steps down a notch or two in order to qualify for social security benefits may be displacing a low-wage worker who really needs the job. If that low-wage worker is himself under 65 and ineligible for social security, he may be forced to go on relief.

Theoretically, there is a social security reserve fund which is supposed to build up to a level sufficient to meet payments to millions in the future. But Mr. Stokes quotes two widely conflicting "scientific" projections put out by Social Security Administration actuaries. One projection is that the fund will go broke in 40 or more years. The other is that it will pile up a $151 billion surplus. The reason for such discrepancies is that no one knows what the level of business will be in 1975, or how many people will be born in 1961, or what inflation may do to the cost of living and hence to Congressmen's ideas of what annuities ought to be.

In any event, the reserve fund is not a real fund. What the Social Security Administration has to show for its collections is mainly Government paper in the form of bonds. To pay annuities in the future, new taxes or new debt will be needed to convert the bonds to money. So the children of the future may be paying by taxes or debt for security supposedly earned in the present.

In spite of everything he has to say against the present law Mr. Stokes remains a convinced believer in the idea of compulsory insurance. Although he insists that not one in a hundred people can afford to buy enough insurance privately to provide for a family for 15, 10 or 5 years, he thinks the job can be accomplished at least to some degree by Government intervention. He has his own prescription for doing the job which he offers free of charge to Congress. Let the Government, he says, give annuity bonds to

people every year as they pay their social security taxes. The bonds would be redeemable as monthly life income on presentation at age 65. Survivors would get the paid-up value of anything left over.

By this system, which has the charm of automaticity, Mr. Stokes would eradicate a huge and cumbersome social security bureaucracy. The savings on operating costs, he says, would amount to $6 billion or $8 billion in 45 years.

As he describes it, under his system "there are no 110 million accounts. No recording of names, ages, addresses, employment, of everybody in the country. No Federal finger on every citizen from crib to coffin. No questionnaires. No investigations. No conditions. No exceptions. No field agents. No case workers. No triple alternative formulas. No interpretation. No claims manual. No retirement test. No earnings limit. No benefits suspended. None forfeited. No cutrate benefits. No overpriced benefits. * * * No unimaginable surplus. No fantastic deficit. * * * No theories. No social experiment. No redistribution of income."

Sounds like paradise. But when, in recent years, has Congress ever gone in for anything that simple?

United States Jaycees Conduct Nationwide Program To Create Greater Public Interest in Hoover Commission Recommendations

EXTENSION OF REMARKS
OF
HON. ORVIN B. FJARE
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. FJARE. Mr. Speaker, the United States Junior Chamber of Commerce, through its 3,000 community locals in all 48 States, Hawaii, and Alaska, is now completing a most successful nationwide program to encourage public interest in the efficiency and economy recommendations of the second Hoover Report. I think that they are to be highly commended for their work in this field.

Tomorrow morning the Honorable Herbert Hoover will address a congressional banquet-breakfast, which will climax a 3-day visit to our Nation's Capital by 56 Jaycee members, selected from the chapter in each State deemed to have conducted the best Hoover Report program. These men have received an opportunity to see the Federal Government in operation and to meet some of the men who make it function. Undoubtedly when they return to their respective States and communities, they will draw upon their Washington experience to increase public interest in governmental affairs.

One of the highlights of their visit in Washington, D. C., is today's opportunity for them to watch the House of Representatives in session. Congressional leaders were honored this morning in a series of presentations made on the Capitol steps on behalf of all Jaycees.

The following is a list of the Jaycee participants who have been honored by their State organizations, and who are participating in the present Meet Your Government program.

George M. Yeager, 113 Ina Street, Fairbanks, Alaska.

Robert Fleming, 3550 Princeton Drive, Montgomery, Ala.

Frank W. Fletcher, 309 Cooper, West Memphis, Ark.

John W. Hamilton, 1638 Walnut Creek Parkway, West Covina, Calif.

Louis P. Martinez, 305 Maplewood Drive, Colorado Springs, Colo.

Gordon C. Smith, 1025 Lincoln Street, Denver, Colo.

Vincent Simko, 57 Dover Street, Bridgeport, Conn.

Lucian H. Vandoren, Jr., Washington, D. C.

Webb H. Vermilya, 1956 Richwood Drive NE., Atlanta, Ga.

Dr. G. W. Atwood, 944 Fair Street, Buhl, Idaho.

Gordon S. Peters, 302 Bigelow, Peoria, Ill.

John B. Hilkin, 9120 Major Avenue, Morton Grove, Ill.

William F. Radcliff, 18 Kimberly Lane, Muncie, Ind.

Gordon J. Forsyth, 1214 North Sixth Street, Estherville, Iowa.

George A. Lowe, 522 East Cedar, Olathe, Kans.

John Coleman Scott, 203 Pinewood Drive, Frankfort, Ky.

F. J. Lungaro, 606 Clarence Street, Lake Charles, La.

Robert Easton, Pleasant Street, Norway, Maine.

Albert D. Darby, Jr., 212 South Allegany Street, Cumberland, Md.

Frank H. Wooton, Holyoke, Mass.

John L. Deal, 1019 Pinehurst Boulevard, Kalamazoo, Mich.

William D. Hurley, 91 Crocus Place, St. Paul, Minn.

Thomas K. (Pete) Griffis, 404 22d Avenue, Meridian, Miss.

Donald C. Woodside, 417 North Washington, Butte, Mont.

Arthur D. Bradley, Jr., 7416 North 28th Avenue, Omaha, Nebr.

David P. Boyer, 1342 Douglas Drive, Las Vegas, Nev.

A. Arthur McKew, Jr., High Street, Troy, N. H.

R. Donald Quackenbush, 372 Owen Avenue, FairLawn, N. J.

John A. Voller, 1600 Gonzales Road, Albuquerque, N. Mex.

Walter P. Quinn, Melrose Road, Auburn, N. Y.

Merril Berg, 1526 First Avenue Southeast, Minot, N. Dak.

P. J. Cole, Logan, Ohio.

William G. Boykin, 2624 Southwest 46 Terrace, Oklahoma City, Okla.

Gerald L. Denton, 853 Washington, McMinnville, Oreg.

Don M. McCutcheon, 1301 West Sherman, Hood River, Oreg.

David L. Emrey, 2246 Fairview Avenue, Easton, Pa.

A. Arthur Rosenblum, 83 A Peachtree Street, Charleston, S. C.

Henry G. Harris, 14 South Main Street, Abbeville, S. C.

Paul Hammerquist, 135 Meade Street, Rapid City, S. Dak.

Gordon A. Walhood, 605 Circle Drive, Tullahoma, Tenn.

Don Greaves, 10940 Snow White Drive, Dallas, Tex.

Jack Childress, 755 West 255 North, Orem, Utah.

Walter E. Dunham II, 109 Spring Street, Bennington, Vt.

Samuel Mason Cole, Jr., Conduit Road, Colonial Heights, Va.

Joseph W. Brinkley, Semple Quarters, Williamsburg, Va.

James A. Marks, 1733 Capital Avenue, Madison, Wis.

Robert L. Lawless, 310 East Third Avenue, Cheyenne, Wyo.

Dinosaur National Park Bill

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. SAYLOR. Mr. Speaker, with our growing population and the added freedom of movement of our Nation's people, and with the National Park System finding itself hard pressed to meet these growing demands, I wonder at the position taken by Senator WATKINS, of Utah, in creating a stumbling block to a proposal for a new national par. Last week, Congressman WAYNE ASPINALL and myself introduced a bill to make the Dinosaur National Monument a fully accredited national park concluding that this was the natural and honest thing to do for this area that Congress and the President have decided is no longer a part of the upper Colorado River storage project. The many thousands of conservationists who fought the battle to resist invasion of the area are convinced that it is of national park caliber and needs to be given the protection as well as the advantages of national park status.

Senator WATKINS, of Utah, has found it necessary to express himself about the Dinosaur National Park bill, according to the Salt Lake Tribune, of April 19, by making a statement that the conservationists in supporting this bill acted in a "disturbing breech of faith." Senator WATKINS reportedly said that the conservationists had agreed to a review by the Interior Department of possible alternative sites—"yet before this program had a chance to get off the ground the conservationist-sponsored bill was offered to remove the necessity for any review."

The good Senator from Utah went on to say that Echo Park Dam had been shelved for the indefinite future, and he hopes the conservationists would show their good faith and withdraw their support of any such legislation prior to the completion and review of the Secretary's study of alternatives.

There is obviously no basis of truth to this silly accusation and it is perfectly obvious that the conservationists would never have agreed to a temporary withdrawal of Echo Park Dam which is what Senator WATKINS' proposal amounts to. The conservationists emphatically deny that they have ever considered awaiting the study of alternative sites. They are interested only in Dinosaur and only as

a site for a national park. Senator WATKINS is apparently determined to take whatever steps are necessary to prevent Dinosaur from getting national park protection because it appears that he is still determined to thwart the will of the people and the express desire of Congress by flooding out the most impressive part of Dinosaur National Monument.

In this connection I would like to present for the RECORD a telegram from David R. Brower, executive secretary of the Sierra Club, in answer to the article in the Salt Lake Tribune of April 19.

SAN FRANCISCO, CALIF., *April 24, 1956.*

Telegram to Senator WATKINS and the Salt Lake Tribune:

The proposal to establish the Dinosaur National Park is completely consonant with the agreement between conservationists and proponents of the Colorado River storage project. Your comments on the agreement, as reported in the Salt Lake Tribune April 19, are not correct. Here are the facts:

1. Last July the Colorado project bill was doomed, according to whip pools, to inevitable defeat in the House of Representatives because Echo Park Dam was not clearly eliminated. The so-called time-bomb amendment, calling for a study of Echo Park and alternatives, was not acceptable to conservationists and was rejected by the House Interior Committee.

2. In a full page ad in the Denver Post, which appeared the day before you and other project proponents held your Denver strategy meeting, the council of conservationists called for elimination of Echo Park Dam or "any secret hopes" for it.

3. On November 1 the project proponents announced after the Denver conference ended that Echo Park Dam was eliminated. Senator ANDERSON added, "in any form."

4. On November 29 Secretary McKay acquiesced in the Denver action. In answer to my question he said that the project was feasible without Echo Park Dam. In his public statement he added that the Department would "be prepared to recommend alternate action."

5. To underline the sincerity of the action in dropping Echo Park, you and the other proponents in Congress agreed to put in the Colorado Project Act the provision that "it is the intention of Congress that no dam or reservoir constructed under the authorization of this act shall be within any national park or monument."

6. Thereupon the conservation organizations withdrew their opposition to the Colorado project bill. It passed the House March 1 by a 120-vote margin. You will recall hearing in the final debate on the floor of the House, when you came in to observe, the repeated assurance that Echo Park was really out. This assurance, we feel, brought you victory. The Senate House conferees stood firm, and S. 500, with Echo Park eliminated without qualification, became law.

Considering these facts, I believe you can understand the concern caused by the statement you are reported to have made that you would strongly oppose the creation of the Dinosaur National Park and that you question the good faith of conservationists supporting the proposal. We ask what restriction would be imposed by a Dinosaur Park that you did not accept when you joined your colleagues in agreeing that Echo Park Dam was out, and that neither that dam nor any other Colorado project dam would be in any national park or monument.

Conservationists have held all along that Dinosaur deserves national park status. The Salt Lake Tribune has editorialized that the "time is ripe for developing Dinosaur Park." It can be one of the finest parks in the entire national park system.

At no time did I pledge, as executive director of the Sierra Club or as chairman of the Natural Resources Council of America or in any other capacity that the park status move would await a study of alternatives by the Secretary, as you are reported to have said. To my knowledge, no other conservationists have urged or indicated this. Nor can I understand why you should raise such a question in view of your having joined the agreement to drop Echo Park Dam and to add to the act the conservation proviso mentioned above. We hope you will not jeopardize the appropriations necessary to get your historic project underway by allowing Congress and the Nation's citizens to infer that Echo Park Dam is still so much alive in your mind that you would oppose creation of a great Dinosaur National Park. I hope that you will instead give this park your full support, as a primeval scenic asset to be appropriately developed for Utah and the Nation.

DAVID R. BROWER,
Executive Director, Sierra Club.

I would also like to insert for the RECORD a telegram to the editor of the Salt Lake Tribune signed by the three conservation groups who led the upper Colorado fight to protect Dinosaur:

APRIL 24, 1956.

SALT LAKE TRIBUNE,
Salt Lake City, Utah.

Letter to the Editor:

We see by statements attributed to Senator WATKINS in the April 19 edition of the Salt Lake Tribune, that he has attacked the conservation organizations that stopped the invasion of Dinosaur National Monument and accused them of acting in bad faith on their recent support of Congressman ASPINALL's bill to give Dinosaur national park status. The undersigned groups who represented the united conservationists' effort would like to keep the record straight by outlining three simple facts:

1. The drive to get park status for Dinosaur is the joint effort of all conservation organizations who supported the previous fight. None of the original organizations has any intention of withdrawing from this position.

2. Any statement that the conservationists have agreed to await the study of alternative sites (as Senator WATKINS was reported to have said) is a complete fabrication—throughout this controversy, conservationists have had no direct concern with any dam or reservoir site which did not involve protected land and have never compromised their determination to remove Echo Park Dam from the project once and for all.

3. Any determined effort on the part of Senator WATKINS to prevent national park status for Dinosaur can have only one motivation—that is to make it easier to restore Echo Park Dam in spite of the public will and the express desire of Congress that no dam or reservoir shall be constructed within any national park or monument in connection with the upper Colorado project. We confidently believe that the Watkins subterfuge will not work now or at any subsequent time and we further believe that it is in the best interest of everyone that this remarkable area be properly developed.

IRA GABRIELSON,
Citizens Committee on Natural Resources, Washington, D. C.
FRED SMITH,
Council of Conservationists, New York City.
ANSEL ADAMS,
Trustees for Conservation, San Francisco, Calif.

I would also like to include in my remarks the resolution of the Izaak Walton League of America passed during their 34th annual convention in Sioux City, Iowa, April 19 to 21, 1956, just 3 days after the introduction of the Dinosaur National Park bill. I am sure that the members will also be interested in the statement of J. W. Penfold, the league's national conservation director, indicating the unanimous endorsement of this resolution by the delegates to the convention.

ENDORSEMENT OF IZAAK WALTON LEAGUE OF AMERICA

RESOLUTION PASSED BY THE 34TH ANNUAL CONVENTION OF THE IZAAK WALTON LEAGUE OF AMERICA, SIOUX CITY, IOWA, APRIL 19-21, 1956

The Izaak Walton League of America, Inc., in annual convention assembled in Sioux City, Iowa, April 21, 1956, heartily commends the congressional delegations of Colorado, Utah, New Mexico, and Wyoming for their successful leadership in securing enactment of an upper Colorado River storage project which excludes Echo Park Dam and firmly protects national parks and monuments from dams and reservoirs constructed under the project authorization.

The Izaak Walton League further heartily commends the Honorable WAYNE N. ASPINALL, of Colorado, and the Honorable JOHN P. SAYLOR, of Pennsylvania, for having introduced legislation in the House of Representatives (H. R. 10614 and H. R. 10635) which will create of Dinosaur National Monument a great new national park and thereby assure the permanent protection and preservation of the unique and irreplaceable natural values of this magnificient river, canyon, and benchland area and provides for the orderly development of this new national park for the full use and enjoyment of the American people.

The Izaak Walton League of America therefore calls upon all conservationists throughout the land to support this legislation and assure its speedy enactment.

STATEMENT OF J. W. PENFOLD, NATIONAL CONSERVATION DIRECTOR OF IZAAK WALTON LEAGUE OF AMERICA

DENVER, COLO.—The Izaak Walton League of America heartily endorses and supports the Aspinall-Saylor bill which would create a great new national park in the Green and Yampa canyon area of Colorado and Utah now included in Dinosaur National Monument. The statement was issued by J. W. Penfold, Denver, the league's national conservation director, upon his return from the league's 34th annual convention held last week in Sioux City, Iowa.

"Over 600 delegates from every State in the Nation, and Alaska voted unanimously for this resolution," Penfold said, "and they are prepared to urge their representatives in Congress to take favorable action on the bill as speedily as possible.

"The Izaak Walton League," Penfold continued, "has urged this action for several years, although we realized that specific bills would be premature until after Congress had disposed of the Echo Park Dam controversy. It is most encouraging, and a source of pride to Pennsylvanians, that Congressman JOHN SAYLOR has taken the lead to secure authorization for Dinosaur National Park. As a national park this magnificent area will be assured of adequate funds for its development for full use and enjoyment by the public.

"Congressman SAYLOR has made an enviable record among conservationists the nation over for his able, effective battling to preserve the national park system and to perpetuate the natural resources upon which healthful outdoor recreation depends. His vigorous defense of Dinosaur National Monument, in which the Bureau of Reclamation sought to construct Echo Park Dam, in no small measure was responsible for deletion of this objectionable feature of the upper Colorado River project. The solid

ranks of conservationists in opposition to Echo Park Dam convinced project proponents that a project containing Echo Park Dam could not pass Congress. Echo Park Dam, consequently was deleted.

"The resolution adopted by the nationwide conservation group," Penfold concluded, "commends Mr. SAYLOR and Mr. ASPINALL for their introducing this national park legislation and calls on all conservationists to support it."

The final insertion that I would like to have permission to present for the RECORD is a statement from an advertisement appearing in today's issue of the Washington Post signed by the Council of Conservationists:

NOW IS THE TIME TO MAKE DINOSAUR A NATIONAL PARK

Last week, Representative WAYNE ASPINALL, of Colorado, took the floor in the House of Representatives to introduce a bill:

"*Be it enacted, etc.*, That, in order to preserve in a natural condition as a national park for the benefit and inspiration of present and future generations, the nationally important scenic grandeur, geologic phenomena, and scientific features of those portions of the canyons of the Yampa and Green Rivers that are now contained in the Dinosaur National Monument, Colorado and Utah, there is hereby established * * * the Dinosaur National Park."

At the same time an identical bill was introduced by Representative JOHN SAYLOR, of Pennsylvania.

Thus was voiced the cherished desire of millions of Americans whose determination made it utterly impossible to bring the mammoth upper Colorado River Basin project into being until it was stripped of Echo Park Dam and Reservoir, which threatened to ruin Dinosaur National Monument—the priceless area which, it is now proposed, should "be preserved, protected, and administered by the Secretary of the Interior for the benefit of present and future generations in accordance with the basic policies established by the Congress for the preservation of the national parks."

FURTHER PROTECTION IS ESSENTIAL

Never before has a national park been established by nationwide popular demand; but there is more than popular sentiment behind the determination to secure permanent national park protection for this incomparably beautiful, historically important, area; in Congress itself there is a determination to protect it permanently from invasion by private interests, and from the threat which is hard to kill; the still persisting effort, in some parts of the West, to get Dinosaur dammed and flooded. A local Utah politician is reported to have promised that the bitterly fought Echo Park Dam is "surer now than ever before." Only this week, there is reported the beginning of a drive planned to stop Dinosaur National Park in its tracks. Senator WATKINS, of Utah, arch foe of conservationists and national park friends in the Echo Park battle, is now quoted in Salt Lake City papers as accusing conservatfonists of bad faith in promoting national park status for Dinosaur. He says that conservationists agreed to do nothing until alternative sites for his dam could be studied. This is a false, trumped-up charge, which has no basis whatever in fact.

With Dinosaur a bona fide national park, all potential invaders would have to face a most powerful weapon: the congressional protection afforded a national park. The battle would finally be won.

THE LEGISLATORS KEPT THEIR WORD

Victory (for the time being) came in the Echo Park struggle because men of stanch integrity in the House and Senate (even though many of them favored Echo Park Dam), listened to the persistent pleas of conservationists, women's club leaders, national park lovers, outdoor club leaders, and thousands upon thousands of independent, unaffiliated people, who begged and pleaded, in letters, in telegrams, on the telephone, and in person, "Don't dam Dinosaur." These legislators, led by New Mexico's Senator ANDERSON, and California's Representative CLAIR ENGLE, and ably assisted by such directly interested western leaders as Montana's Senator MURRAY, Congressmen ASPINALL, of Colorado, DAWSON, of Utah, and METCALF, of Montana, and nonwesterners like JOHN P. SAYLOR, of Pennsylvania, agreed that Echo Dam was not essential to the plan, and therefore it was unnecessary to invade Dinosaur Monument. As a result of public reaction, these men assured conservationist leaders that Echo Park Dam would be dropped from the project, and it was. The American people owe a debt of gratitude to Senator ANDERSON and his Senate colleagues, and to Representatives ASPINALL and ENGLE and their House colleagues, for carrying out their word in spite of heavy political pressures from several sides. It was not easy to do.

HELP US PRESERVE THIS REMARKABLE AREA

The Nation needs more national parks—more natural areas that provide retreat and escape from the strains and trials of city life. Our national parks are a vital resource—and one we are rapidly outgrowing. There are too few natural recreational areas left—and too many people who need them.

The present Dinosaur National Monument, which under the new bills would become a park, is not only an area of scenic splendor. True, it is one of the world's most wondrous sites—hills, terraces, massive and colorful rock formations that tower high as a skyscraper, raging rivers, and all the rest. But Dinosaur is far more; it is the whole story of millions of years of the earth's life. The story is all there for anyone to see, more complete and more graphic, perhaps, than in any other place on earth.

The remains of long-extinct, 50-ton dinosaurs are the start of the story, the record of what life was like a million centuries ago. The erosions of the wild, foaming river, the mountain that it gnawed in two, the hogback ridges that nature left, the sharp vertical cliffs and the flat mesas—all these are chapters in a long, uninterrupted tale of the earth and its inhabitants adapting to changing conditions. The pictographs of prehistoric Pueblo basket-makers, scratched 3,000 years ago on the sides of canyons, unfold a story of a too-contented life that drifted into nothingness in a dim, distant era—a story that even a school child can read, in a general way, just by walking past a wall. The full record of animal life in Dinosaur's canyons has yet to be established—even by the experts; but when the park is improved, many of the almost-extinct creatures which we know once lived there will be back, protected by the National Park Service. Dinosaur was explored only a few years ago, and perhaps it never was explored completely; but the far reaches of this surprising area already have turned up random chapters of the old West, such as the placard that reads: "To all who this may consarn that I Pat Lynch do lay claim on this botom for my home and support. Wrote the 8th month of 1886 by P. Lynch."

Who can describe even sketchily the incredible world of man and nature that lies within Dinosaur's remarkable acres? What can one really say about it—except that it straddles the Utah-Colorado border, a little south of where that border meets Wyoming, and there it should stay, unharmed, for our children, coming in jet planes and gas-turbined speedsters, to wonder at. Wallace Stegner, in This Is Dinosaur (a brilliantly illustrated book well worth enjoying) has this to say:

"To this moment, at least, the Green and Yampa Canyons (in Dinosaur) have been saved intact, a wilderness that is the property of all Americans, a 325-square-mile preserve that is part schoolroom and part playground and part—the best part—sanctuary from a world paved with concrete, jet-propelled, smog-blanketed, sterilized, overinsured, aseptic, a world mass-produced with interchangeable parts, and with every natural beautiful thing endangered by the raw engineering power of the 20th century."

If only because everywhere we turn progress is taking so great a toll, it is essential that we cling desperately to the little natural wilderness beauty we have left. Dinosaur's beauty is unmatched, its charm incredible.

Will you join us in urging Congress to enact the Dinosaur National Park bill in this session—before it is too late? Your Senators and Congressmen will be glad to hear from you about this.

Council of Conservationists, 588 Fifth Avenue, New York 36, N. Y., Executive Committee: Fred Smith, Director, New York, N. Y.; Horace M. Albright, New York, N. Y.; David R. Brower, San Francisco, Calif.; Ira N. Gabrielson, Washington, D. C.; Joseph Penfold, Denver, Colo.; Howard Zahniser, Hyattsville, Md.

These statements prove conclusively that the conservationists will go all out to give Dinosaur park status and assure that a dam will never be built within its boundaries.

An editorial challenge in the Denver Post of April 22 in support of the proposal to make Dinosaur a park states:

With all the Congressmen who opposed Echo Park Dam line up with alacrity to support the Aspinall-Saylor bill? Will garden clubs and bird clubs and hiking clubs and other groups pass resolutions, write their Congressmen, and testify on behalf of the bill? Will outdoor writers deluge magazines and newspapers with articles about the importance of developing Dinosaur, now that it has been saved?

They will unless most of the opposition to Echo Park Dam was phony. We will just have to wait and see.

I can assure the Denver Post that the same conservationists are committed to finish the job they started.

When Congressman ASPINALL and myself introduced the Dinosaur park bill we thought, as did conservationists, that it was a natural culmination—but we suddenly found ourselves confronted with Senator WATKINS who, if his statements are correctly reported in the Salt Lake Tribune, has no intention of allowing the area to become a park because he still believes, contrary to the will of the people and the Congress of the United States, that Echo Park Dam will be built. This seems to be a private project of Senator WATKINS and only when viewed in the light of a private project could one realize his intentions. He knows that the bill authorizing the upper Colorado River storage project was passed because conservationists withdrew their opposition when he, along with other upper basin legislators, agreed that Echo Park Dam would not be built. Why then does Senator WATKINS seemingly continue to fabricate opposition for the park bill?

A Citizen Describes Broken Campaign Promises

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Mr. Lee Wallek which appears in the May 1956 issue of the Democratic Digest. Mr. Wallek describes some broken Republican campaign promises.

YOU CAN'T BLAME IKE—HE DIDN'T WRITE THOSE CAMPAIGN SPEECHES

(By Lee Wallek)

My brother wrote me a letter. Every 2 or 3 years he does that.

In the same mail with my brother's letter, I got a booklet on Infant Care from the Government Printing Office, Washington 25, D. C. I sent for it, for a quarter, because we'll soon need it in our thatched hut.

It's a good booklet it looks like. Tenth revision since 1914, with nobody knows how many printings altogether, I guess. Has over 100 pages crammed with information for people in our fix. And all for a quarter.

With the booklet was a note from the Superintendent of Documents, C. W. Buckley, thanking me for my order. There's courtesy for you. Said my order had been received on Thursday, mailed the same Thursday. There's efficiency. Also, said it had been a pleasure to help and hoped I'd let them be of service again. Said I could receive a free copy of a selected list of United States Government publications every two weeks if I wanted. Enclosed a sample copy of the list and a return postcard. There's thoughtfulness.

That's why I come to praise a broken promise. If a 1952 campaign promise had been kept, we wouldn't still be able to get booklets from the Government. Ike said it was ridiculous for the United States Government to be providing such services.

I remember how during the campaign I was whooping and hollering myself. It was great fun in those days. The speechwriters had one clever TV short they had Ike do where he really cut loose against this one booklet in particular. Home-canning methods I think it was. I'd watch that and roll on the floor. Ho, ho. I'd laugh: Imagine those Democrats spending tax money to print a book on home canning. But then when we got in, all that ridicule went to waste. That particular booklet featured on TV was so popular they had to order a reprinting right away. Same deal for most of the other booklets. They were in such demand that the promise had to be welshed on.

And personally, now at least I consider it a good thing. But my brother wouldn't. He's fairly rich, he hates for the Government to spend money. He's right-wing too. He's so right-wing, I'm not even sure he's for Eisenhower.

I remember one other TV spot announcement Ike made in 1952: "They say you can't cut taxes. What kind of stuff is that? Of course you can and will. That is what the people want now. They want lower taxes now."

My brother'd explode if he ever got hold of that. Especially since Ike didn't recommend any tax cuts this year. And is spending more for nondefense items in his proposed budget, for things like the Government Printing Office, than even the Democrats did in their last 2 years in office. But you can't blame Ike; he didn't write those campaign speeches.

He'll have the same sharp-shooting bunch of Madison Avenue ad men writing his speeches and TV spots as he did in 1952. And they have that winning 1952 campaign under their belt. They probably look on winning an election as simple as infant care by now. They're not called consent engineers for nothing. They know what the people want promised. How can us Republicans lose with a team like that fronting for us? Or what?

A Goldwater-Reuther Debate

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an article which appeared in the column entitled "George Todt's Opinion" of the San Fernando Valley Times, San Fernando, Calif., on April 9, 1956.

A GOLDWATER-REUTHER DEBATE

Last Wednesday I hied myself to the embassy room of the Ambassador Hotel in Los Angeles to the Merchants and Manufacturers Association's 60th anniversary dinner to hear a speech by a great Republican Senator, BARRY GOLDWATER, of Arizona. He spoke on the right to work.

This man is simply tremendous—and if you ever have a chance to hear him, don't miss it. He is a rare combination of courage, character, and commonsense. I think you will hear of him increasingly in the future.

BARRY GOLDWATER is of pioneer western American stock; he is just about as honest and forthright as California's BILL KNOWLAND knows how to be on subjects touching on rugged Americanism. In fact, these two men have much in common in their outlook. Anyone who likes one of them should have little difficulty in liking the other one, too.

I have never heard anyone in politics do a better job of explaining what the right-to-work law means than Senator GOLDWATER did.

He is not only intelligent, but extremely articulate. And his competent and effective oratory is based on reason. Now, what did he say?

In the first place, he pointed out that the right-to-work laws had not decreased union membership or the number of jobs in any of the 18 States where such legislation has been placed into effect by the will of the people concerned. Such laws are not aimed at destroying unions, but simply to give workers the privilege of choosing for themselves whether they wish to join a union, or not.

If a worker wants to join a union in a State where right-to-work laws have been placed into effect—he may do so. He is encouraged to do so. But on the other hand, if he does not wish to join the union involved where he is concerned—then he cannot be compelled to do so. There can be no compulsion from either management or the union in such a case. Now this is nothing less than a realistic protection of civil rights. And Senator GOLDWATER indicated that the greatest wonder of it all was that the civil liberties crowd had so remarkably ignored this issue in all the years of the New Deal.

After listening to many phonies prate of civil liberties in the past—I found it a truly refreshing experience for me to hear from a real champion of human liberty, such as the junior Senator from Arizona turned out to be. He believes that the American people have become the greatest Nation in the world because of the liberty and freedom allowed them under Almighty God—and he decries socialism at every turn.

Senator GOLDWATER is about as afraid of Walter Reuther as I am of my second piece of fried chicken. The manner in which he threw down the gantlet to the man who has sometimes been called Socialist No. 1 in the United States—and not without reason—bodes ill for Mr. Reuther. For in GOLDWATER the AFL–CIO political action boss is going to find he has come up against something he has seldom met in the past—a man with the courage of his convictions who doesn't scare easily.

In the forthcoming duel between these titans on the labor front, I predict that GOLDWATER will win. And for reasons which are not quickly apparent on the surface. Both men have intestinal fortitude in abundance—and Reuther has a treasure chest of fantastic proportions from union dues collected from the workers, nearly half of them Republicans. But GOLDWATER has the edge over Reuther in the power of his ideas—and he will crack Walter wide open on the ideological front in America just as soon as he gets his story over to the American people. Which may not be too long in coming.

Senator GOLDWATER told the leaders of industry that the time for sniveling action is past—and their duty is to stand up to protect the American way of life based on traditional capitalistic free enterprise. This means, simply stated, that the time has arrived—though really long overdue—to insist that the communications media of the United States give equal facilities and time to exponents of the kind of Americanism which BARRY GOLDWATER stands for as against Mr. Reuther's brand.

Anything less than this amounts to censorship of sorts against the entire American people—who are already stirring restively against the socialistic doctrine on all fronts today. A great reaction to Marxism is about to take place, and the pendulum is going to swing back again. When it does, the embarrassed communications industry may find itself to be far out on a limb of its own choosing. It will be blamed on all sides.

Why not stage a Goldwater-Reuther series of debates on television across the Nation on The Right To Work? I think it would be good while it lasted—if Mr. Reuther could be persuaded to speak under conditions which were not rigged for him at the outset.

Our Great Presidents Were Judged Strictly by the Enemies They Made

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "What Has Happened to Ike?" which appeared in the April 23, 1956, issue of the Philadelphia Daily News. The editorial follows:

WHAT HAS HAPPENED TO IKE?

Is this the new Ike Eisenhower?

For the first, time Ike went to the people last week on a controversial issue—busted right through the Filter Curtain and rassled

with the farm depression on millions of 21-inch screens. Not many people could understand his speech. But everybody could understand that Ike was finally taking sides in an argument.

IT WAS REFRESHING BUT CONFUSING

In his old role as the strong but silent father of us all, Ike escaped blame for the blunders of Dulles, the tactlessness of Wilson, the messes of Oveta Hobby. People ranted at his Secretaries. But they felt sorry for Ike—seemed to forget they were his brats; and if he couldn't control 'em, who could?

So it was refreshing to find Ike out in the open supporting Ezra Benson. But it was confusing. You couldn't be quite sure whether Ike had appointed Ezra Assistant President or whether Ike had suddenly become Assistant Secreatry of Agriculture.

THE VOICE WAS IKE'S; THE WORDS WERE EZRA'S

In speaking Ezra's mind Monday night, Ike said, in effect, that perhaps maybe the farmers will get around $550 million in Government cash this year. But he omitted the fact that farmers' income in 1955 had dropped $10,600,000.000 and is still falling. You had to get out your own pencil to figure that Ike's and Ezra's farm promises tote up to about 5 percent of the farmers' losses in 1 year.

STILL, THE AIR IS A LOT CLEARER

Until last week farmers had been booing Ezra and cheering Ike. Didn't seem to understand that Ezra's bumbling was also Ike's fumbling.

Now they know: Ike told them he is 100 percent for Ezra. Ezra is for 82 percent of farm parity.

Whatever happens to the farmer this year, there can be no mistake about it: The blame or the credit goes to the new Ike Eisenhower.

CAN THIS BE THE TURNING POINT?

Richard Rovere writes in his best-seller book, The Eisenhower Years:

"In no administration within memory have so few decisions been made by the President himself. Eisenhower parcels everything out to committees, commissions, secretariats, advisory groups, and task forces. * * * The administration lacks the stamp of the President's personality and bears that of no one else—except possibly the collective one of the public relations and advertising men."

Has Ezra Benson finally brought about a change? Has Ike made a decision at last? That stamp you heard last week sounded like Ike and Ezra slamming a door on the have-nots.

ONLY HISTORY CAN GIVE THE ANSWER

The new Ike may again fade back of the filter curtain that has shielded him so effectively. But that's a hard trick in an election year.

It's possible the voters in 1956 will make up their minds on the basis of Ike's record as a President. Not on the picture of a genial smile. Or on his military record.

Only history can give the answer as to Ike's place in the Hall of Presidents.

PRESIDENTS ARE JUDGED BY THEIR ENEMIES

Our great Presidents were judged historically by the enemies they made. Jefferson had his Aaron Burr, Lincoln his Jeff Davis, and Roosevelt his "economic royalists."

They made enemies because they had positive opinions, because they acted boldly, because they don't parcel out problems to secretariats and task forces.

WHO ARE IKE'S ENEMIES?

They've been mighty hard to find. Ike had done nothing to make enemies. The Dulleses, Wilsons, Hobbys, and Bensons had the errors chalked up against them. Ike, the Likable, had been strangely immune even from the mildest censure.

Last Tuesday Ike got into his first public brawl. Almost anything can happen and probably will.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Excerpts From Address by Hugh Gordon Miller at Ceremonies in Connection With the Issuance of the Robert E. Lee Series Postage Stamp

EXTENSION OF REMARKS
OF

HON. PORTER HARDY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 27, 1956

Mr. HARDY. Mr. Speaker, last September the American Philatelic Society held its convention in my district. It was a very successful convention, due in substantial part to the tireless efforts of its general chairman, Rear Adm. Jesse G. Johnson, United States Navy, retired.

One of the highlights of the convention was the issuance at Norfolk of the new Robert E. Lee postage stamp, and the significance of this was accentuated by the delightful address of an outstanding native Virginian, Dr. Hugh Gordon Miller. Because I am sure many of my colleagues will enjoy reading Dr. Miller's address, excerpts from it are printed below:

EXCERPTS FROM ADDRESS OF HUGH GORDON MILLER, HISTORIAN OF NEW YORK SOUTHERN SOCIETY, ON BOARD UNITED STATES FLAGSHIP "TICONDEROGA," AT THE OPENING CEREMONIES OF CELEBRATION OF THE ISSUANCE OF SPECIAL ROBERT E. LEE LIBERTY SERIES POSTAGE STAMP AT HAMPTON ROADS AND NORFOLK, VA., SEPTEMBER 21, 23, 24, 1955

Mr. Chairman, here today, once again, the Navy pays honor to the Army. Once again we realize that the Navy and its admirals, one of the most distinguished of whom now in civil life here at Norfolk, Va., is your general chairman, Rear Adm. Jesse Johnson (retired), along with the Marines, always reaches its objects first, ahead of anybody else. They do not always get there, in the language of General Forrest, one of the South's great cavalry leaders, "fustest with the mostest men," but regardless of numbers, the situation is always quickly under control after they do get there, regardless of weather or anything else.

As the great carrier *Ticonderoga* sailed back here this morning from its brush with the hurricane, loaded with brave admirals and admirals-to-be, to take the leading part in doing this signal honor to one of America's greatest generals, and I saw this magnificent warship on this beautiful day, I changed my inspiration to suggest that its name be changed from *Ticonderoga*, which is a fort on land, to "The Robert E. Lee," the name of the famous Mississippi ship made more famous by Mark Twain, a southerner, and John Hay, secretary and biographer of Abraham Lincoln.

* * * * *

Permit me to say that stamp collectors such as comprise the organization represented here, in collaboration with the Postmaster General and his staff of selectors of the really great men of our history, who should be honored with these special postage stamps, fill an important part in recording world events, just as important a part, in a way, as historians do in writing their books or teaching their classes.

Today and here, historians as well as all citizens and scholars who have become interested in this event, have actually to stand aside as the American Philatelic Society holds its 69th national convention and exhibition of celebrated stamps here at Norfolk; and as the 30-cent Robert E. Lee postage stamp of the 1954–56 liberty series is issued and put on sale. All true Americans, and especially all Virginians, thank this great national society for selecting this date and place for their annual convention, which opens today under truly inspiring circumstances. It is gratifying that this is a national and not a southern event. And those of us who are able to be here from far and near are indeed happy to be with you to honor the great name of Robert E. Lee. He has long since been accepted by historians and military men as one of the great military figures of the Anglo-Saxon world.

There have been many splendid monuments built and many great celebrations held, especially in the South before this, honoring the name of its greatest military hero. General Lee has been honored with such stamps twice before, but never by such a celebration as is opening here today. No hero of war or peace of any type is more loved or respected in this old Commonwealth, and indeed throughout the whole Southland, except, of course, one other—George Washington, the greatest of all Virginians and of all Americans, who, in the language of General Lee's great Virginian kinsman, Richard Henry Lee, was described in Congress as "first in war, first in peace, and first in the hearts of his countrymen."

At the Yorktown celebration of 1931, a special postage stamp was issued carrying the faces of two great Frenchmen—Admiral Count De Grasse and General Rochambeau, great aides of Washington in the American Revolution, especially at the decisive Yorktown victory—on either side of the Father of Our Country. But they represented a foreign element and had not the same significance to us as the placing of another American by the side of Washington. By chance or fate, only Robert E. Lee has ever been so honored.

In 1937 the special issue carried both of these great Americans—Washington and Lee—in oval inserts opposite each other, with the main building of the great College of Washington and Lee University then holding a commemorative celebration, in the center. No one raised a voice in dissent or criticism of Lee and Washington together, on a special postage stamp.

Today a 30-cent stamp is put on sale with General Lee appearing alone, and of vital importance, in civilian dress, typifying that final period of his life which was devoted to duty as he saw it. Lee, as you know, accepted the result of that great struggle between those sovereign States with heroic fortitude, even through those dreadful years of reconstruction, teaching the youth of the land there at Washington College in Virginia, how to meet the severest adversity; in that case, by shouldering the obligations of American citizenship thereafter, to the very fullest, in what was destined, in spite of any and all setbacks, to be the greatest Nation, the freest Nation, that ever existed under the sun, in a truly reunited country.

It almost seems that the hand of Providence might have entered into the recording of names and events in American history by United States special postage stamps such as these, to place the name of Robert E. Lee and George Washington together, as symbols, so to speak, of the finest that the United States and the great State of Virginia, or indeed the civilized world, could produce; because in the last analysis, they both attained their finest hour after retirement to private life, and after returning to civilian clothes, as today's stamp so fittingly presents General Lee. It was thus, of course, that Washington appeared in his last days at Mount Vernon, after he had retired from all military or other Government service, and after refusing a crown at the hands of his victorious army.

And so Robert E. Lee appears here on this stamp in civilian dress as in those final days of his life at Washington College, and in his journeys from time to time in our Southland after that war, stopping at Norfolk on his last such journey in the interest of rehabilitation, peace, and a reunited country.

I now have the great honor to be delegated by the New York Southern Society * * * and other sponsors of this celebration representing every section in the country * * * to thank first the great general of the United States Army, born in the southern State of Texas, and familiar with southern as well as northern history, who is President of the United States and without whose approval this great honor could not have been paid the name of General Lee, and who believes as did General Lee, in the reserved constitutional rights of the States; and the Postmaster General of the United States, and his staff, and all others who have had part in the selection of this special postage stamp and who have taken part in this celebration, in further honor of the great name of Gen. Robert E. Lee.

Many of us hope that some day we, or at least our descendants, will see a special United States postage stamp issued, with George Washington, the Father of Our Country, in the center, and with Abraham Lincoln, the savior of the Union, and one of the best friends and certainly the most powerful one the South ever had, had Southerners known and understood him at the time, on the right of Washington. (If you doubt this statement as to Lincoln, you have only to read the Lincoln-Douglas debates * * * or the true story of the conference here at Hampton Roads in February 1865.) He summed up his position prior to that conflict by stating at Peoria, Ill., that if he were living in the South he would approach the questions involved just as the Southerners were doing, or words to that effect. And on that stamp to the left of Washington should appear the face of Gen. Robert E. Lee as the symbol forever in this Nation of the reserved rights of these sovereign States, under a Constitution which William E. Gladstone, a great pioneer liberal in the Anglo-Saxon world, Great Britain's most famous Prime Minister prior to Winston Churchill, declared to be "the greatest instrument of government ever put together in a given time by the mind or purpose of man." * * *

I shall not detain you now to attempt to paint the lily, so to speak, or attempt to

carry the "coals (of history) to Newcastle." Certainly not here at Norfolk, which was the subject of Lee's last trip away from Washington College as was recently so brilliantly described by Mr. Alf. J. Mapp, Jr., a journalist of this city. I beg leave to quote two short paragraphs from that fascinating article which appeared in the Virginian-Pilot of your city, on September 21, last, in which he declared:

"For the sake of national unity, Lee had concealed from the public the fact that he was denied the restitution of his American citizenship, after applying for it and taking the oath of loyalty.

"That denial was not a blot upon the record of that noble man, but upon our own national history. The blot will be erased in handsome and generous fashion Wednesday when the Post Office Department of the United States issues a stamp commemorating Robert E. Lee, a great American. Such a national celebration as this will go far to remove that blot."

That blot is a sad thing to contemplate, but we are recording history here today, and as that articles states, in behalf of all America we are doing our best to make amends for that great blunder of our Government. Gen. Robert E. Lee is today enshrined, like the brave knights and cavaliers of old, from which race he sprang, forever enshrined, in a beautiful window in the Great cathedral at Washington, the Capital of our County, on a hill which overlooks both the North and the South. Only a Christian American gentleman, regardless of controversy, could have found a place in such a shrine.

The rights of the sovereign States of the Union, under the Constitution, many claim today, are being whittled gradually away by Congress and sometimes even by interpretations of the Federal courts, including the Supreme Court of the United States. I will not discuss that issue which might be claimed to be controversial, but the States' rights theory was grounded in General Lee when he was a student at the Military Academy at West Point, and was the key to his action in the War Between the States. When he resigned his commission in the United States Army, when invasion threatened Virginia, he declared that he would "never again draw (his) sword except in defense of his native State."

Gen. Robert E. Lee was not a rebel. I say this on the authority, among others, of President John Quincy Adams, of Massachusetts. Surely he had no bias in favor of the South, and surely it must be conceded that he was honest, able and independent. Surely Adams had a right to speak the verdict of the North on the constitutional right of such a matter. Adams is recorded to have said, "Whenever the time comes for seceding, it were better for the people of these Dis-United States to part in friendship from each other than to be held together by restraint."

From 1861 to 1865 a war was waged by two parties whose official titles were the United States of America and the Confederate States of America. It was the War Between the States, because 22 nonseceding States made war upon the 11 seceding States to force them back into the Union of States.

It was a war between two organized governments; the Southern States fighting to repel invasion; to protect their rights as guaranteed by the Constitution of the United States of America—the rights that were assured to each State that ratified the Constitution. Had these rights not been guaranteed, there would have been no United States of America. It was not a Civil War, as it was not fought between two parties in the same government. * * *

If a substantial part of the reserved rights of the States of the American Union, are retained as provided in one of the fundamental provisions of our Constitution, the cause of Gen. Robert E. Lee and his followers as they understood that cause, will not have been entirely lost.

Whenever we contemplate the unique position of Robert E. Lee in American history, we are constrained to doubt that the British Commonwealth nevertheless will ever place the face of Oliver Cromwell, or even John Hampden, on a postage stamp by the side of the weakest and puniest of their kings. But there stands Robert E. Lee by the side of the Father of His Country, without a protest from any American, but by universal consent, and his enemies and critics, if there are such, can in the language of Patrick Henry, of Virginia, with reference to George the Third, "Make the most of it."

Bear with me for a moment, if you please, while I illustrate how universally General Lee's name is today honored and respected all over this great country. The February following the last reunion of Confederate Veterans which was held here 5 years ago, in which I had the great honor to modestly participate, I was invited to deliver an address on Abraham Lincoln on his birthday at a celebration being held by a group of young men at New York University. I accepted the invitation and prepared to speak on Abraham Lincoln, of whom I am also, as all the country knows, an admirer.

I went to the meeting prepared to speak on Abraham Lincoln, as a typical American of the finest caliber, though not to apologize for anything that Lee or his followers did in the War Between the States, a thing which I have never done and will never do. I went prepared to speak on Abraham Lincoln, but when I arrived at the place of meeting those young northern men voted unanimously for me to speak, not on Abraham Lincoln, but on Robert E. Lee. I did so. I think I was the only southerner there. When I finished my eulogy on Robert E. Lee, those northern young men unanimously thanked me and rose to their feet and cheered the name of Robert E. Lee for 5 minutes, in a hall decorated, incidentally, by the photographs of the Union generals and other officers; a hall decorated by them with both the Stars and Stripes and the stars and bars.

I shall not detain you by attempting to eulogize generally in a place, as I have said, where he needs no eulogy. But I cannot refrain from quoting Lord Wolsley, the leading British soldier of that era, and a contemporary of Lee, who was an observer back and forth on both sides of that war, and who, when asked to name the five greatest generals of the English-speaking world, named "Marlborough, Washington, Wellington, Robert E. Lee, and Stonewall Jackson." And remind you, that that great journal, the London Standard, on the passing of General Lee, declared editorially that "A country which has given birth to men like him, and those who followed him, may look to chivalry of Europe in the fact without shame, for the fatherlands of Sidney and Bayard never produced a nobler soldier, gentleman, and Christian than Gen. Robert E. Lee." That was the true verdict of history, the history you place your stamp upon today with the approval of the Government, and the people of the United States now put their seal of approval once again.

We southerners and descendants of southerners, gathered here, are proud indeed when those who are authorized to speak for the United States Government and a country fully united, thus acknowledge by implication at least, justification for the southern position in that great conflict, and thus testify that in the light of history, Robert E. Lee and his followers were not mere rebels. We appreciate the fact that in launching the sale of this special stamp our Government is honoring the leader of the Confederacy, just as it honored the heroic veterans of the Grand Army of the Republic at their last reunion at Indianapolis 8 years ago, and just as it has on similar occasions, honored the great name of Gen. Ulysses S. Grant, the great magnanimous victor in that conflict.

The stamp honoring the Confederate veterans in their last reunion was exactly in the form of the one authorized and distributed by our Government at the last reunion of the veterans of the gallant Union Army. And I say now, as I said then, that they were gallant men in that Union Army, and their sons and grandsons were gallant comrades of the boys from the South in the Spanish-American War, and the two great World Wars, and that terrible Korean war when the sons and the grandsons of those who once wore the blue, and the ones who wore the gray, fought side by side for great ideals and for a great, glorious reunited country. These special stamps proclaim to the world that this country, represented by the sons and followers of Grant and Lee, are indeed reunited forever, and none of us, north, south, east, or west would have it otherwise.

Gen. Robert E. Lee was never drawn into any controversy over slavery or the race issue, in any form.

As I said at the last reunion of Confederate soldiers here at Norfolk 5 years ago—

"As a matter of fact, most of the leaders of the South, from the days of Washington to the days of Lee and Jackson, had been freeing their slaves as fast as they could reasonably do so, in justice to the slaves themselves. General Lee owned no slaves. My father and his brothers, who were Confederate soldiers, and their ancestors, on religious grounds, and most of your fathers and uncles had no slaves.

"In 1862 General Lee paused in the midst of one of the greatest battles of the war to liberate the many slaves of his father-in-law, Mr. Custis, who died in 1857, making Lee his executor. His will provided for the liberation of his slaves 5 years after his death. General Lee did not wait a minute for anything, in liberating those slaves. Stonewall Jackson established a Sunday school for Negroes at Lexington and taught there; and on the night following the stress of the great victorious Battle of Manassas he paused to write a leter to his pastor and enclosed a check to support that Negro Sunday school. The North was talking a great deal about the Negro problem, but they were not doing much to help the problem."

One more word on this before I close. Some great man once observed that if he could write the national songs of a country, anyone else could write its history. There is a monument in this country erected by Virginians to an old colored man named Bland. He was a poet and a songwriter, and in fact the actual—and I am not so sure that he is not already the official poet laureate of Virginia. Certainly one of his great songs is the State official song of old Virginia, and since I see that you have made that song the official greeting of this great celebration, I am sure that in responding to it I cannot be charged with raising any controversial question. He it was who, after all the horrors of the war itself, and the worse horrors of reconstruction, and of all his contacts with the white people of the South during the many intervening years, wrote that grand old song which has thrilled not only Virginians and southerners everywhere, but Americans all over the world; he wrote: Carry Me Back to Old Virginia.

That great and inspired colored poet did not, as his masterpiece, write Carry Me Back to Old Massachusetts; he did not write—with all due respect to Massachusetts and New England—he did not write "Carry me back to Massachusetts, build me a monument on Boston Common, and make me the poet laureate of that grand old State"; he did not write and sing to thrill a listening world, "Carry me back to Chicago and old Illinois,

where our Great Liberator lived and practiced law, went to the State assembly, went to Congress, and went to the Presidency"; he did not write, "Carry me back to Detroit and old Michigan, where all is said to be, for us, peace and plenty, and sweetness and light for the colored man"; he did not write and sing, "Carry me across the continent to that great State of California, where they think they know my troubles better than I do, and can right them overnight with the scratch of a pen." He did not write and sing, believe it or not, "Carry me back to old New York and to Harlem, where I was born." No, he wrote from the bottom of that great heart of his, and as only a great poet could write, under the inspiration of a great conclusion as to where his real friends actually were—he wrote those words which will make him as remembered as any Virginian, white or black—he wrote, "Carry Me Back to Old Virginia where they know and understand me best."

If southerners had been as mean and unhelpful to him and his race as some would have you believe, he would never have written such a song as that.

As Americans all, we are especially proud and happy today because this is not primarily a southern, but a great national celebration to the memory of General Lee, a great American fully understood and appreciated by historians and others, at last; and that this celebration was conceived and carried out in this way at this historic place, by a distinguished American who knows American history, and knows especially his stamps, Rear Adm. Jesse Johnson, who has come to live among you, and to understand you, though born in New Jersey, and so far as I know, without southern prejudices or affiliations; but who was able to so quickly to rally these leading history makers of the whole Nation to properly honor the great name of one of our greatest Americans, Gen. Robert E. Lee.

Free Enterprise and Taxes

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. FASCELL. Mr. Speaker, the passing of the income tax filing deadline date, April 15, annually brings merely a feeling of temporary relief to the American taxpayer.

The inequities of our present tax system and its resulting injurious effects upon many of our Nation's citizens is portrayed in an article by a former Commissioner of the Bureau of Internal Revenue, T. Coleman Andrews. This article appeared nationally in the April 22 edition of the American Weekly. This timely statement by our former Commissioner prompted many editorials to be written in newspapers and other publications throughout the United States.

One that has attracted national attention was written by Mr. T. A. McInerny, editor of the Independent Editorial Services, Ltd., of Washington, D. C.

Whether you agree or disagree with the thinking expressed by these gentlemen, all agree that the time is long overdue for a thorough examination of our entire tax structure. It behooves us as Members of Congress to encourage and support such a study.

FREE ENTERPRISE AND TAXES

Former Internal Revenue Commissioner T. Coleman Andrews has done a public service in his forthright attack upon the income tax. The Hearst press did a public service by printing it. The former official places the blame for our ruinous tax policy squarely upon Congress.

The Congress over the years has erected a jerry-built tax structure which has defied analysis. The faults and the inequities are myriad, and unless corrected will destroy our form of government. It is axiomatic that the power to tax is the power to destroy. Mr. Andrews says that the middle class will be eliminated eventually by it.

He could have added that two other elements are closing in on the middle class. They are big business and organized labor. Both are moving toward each other. Eventually, it could happen that a man won't be able to earn a living by himself any more. He will either have to belong to a union or work white-collar for a huge manufacturing or merchandising corporation.

The Saturday Evening Post recently carried a story about the tax troubles of Joe Louis, former heavyweight champion. Joe is completely in the hands of Internal Revenue, now and forever. No matter what he does from here to the grave, he can never own, for practical purposes, one solitary dollar. Every mouthful he ever eats is only upon sufferance of Uncle Sam. He is literally given an allowance to live, while his earning power goes down. And at the rate that interest piles up on what he owes, he will owe more at life's end than he ever actually earned.

In several of the States, laws have been passed against this sort of thing, among installment sellers. It has been shown that usurious interest charges could make people pay for something forever. Joe Louis will pay forever for being one of the great champions of our time. Any democracy which lets this sort of thing go past without diligent and constant scrutiny is courting a new form of government.

Congress, ever since it made income taxes constitutional in the face of a Supreme Court decision, never has been in a mood to review our present laws. No administration ever has had courage enough to fight for fair taxation.

What is fair? Mr. Andrews does not dwell on this subject, and regrettably. Perhaps he will save his suggestions for future articles. Perhaps he doesn't know. Men of good minds have asked how this country can bear its national and international burdens without the income tax. A sales or transaction tax, which field has been preempted by the States and cities, never could fill the coffers for our big and expensive war efforts. Yet the income tax excesses, both in productivity and enforcement, have never produced an adequate amount for current bills and a sum to reduce materially the national debt.

If we can't trust this method of raising money in boom times, what are we going to do in bust times, which are surely coming? Free enterprise, that very overquoted slogan, has suffered beyond hope by the use of the income tax. Every time you hear a man thanking his lucky stars that he is living and breathing in the good old U. S. A. under free enterprise, you can bring up the income tax question and point out that the United States is actually No. 8 in the scale of nations where a man can make a dollar and keep it.

Britain, Canada, Germany, Belgium, Switzerland, France, and Mexico all have income tax laws which are far more favorable than ours.

Will Farming Become a Monopoly?

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. PATMAN. Mr. Speaker, as we watch a few colossal corporate empires taking dominion over more and more of the industrial and commercial resources of the Nation, we sometimes assume that farming—in the United States at least—is exempt from any such threat of giantism. Despite the historical record of most countries of the old world, and not a few of those in the new world, a picture of all the farm lands in this country being held by a small clique of land barons, and several million farm families being dispossessed, is we like to think an unlikely picture. And such a picture is also entirely unsuited to our basic conceptions.

Actually, we already have some giant farms; and the giant farms are getting bigger, while the small farms are getting smaller.

Between 1920 and 1950 1 million farms disappeared. The land in these farms did not disappear, and this land was not taken out of farming. On the contrary, most of this land was consolidated with the bigger farms.

What are the reasons for big farms getting bigger and small farms getting smaller? Is it because of the new farm machinery and the new cultivation methods? Prof. Mason Gaffney, a distinguished economist and member of the faculty of North Carolina State College says that changes in the technology of farming is not the answer. I would like to call the Members' attention to a brief article by Professor Gaffney which sums up the recent transformations in farm holdings and points out the portentous impact of these transformations. Professor Gaffney's article, which appeared in The Nation last December, is as follows:

THE DRIFT FROM MEDIUM-SIZED FARMS IN AMERICA—MORE ACRES, FEWER MEN

(By M. M. Gaffney)

A little heeded but radical and portentous change has been quietly transforming the American farm landscape. Many a field has changed hands these last decades, many an old fence line given way to new. Although each transaction has had its own motivations the aggregate displays an unmistakable trend. The medium-sized American farm—the traditional 160-acre homestead—is clearly on the wane.

From 1920 to 1950 the number of farms containing from 10 to 260 acres dwindled from 5,500,000 to 4,100,000. The number of American farms of all sizes fell in that 30-year interval by 1 million from 6,400,000 to 5,400,000. The land yielded up by these disappearing enterprises has been, in the main, consolidated by the larger farms. The acreage held by farms 1,000 acres and over increased swiftly—from 221,000,000 in 1920 to 495,000,000—or 43 percent of the farm acreage—by 1950.

These giants comprise only 2.3 percent of all farms, and as they increased their acreage they also increased the average quality of

their lands. Values per acre of the land in farms 1,000 acres and over have been rising noticeably relative to values in smaller farms. In several Eastern States values per acre in the larger farms are now actually higher than values in smaller farms, although this is not true in all regions.

What is the background of this striking trend? Prof. C. V. Dominguez, Argentine student of land policies, once observed that, in the wake of land reforms, giant farm holdings reconstitute themselves inexorably. This does indeed seem to be the history of the many instances when governments have undertaken to distribute land more equally among those who operated it. In America we had our land reform in the 19th century. We entered the 20th with a preponderance of medium-sized farms, the heritage of equalitarian policies of land distribution which, while often honored in the breach, still set us apart from, say, Latins. And, where Federal policies failed, our State and local governments often, by accident or design, broke up large neofeudal or speculative holdings through the property tax, on which they relied heavily for financing public functions and improvements.

But today the public domain is gone, and while the income-yielding capacity of farmland has increased enormously, property taxes have receded to a miner place in the national tax structure. In these new circumstances farmland has become an attractive investment for the well-to-do with surplus funds seeking an outlet. Their spirited bidding has driven land prices up beyond the reach of many small farmers, and farmland, like most attractive investments, has tended to become concentrated in a few strong hands. Thus the middle-class farmer is losing numbers, while the giant holdings reconstitute themselves inexorably.

Some have interpreted this trend as a move toward greater efficiency, pointing to the higher outputs per man and machine that are possible when they have more good land to range over—for most analysts agree that the larger farms generally use much less labor and equipment per dollar of land value. This narrow concept of efficiency has satisfied, on one end of the ideological spectrum, the largest landholders, and on the other the Marxists—since both hold great faith in agricultural gigantism. Its obvious weakness lies in its total disregard for good land that may be underused in achieving high outputs per man and per machine.

Smaller farmers, lacking enough land to employ themselves or their equipment fully, could take additional land and put it to more productive use than those already oversupplied. In 1940 farms of 1,000 acres and more planted only 45 percent of the land available to them for crops. An efficient use of all resources would seem to call for shifting some land from those who have more than they can contrive to work intensively to those whose enterprise is cramped for lack of an adequate land base. This follows the basic economic principle of transferring resources from where they are abundant to where they are scarce, in this instance from the land-glutted to the land-starved.

But the trend in America has been the opposite. Those who have been laying field to field are, on the whole, exactly those with enough and more than enough land to complement their labor and capital. The trend has been to separate most of the farm proprietors and improvements from most of the farmland. Various studies by farm economists have shown 10 and 20 times more men per dollar of land value on small farms in such areas as the Ozarks, Appalachians, and marginal zones in Utah and New Mexico than on, for example, the vast and fertile farms of Iowa.

The larger farms, it is true, have more capital equipment, but it is often overlooked that they have less capital equipment per dollar of land value. The 1940 census, last to give this information, reported that there were 16 times more dollars of building value per dollar of land value on farms 3 acres and under than on farms 1,000 acres and over (and between these extremes the proportion of building to land value became steadily less as the farms became larger).

A great deal has been said about farms expanding to accommodate new forms of large-scale machinery. There are many small farms which could doubtless have benefited a great deal by expanding, but these are not on the whole the ones that have expanded. They have tended to grow smaller, or to be replaced with even smaller farms. The expanding farms have in general been those already large enough to achieve savings from large-scale mechanization.

The census reports the number of farms falling within various size brackets, as well as the total acreage held by the farms in each bracket. From these figures one can compute the average size of the farms in each bracket. Comparing 1920 with 1950 again, in each of the upper brackets the average has risen toward the top limit of the bracket, while in each of the lowest it has descended. On top of the heap the average size of farms 1,000 acres and over increased from about 3,300 up almost to 4,100 acres. At the bottom the average farm under 3 acres fell from 1.7 to 1.4 acres.

This pattern of change is hard to reconcile with the idea of a mechanical revolution as the prime mover. If a technological imperative determined farm sizes it would make them cluster, one would think, about some central optimum prescribed by operating economies. But, in fact, they are racing away from each other toward the two extremes, the large getting larger and the small smaller.

Today, as population has increased, as new demands, improved techniques, and farm-price supports have enhanced the income-producing capacity of farmland, as interest rates have declined absolutely and land taxes relatively, farmland titles have become a much more attractive investment than once they were.

Prices of these titles, while they have their downs as well as their ups, have stood in this century on the whole much higher than in the last. This means that those who buy land with surplus funds—as an investment, an income, a hedge against inflation, a provision for grandchildren, a good speculation, or what you will—have a new advantage over the impecunious young farmer trying to secure an operating unit of sufficient size to produce an adequate return for his labors. In the competition for land titles today, good husbandry counts for less, financial power for more. And in the arena of finance, more than an other, him that has gets. A large debt-free landholding provides a surplus of funds for additional investments, collateral security for loans, and social position to facilitate advantageous alliances. As additional factors, one might mention the superior ability of larger landholders to secure political favors such as low tax assessments, forgiveness of delinquent taxes, access to cheap, foreign labor, and Government price supports for their products. And so the race for land titles goes more and more to those who already have.

Many sincere citizens have regretfully accepted for agriculture the economic philosophy of scarcity that they condemn in other industries. For them, the present trend has its compensations. To lock up much of our good underused land in large holdings, while much labor and capital hibernate in confined quarters, is a most effective way to hold down production. It also tends to choke off investment opportunities, flood the labor market, and raise the price of necessities. Those who agree with R. H. Tawney that "a society is rich when material goods are cheap and * * * human beings dear" do not find the trend so welcome.

The Government and Fine Arts

EXTENSION OF REMARKS
OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 27, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to insert the attached letter from Mrs. Peggy K. Walker, of Santa Ana, Calif., to the editor of the Register, Santa Ana, because I think it is a letter which merits the attention of every taxpayer:

SANTA ANA, CALIF., *April 23, 1956.*

DEAR SIR: Miss Lillian Gish's plea for the Federal Government's recognition and support of the fine arts in the creation of a Cabinet office for the arts, when stripped of its spendorous and respectable guise, leaves the now very familiar impression of more and more centralized Federal control, more and more spending and less and less liberty, to the detriment of all of us and to the delight of those few who would knowingly or unknowingly continue to foist upon us shackling, backward Old World theories of a collectivist state.

The very fact that practically every other country's government in the world, including the Soviet Union, has undertaken the responsibility of its fine arts should be a timely reminder that it must not happen here. In America it is the people who are sovereign, not the Government. In all countries it is the people who pay through compulsory taxation for the whims of their government masters and those who support its collectivist philosophy.

Miss Gish's comparison of dogs and Ernest Hemingway is misleading. Dogs, in America, both kennel-fed and hunting, are awarded blue ribbons, to be sure, but the bestowal comes not from government but from voluntary, privately financed groups of dog fanciers. Mr. Hemingway has been widely recognized by the people of America, not through government but by the people themselves. What greater glory could there be. The Nobel prize which Ernest Hemingway received came not from the Swedish Government as such, but as a result of a fund for such prizes established by the will of the Swedish chemist, Alfred Nobel.

A reward for artistic achievement, if it is to mean anything at all by our standards, must come from just such private, voluntary action, certainly not through compulsorily taxed and compulsorily directed governmental action.

Frederic Bastiat sounded a warning over 100 years ago and clearly set forth the steps which would inevitably lead to an all-powerful totalitarian state. Among these steps was the state's encouragement and subsidization of the arts.

Igor Gorin, in the January Reader's Digest, is quoted: "In the Old World music is sponsored by the state. Here (America) the people sponsor their own culture—and pay for it."

Why must we here in America, since 1947, inject politics into our culture? Such a suggestion only recently was made, and the cry has been taken up by all the collectivists that our Government sponsor an increasing number of international cultural junkets, particularly to the Soviet-dominated countries. There is no rational basis whatsoever for the justification of such a subsidy at the taxpayers' expense. European governments for years have sponsored such entertainment within their own countries, and it has accomplished nothing but to further impoverish these countries and sink them further into the morass of mediocrity. Cultural

leveling should certainly neither be a part of the American ideal nor its practice, and to indulge in such is only to hasten the final tragedy which once befell that once proud and great Roman civilization. To repeat its mistake is folly. Government-sponsored bread and circuses pleased the people with their own money, but it lost them their liberty, their pride, and their civilization.

On April 14 Lillian Gish appeared before a Senate subcommittee holding a hearing on a bill to create a 24-member Federal Advisory Commission on the Arts, and urged that the Government become "a patron of the arts." She has been touring the United States, has been interviewed by the press, and has appeared on a television program urging the creation of a Cabinet office for the arts. Her main selling point is that "Sweden has a Nobel prize. We have a blue ribbon for a dog. We pin a bronze cross on a man who killed his brothers, but we have nothing for one who has excelled in the arts."

An Associated Press dispatch on April 21 states that "President Eisenhower is considering setting up a Commission to plan a Government award for important civilian achievements in art, science, and other activities." He is taking up the idea with the president of Princeton University, Dr. Harold W. Dodds, and the secretady of the Smithsonian Institute, Mr. Leonard Carmichael. Others who will attend the meeting at the White House "will be Budget Director Percival Brundage and Presidential Assistants Sherman Adams and Howard Pyle."

It is imperative that all those who wish to keep the Government out of the arts contact their Senators and Representatives immediately and make their protests known.

Sincerely,

PEGGY K. WALKER.

Honesty and Courage

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. HAND. Mr. Speaker, amongst many editorial comments, which are overwhelmingly favorable to the President's veto of the quite remarkable farm bill recently before the Congress, there was one recently appearing in the Wildwood (N. J.) Leader, which I beg to call to the attention of the House. The editorial is as follows:

AN EXEMPLARY DISPLAY OF HONESTY AND COURAGE

For days the eyes and ears of most thoughtful Americans were turned toward Washington, anxiously awaiting news of the President's action on the controversial farm bill, known as the "Agricultural Act of 1956."

The bill was of such a nature as to put the President "on the spot." There is every reason to believe that it was purposely so designed.

It contained some features which the President believed were highly necessary to the alleviation of some agricultural troubles.

But in its Congress had also placed some features which the President believed to be highly injurious not only to the welfare of farmers but to the whole national economy.

The President was placed in the position of having to accept the bad parts of the bill in order to get the good, or of vetoing the bill and losing the good part in order to avoid the bad.

Many farmers had been persuaded by politicians that the bill was the answer to agricultural troubles, and that if the President did not approve the bill it was because he was not sincerely interested in the farmers' problems.

Most of that had all the earmarks of the kind of political stuff that Americans have come to expect from politicians in a national election year.

If the President were to be honest and courageous enough to follow the dictates of his conscience and veto the bill, that would give his opponents campaign material with which to garner in the votes of many farmers willing to accept immediate temporary relief at the cost of greater future distress.

Some of the prominent members of the President's own political party, recognizing the possible danger to the party's election interests, asked the President to sign the bill.

But the President's chief interest was in the welfare of the farmers (even though some may not realize it) and in the Nation as a whole, rather than in the political party and the election.

Here is an example of the kind of honesty and courage that all of us could wish were found in more of our elected officials, from national way down the line.

In effect the President repeated the well-known words, "I'd rather be right than President." And because he said that, it is all the more reason why we should reelect him this fall, so that he may be not only right but President also.

The same idea holds good for all seekers of public office. The man that shows he would rather be right than be a successful candidate for public office is the man that should be elected. He would make the best official.

Statement by Cecil Harden on Farm Bill

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mrs. HARDEN. Mr. Speaker, my personal viewpoint on the farm bill sponsored by the majority party and vetoed by President Eisenhower is contained in the following statement published April 11 on the front page of the Attica (Ind.) Ledger-Tribune. The preliminary remarks were written by that newspaper's publisher, Mr. Don Montgomery. The statement follows:

STATEMENT BY CECIL HARDEN ON FARM BILL

The following telegram was received from Congresswoman CECIL M. HARDEN who not only expresses her own opinion of the pending farm bill but the opinion of many other who have followed this bill closely. The statement follows closely the opinion of Governor Pyle, of Arizona, who addressed the Hoosier State Press Association, last Saturday noon in Indianapolis. The telegram follows:

"LEDGER TRIBUNE,
Attica, Ind.:

"The House just passed the catch-all farm bill approved by House-Senate conferees. I voted against it after first voting to recommit it to committee with instructions to delete most harmful sections.

"I am convinced this bill is a bad bill, that it would hurt Indiana farmers and that the President will veto it if it passes the Senate in the form approved by the House.

"The bill is undoubtedly attractive to the commercial wheat interests in the West, to corporation-size farms and to the big cotton growers in the South. It would be of no help to the family farmer in the 6th Indiana District.

"The Democrats, who control this Congress, deliberately held up action on farm legislation for 15 months. Because of this delay, the good features of the bill, particularly the soil bank, could not now be placed in operation in time for this year's crop season in the Midwest.

"Today's action proves that the interest of the Democrat leaders of this Congress lies not in solving the farm problem but in keeping the farm issue alive for use on election day. They are depending on a presidential veto. I doubt that Indiana farmers will be misled by these tactics.

CECIL M. HARDEN.

Secretary of the Air Force Quarles on the ICBM

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. CARRIGG. Mr. Speaker, it is always a pleasure to hear—or read—a speech by the Honorable Donald A. Quarles, Secretary of the Air Force. Everything that Secretary Quarles has to say is well organized, forcibly presented and easily understood. His speech on Wednesday, March 21, before the Aviation Writers Association, Washington, D. C., was a model of the clarity we expect of him.

This speech at a meeting held in observance of the 10th anniversary of the 3 basic combat commands of the Air Force—SAC, TAC, and ADC—contains some very interesting things about Air Force missile development. In fact, Secretary Quarles lifted a bit of the secrecy that properly surrounds the Pentagon's missile programs and outlined the Air Force organization in this field and officially identified the various projects underway.

He made it plain, however, that the Air Force is many things and that in considering airpower we must talk about the Air Force as a whole rather than about any of its parts, no matter how important they may be. "As a matter of fact," he said, "we should really talk about the Armed Forces as a whole because each service complements the other." The anniversary of SAC, TAC, and ADC is also a kind of anniversary for global airpower. Modern airpower is an entity—flexible and powerful; and in the last 10 years the Air Force, to carry out its missions, has developed global airpower to a degree never before reached. To maintain this airpower, an airpower adequate to meet the threat posed against us, we must continually improve our concepts and our weapons.

In discussing the new weapons programs, Secretary Quarles made it plain that missiles will not replace conventional aircraft. Air Force strategic de-

livery, he said, "still puts primary reliance on the manned bomber."

Intercontinental ballistic missiles which Secretary Quarles named are the Atlas and the Titan. The Thor is a missile of intermediate range, but these three are all strategic ballistic missiles which are being developed under the guidance of the Air Research and Development Command. Secretary Quarles stated that "While it is our estimate that we are ahead of the Soviets in the guided-missile field as a whole, we know that they have emphasized the ballistic line and we would not be surprised to find close competition in this field."

Without entering the argument going on as a result of certain charges made by Members of this Congress, I would like to point out that the Air Force, under the able direction of Donald A. Quarles, is well aware of what Russia is doing in building a strong air force and developing missiles. It is well aware of the competition taking place and of the superiority that we must maintain. But in the sensible view of our clear-sighted Secretary, ballistic missiles are not an end in themselves, but only an important addition to our arsenal. Even as such, we are developing them solely to maintain a solid deterrent position that is, in the words of Secretary Quarles, "a position of retaliatory strength that could respond to any Communist aggression, even a surprise massive attack, with such devastation to the aggressors that by no stretch of the imagination could they expect to improve their position by launching an attack."

In the midst of an often acrimonious dispute about our strength and about what is being done in the Air Force, it is gratifying to read the sensible remarks of Mr. Quarles in conclusion. His final words were, "As we analyze the situation in the foreseeable future, I see no circumstances under which we would fail to have such a deterrent position even if we should not be the first to achieve each of the potent new weapons we have been talking about, assuming, of course, that we continue to press ahead with our programs."

Mr. Speaker, with the consent of my colleagues, I wish to insert this fine statement on missile development by the Secretary of the Air Force in the CONGRESSIONAL RECORD. It follows:

ADDRESS BY HON. DONALD A. QUARLES, SECRETARY OF THE AIR FORCE, BEFORE THE AVIATION WRITER'S ASSOCIATION, WASHINGTON CHAPTER, NATIONAL PRESS CLUB, WASHINGTON, D. C., MARCH 21, 1956

It seems only a short time to me, and I am sure to you, since my previous meeting here with the Aviation Writer's Association. I am very pleased and highly honored that you have given me this return engagement. I realize that there is a special occasion for it and am, of course, very happy to join with you today in observing this 10th anniversary of the three basic combat commands of the United States Air Force. The Strategic Air Command, Tactical Air Command, and Air Defense Command were first established as combat elements of the Army Air Forces on March 21, 1946. Statutory authority for these commands was provided by the Air Force Organization Act of 1951, section 308 of which states that "there shall be within the Air Force the following major air commands: (1) An Air Defense Command, (2) a Strategic Air Command, (3) a Tactical Air Command, and such other commands, forces, and organizations as may from time to time be established by the Secretary of the Air Force * * *." The Strategic Air Command, under General LeMay, the Tactical Air Command, under General Weyland, and the Air Defense Command, under General Partridge, typify the basic combat elements of our Air Force. They are represented here today by Maj. Gen. James Seltzer (SAC), Maj. Gen. Earl W. Barnes (TAC), and Maj. Gen. Norris B. Harbold (ADC).

Each of these commands has made an enviable record in the past 10 years in building up powerful, well trained, well equipped and instantly ready organizations. With their leadership, their esprit de corps, their dedication to their missions, I am sure their promise for the future is even brighter than their great record of the past. At the same time, General LeMay, General Weyland, and General Patridge would be the first to emphasize the fact that their commands are integral parts of the Air Force as a whole and that it is with the whole rather than its parts that we should be concerned. Altogether we have some 18 Air Force commands, all interrelated and interdependent, all, for example, dependent on the Air Research and Development Command and the Air Materiel Command for materiel, and on the Military Air Transport Service for air logistic support. The United States Air Forces in Europe, the Far East Air Forces, and other theater commands, are supported by rotation of personnel largely from the Tactical Air Command. And so it goes.

Without in any way belittling these three basic combat commands, I would therefore like to talk about the Air Force as a whole, rather than with these illustrious parts. As a matter of fact, we should really talk about the Armed Forces as a whole because each service complements the others. The defense mission is the mission of all. The principle of economy of force requires that each have its assigned roles and missions, and of course as the situation evolves, these must be reviewed by the Joint Chiefs of Staff and from time to time revised under the authority of the Secretary of Defense. While I believe it is fair to say that all the services are proud and watchful of their assigned responsibilities, it has always seemed to me that the public tended to exaggerate the inter-service differences, perhaps because nothing makes the news like a good scrap. In any case, in talking about the Air Force I want to make it clear that I am not implying any lack of respect for our older sister services.

Thus as we commemorate this tenth anniversary of SAC, TAC, and ADC as the basic combat arms of the Air Force, we must also remember the global nature of the Air Force and the complementary aspect of all Air Force commands and components. Modern airpower is an entity, flexible and powerful. For 10 years now, such peace as we have enjoyed has resulted from the air/atomic strength existing primarily in SAC but also in varying degrees in other Air Force and Navy commands. This strength has largely succeeded in restraining the enormously greater numerical forces of the Communist bloc while the free world built up its defenses.

To carry out its missions, the Air Force has developed global airpower to a degree never before reached. We have the men with the knowledge to employ airpower as an instrument of our national policy. We have the aircraft and weapons to make that airpower effective, and we have the base complex from which to launch it. But no form of human endeavor is static, and airpower, above all other military forms, is a dynamic thing. To maintain airpower relative to the threat posed against us, we must continually improve our concepts, and our weapons.

I would like to discuss a few of our recent weapons programs. Guided missiles seem to make news these days, so I believe you will be interested in a report on some of the newer weapons now being developed by the Air Force in this area. Again, I should point out that all three services have guided missile development programs, directed toward their respective missions or toward cross-support of other services.

The ability of guided missiles to increase Air Force effectiveness makes them a vital part of our program. We recognize their great potentialities and will develop them in many forms and integrate them as rapidly as possible to increase our operational capabilities. As I say, the other services, very properly, have similar plans.

While the guided missile field is very broad, much interest recently has been centered on the long-range surface-to-surface missiles in the strategic category. I would like to tell you what I can about the Air Force program in this field.

To get it all in perspective we should note that the Air Force strategic delivery program still puts primary reliance on the manned bomber. The B–52 now building up in production is the fourth major development in this area since the World War II B–29. Moreover, we have a continuing strong program of research and development in this field since we believe that manned bombers will be important in our program for many years to come.

Supplementing this line of manned bombers, we have two categories of strategic missiles, the ballistic or rocketlike missiles, and the air-breathing types, the Northrop Snark and the North American Navaho, which will have range, accuracy, and load carrying capabilities at least as good as the ballistic missile, although the latter will be even more difficult to intercept than the air-breathing types.

Each of these programs has its cycle of development and use—its part and place on the program. As of any given time, our capability is the summation of all parts then operationally available.

Within the Department of Defense, overall responsibility for the development of an intercontinental ballistic missile has been assigned to the Air Force. For some time now, in fact ever since our scientists became convinced that such long-range ballistic missiles had the possibility of being developed into a practicable system, the Air Force has been giving top priority to this development.

Our first project in this field—the Atlas intercontinental ballistic missile (ICBM)—has been under development by the Convair Division of the General Dynamics Corp. in San Diego, Calif., for a number of years.

A second ICBM—Titan—is being developed by the Denver division of the Martin Co. of Baltimore, Md. The Titan will use many of the components being developed for the Atlas. This plan enables us to conduct simultaneous development of 2 operational missiles, representing different technical approaches, at an estimated increase of only 10 percent over the cost of developing a single configuration. The decision to pursue two different approaches was prompted by the desire to assure earliest possible success in our ICBM effort.

As in the case of the ICBM program, alternate lines are also being followed in the intermediate range or IRBM missile development. In the IRBM case, however, the Army and Navy jointly are pursuing one line, the Air Force the other. Again in the IRBM field some of the ICBM components are applicable and are being made available to the IRBM contractors.

For the Air Force IRBM or Thor program, the Douglas Aircraft Co., of Santa Monica, Calif., has been assigned a development responsibility similiar to that of Convair and Martin in the ICBM program.

The Air Force strategic ballistic missile program, including Atlas, Titan, and Thor,

is managed by our Air Research and Development Command, headed by Lt. Gen. Thomas S. Power. Immediate control and supervision over this program are exercised by Maj. Gen. B. A. Schriever, commander of the Western Development Division of ARDC, with headquarters in Los Angeles, Calif.

Backed by the vast resources of ARDC and its 10 research, development, and test centers, WDD currently supervises the activities of the thousands of military and industrial specialists who are already actively engaged in these three ballistic-missile projects.

To gain the services of top technical and scientific experts and to direct and expedite the innumerable and vitally important elements of the whole program, the Air Force has established a unique military-civilian management structure. Within the Western Development Division, three organizational elements guide the operations—the staff of the Western Development Division, the Special Aircraft Project Office of the Air Materiel Command which provides expedited procurement and similar materiel functions, and the Ramo-Wooldridge Corp. of Los Angeles which, under contract, provides WDD with a closely integrated technical staff, with specific responsibility to furnish systems engineering and technical direction to more than a dozen major contractors.

In addition, a group of the Nation's outstanding scientists, under the chairmanship of Dr. John Von Neumann, contributes to this vital program as advisers.

The organizational structure of the Western Development Division is designed primarily to expedite the Air Force ballistic-missile development program. It has the added advantage of providing for rapid transition from hardware development to operational weapons. This is made possible by concurrent operational development in which other major Air Force commands, principally the Strategic Air Command, actively participate.

While it is our estimate that we are ahead of the Soviets in the guided-missile field as a whole, we know that they have emphasized the ballistic line and we would not be surprised to find close competition in this field. Even here we must realize that the objective is effective delivery of explosive power on target and this is a very much broader problem than just sending rockets long distances.

In fact, as we view the whole strategic delivery field and consider manned bombers and air-breathing missiles as well as ballistic missiles, we are not inclined to view the ballistic missiles as more than an important addition to the arsenal. As potent as it will be when and if it is perfected, I see no reason to regard it as an ultimate weapon. I do see a reason to give its development the highest priority, and we are doing so.

Let me try, then, to get this matter of strategic delivery in perspective. First, we must remember that our primary purpose is to preserve at all times a solid deterrent position; that is, a position of retaliatory strength that could respond to any Communist aggression, even a surprise massive attack, with such devastation to the aggressors that by no stretch of the imagination could they expect to improve their position by launching the attack. This deterrent is a complex of many factors—men, weapons, delivery systems, bases, and many others. There is no question in my mind that we have such a solid deterrent position today. As we analyze the situation in the foreseeable future, I see no circumstances under which we would fail to have such a deterrent position even if we should not be the first to achieve each of the potent new weapons we have been talking about, assuming, of course, that we continue to press ahead with our programs.

The Case for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. BARTLETT. Mr. Speaker, I take pleasure in presenting here a column written by Morley Cassidy for the Philadelphia Bulletin which comments on the speech made at the Alaska Constitutional Convention by the distinguished former Governor of Alaska, Ernest Gruening:

THE CASE FOR ALASKA

After waiting for 88 years, Alaska is about to get a constitution. The delegates to a constitutional convention signed on Monday a document on which they had been working for more than 3 months, and their draft now goes to the Alaskan people for their approval at a special election on April 24.

It will be approved, without doubt, for by all accounts it is a very fine constitution, impeccably democratic and with ironclad guaranties of the liberties that Americans cherish.

There is only one flaw, which unfortunately is big enough to be seen from Philadelphia with the naked eye. The document won't be worth the paper it is written on, and the rights it guarantees will continue to be denied until Congress sees fit to confer statehood on its stepchild of the snows.

This may take quite a while. It will certainly allow time enough to study a little pamphlet which has just been sent to this department by our old friend, Ernest Gruening, and to reflect at length on the ability of the American people to turn their moral indignation on and off at will.

The American people, bless 'em, are well known for their outsize hearts which can be counted on to bleed copiously at the very whisper of an injustice almost anywhere.

The key word in that sentence, though, is "almost," for injustice in American eyes seems to be largely a matter of latitude, like morals.

An injustice committed in the tropics, by the wicked French or British, is almost automatically an outrage which will start up an American committee for justice to Bantustan. The same injustice, however, is likely to start up nothing more than a yawn when it happens in latitude 72 degrees north, to Americans who are not illiterate, not colored, not Communists, and not even especially hungry or disease ridden.

Suppose, for instance, that the people of Bantustan were to haul Great Britain before the United Nations, and complain:

"We have been promised all the rights of British citizens for 88 years, but they are still denied us. We are taxed without our consent, and our money taken to England to build roads in Sussex while we go on wading through swamps. We are denied a voice in parliament, yet our young men are drafted and sent all over the world to die at the command of our British rulers."

Who can doubt that Americans would leap on their British ally with claw and fang, to demand justice for the Bantus?

Yet these things, former Governor Gruening points out, are happening this very day in Alaska, the United States colony; and how much indignation have you heard?

Governor Gruening's pamphlet contains the keynote address which he made to the constitutional convention when it met last November 9, and it deserves a thoughtful reading from all Americans.

It is couched in terms borrowed from the Declaration of Independence, as a dramatic way of stating Alaska's claims to statehood. The American conscience can hardly escape being stung by the thoroughly documented evidence that many of the grievances charged against George III are being duplicated today in this Nation's treatment of Alaska.

It is a long bill of complaints, and its main items can only be suggested here:

1. Alaskan citizens are subject to military conscription, yet are denied the vote, and thereby any voice in making the policies which lead to war or peace.

2. Alaskans pay all Federal taxes, including the gas tax, yet Alaska finds itself excluded from the proposed highway building program, and has received only minimal road-building aid.

3. Alaskans are denied the right to regulate such local industries as fisheries and aviation. As a result the fishing industry has declined by more than 60 percent in 20 years; and nonscheduled commercial flying, on which the Territory is largely dependent for transportation, has been banned for the benefit of scheduled airlines with stateside ownership, which do not meet the Territory's needs.

4. Alaska, as a Territory, is specifically excluded from the benefits of shipping laws applying to the United States. It is compelled thereby to use ports and shipping lines which greatly increase transportation costs and retard development of the area.

There are many more specific grievances beyond the greatest of all—that the Americans of Alaska are not self-governing citizens.

Their status, Governor Gruening points out, requires the United States to make annual reports to the United Nations on the progress it is making toward fulfilling the political aspirations of Alaskans under article 73 of the charter dealing with non-self-governing territories.

It is not flattering to Alaskans apparently to find themselves thus lumped in with the natives of Togoland or the Cameroons.

But a reading of Governor Gruening's pamphlet makes one wonder. Maybe Alaskans may some day be driven to enlisting the support of a Togoland Committee for Justice to Alaska. And maybe that is their best hope for getting action.

Need for More VA Hospital Facilities in Florida

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. FASCELL. Mr. Speaker, Mr. Kenneth E. Doncaster, assistant State service officer of the State of Florida's Department of Veterans' Affairs, has just completed a survey of Florida's veterans needs and their economic situation.

I note with interest that they too are firmly of the opinion that for Florida veterans the major crying need today is for adequate hospital facilities.

Florida, percentagewise, is first in population growth as compared to all other States equal to or greater in population.

Florida's continued growth is a foregone conclusion. Along with this growth

annually comes increased requests for VA hospitalization.

The need for improved and expanded facilities should be recognized and immediate steps taken to correct this inequitable and inadequate situation.

Mr. Doncaster's comments together with the results of the survey follow:

STATE OF FLORIDA,
DEPARTMENT OF VETERANS' AFFAIRS,
St. Petersburg, Fla., April 24, 1956.

Hon. DANTE FASCELL,
Member of Congress, House Office Building, Washington, D. C.

DEAR CONGRESSMAN FASCELL: There is enclosed a copy of a survey I have recently completed dealing with the current economic situation of 60 veterans of World War I, scattered all over the State of Florida. I had been working on this survey for some months and had hoped to have many more than 60 reports, but feel that this is a representative sampling of the present-day status of our older war veterans.

Quite frankly, we were trying to determine the need for (1) more hospital facilities in the VA in Florida and (2) for liberalized pensions for World War I group. The results were not predetermined by us in any way, and they do speak for themselves.

The results, which I am sure would be confirmed again and again, in any survey of a broader scope, shows two important things in by opinion. The first is that the major crying need today is for adequate hospital facilities. Being a student of gerontology (St. Petersburg Junior College), I am well aware that this is a finding that is true of citizens generally who are in their sixties. This survey confirms the acute need in the veterans group who are in that same age group. I feel that we must continue to expand the VA hospital facilities in Florida, particularly Bay Pines, to accommodate these older veterans—many thousands of whom are daily moving down here from all over the North. The hospital problem in the North slowly improves by reason of emigration, and in the South is ingravescent by reason of immigration. The second major point established by this report is that for the people in their sixties now, the social-security program is less than adequate. If the veterans didn't have the VA pension to rely upon, they would obviously be on the welfare rolls of the several counties of Florida. Even so, the minimum benefit of $66.15 is not enough to keep a man and wife—even in Florida—or perhaps I should say, especially in Florida.

Therefore the VA pension program must be liberalized particularly for the World War I group. This finding is not motivated by the adverse finding of the Bradley Commission which came out this morning, but by hard and cold facts independently arrived at by a study of individual cases.

I am sending copies of this survey and similar letter to all members of our congressional delegation, being assured you will all work for the welfare of our older veterans, when you find the opportunity presented.

Very sincerely yours,
KENNETH E. DONCASTER,
Assistant State Service Officer.

The following report is a survey of 60 veterans of World War I, completed on April 16, 1956, by Kenneth E. Doncaster, assistant State service officer, Florida Department of Veterans' Affairs, and department service officer, Veterans of Foreign Wars of the United States. This survey concerned itself with the need by these men for hospitalization; their income status, and employment situation.

On the question of age, 20 out of the 60 were 65 years of age or older, 18 of the 60 were 60 years of age or younger, the remainder being between 60 and 65. The youngest man in the group was 57 years of age and the eldest was 79.

On the question of dependents, 36 of the 60 were married. A total of 45 out of 60 had 1 or more dependents. Only 9 of them were unmarried, without dependents, and the remaining 6 declined to give this information.

To the question, "Do you anticipate needing VA hospital care within 5 years?" an unequivocal "Yes" was noted from 51 out of the 60; 5 men answered with a positive "No." On the question of needing VA hospital care within 1 year, 24 answered affirmatively and 30 were indefinite or vague as to when they might need it; the remainder declined to answer.

On the question of employment, 49 out of 60 reported that they were not employed at anything whatever; 11 men stated they were employed and gave their wages, which ranged from $25 per month to $327.60 per month, with 2 men who couldn't compute their wage because they were self-employed. Five of the 11 had earned income of $100 per month or more (5 out of 60 is equally valid here). The average monthly wage of these 11 was $117.96.

On the question of social security, 17 out of 60 are now in receipt of social-security benefits, ranging from $30 to $80 per month. Six men reported they would receive social-security upon reaching age 65; 25 men stated they would never draw social security. The remaining 12 men simply didn't know whether they had coverage under social security sufficient to permit payment of the benefit.

On the question of VA pension (nonservice connected), 36 men out of 60 were in receipt of the VA pension; 12 of them drew $66.15 per month, 12 drew $78.75, and 2 drew $135.45.

On the question of other income, 20 out of 60 reported income from other sources (other than VA pension or social security). The average of other income was $92.90 per month and ranged from a low of $17 per month for service-connected disability compensation to $216 per month railroad retirement. The remaining 40 of the 60 had to rely entirely upon social security or VA pension for non-service-connected permanent and total disability.

On the question of assets, 21 out of 60 reported no assets whatever—no real property, automobile, cash in bank, etc.; 31 out of 60 did have assets ranging from $100 to $10,000, with an average of $3,585.

The Public Always Pays

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. BOW. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Cleveland Plain Dealer on April 25, 1956:

THE PUBLIC ALWAYS PAYS

Who should pay the cost of relocating utilities in the proposed $51½-billion Federal road network? Should Federal funds be used to meet 90 percent of the cost, as the bill provided when it went to the House, or should the utilities be required to pay the cost themselves?

This issue promises to evoke heated debate in the House, with one faction contending it would be a horrible giveaway if Federal funds were used to finance the utilities' relocation.

We are not greatly concerned over this issue, however, because, regardless of the outcome, the public will pay the bill, as it always does.

The cost of relocating utilities has been estimated at $1½ billion. If this money came out of Federal funds, the cost would be paid by Federal taxpayers. If the utilities were required to foot the bill, the cost would become part of their operations and would be reflected in their rate structures, in which case the utility users eventually would pay the relocation cost.

Nowadays there is no difference between utility users and Federal taxpayers. They're all members of the public. But there are demagogs who like to pretend that they are doing the public a service if they can "soak" utilities for something for which the public is going to pay anyhow. So let them have their fun.

The Republican Candidates and Union Labor

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. SHEEHAN. Mr. Speaker, on Saturday, April 21, I had the privilege of delivering the principal address at the luncheon meeting of the Young Republican Organization of Illinois, which had assembled at the La Salle Hotel in Chicago, for its annual convention. Under leave to extend my remarks, I include the text of my address, which was as follows:

In spite of the fact that there are still many problems which the Republican administration has to resolve, no one can gainsay the fact that during the 4 years of Republican administration the country has reached its greatest heights of prosperity, peace has been attained, and we have not been involved in a shooting war. In every direction, we have been making great progress—economically, socially, and in welding our own people together.

Even with prosperity, peace and progress, and with the great popularity of President Eisenhower, there is grave question in many minds that the cumulative effect of all these factors might not be enough to capture control of the next Congress. From a review of the actions of the present 84th Congress, none of us can labor under the delusion that the Democrats will support President Eisenhower's policies. The Democrats only support Mr. Eisenhower's policies when it suits their political advantage, otherwise they are diametrically opposed to him and his program, even though they pay lip service to the principle that they want to support the President.

Knowing this audience is composed of people who are ready, willing, and able to carry a message to the people, I feel it is necessary to talk to you about a phase of the coming election which most politicians and citizens would like to forget about. It is a problem which confronts the Republican Party and all Republican officeholders, and is the opposition to the Republican Party and Republican principles voiced and carried out by union labor spokesmen. Naturally, I am speaking from the standpoint of a resident of Illinois and of the industrial North. I am speaking of the very real problem con-

fronting us whereby labor union leaders distort the truth by means of hoodwinking the labor union workers about the Taft-Hartley Act. And here I want to strongly emphasize that I am speaking only of labor union leaders. By no means are my remarks here today aimed at the rank and file of union membership, because over the years it has been proven that when the working people go to the polls they vote as Americans, supporting the best qualified candidates and keeping in mind the general welfare of the country.

The majority of union labor leaders knowingly try to sell the proverbial "bill of goods" by promoting the false idea that only the Democrats are friends of the working people. When I note the firm grip that labor union leaders like Walter Reuther and James Carey have on the Democrat political leaders, I have grave misgivings regarding the motives of these few men, as it seems to me that they are personally more interested in achieving political power and in taking over control of the Democratic Party than they are in the welfare of labor.

However, in all fairness, it must be noted that some union labor leaders do not follow the herd. Dave Beck, president of the International Brotherhood of Teamsters, in February said he thought organized labor should not get into politics any more than is absolutely necessary on issues confronting it in the economic fields. Maurice Hutchinson, of the International Brotherhood of Carpenters, said that neither political party has "the labor vote sewed up." He stated (February 17, 1956) that "labor will not latch onto the shirttails of any political party in 1956," and further said, "the Democrats have more people in favor of antilabor legislation than the Republicans."

If the majority of union labor leaders were interested in disseminating the truth, they would not continue to hoodwink the rank and file of union workers about the Taft-Hartley Act. They would not continue telling their members and the voters to defeat Republican candidates for the legislature and to elect Democratic candidates on the promise that the Democrats will repeal the Taft-Hartley Act.

Let us look at the record. The Democratic Party, since the passage of the Taft-Hartley Act back in 1947, has continually promised to have it repealed. You do not have to be reminded that in the Democratic Party platform and in the Democratic campaign speeches of 1948 and 1952, they promised to "tear the Taft-Hartley Act out of the books." I do not have to remind you that in the congressional and senatorial elections of 1950 and 1954, you heard practically every one of the Northern industrial Democratic legislative candidates promising to repeal the Taft-Hartley Act.

Since the passage of the act, the late Senator Taft, various labor unions, and also the general public have recognized that some changes in it were necessary and called for, and on two separate occasions the Republican leadership has considered enacting some of these proposed amendments to the law. On both occasions the solid block of Democratic votes has stopped enactment of those needed revisions. Such action by the Democrats makes it clear that they are willing to sacrifice the best interests of labor in the mistaken belief that the Taft-Hartley Act will provide them with a continuing campaign issue.

On the first occasion, in the 81st Congress, when amendments to the act were presented on the floor of the House in the Wood bill, 193 Democrats voted against the proposed improvements to the law, while nearly every Republican voted to pass them. In 1954, when amendments were considered in the Senate, every Democrat voted for recommittal. The recommittal motion carried, thus killing any chances of improveing the law in that session of Congress. Here again, I should like to point out that almost every single Republican Senator voted in favor of those proposed amendments. During that session, extensive hearings on amendments to the Taft-Hartley Act were conducted by the House Education and Labor Committee, but after noting the action in the Senate, the committee realized that there was no chance for clarification or refinement of the act in that Congress and took no further action. The Democrats have again—as you will recall they did before the November 1954 elections—told the people that they would repeal the Taft-Hartley Act. So far while they have controlled Congress during this past 2 years now, there have been no hearings in the House of Representatives to attempt to either clarify or repeal the law as a whole.

The Democrats have controlled the 81st, 82d, and 84th Congresses since the Taft-Hartley Act was passed. In 6 out of the 8 years since the enactment of that law, the Democrats had full control of both Houses of Congress and all committees. The very least they could have done, if they had wanted to be honest with union members, was to bring out of committee and onto the floor a bill for the repeal of the Taft-Hartley Act. They had the necessary control and the opportunity to act—they failed to do so. It is a 100-to-1 bet they will again campaign on this false issue and, I regret to say, they will again hoodwink some of the union people.

In labor legislation, as in civil rights, it seems to me that the Democrats are very long on promises and short on performance. The voters will have to judge this themselves in the coming election, and disregard Democrat promises which do not result in Democrat performance. In my opinion, the Democratic Party is divided on labor issues and will not, in the foreseeable future, repeal the Taft-Hartley Act.

In the 1956 campaign, we will again be faced with the same hoodwinking and the same rash promises by labor-union spokesmen in cooperation with the Democrat politicians.

On Wednesday, April 3, the Cook County Branch of Labor's League for Political Education asked permission to use membership lists of the Chicago Federation of Labor in order to get out the vote on labor's side in the coming national election. The chairman of the league appealed for aid from the federation unions in electing a Congress that would repeal or amend the Taft-Hartley Act. How far can union labor leaders demagog? How can they continue to hoodwink their own membership, especially when you look at the record as it has been recited here today. It seems to me that if the union-labor leaders are really interested in the welfare of their organizations and in the welfare of the workingman, they would face the facts and tell the membership exactly what has happened to the laboring man during the past 4 years of Republican administration. Among a great many things they would—if they were honest—have to bring out:

(1) An alltime high in people employed: At the present time we have the greatest peacetime employment in the history of our country. The 1955 Republican peacetime average of 63.2 million is 3.8 million above the highest Democrat peacetime high of 59.4 million in 1948, and 1.9 million more than the highest Democrat wartime high of 61.3 million in 1952.

(2) Cost of living stability: Since 1933, the cost of living has continuously gone up and in practically every year since that time under a Democrat administration the increase in the cost of living has offset the gains in wages that the workingman received. The stability of the cost of living in terms of real wages, as indicated by the Consumer Price Index for 1955 and up to the present time, has meant that when the workers won wage increases in this period the extra money made it possible for them to buy more consumer items instead of merely being able to buy the same number of consumer items as previously but at a higher price. In the year 1955, there was a 10-cent total increase in wages, which resulted in an actual real increase of 9 cents. This is a record of which the Republicans can be very proud because it clearly demonstrates that the cost of living has been stabilized. The Democrats and the labor-union leaders certainly cannot point to any such record in any comparably recent year of Democratic administration.

(3) Average pay at an alltime high: From the Bureau of Labor Statistics of the United States Department of Labor, the figures show that under the Republican administration and Republican leadership the average weekly earnings of factory workers have reached an alltime high, being at $78.59 in March.

(4) Facts about the Taft-Hartley Act: In all fairness, should not the labor union leaders reveal to the union man the fact that the Democrats have never lived up to their promises to repeal the Taft-Hartley Act, even though they controlled Congress 6 out of 8 years since the law was enacted. In the earlier part of my speech, I detailed the lack of action on the part of the Democrats. Why do not the union leaders give their membership these details? In spite of the fact that union leaders and the Democrats have seen fit to call the Taft-Hartley Act the "slave labor law," why doesn't common honesty force the union labor leaders to reveal to the rank-and-file union workers that union membership rolls have increased year by year and are at a record high; that the loss of time due to strikes is at a minimum; that the union treasuries are more prosperous than they have ever been; that the various unions are building palatial million-dollar structures, as evidenced by the fact that during the past 1 to 2 years seven now million-dollar union buildings have gone up in the Washington area. If the Taft-Hartley Act is destroying labor unions, how come this growth and how come this prosperity of the unions? Why do not the labor leaders reveal these facts to their members?

When President Eisenhower and the Republican administration have given the working people of the United States full employment, a stabilized cost of living, an alltime high in their earnings, and have developed a climate wherein the unions have made their greatest progress, how—in the name of common decency and justice—can so many of the labor union leaders continue to misrepresent the facts? We can all be thankful that the rank and file of union members have such good sense and are still able to see and know the truth.

I have, as you realize, spent a lot of time on this single issue because I feel it is a very vital one, and unless good citizens like yourself have the facts you will not be able to intelligently counteract the false propaganda which the labor union leaders, in conjunction with many Democrat politicians, will spread between now and the November election. Those men realize that it will be an impossibility to defeat President Eisenhower and consequently are concentrating on capturing control of both Houses of Congress. You are a vital factor in helping to counteract this false propaganda, and if you will but remember some of these facts you will be of inestimable help to President Eisenhower, the Republican Party and the general welfare of the country in the coming months.

H. R. 10

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. KEOGH. Mr. Speaker, during recent weeks the Members of this House have evidenced increasing awareness of the pension plight of the self-employed. Many of them, from both sides of the aisle, have expressed to me their support of H. R. 10, the Individual Retirement Act, which would permit self-employed persons to obtain tax deferment on reasonable amounts set aside for their retired years. This measure is now a part of the omnibus tax bill upon which the Ways and Means Committee has not taken final action. The following comments by Sylvia Porter in her syndicated column indicate another aspect of this problem of discrimination against the self-employed. It sets forth clearly some of the major fringe benefits upon which taxes are now deferred or diminished:

[From the Chicago Daily News of April 21, 1956]

SALARIES MODEST, BUT EXECUTIVES LIVE HIGH ON FRINGE BENEFITS

My friend, R. A., is a policymaking vice president of a nationally known corporation which has made a lot of money in the last few years. If you saw his monthly paycheck, though, you would be surprised; you would expect the check to be much bigger, considering the name of the company, the industry, and his key job.

But R. A.'s paycheck would give you a badly distorted view of his actual financial setup. For, in addition to a cash salary, R. A.'s company has just, in the last 5 years, given him:

A handsome expense account which covers virtually all his expensive entertaining, travel costs, etc. It also provides him with a new car every year and a beautiful vacation haven.

A retirement program under which he's already guaranteed $21,000 a year for life, and his retirement benefits are steadily increasing.

A special contract retaining him as a consultant at $14,000 a year for 10 years beginning when he's 65.

A privilege to buy a big chunk of the company's stock at a specified price at any time between now and 1965. The stock is now quoted at $40 above the price at which R. A. can buy (or has bought) the stock, and his paper profits on the stock top a quarter-million dollars.

So, if you added to R. A.'s cash salary all his fringe benefits you would find that he is doing very nicely indeed in this era of stiff taxes on incomes. R. A. is not only building a major estate for his family; he also is in a position to move easily and comfortably in the so-called million-dollar circles of our land.

Am I making this report on R. A. because he is so exceptional? Oh, no. The point of this story is that R. A. is becoming less and less the exception, more and more typical of executives in industry.

In corporation after corporation, key officers are getting contracts and pay deals that rival or surpass the one R. A. has. As an illustration, the magazine Sales Management made a survey of 50 leading corporations a short time ago, found only one in which the chief sales executive is compensated by salary alone.

In corporation after corporation, top management men are being tied to their jobs for life by a golden cord of fringe benefits.

The deals make the executives all but immune to offers from the companies' competitors because the men would have to give up their impressively attractive benefits if they quit.

What are some of the ways corporations are compensating key men—outside of cash? These:

1. A stock option deal. Under this plan, a key employee gets the option to buy a specified total of the company's stock at a specified price during a specified period of years.

If the stock soars during the period, he still can exercise his option at the fixed price; when and as he sells his shares, his gain will be taxed only at the capital gains rate, meaning at a top of 25 percent.

The profits of some men who have stock option deals run into millions of dollars.

2. A deferred bonus arrangement. Under this, the company votes the officer a bonus payable in installments over a number of years, thereby cutting his year-to-year tax liability. In some cases, the executive prefers (and will get) payment of his bonus after he retires.

3. Handsome retirement programs. Some contracts I've seen give executives really eye-popping incomes for life. In addition, many have contracts to remain as consultants at impressive salaries after 65.

4. Rich insurance policies which also may pledge a lifetime income to the wife.

5. And fat expense accounts, special health programs, profit-sharing arrangements, many other variations of benefits.

The publicized statistics on the rate of rise in executives' salaries are meaningless unless the fringe benefits also are included.

The cash paycheck of an American executive is less and less the yardstick of his financial well-being, and it'll continue to be less and less so as his fringe benefits multiply.

Pure Milk Products Cooperative in Wisconsin Hails Prop Hikes

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, much has been said about the recent increase in price supports for the dairy farmer. I am including as part of my remarks, a news article which points out that the Pure Milk Products Cooperative, of Fond du Lac, Wis., was greatly pleased with this increase. Mr. William C. Eckles, of that cooperative, says that "this will mean an increase of $1 million a month" in the income of Wisconsin dairy farmers. Who said this would not help them? The article follows:

PURE MILK CO-OP HAILS PROP HIKES

FOND DU LAC.—William C. Eckles, of the Pure Milk Products Cooperative, said Thursday night, higher price supports for surplus cheddar cheese and butter "will mean an increase of $1 million a month" in the income of Wisconsin dairy farmers.

Eckles, general manager of the co-op, made the statement in a telephone conversation from Washington where he had been meeting with Agricultural Department officials and attending an executive committee meeting of the National Milk Producers Federation.

He referred to the announcement by the Agricultural Department Wednesday in which it said it will pay 2 cents and 1 cent per pound more for surplus butter and cheddar cheese respectively.

"This action," Eckles said, "is actually a much better emergency measure than what was contained in the farm bill." President Eisenhower vetoed the farm bill Monday and the same night announced the emergency measure.

National Association of Home Builders Endorses Extension of GI Home Loan Guaranty Program

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. FASCELL. Mr. Speaker, I thought the Members of the House would be interested in reading a newspaper report dealing with the comments of the president of the National Association of Home Builders on the subject of the GI home loan program which is due to expire in July of next year unless we take up very soon and enact legislation to offset the ill effects of the scheduled cut-off date of the home loan guaranty program for our veterans, the benefits which they have enjoyed as well as the good this program has been to our national economy, will have been greatly diminished as this article from the April 22 issue of the Miami Daily News, Miami, Fla., so accurately points out. There is legislation before the Veterans' Affairs Committee right now to avoid this contingency, and I am hopeful the Members will take the time to review the provisions of H. R. 10469 and that they will see fit to make their endorsement known to the committee.

BLOW THREATENS BUILDING INDUSTRY—TIME IS RUNNING OUT FAST ON GI HOME LOAN PROGRAM

WASHINGTON, April 21.—Joseph B. Haverstick, president of the National Association of Home Builders, today warned World War II veterans that time is rapidly running out this year on their rights to buy a home under the GI home loan guaranty program.

"The unpleasant fact must be faced that there is a strong indication that the Congress may not extend this patriotic program beyond its expiration date of July 25, 1957," Haverstick said. "If the 3-year extension recommended by NAHB and the major veterans groups is denied, the program for all practical purposes will terminate sometime this fall."

He pointed out that builders will have to quit starting GI houses well in advance of the actual termination date because of the long period of time involved in planning, financing, building, and actually giving possession of a house to its new owner.

PRICE TAG LOWER

Under the terms of the GI home loan program, administered by the Veterans' Administration, the Federal Government guarantees up to $7,500 of the purchase price of a house. Equally important, the veteran pays only 4½ percent interest. This compares with 4½ percent plus a one-half of 1 percent insurance charge under the FHA program and the conventional interest rate

which seldom, if ever, is under 5 percent and more often than not is more.

Haverstick also noted that despite a continuing upward trend in the cost of new housing—due to progressive increases in land, labor and materials costs—the typical GI house has still been priced somewhat under the conventionally financed home. He cited figures from the Bureau of Labor Statistics showing that in 1955 the typical GI house sold for $12,476, as compared with an average $13,700 price tag on all houses.

ADVERSE EFFECT SEEN

"The consequences of any failure on the part of the Congress to extend the GI program will adversely affect an estimated 5 million World War II veterans, many of whom for very valid reasons, have not been able to take advantage of their rights," Haverstick said. "They are going to be left stranded. Ironically, the figures show that this program is about to be allowed to die at the very height of its usefulness to the men who fought in World War II."

Haverstick said that entirely apart from the hardship imposed on individual veterans, the termination of the GI program at this time will have an unusually severe impact on the home building industry and upon the overall economy.

"The extent of the blow may be readily seen in the housing figures for 1955," Haverstick continued. "New GI housing accounted for at least 400,000 units, or more than 30 percent of all 1955 starts, for more than $4 billion of our national product, and provided more than 400,000 man-years of employment onsite, and at least an equivalent amount of offsite employment. This is a staggering amount of goods and services to let go down the drain."

Advisers or Yes-Men?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a penetrating evaluating editorial, "Advisers or Yes-Men?" appearing in the Boston Post of April 23, 1956. The editorial, consistent with the direct editorial policy of the Boston Post, is an objective one, and one that every reader clearly understands. It is an editorial that merits deep consideration:

President Eisenhower's proposal of a nonpartisan civilian brain trust to advise on global strategy in the fight against communism is one of those meritorious plans which look and sound good, but which inevitably drift and disappear into a fog of semantics.

A rotating board of private citizens to advise the Government on anti-Communist policy sounds fine until it comes down to a question of who will be on the board and whether their advice would be taken. If those chosen are to be friends, supporters and admirers of Secretary of State John Foster Dulles, for example, or of the President, the advice will either be strongly flavored with the views of the Chief Executive and his major foreign policy adviser, or will be relegated to the circular file.

When the President says that the interests of the United States and the free world do not conflict with the legitimate interests of the Soviet Union he again ventures into the area where definition of the meaning of legitimate interest is necessary. If the President means that the legitimate interest of the Soviet Union does not reach beyond the pre-World War II boundaries of the Soviet Union the Russians would not deal with the West, but if he means the present spheres of Soviet influence it is abject surrender and appeasement of the worst kind.

His first major foreign-policy speech of the 1956 campaign—shorn of its generalities—is not reassuring, for it is measurable against the foreign policy-speech of 3 years ago before the same audience of newspaper editors.

The cold-war victories he cited as the proof of the merit of his foreign policy are no cause for dancing in the streets. The Communists did not overrun all of Korea; they were given only part but not all of Vietnam; the Iranian situation improved; Anglo-Egyptian settlement on the Suez was reached; and Trieste was partitioned as a result of Communist consent. These are not victories, but appeasement and compromise.

Something more than the President's assurance that we are winning the cold war is required to reverse the tide of affairs which has set against the United States. There has got to be a reappraisal of our foreign policy and an evaluation of foreign aid. To argue that the new nations, whose leaders have been actively anti-American and anti-West, deserve assistance because America, too, refused entangling foreign alliances when it was a new nation is childish. The conditions are altogether different. America of that day was making a challenge at sea and was addressing itself to the task of taming a continent.

The President seems to be more concerned with answering the arguments of Adlai Stevenson (which are also open to criticism) rather than formulating a foreign policy to retrieve lost American prestige and to put the world on notice that all the Nation's resources will be employed to achieve peace, order, and justice. This isn't done by dressing up the clear and decisive expansions of Soviet influence to masquerade as western victories. No one is very much deceived—as the 2-to-1 vote of the editors that America is losing the cold war bears out.

Soviet policy has not changed. It has been successful. It is American policy that changed—and not for the better.

Federal Assistance Is Needed To Deal With the Pockets of Unemployment That Here and There Mar the Nation's General Industrial Prosperity

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. VAN ZANDT. Mr. Speaker, one of the major problems still pending before this Congress is that of providing Federal assistance to depressed areas which represent pockets of unemployment despite the fact that our Nation is enjoying a period of unparalleled prosperity.

As the representative of the 20th Congressional District of Pennsylvania where pockets of unemployment exist, I appeared before the House Banking and Currency Committee, April 26, 1956, in support of my bill, H. R. 8223, designed to provide Federal assistance to depressed areas.

My statement follows:

STATEMENT BY HON. JAMES E. VAN ZANDT, OF PENNSYLVANIA, APRIL 26, 1956, BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY REGARDING THE NEED FOR FEDERAL ASSISTANCE TO DEPRESSED AREAS

Mr. Chairman, it is a pleasure to have the opportunity of appearing before this committee in support of legislation to provide Federal assistance to depressed areas.

As you probably know, over a period of several years I have sponsored legislation on this subject. However, today I am appearing in support of my bill, H. R. 8223, which I introduced on January 9 of this year. In my opinion, H. R. 8223 is an improvement over the bills I introduced previously in the 83d Congress and during the first session of this Congress.

H. R. 8223 is a bill to assist areas to develop and maintain stable and diversified economies by a program of financial and technical assistance and for other purposes. In a few words, the bill provides a $50 million revolving fund for making loans in areas of substantial and persistent unemployment for industrial development projects worked out on a local level and approved by the State.

The loans would be used for (a) preparing land for industrial use; (b) constructing new factories; (c) and modernizing old factories. In addition, a fund of $1½ million would be authorized to provide technical assistance, including studies evaluating the needs of and developing potentialities for economic growth in such areas.

My interest in legislation of this type stems from the fact that I represent a congressional district in Pennsylvania whose economy is dependent upon the coal and railroad industries. Years ago substitute fuels and modernization of railroads gave indications that unemployment would result in these two basic industries. World War II and the Korean war simply postponed the day of reckoning. However, following World War II and until the Korean conflict, unemployment became a vexing problem with the Korean war absorbing the unemployed until a truce was declared.

Since the end of the Korean war, the stark specter of unemployment again began to rear its ugly head and for a period of over several years 18 percent of our employables were unemployed with the result that the United States Department of Labor classified my congressional district in group 4–B because of having a very substantial labor surplus. This condition brought hardship and suffering to thousands of good Americans.

During the period when my congressional district was classified in group 4–B, thousands of my constituents were forced to exist on unemployment insurance and when their eligibility for such benefits expired, they were compelled to rely on public assistance. To supplement the small benefits received through the public assistance program, thousands of them received surplus commodities and it may be of interest to you to know that at one time nearly 30 percent of the residents of my congressional district were eligible to receive surplus food. Words are inadequate to explain the hardship and suffering caused by this unemployment.

Mr. Chairman, I am happy to report that we have experienced a marked recovery in my congressional district to the extent that unemployment varies between 6 percent and 8 percent of our employables. This unemployment can mostly be found in one of my counties whose basic industry is coal. It truly represents a pocket of unemployment that is distressing in its effects.

At the present time, over 36,000 of the residents of this particular county or about 40 percent of the total population are eligible and are receiving surplus commodities. This is truly a blighted area that is in need of the

assistance that would be provided under my bill, H. R. 8223.

While there are smaller areas in my congressional district that represent pockets of unemployment, yet I want you to know that every single community in my congressional district faced with unemployment organized, some years ago with my assistance, an industrial development committee.

These committees were financed by the local citizens who, in addition to cash contributions, gave freely of their time and effort to bring new industries to their communities as a means of providing employment.

These industrial development committees have been instrumental not only in attracting new industries to my congressional district but by their activities and their faith in the future have created an atmosphere of hope and confidence with the result that in the last 2 years existing and new industries have increased the industrial capital investment in that area by over $100 million. These industrial development committees are to be commended for the leadership they have provided in trying to solve the unemployment problem.

Mr. Chairman, our experience in the central Pennsylvania area has convinced us that we cannot do this job alone. If we are going to lick these little depressions that stem from pockets of unemployment, we need State and Federal assistance in coordinating our efforts.

Already the Commonwealth of Pennsylvania has enacted a $5 million industrial-development program to aid communities in their efforts to attract industry. All that is left to be done is for Congress to implement the State action by enacting my bill H. R. 8223, which will provide Federal assistance to distressed areas.

Mr. Chairman, the people whom I represent are good Americans, thousands of whom have suffered as the result of distress in the coal and railroad industries. Modern-day progress in these two industries brought about this distress. By the facts that I have given you, my constituents without Federal or State financial aid have given of their own money as well as their own time and effort to lick this economic problem. As I have stated, some progress has been made down the long, hard road but they need a helping hand to attain their objective.

Mr. Chairman, in concluding this statement and speaking for the people of my congressional district, if this Congress will enact a program similar to the program contained in my bill, H. R. 8223, I am confident that economic stability will be restored to the blighted areas of my congressional district and these little depressions resulting from pockets of unemployment will be a thing of the past.

While not all of the communities have been successful, we can point with pride to the fact that hundreds of new jobs have been created in the central Pennsylvania area through community effort.

Outstanding in the effort is the city of Altoona, Pa., where through the Altoona Enterprises, Inc., a subsidiary of the Altoona Chamber of Commerce, to date 10 new industries have been secured representing employment for 3,500 persons with an increased annual payroll for the area of approximately $15 million.

The $750,000 contributed by Altoona residents to finance this effort represents contributions on the part of a cross section of Altoona's population. In addition, it was necessary to borrow funds from the local banks. At this moment, the Altoona group has exhausted its borrowing capacity and this is a specific instance where my bill, H. R. 8223, will be of assistance.

Besides praising Altoona, Pa., I should like also to commend Curwensville, Coalport, Clearfield, DuBois, Tyrone, Philipsburg, Martinsburg, and Houtzdale, because these communities are also pulling themselves up by their own bootstraps.

Even though the unemployment situation has improved, we still have pockets of unemployment that cannot be ignored; hence, we have a long, hard road ahead of us to build a stable and diversified economy capable of meeting the menace of unemployment.

Bradley Commission Endorses Principal of H. R. 10469 Extending GI Home Loan Guaranty Program

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. FASCELL. Mr. Speaker, 2 weeks ago, I introduced a bill which would extend the GI home-loan guaranty program for a maximum of 3 years. This bill, H. R. 10469, is before the Veterans' Affairs Committee and the chairman has already requested reports on the measure from the Veterans' Administration and the Bureau of the Budget.

With reference to this legislation, I would like to call to the attention of the Members a report which is available as House committee print No. 236, titled "Veterans' Benefits in the United States," and which was submitted to the President by Gen. Omar N. Bradley, who served as Chairman of the President's Commission on Veterans' Pensions. This group was appointed last year to conduct a comprehensive study of the laws and policies pertaining to veterans' pensions, compensation, and related nonmedical benefits. The purpose of this study was to bring up to date and correlate these benefits and services so that appropriate legislative action could be taken to insure that our veterans and their survivors will receive equitable treatment in the years to come, "consistent with the orderly development of public policy in this important area."

General Bradley's recommendation No. 45 calls for an extension of our GI home-loan guaranty program "to avoid a last-minute rush and allow an orderly termination of the program," pages 312–313.

These home-loan guaranty benefits for our veterans are due to expire on July 25 next year. The opinion of the Bradley Commission is that this home-loan guaranty program has enabled our veterans to readjust to civilian life by providing them with the opportunity to purchase their own homes and at the same time helped to overcome the national housing deficit we faced at the end of the war. I respectfully submit that H. R. 10469 is in step with the Bradley Commission recommendation toward insuring an orderly termination of this program; offsetting the serious impact which the July 1957 cut-off date will have upon our economy; and allowing our veterans the time they need to take full advantage of these benefits. I am hopeful the Members of the House will share my enthusiasm for this legislation and that the Veterans' Affairs Committee will give speedy and favorable consideration to the bill.

I am not opposed to an overall housing program. Such a program has been suggested by some of my colleagues, recommended in the Bradley report and by others.

But it is extremely doubtful that the extensive study necessary to predicate such legislation can be completed this year in sufficient time to be acted on by the Congress.

It is obvious that a July 1957 abrupt termination will cause a serious setback in our entire economy. Manufacturers, wholesalers and retailers, of furniture, electrical appliances, builder supplies, and all other household items whose business it is to supply the homeowners are undoubtedly already considering cutback of their production. This cutback must begin no later than January of next year if legislation to extend the GI home-loan guaranty program is not enacted before the close of this session of Congress.

H. R. 10469, therefore, eliminates the abrupt ending and provides for a gradual termination over a conservative period of time; thereby allowing ample opportunity for us who want to consider an overall housing program, to prepare adequate and effective legislation for this all important measure.

A Bill To Amend Section 404 of the Housing Amendments of 1955

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. RAINS. Mr. Speaker, I am introducing today a bill to amend section 404 of the housing amendments of 1955. This section is to facilitate the acquisition by the military departments of housing covered by mortgages insured under the military housing insurance program, commonly known as the Wherry housing program.

As the new title VIII military housing program rolls into high gear, it will inevitably increase the competitive pressure upon existing Wherry projects with attendant hardship upon the sponsors. We must find some means to prevent this hardship which at the same time will protect the interests of the Government as well.

Existing law governing the purchase of Wherry housing has proved unworkable. Several bills on this subject have been introduced but in my judgment, based upon careful study of the staff of our subcommittee on housing, none of them answers the principle objections being made to these pending bills by the various interested parties.

I must agree with what others have said about the high cost of Wherry hous-

ing under the long-term lease arrangement. I also agree with statements made to the effect that tremendous future savings will be made possible if this housing can be acquired by the military departments on an equitable basis.

My bill would clearly establish the intent of Congress in this field for it would make quite clear to the military departments that they should acquire these projects. It also provides authority for the military departments to alter or improve such projects, if necessary, so that the units may be made adequate under appropriate and reasonable standards for use as public quarters. No one can dispute the fact that some of these Wherry projects do not provide the living area that our military personnel are entitled to nor is it comparable with other types of housing operated by the military department.

I feel rather strongly that all housing being used by our military departments on base should be operated as public quarters, and insofar as practical, all such housing should be comparable whether it has been built with appropriated funds, or under any other program. The provisions of my bill would permit the necessary alteration of such housing if and when acquired. In order to give the military departments some latitude in this respect, I have included a provision in the bill which though authorizing the assignment of this housing as public quarters would permit its assignment on a rental basis, without loss of quarters allowance to military personnel if the Secretary of the military departments concerned determined such housing to be inadequate for assignment as public quarters. However, these units could be rented to military personnel for only such time that was required to alter or improve them so that they could be determined acceptable for assignment as public quarters.

Perhaps the knottiest problem is the question of how to arrive at a fair purchase price. I agree with many of the charges made by the sponsors of Wherry projects that the present law does not contain an acceptable formula for determining the value of the sponsor's interest. It is important that any formula for determining the price to be paid for the sponsor's interest in this type of housing must be fair to him. But equally important the interest of the Federal Government must also be protected.

In developing the formula contained in my bill, our studies show that in some instances the fair-market-value formula contained in the present law, although equitable for some projects, would be completely unfair to most of the Wherry projects, particularly those with a high vacancy ratio. On the other hand, a formula using only adjusted cost would not produce the desired results either since we have been reliably informed that a large proportion of Wherry housing was constructed prior to the inauguration of the cost certification requirement, and, in these instances, cost records have long since been destroyed. I believe the formula contained in my bill, developed after consultation with informed persons in this field, will produce a fair price for these properties—fair to the present owners and fair to the military departments.

A number of you have spoken to me regarding the problem of Wherry housing, problems facing both the military and the sponsors under present law. I urge you to examine this proposal carefully and any suggestions you may have to improve this proposed legislation will receive my careful consideration.

I feel that my bill will provide a workable solution to the problem and hope that it will receive early and favorable attention by the Banking and Currency Committee.

Mr. Speaker, I am attaching a brief summary of this bill which follows:

AMENDMENT OF SECTION 404 OF THE HOUSING AMENDMENTS OF 1955

This proposal would amend section 404 of the housing amendments of 1955 by—

1. Establishing the intent of Congress with respect to the acquisition of "Wherry housing projects" by the military departments and authorizing the military departments to acquire them through purchase, donation, or through condemnation.

2. Establishing a formula to determine the price to be paid for the sponsors' interest in such housing. Such formula would make use of the technique of fair market value as determined by an independent appraisal; actual cost of such housing as determined by the Commissioner of the FHA, and adjusted to current costs; or the Commissioner's estimate of replacement cost of such housing at the date of final endorsement for mortgage insurance adjusted to current cost level. Both adjusted actual cost and adjusted replacement cost would be reduced by the value of improvements installed or constructed with appropriated funds and by an appropriate allowance for physical depreciation.

3. Authorizing the Secretary of the military department concerned to rent the housing acquired under this section (where it is not assigned as public quarters) to military or civilian personnel without loss to military personnel of quarter allowances.

4. Authorizing an appropriation up to $50 million for the purposes of carrying out the provisions of this section.

Mortgage Bankers Association Endorses Extension of GI Home Loan Guaranty Program

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. FASCELL. Mr. Speaker, Mr. Lindell Peterson, president of the Mortgage Bankers Association of America, this week made available to all the Members a policy statement on housing and housing finance legislation. In connection with H. R. 10469 which I recently introduced to extend the GI home-loan program for 3 years, I would like to call to the attention of the Members that portion of this statement which deals with the need for extension of the GI home-loan guaranty program. The statement is as follows:

THE VETERANS' ADMINISTRATION

(1) Extension of the Servicemen's Readjustment Act of 1944, as amended:

Benefits under this act for veterans of World War II will expire on June 30, 1957 (July 25, 1957). Of the eligible veterans it is estimated that about 10 or 11 million still have not utilized their rights under this program. While the association considers that an effort should be made over a long term to consolidate the VA loan-guaranty program with the insuring operations of FHA, it is our belief that any such proposal can probably not be effectuated prior to the June 30, 1957 (July 25, 1957), cut-off date, particularly since the rights of veterans of the Korean war do not expire until January 31, 1965.

We, therefore, recommend a 3-year extension of the benefits available to World War II veterans; and, in order to avoid the complications we foresee if the extension is not enacted until 1957, we recommend that Congress enact the extension now.

Mr. Speaker, my bill to accomplish this, H. R. 10469, is before the Veterans' Affairs Committee, and I am hopeful the chairman will see fit to schedule this measure for action as soon as possible.

Israel Independence Day

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me on the eighth anniversary of the birth of the State of Israel:

ISRAEL INDEPENDENCE DAY, APRIL 27, 1956

It was in 1948 that the new State of Israel was established. Today, on the eighth anniversary of its birth, we pause to commemorate its record of progress and advancement. Examining the course of events which helped mold this record, we are amazed at how much Israel has realized against a backdrop of discord and international tension. We feel a great humility in confronting these great achievements chiseled out of the hard rock of adversity and salute the nation that accomplished them.

We also salute our Government's enlightened decision in 1948 to recognize the new State of Israel promptly. In part this House itself may claim credit for this. In 1945, you will recall, it passed a resolution favoring the establishment in Palestine of a national home for the Jewish people. This resolution, in part, reads as follows:

"Resolved by the House of Representatives (the Senate concurring), That the interest shown by the President in the solution of this problem is hereby commended and that the United States shall use its good offices with the mandatory power to the end that Palestine shall be opened for free entry of Jews into that country to the maximum of its agricultural and economic potentialities, and that there shall be full opportunity for colonization and development, so that they may freely proceed with the upbuilding of Palestine as the Jewish national home and, in association with all elements of the population, establish Palestine as a democratic commonwealth in which all men, regardless of race or creed, shall have equal rights."

As you will all understand, I am proud to have been the author of this resolution.

The resolution, if I may repeat, looked forward to the establishment of Israel as a democratic commonwealth. Our policy of promoting this democratic commonwealth, however, is being rapidly frustrated. Disruptive problems within Israel and outside pressures and conflict have deflected our good intentions and Israeli national aspirations. The State of Israel has never been in greater peril of national annihilation, and it is primarily the responsibility of the United States to prevent such an act. I explaind in 1945 that my resolution reflected a long series of "authoritative expressions of American policy and the views of the American people on the subject of Palestine." Today those same American people are faced with the responsibility of advocating yet another authoritative policy regarding Israel. This time, however, our decisions must be based on more than humanitarian desires; we must base them on the imperatives of international politics. The realities of world politics demand strong and immediate action to halt the drift toward war in the Middle East, with all its risks of spiraling into an even bigger war, engulfing, perhaps, the whole world.

The first question we ask is: What are the realities of the international crisis revolving around Israel? Superficially the events leading up to the present crisis consolidate into three major phases: (1) The rise of Israel; (2) the Arab-Israeli war; and (3) the truce.

Accurate as these phases may be, however, they are local and restrictive, whereas the broader political implications involve major world powers whose foreign policies need to be keyed to preserving the balance of power in the Middle East. Our own Government, therefore, must adopt a statesmanlike, constructive policy, providing not only security and peace for Israel but also for the world. In 1945 on the floor of this House I stressed the evolutionary and humanitarian elements underlying our promotion of the creation of the State of Israel. I repeat the words I then used: "As in so many fields of international policy, so here also the issue is not between nations but between emerging world democracy and the forces of reaction, hate, and decay." Numerous historical incidents have buttressed my contention, and I insist, as before, we have had and still do have the mandate of human conscience to promote Israeli national interests. This same mandate compels us today to use every available means to bring peace to the Middle East. Only with peace may Israel develop, advancing further along the road of modernization and democracy.

Eleven years ago the United States Government's primary reason for supporting the creation of the new Israeli state was to seek the establishment of a democratic commonwealth evolved through the trials of time and circumstance. It was never our intention, as I pointed out then, to "create overnight a political entity." Yet from the beginning the United States Government intended that this new nation, once founded, should remain a permanent one within the community of nations. We sensed the potentialities that Israel possessed for serving as an outpost for western civilization; we felt her existence was a positive affirmation of our own democratic values and concepts. We were aware that a new nation would likely suffer with growing pains, struggling to get on its infant feet. We also were aware that nationalist feelings would probably erupt, causing stresses within the Middle Eastern political framework. After all, the Arab States of the Middle East are also new stars in the firmament of world powers; the head-on collision of Israel and the Arab States was a calculated international risk. Fully aware of the possibilities for international tension another new nationalistic group would doubtless unleash, we, nevertheless, welcomed the rise of Israel as a victory for advancing Western idealism and triumphant democratic idealogy. We espoused the establishment of a new democracy, not as a narrow triumph for a religious or cultural group but as a broad triumph for our own faith in international morality and justice. On Christmas Eve in 1945 I remarked to this House: "The cause of freedom for a race and for a people is at all times a cause to be sponsored and proposed and fought for by Christians." At the present time I repeat that the right for the Israeli nation to exist is a cause we must continue to fight for.

Today the matter of primary concern to the world, however, is not one between nations—nor between religions—but one between ideological doctrines. Before World War I the Middle Eastern area was primarily of strategic or military concern to interested world powers. Since that time the complex ideological forces of nationalism and comunism have been added to complicate the picture. Soviet Russia's new and dynamic entrance into Middle Eastern politics is far more dangerous to the underlying democratic objectives of the Western World than many realize. To lose the battle of men's minds in another area of the world could spell final defeat for basic beliefs of Western civilization. Other areas of the world, for example, in which nationalist groups are becoming more articulate and aware may throw in their lot with the Communists if the West, especially the United States, fails to give its support toward stabilizing the fluid power structure of the Middle East. Especially Israel deserves the backing of the United States Government whose firm, decisive foreign policy could act as the realistic guaranty of the triumph of democracy. Our continuing expressions of sympathy for the material and social successes of Israel are no substitute for the diplomatic support our original policy implied when advocating its creation. The United States must exert her influence immediately for the forces of democracy before Soviet Russia makes still another vital area of the world an ideological captive.

"America," I declared in 1949, "will always be a friend at the crossroads of the world—turbulent and seething birthplace of man in the Middle East." I still do not think that our work is done as Christians or as individuals who believe in the victory of the human spirit and the ideals of brotherhood until we face up to our international obligation in this area, effectively implementing our basic democratic goals with a forthright policy. In this way alone can the State of Israel, along with the other Middle Eastern countries, feel the strength of freedom and democracy at the moment when those strengths need most to be felt. It has been truly said that we can strike no more effective blow in defense of our way of life than to do everything possible to make Israel a strong bastion of freedom in the Middle East and through it to reach the Arab world in the true spirit of our freedom. I insist, therefore, that we reaffirm at this time our own faith in democracy by championing it in Israel.

Supreme Court Enacts Another Law

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. FORRESTER. Mr. Speaker, it is a source of great satisfaction to constitutional lawyers over our Nation that the laity is becoming increasingly conscious of the usurpation of powers by the United States Supreme Court.

I am delighted to call the attention of this body to an editorial written by Hon. James R. Blair, editor and publisher of the Americus Times-Recorder, a daily newspaper published in the city of Americus, Sumter County, Ga., reading as follows:

SUPREME COURT ENACTS ANOTHER LAW

The United States Supreme Court enacted another law Monday, this one banning segregation of races on privately owned transportation conveyances operating solely within a State. States rights means nothing to these nine little men in Washington. Is the Congress going to sit idly by and permit the Court to usurp its powers?

If the Court can tell privately owned transportation companies how they must operate their facilities, then is there any privately owned business that the Court can't dictate to in its operations? The United States Constitution means nothing to these glorified politicians.

There is one bright ray of hope gleaming through all these antics of a power-crazed Court—it may go so far that people in all sections of the country will become so thoroughly aroused by the usurpation of their rights and freedoms that proper and effective steps will be taken to curb the Court's powers. In the meantime, a serious situation appears destined to grow much worse.

This editorial is short but very concise. Mr. Blair asks the important question confronting this country, to wit: Is the Congress going to sit idly by and permit the Court to usurp its powers? Our Constitution still says that the powers granted to that Court are subject to such exceptions and regulations as Congress might make. In the 83d Congress, S. 44, which passed the Senate, had sandwiched in its other provisions a provision that would have deprived Congress of that power. I humbly point out that I was privileged to discover the language in S. 44 that would have deprived Congress of that power, and led the fight in the House Committee on the Judiciary which resulted in killing that bill. Thank God Congress still has that power.

As servants sworn to support the Constitution of the United States, I also ask: When is Congress going to exercise the power which it has to preserve constitutional government?

Veterans of Foreign Wars Honor Hon. Victor Wickersham, of Oklahoma

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. TEAGUE of Texas. Mr. Speaker, as chairman of the House Committee on Veterans' Affairs, I am pleased to inform the House that Mr. Rutherford Day, chairman, Loyalty Day Committee, Department of the District of Columbia, Veterans of Foreign Wars of the United

States, Washington, D. C., announced today that my colleague Congressman VICTOR WICKERSHAM, Democrat, of Oklahoma, has been unanimously selected from a group of all outstanding leaders, including Senators and Congressmen, to receive the annual Loyalty Day award given by the Veterans of Foreign Wars of the District of Columbia.

Mr. Day stated that this award is made annually to a figure of national prominence who works in the District of Columbia and that this is the first time that the award has been made to a Member of Congress, either on the Senate or House side. The award consists of a plaque, with the following inscription:

TO VICTOR WICKERSHAM for exhibiting those qualities in private and public life which make for a greater America.

In advising Congressman WICKERSHAM of his selection to receive the annual Loyalty Day award on May 1, Mr. Day stated:

It is the unanimous opinion of the committee, which opinion is concurred in by the Department of the District of Columbia, that no finer a man could be found to whom the award might be made. By Congressman WICKERSHAM'S sincere application to duty and to the interests of his congressional district, as well as to those of the Nation, and with a solid record of achievement in committee and other work, he has proven to be the type of man who is the basic strength of our great United States of America.

Congressman Teague of Texas: His Job Affects You

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. RUTHERFORD. Mr. Speaker, there is a popular misconception in this Nation to the effect that if a Member of Congress is chairman of, or associated with, a given congressional committee, then he has no other interests save that committee and subjects allied to it.

Many of us, often without cause, are tagged as the champion of one particular industry, or one particular group, because of our committee assignments and attendant activity in that specified field.

But what the general public does not realize, in many instances, is the fact that every committee on Capitol Hill is directly concerned with the Nation's economic health. Each committee must operate with a two-fold purpose in mind: to give our people the service to which they are entitled, and at the same time to practice sound, sensible, economic operations.

This is especially true of the House Veterans' Affairs Committee, where the members must attempt to do justice to the men who have fought our wars; where they must attempt to provide for the widows and orphans of our comrades who have fallen in battle; or where they are charged with the responsibility of seeing that no man, disabled by the horrors of war, will come upon economic poverty in this land of opportunity.

And yet the members of the Veterans' Affairs Committee must adhere to sound business practices; must work toward accomplishments for the needy without becoming spendthrifts with our tax dollars. They must separate the wheat from the chaff, so to speak.

In my opinion, Mr. Speaker—and I know, in the opinions of many of my colleagues—the Veterans' Affairs Committee is in good, capable hands. The chairman of this committee is, as we know, the Honorable OLIN E. TEAGUE, of the Sixth Congressional District of Texas.

"TIGER" TEAGUE, as we know him here, has indeed a thankless task. I am certain that some disgruntled and misguided veterans must besiege him with requests which simply cannot be granted. I know, too, that many businessmen—both veterans and nonveterans—must at times berate him for expenditures which they do not consider essential.

But Congressman TEAGUE has proved to those of us who know him best, those of us familiar with his sincerity, ideals and integrity, that he is a very able committee chairman.

He has never willingly turned his back on deserving veterans and their families or survivors. As a former combat infantryman he is acquainted with their problems and their cause. At the same time, he has met with courage the sharp thrusts of pressure groups attempting to secure passage of legislation unneeded and economically unsound.

He has been a watchdog over the Veterans' Administration program. He has ferreted out those comparatively few persons who would abuse the veterans program, he has kept a good weather eye on attempts to defraud the Government, and he has saved our taxpayers many, many dollars by his constant and tireless efforts.

Many of our people do not realize it, but they owe OLIN E. TEAGUE a debt of gratitude. Needy veterans and their families are indebted to him because of his acts of compassion, his sense of fair play and humane responsibility. The taxpayer is indebted to him for his courage in refusing to be stampeded into expenditures designed to benefit but few at the expense of many. We are all indebted to him for his hard-working service to us as chairman of the House Veterans' Affairs Committee.

Nation's Business, a reputable publication of the business world, featured an article in the April 1956 issue about Congressman OLIN E. TEAGUE, of Texas, and his work in Congress. Believing people from all walks of life should have the opportunity to read it, I, under the unanimous consent of my colleagues, include the article titled "A Combat Vet Weighs Pension Pleas," written by veteran Washington correspondent, Frank Eleazer, in the RECORD:

Most of the pressures generated by the desire to liberalize veterans' benefits will focus on one man, a badly-wounded, much-decorated, 45-year-old infantry veteran of World War II. He is Representative OLIN E. TEAGUE, a blunt, hard-working Texan, a Democrat and Chairman of the House Veterans' Committee.

Mr. TEAGUE'S committee at recent count was a repository for 390 piees of proposed legislation on veterans' benefits, introduced by 146 House Members. By the end of the year the pile will approach about 500 bills, with maybe half of the House represented. Virtually all these bills call for bigger payments, looser restrictions, broader coverage, extension of time for application. Few members ever propose to reduce a veterans' benefit.

It is Mr. TEAGUE'S lot to study these proposals, to ponder over the $4,700,000,000 which the Veterans' Administration will spend this year, the $4,900,000,000 it will need next year, and the prospect that, even under present laws, this figure will rise steadily for decades as America's 22,088,000 veterans, who, with their dependents, make up almost half the population, get older, sicker, less able to take care of themselves.

Mr. TEAGUE is a man of few but plain words. He is bluntly honest about his conclusions and he is a continuing target for fire from opposing directions.

There is always the Member whose bill Mr. TEAGUE must bury. There is the local post that proposed it. There is the unending pressure for a whole array of such proposals from the vocal and persuasive national veterans' lobby. There is his own natural, inevitable, warm-hearted desire to take the best possible care of disabled veterans and their needy widows and orphans.

On the other side stands the economy bloc. Its spokesmen rarely propose directly to repeal benefits for veterans. But they continually seek out waste in veterans' programs, relating to abuse of benefits.

One group expressing outright opposition to some existing benefits for veterans is the United States Junior Chamber of Commerce, 85 percent of whose members once were in service. At their 1955 convention in Atlanta the Jaycees deplored pension payments for disability not incurred in service; they opposed any pension plan based solely on having once worn the uniform.

The Amvets and the Disabled American Veterans strongly opposed broad benefit plans.

The Hoover Commission on Government Reorganization also has thrown its weight into the economy drive. Its task force on Government medicine said 19 veterans' hospitals should be closed, and that new strings should be tied to free medical care.

Congressional leaders rest easier nights because it is Representative TEAGUE who will make the compromises these pressures will require.

Speaker SAM RAYBURN, who helped steer his fellow Texan to the key post he has held since the start of the 84th Congress, is inclined to take Representative TEAGUE at his word. Bills his Veterans' Committee reports favorably usually get cleared to the floor without trouble, and are passed.

It was not always this way. There was a time when leaders and some other Members of Congress viewed the Veterans' Committee, rightly or wrongly, as a sort of annex to the veterans' lobby. There were complaints that its members let their hearts rule their heads.

In those days, bills approved by the Veterans' Committee often fared badly in the House.

It was in just such a case that "Tiger" TEAGUE first came to public attention as a junior Member of Congress. The year was 1949.

Veterans' Committee Chairman John E. Rankin, an open-handed Mississippi Democrat, who was one of Representative TEAGUE'S predecessors in the top committee post, had

pushed through the committee a pension bill under which any veteran whether or not disabled or in need, could have drawn $90 a month at age 65.

Pensions, it should be noted here, are not to be confused—though they frequently are—with compensation. The latter is a Government payment (up to $511 per month) to an exserviceman injured or disabled in service. Pensions are payments (from $66.15 to $135.45) for disability not due to military service. Compensation is paid as a matter of right and without regard to need. Pensions are paid only in case of need and established disability, the required degree of the later declining with age.

Mr. Rankin's bill would have eliminated the need and disability tests. Age would have been the sole qualification. His bill carried other liberlizations, including larger monthly checks. Initially, the cost would not have been prohibitive. Estimates of evential costs, as veterans by the millions reached 65, ran as high as $125 billion.

In committee Mr. TEAGUE had argued in vain that other needs were more urgent. He said care of the service disabled and their widows and orphans came first. Defeated in committee, he took his political life in his hands and set out to beat the bill on the House floor.

During most of the raging debate Mr. TEAGUE sat glumly silent. But he had organized well. Other courageous young members, virtually staring down the throats of the organized veterans who sat in the gallery, argued that the bill was unneeded, unwarranted, and a threat to all other veterans' programs.

Representative Rankin pointed out that the same benefit already had been provided for one group, veterans of the Spanish-American War, and argued that this merely put all veterans on the same basis. His argument had wide support, especially among the aging veterans of World War I.

On the third day Representative TEAGUE took the floor.

"Mr. Speaker," he said quietly, "I move that the bill be sent back to committee for further study."

Mr. Rankin roared his protest. The roll-call began. The voting was close. The Chamber grew tense. Speaker RAYBURN announced the results: 208 "aye" to 209 "no." It appeared that Representative Rankin had won.

Speaker RAYBURN, however, was not satisfied. A number of votes had been switched midway in the call. The count was so close that a single error could have altered the outcome. He ordered a recapitulation. As he had suspected, this recount turned up an error that reversed the decision. The vote actually was 208 to 207. The bill went back to committee, where it was buried.

For this, Representative TEAGUE was sternly scolded by the big veterans' groups. The Veterans of Foreign Wars, in a letter to its posts, gave him prominent billing in its anti-veteran listing. The American Legion made noises about going into his district. But Members of the House—and, privately, many veterans' leaders—sized up Representative TEAGUE as a tough, honest young man with no front and only one good leg but plenty of guts, and likely to go places in Congress.

Intestinal fortitude was a quality Mr. TEAGUE never had lacked. He was born on a wheat farm near Woodward, Okla., in 1910, and moved early to Mena, Ark., where his father ran lumber camps in the Ozarks. Young TEAGUE, already nicknamed "Tiger" though he claims he can't recall why, spent summer vacations from high school loading log wagons, driving the four-mule teams that hauled them, and firing the boilers that powered the saws. He also joined the National Guard.

After his first year at Texas A. and M. his father suffered a heart attack.

"From then on," the Congressman recalls, "I was on my own."

He already knew about work. What he had to do now was find more of it. At 25 cents an hour he fed the college's show calves. For the same price he shoveled manure from their stalls. A new stadium was built and TIGER TEAGUE was among the laborers. He got a job at the local post office as janitor, subclerk, and finally mail-master. The post office job took only 8 hours a day (4 to 8 a. m. and 7 to 11 p. m.) so young TEAGUE sold tickets part time for the Missouri Pacific Railroad.

He had little time in college for fun. Apparently he also had little inclination. Already he had developed into the serious, solid type that he remains today. His main recreation always has been athletics, then as a participant, now mostly as a spectator but still one of the hottest paddleball players—despite his crippled left leg—in Congress.

OLIN TEAGUE was graduated from A. and M. in 1932, in the lower half of his class but as a bachelor of science and a Reserve second lieutenant in the infantry. Somehow there were no jobs around in his chosen agricultural field, so he stuck it out at his old job in the post office. On December 20, 1933, earning $2,100 a year, he was married. His first of 3 children—2 sons and a daughter—came in 1935.

He also worked hard in the Reserves during those years, and in 1940 he went voluntarily into active service as a first lieutenant. To his dismay they put him into the military police. Not until February 1943, did he succeed in getting back to the infantry. According to his own account, it wasn't that he was a natural-born hero, or even that he was eager to get into the shooting. He was just trying to get ahead in the world, and couldn't see any future as a provost marshal.

For a time it loked like such future as he had in the infantry was soon to be all behind him.

Lieutenant Colonel TEAGUE led his First Battalion, 314th Infantry Regiment, 79th Division, onto Utah Beach on D–Day plus 6, and was in combat for 120 straight days before his comand got its first rest. Eventually one-third of his battalion was killed, another third injured.

Colonel TEAGUE himself was wounded six times. It was on December 18, 1944, that they finally knocked him out of the war. Shrapnel tore his left ankle as he reconnoitered along near the Siegfried Line, some 200 yards from help. He pulled the lace from his right shoe, fashioned it as a tourniquet around his shattered left leg. Then, with his foot hanging from a tendon, he crawled toward his lines.

Another shell exploded and shrapnel smashed into his lower back.

Somehow he made it anyway.

In the operating room 10 days later doctors changed their minds about removing his foot, and instead pulled the foot and leg bones together, shortening the limb about 3 inches.

After 20 operations and 2 years in the hospital, Representative TEAGUE still was on crutches. He also was in Congress, having succeeded at a special election his own representative, Luther Johnson, who had quit to become a judge.

"Nobody asked me to run," Representative TEAGUE recalled recently. "I didn't know anything much about Congress, and didn't know a single Member personally or even how many there were. But some of us in the hospital had done a lot of talking about the war and the Government, and I just thought I would try it."

Mr. TEAGUE arrived at the Capitol in September 1946, with no single pledge, principle, or burning ambition that he can recall, other than a general aim to take care of returning servicemen and the families of those who didn't come back. He did take along a few fundamental concepts. One was that money does not grow on trees, and that you don't spend what you don't have.

"I can't get away from the thought that the national debt is one of the biggest dangers in the country today." Representative TEAGUE said recently, "It's just the same as in your own home or business. If you keep on spending more than you make you are going to get into trouble. Sometimes I think the danger from within is greater than that from without. Too many have come to think that what they get from Washington doesn't cost anything."

In his view, debt reduction should come ahead of tax cuts. He once introduced a bill to bar Government spending beyond income, and to require, besides, that 10 percent of all receipts be channeled into reducing the debt. He admits today this would be a mighty hard goal to attain. But he says:

"We have got to live within our means. If that means cutting down somewhere, let's do it."

Representative TEAGUE is not adamant on where to start cutting. One thing is sure: He won't hold still for any big raids against spending for veterans. He has battled continuously, and usually with success, attempts to trim veterans' big medical bill. Three years ago he played a key part in a drive that added $56 million to veterans' hospital funds. Later he helped get $16 million to start work he believed long overdue putting rundown old hospitals back into shape.

Mr. TEAGUE will resist—and can make it stick—any unlikely effort to pare benefits for the service-disabled or the widows, orphans or dependent parents of men dead as a result of service. Almost certainly, as time goes on, he will insist on increasing some of these benefits.

On the other hand, he is not likely to buy broad new benefits for the men who came back whole. He is cool to the idea of any large-scale readjustment program—like the GI bill of rights for veterans of World War II and Korea—for men now being drafted for 2 years of non-combat duty. He does not believe in the general service pension, partly on principle and partly because of the vast probable cost.

That means there may be a big fight ahead.

Officially, the American Legion and VFW have forgiven Representative TEAGUE for what he did to the Rankin pension bill in 1949. They still are not happy about it, though, and relations weren't exactly improved when Representative TEAGUE, early in January, refused even to introduce "by request" the Legion's new pension bill.

Mr. TEAGUE contends the present pension law is sound and broad enough to care for those who really need help. It provides payments of $65.15 a month, subject to income limitations of $1,400 for single men and $2,700 for those with dependents. After 10 years on the rolls, or at age 65, the rate goes up to $78.75. Those so helpless as to need an attendant can draw $135.45.

In support of his position, Mr. TEAGUE cites the record: Of 3,112,000 living veterans of World War I—the group most immediately affected—502,000 already are pensioned. This is in addition to 231,000 who draw compensation.

The veterans' committee for some time has been deluged with mail about 1 or another of the 76 pension bills on which it recently held a week's public hearings without taking immediate action. Before the Legion and VFW got their letter-writing campaigns underway, the heaviest correspondence was about an even more liberal pension proposal sponsored by a group called Veterans of World War I.

Representative TEAGUE got so many letters demanding action on this proposal, and so

many phone calls from House and Senate Members asking about its status, that he sat down and wrote a long, definitive answer, which he mimeographed and now mails out to all who inquire. It sums up his philosophy pretty well. In part, it says:

"It seems to me that our first obligation is to the veterans who were disabled, to the widows and orphans, and then to those unfortunate veterans who have not been able to provide for themselves. * * *

"It is my opinion that to enact legislation such as proposed would jeopardize our entire veteran program. For that reason I am unalterably opposed to this legislation."

In short, no.

That kind of letter, as any Member of Congress will tell you, takes courage.

His friends report that Representative TEAGUE bleeds easily for a hard luck story from almost any disabled veteran. However, he has a sharp eye for the faker, the phony or the chiseler. As chairman of a special committee on abuse of the GI bill during the 81st and 82d Congresses he was the scourge of racketeers who flocked into veteran training.

He dealt unmercifully with builders who put up shoddy homes for veterans under Government-backed mortgages.

Recently Mr. TEAGUE got word that chiselers were moving into veterans' charities. Sharp operators in some cases were reported cashing in with no more than a claim that veterans—in some unspecified way—were to benefit from the proceeds. In other cases local posts had been taken in by fund-raising schemes in which virtually all the take left town in the pockets of the promoters.

Representative TEAGUE asked the House for special authority to investigate such rackets. He can be expected to show their perpetrators no mercy.

FRANK ELEAZER.

In Memory of the Passing of Isaac Evans, Industrialist, Farmer, Good Citizen

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, I am asking to insert in the CONGRESSIONAL RECORD today an article from the Cleveland Press of April 19 which tells of the passing of one of Cleveland's most constructive citizens, Mr. Isaac Evans, industrialist, farmer, and "one-man United Nations."

This is a splendid article, but how can words do justice to the inspiring life of a sensitive, intelligent man who was deeply devoted to the needs of humanity throughout the world? How can one describe the feelings of people abroad who received some $1 million worth of his prize livestock? How can we record the rejoicing of Americans who were given work on his farm when the banks failed back in the "depression"?

Those of us who knew about the forests he planted in Israel, those of us who have been to Israel and know what those trees mean to the future of that brave little country, cannot let just a newspaper article record his passing.

I want to pay my personal respects to Isaac Evans, respects that are filled with an affection and understanding of the kind of man that had been my neighbor, whom I knew in such friendly fashion and whose correspondence meant much to me.

The kindness and friendliness of Isaac Evans to me personally is something I shall never forget. It is good to have known him. America is better because he has lived.

Under leave granted to me by unanimous consent, I am inserting herewith the article from the Cleveland Press of April 19, 1956:

ISAAC EVANS IS DEAD, GOODWILL AMBASSADOR

Isaac Evans, 72, Cleveland industrialist, farmer, and "one-man United Nations," died today at his home, 16251 Aldersyde Drive, Shaker Heights.

Mr. Evans, president of Master Mechanics Co., chemical manufacturers, earned international goodwill for donating livestock to countries whose herds were depleted because of World War II.

The animal shipments were valued at more than a million dollars. Mr. Evans owned farms in Geauga, Lake, Ashtabula, and Lorain Counties.

He came to this country from Russia as a boy of 6. He attended Brownell School, then quit high school to go to work.

BORROWED FOR BUSINESS

He started his own business with a borrowed $750 in an abandoned blacksmith shop.

Mr. Evans was a charter member of the Cleveland Farmers Club, a founder of the Cleveland Zionist Society, and vice president of Leo Levi Memorial Hospital, Hot Springs, Ark.

He paid for the planting of five forests in Israel, each named for one of the United Nations, to commemorate World War II victory.

His benevolence made him a Press "Alias Santa Claus" in 1945. His employees enjoyed unusual security and bonus arrangements.

KEPT EMPLOYEES WORKING

During the depression when part of the factory was shut down by the bank holiday, employees without work were sent to one of his farms to work at their usual wages.

Surviving Mr. Evans are his wife, Lillian; five sons, William, Robert, Charles, Martin, and Donald; and 16 grandchildren.

Services will be Friday, at a time to be announced, at J. D. Deutsch Funeral Home, 1490 Crawford Road.

The family said it will set up a charitable foundation in Mr. Evans' name and friends may contribute to it.

National Wildlife Federation Supports Bills To Curb Military Land Grabs

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. ENGLE. Mr. Speaker, the National Wildlife Federation, and other conservation groups, are giving active support to legislation which I have introduced to restore to Congress its constitutional powers and responsibilities with reference to the disposition of the public domain lands of the United States. A practice has grown up over the years whereby executive departments with little more than a simple application can withdraw these lands from general use. Congress has thus by default abdicated its responsibilities and the practice which has grown up is being viciously abused by some executive agencies, especially some agencies in the Defense Department.

I attach a copy of a statement issued recently by the National Wildlife Federation to all of its members, and through its publications, regarding the legislation to correct this situation:

BILLS INTRODUCED TO CURB MILITARY LAND GRABS

Chairman CLAIR ENGLE, California, and other members of the House Committee on Interior and Insular Affairs have introduced a bill to curb the appetite of the huge Department of Defense and its three rapacious children—Army, Navy, and Air Force—for more and more of the public domain.

Mr. ENGLE'S H. R. 10371 states that except in time of war or national emergency, no area of public land or water exceeding 5,000 acres can be withdrawn or reserved for defense purposes except by act of Congress.

The bill would require a military department, in making application for withdrawal or reservation of more than 5,000 acres, to declare who is going to use the area, for how long, and whether or not the result will be permanent or temporary contamination. The application also would have to specify the location and gross area, describe the boundaries, and set down how and to what extent the natural resources and multiple use of the area would be affected, including consideration of mining and mineral development, timber resources, grazing, fish and game management, water, and scenic, wilderness and recreational values. State water laws would have to be taken into account.

A third major provision would require observance of State conservation laws if any hunting or fishing is done on the reservation.

A fourth amends the Federal Property and Administrative Services Act of 1949 to provide that if withdrawn portions of the public domain are declared surplus, they shall revert to the public domain and not be sold into private ownership by the General Services Administration as is now the case.

The legislation has been proposed to plug what Mr. ENGLE has termed "a strange hole in the law." It was disclosed during prolonged hearings conducted by the Interior Committee that simply by a stroke of the pen, a military department can take over large areas of the public lands in the Western States and in Alaska. No other agency has the power to check on the need for such withdrawal, and the Department of the Interior is powerless to resist. The reservations become, in effect, permanent possessions.

The defense agencies, it was discovered, already have withdrawn lands exceeding in total area the States of Massachusetts, Maryland, New Hampshire, and Delaware, and presently are proposing to take other millions of acres in Alaska, Nevada, California, Arizona, Montana, and other Western States.

In Nevada where the Air Force has some 3½ million acres only sparsely and occasionally used in the Nellis (Las Vegas-Tonopah) Bombing Range, the Navy wants to take another 2½ million acres for aerial gunnery practice. The Air Force is eying covetously another million acres of the Desert Game Range in the same State.

The Engle bill will be opposed by the military departments with all their tremendous lobbying organizations. It will become law only if the people speak in a louder and more insistent voice.

Bills identical to Mr. ENGLE's H. R. 10371 were introduced as follows: H. R. 10362, Mr. WAYNE ASPINALL, Colorado; H. R. 10365, Delegate E. L. BARTLETT, Alaska; H. R. 10367, Mr. HAMER H. BUDGE, Idaho; H. R. 10372, Mr. ANTONIO M. FERNANDEZ, New Mexico; H. R. 10377, Mr. LEE METCALF, Montana; H. R. 10380, Mrs. GRACIE PFOST, Idaho; H. R. 10384, Mr. WALTER ROGERS, Texas; H. R. 10394, Mr. JOHN P. SAYLOR, Pennsylvania; H. R. 10396, Mr. STEWART UDALL, Arizona—all referred April 10 to the House Committee on Interior and Insular Affairs.

Address by Grover C. Hall, Jr., Editor in Chief, the Montgomery Advertiser, to the 57th Annual Banquet of the Huckleberry Indians at the New York Athletic Club, April 21, 1956

EXTENSION OF REMARKS
OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 27, 1956

Mr. RAINS. Mr. Speaker, I would like to call the attention of Congress to a speech made by Grover Hall, Jr., editor in chief of the Montgomery (Ala.) Advertiser, to the 57th annual banquet of the Huckleberry Indians at the New York Athletic Club on April 21. Mr. Hall is one of the South's outstanding editorialists. His newspaper, known to Alabamians for generations as Old Grandma, has done a remarkable job in its coverage of the race situation in the South and under his guidance has taken the lead among southern publications which have with such just cause recently called on the northern press to give adequate coverage to similar problems in their own backyards.

I submit Editor Hall's address with the hope that it will receive the attention which is due an intelligent and shrewd analysis of one of today's most prominent national issues:

THE SOUTHERN WAY OF LIFE UP NORTH

I simply cannot express how pleased I am by this opportunity to travel down North from up South to speak on this Indian reservation. To me at least, this seems the most gracious of Yankee gestures since General Grant allowed General Lee's men at Appomattox to keep their horses for the spring plowing.

I will offer a few observations on a condition whose mention some regard as exotic, indelicate, and even gauche—that condition being the southern way of life up North. I mean, of course, segregation and discrimination against the Negro in the North.

I hope to say something worth your consideration on four points:

1. The history of nullification, of defying the United States Supreme Court and Federal authority, is not southern. It is all-American.

2. There is an exasperating failure by the American press to present a faithful, unsparing picture of American race disharmony from New York to Los Angeles.

3. It is a sorrowful but evident fact—not yet adequately grasped or reported by the press—that wherever the Negro migrates in significant numbers, he encounters rejection, overtly and legally in the South, covertly and illegally in the North.

Adlai Stevenson—who, take it from this Eisenhower partisan, ought to be, but apparently isn't, the pride of the Democratic Party—has stated this painful fact more honestly than his huckster rivals. Stevenson puts it this way:

"The race problem is an American, not a Southern, dilemma * * *. Before we cast a stone at Alabama, it might be well for those of us who live in some of the great Northern States to ask ourselves in candor how the Negro is faring in our own communities * * *. Racial discrimination in some degree is still a fact of life for the great majority of our Negro citizens who live outside the South."

4. The glamorous dispensation of the Supreme Court 2 years ago will not achieve a sudden, tidy Hollywood ending. Nevertheless, we southerners rejoice in the expectation that the hard lot of the Negro will continue to ease. This easement will depend, not upon the exertions of his tearful sponsors nor upon the rasping paranoid agitations of the NAACP, but upon diligence with which he works his passage to personal respectability. We Alabamians assuredly are not spending $33 million this year on Negro education with the expectation that he will remain in his present condition. But in States like Alabama, there will be no general race mixing as far as the eye can see.

I

But how is race mixing to be evaded in view of the Supreme Court's ruling? Well, to anybody with a schoolboy's knowledge of American history, the means of resistance is traditional American and obvious.

You've been reading a great deal about the resolutions of nullification, or interposition, through which some southern legislatures have been declaring the Court's school segregation "null, void, and of no effect." Like the power of the Supreme Court to nullify an act of Congress, the procedure and warrant for nullification are nowhere written down, except in the annals of American practice. Annulment of Federal dispensations since the 18th century have taken many different forms, varying from formal legislative resolutions, to the marshalling of State militia to repulse Federal troops, to a general sitdown against Federal law as in the case of the prohibition.

You've lately been splashing underneath a cataract of solemn-ass editorials in the northern press fuming that nullification is a perverse, un-American rebellion in which the South has exhumed the bleached bones of a skeleton laid away by the Civil War.

But the truth is, nullification, in one form or the other, has been undertaken by every single section of this country whenever a sectional grievance became profound.

The preeminent architects of nullification were none other than James Madison, "Father of the Constitution", and Thomas Jefferson. And there are many people—perhaps some of them right here in this hall—who consider that James Madison and Thomas Jefferson knew as much about the Constitution as Chief Justice Warren, or even that erudite Texas Blackstone, Tom Clark. After all, Madison was the only man who took notes at the convention that wrote the Constitution, and Jefferson had something or other to do with the Bill of Rights.

This country was not 7 years old when the first act of nullification occurred: the State of Georgia defied the Federal Government head-on by refusing to be sued in Federal court by a citizen of another State. This act of nullification stuck, the fruit being the 11th amendment to the Constitution. When 30 years ago Georgia again defied the Court in another matter, President Andrew Jackson egged Georgia on, saying—"John Marshall has made his decision, now let him enforce it."

In 1832, my own State of Alabama collided with Washington over control of our Indian lands. Alabama put an army into the field, and I express posthumous gratitude to you New Yorkers for the fact that a band of young New York bucks volunteered to form a company in the army of Alabama. As it turned out, President Jackson allowed Federal authority to be nullified by Alabama, and dispatched a peace emissary—who, incidentally, was a rather well-remembered music composer, Francis Scott Key.

Abraham Lincoln tweaked the nose of the Court. But the classic nullification, the one that most fascinates us southerners today, was the red-eyed defiance of the Court by the North in the case of the fugitive slave law. Runaway slaves, the law said, must be returned. Yet in the face of that law and a ruling by the Court of Chief Justice Taney, some 14 rebel States in the North enacted the so-called personal liberty laws, forbidding their citizens and constables to obey the Federal law. Poujade of France is not a more obstreperous and incorrigible scofflaw than were these 14 abolitionist States.

Many of the most strident and rash neo-abolitionists are Roosevelt idolaters. These dudish preceptors enjoin the South that it is chauvinistic—a swig of "rum, Romanism, and rebellion"—not to submit to the nine sociologists of the Supreme Court. I trust it will not seem indelicate to ask these civil rights holyrollers if they did not try to pack the Supreme Court.

And if court packing is not one of the most licentious forms of nullification? Again, it's not amiss to ask these officious, prissy scolds if it is not a fact that, had the Court ruled against Roosevelt in the gold-clause case, the country would have gotten a statement from Roosevelt that he would systematically defy the decision.

I have superficially rehearsed these episodes of nullification, not to justify what is happening in the South, but to demonstrate the plain fact that there are obvious limits beyond which the law cannot be enforced short of artillery.

It is sometimes suggested that nullification in its various forms was itself nullified by the Civil War, secession being the final resort in nullification. Stuff and nonsense. Consider, for example, the South's cunning nullification of the civil-rights statutes enacted after the Civil War. Consider how the prohibition law was suffocated. As Senator ROBERTSON recently reminded your Senator LEHMAN, there were 32,000 speakeasies in New York alone in the final nullification convulsion. How are 32,000 speakeasies different from a segregated school in Montgomery, Ala.?

II

The analogy between the present constitutional crisis and that in 1860 is striking, but imprecise. The rash, envenomed ecstatic agitations of the northern abolitionist destroyed the position of those in the South who advocated a gradual liquidation of slavery, and the rest is tragic history.

However, after that the parallel falters, for when the Confederate Army stacked its arms, slavery was at an absolute end, whereas the abolition of segregation has not, cannot, and will not come at a stroke.

There is another pregnant difference between the abolition of slavery and the abolition of segregation, for slavery was an exclusive southern institution, whereas segregation is not a Southern institution—it is an all-American practice. In 1860, the Negro was concentrated in the South, whereas today a third of our Negro population is in the North.

The hegira of the Negro to the North is a swelling torrent, at a rate that has already

reached a million in 10 years. It is estimated that the Negro is migrating to Chicago at the rate of 2,500 a month, nor does his traveling diminish his rate of reproduction.

What happens when the hopeful colored man departs the South's legal and customary order of segregation? As you yourself know, the Negro who has fled the open-faced Jim Crow meets in the North a furtive, darting Jim Crow wearing a mask and carrying concealed weapons.

But in citing this difference in the candid South and the devious North, I assure you that I am not imputing any superior morality to the South. It is simply that at one time the South had almost all of the Negroes and was impelled to create a legal structure to contain the problem, whereas you carefreely enacted your nondiscrimination laws when you had only a handful of colored citizens. Now that you have about a third of the Negro population and with more to come, you recoil and your nondiscrimination laws and flouted. Just the other day in Milwaukee, for example, an able mayor was jeopardized in an election because the opposition sprayed it around that he had encouraged Negroes to migrate to Milwaukee.

Why, then, you properly ask, if discrimination is a national fact of life do you not read more about it? Does race strife have to occur under a magnolia blossom to be news that is fit to print? The answer is, "Yes," more or less.

I am not going to burden you with a mass of examples demonstrating this newspaper distortion, for in recent weeks my newspaper has done this day after day, citing chapter and verse.

I know that the American press will land on its feet in this case, but meanwhile there are not 1 but 2 stereotype departments in northern newspaper plants. In one they cast stereotype plates from which the white paper on the press takes the printed word. In the other, editors and reporters cast stereotype plates whereon we see that segregation is newsworthy when it occurs in de land o' cotton; that the South and segregation go together like spaghetti and meat balls.

These writing stereotypers of the abolitionist press are not less honest than their southern colleagues, they simply are sluggards in catching up with the verity that wherever the Negro migrates in significant numbers, he encounters rejection. Like the Bourbons of France, these writing stereos are always prepared to fight the war just ended; and again, they have learned nothing and forgotten nothing.

But they will come around. However, their dereliction in nationalizing the discrimination story could be redeemed with swiftness if defensive southern editors and publishers would rise from their hams, give some positive stimulation to the stereos of the Associated Press, and send their own staff writers to the North to write the virgin story.

Now in the course of the Montgomery bus boycott, scores of reporters, representing papers from here to Paris and Nagasaki, descended on my office to write a story of great significance. These northerners were so diligent in describing the bus boycott that I saw in the Times this week where the bus boycott in Montgomery had spread to the buses in Captetown, South Africa.

I was pleased to help my visiting colleagues, but sometimes I could not forbear to ask them who was left back home to cover northern race disharmony with all of them taking the waters in Montgomery. They all conceded their back-home troubles, but their editors craved race strife under the Dixie magnolia. And that is what got my paper started in examining the situation in the North.

Take the New York Times, the world's greatest newspaper, which recently printed a special 8-page section on the race problem in the South. Now New York has a million Negro citizens, but how many times have you seen in the Times' society section the photographs of a Negro bride? One time only. In 125 years, the Times, whose credendum is All the News That's Fit To Print, has printed the picture in its society section of but one Negro bride. That auspicious event occurred on September 10, 1954, and at the Times office they give you that date out of hand like an Englishman giving the date of Hitler's blitz.

But I do not wish to exalt this audacious stroke of desegregation beyond the true measure of its worth, because, after all, the Times' society editor told us that—quoting—this Negro bride "was extremely light and no one ever noticed it."

One more example. In St. Louis, wherein is published the South-baiting Post-Dispatch, the Negro bride is also left at the altar. The Post-Dispatch society editor told my newspaper that when Negro brides submit their pictures, they are tactfully reminded that there are Negro publications for Negro brides. In the case of the uncertainty of a telephone approach, the Post-Dispatch asks the caller to submit the picture, which takes care of the screening in all save the most mulatto cases.

Out across the continent at the Los Angeles Times, Jim Crow is society editor, but he wears a different hat—the Los Angeles Times refuses to run Chinese brides. And since there is a great deal of race friction in Los Angeles, I assume that a Negro bride's picture hasn't got a Chinaman's chance.

By contrast, Alabama newspapers are very liberal about Chinese brides—because Alabama hasn't any Chinese to speak of. Simple, isn't it?

It is only when dealing with an Artherine Lucy—by now a more famous co-ed than Betty Co-ed herself—that the northern press finds its voice, drowning the stage with tears and cleaving the general ear with horrid speech.

Have you ever read anything about the ctiy of Dearborn, Mich.? Its population is 130,000 and it presses against Detroit with its half million Negroes, but not a single Negro citizen is permitted to live in the city of Dearborn. The mayor of Dearborn says: "Negroes can't get in Dearborn. We watch it. Everytime we hear of a Negro moving in—for instance, we had one last year—we respond quicker than you do to a fire. Our Italians and Poles are so anticolored—much more than you in Alabama."

Close by are the satellite cities of Royal Oak, Wyandotte, and others. Not a single Negro resident is permitted.

In Chicago is a code agreement among the newspapers and radio stations to muffle and play down race strife stories lest they incite more riots. There is, for example, Trumbull Park, where every day 93 policemen are required to guard the lives of 30 Negro families. In all Alabama, there is not a single Negro family in need of police protection.

This month in Detroit, a suburban mob of 500 cast stones through the front windows of a house. More than 50 policemen were ordered into action. The mob thought the new family was Negro, though the head of the family claimed to be a Cherokee Indian. But the mob thought he was a Negro and before the sun went down over Detroit that day, the mob made him sell the house and willingly gave him a $2,000 profit to be rid of him.

Now the Detroit stereotypers had made the photograph of Artherine Lucy more familiar to their readers than the photographs of Eleanor Roosevelt or even Her Royal Highness Grace Kelly, but how did they play this race riot?

I found, on examination of the 3 Detroit papers, that what is a mob in Alabama is delicately referred to as a crowd in 2 of the papers.

That only one of the papers used the word "Negro," without which you couldn't explain what happened.

That none of the 3 papers played the story on page 1, and 1 played it on page 60. In the Detroit Times the story was but three vague paragraphs. But a few weeks later, when a group of white ruffians assailed Nat King Cole in Birmingham, one Detroit paper made it an 8-column streamer on page 1.

III

I might go on relating these incidents of derelict newspaper practice until the last New York bar closes tonight, but that would be an abuse of your hospitality, even if you don't want a nightcap. So I'll pass on to the question of what is the reason why the Negro encounters rejection wherever he migrates in significant numbers.

I think the basis at least of the answer is to be found in a book written by a great Frenchman 100 years ago, that indispensable classic which is an education by itself, Democracy in America, by Alexis de Tocqueville.

A hundred years ago, Tocqueville foresaw the tortured destiny of the American Negro amid the white majority. The essence of his prediction was based on two things, the Negro's slave history and his conspicuous difference of color. Here are the remarkably discerning words of Tocqueville:

"The Negro makes a thousand fruitless efforts to insinuate himself among men who repulse him; he conforms to the tastes of his oppressors, adopts their opinions, and hopes by imitating them to form a part of their community. Having been told from infancy that his race is naturally inferior to that of the whites, he assents to the proposition and is ashamed of his own nature. In each of his features he discovers a trace of slavery, and if it were in his power, he would willingly rid himself of everything that makes him what he is.

"The Negro who earnestly desires to mingle his race with that of the whites cannot do so; while the Indian, who might succeed to a certain extent, disdains to make the attempt."

Now here are the words of Tocqueville differentiating between, say, an antique Greek slave amid Roman captors and the Negro slave:

"The immediate evils produced by slavery were very nearly the same in antiquity as they are among the moderns, but the consequences of these evils were different. The slave among the ancient belonged to the same race as his master, and was often the superior of the two in education and intelligence. Freedom was the only distinction between them, and when freedom was conferred, they were easily confounded together.

"The ancients, then, had a very simple means of ridding themselves of slavery and its consequences: that of enfranchisement; and they succeeded as soon as they adopted this measure generally. * * * Among the ancients * * * (the) consequences of slavery had a natural limit; for the freedman bore so entire a resemblance to those born free that it soon became impossible to distinguish him from them."

And here Tocqueville gets at the quintessence of his remarkable insight:

"The greatest difficulty in antiquity was that of altering the law: among the (Americans) it is that of altering customs, and as far as we are concerned, the real obstacles begin where those of the ancients left off. This arises from the circumstances that among the moderns the abstract and trancient fact of slavery is fatally united with the physical and permanent fact of color. Although the law may abolish slavery, God alone can obliterate the traces of its existence."

So said Tocqueville, and I think in his observations you have the basis for understanding the durability of the American

prejudice against the colored man. It is a depressing thing and one that no person of goodwill can contemplate without unshakable distress.

IV

So much for the past, which they say is prologue to the future. What of the future? I ought to say, first of all, that the future of the Negro in America utterly baffles me in some respects.

I can point this out. Between the North and the South there is no fortification. Any citizen, black or white, is as free as the birds to cross into the North. No passports or visas are required.

By this I mean to point out that every Negro citizen in the South is free to remove to the North any day he chooses. Many have done so and do not choose to return, even though they soon find that they are not accepted in the North. If the country's 16 million Negroes could be evenly resettled in the country, there would be only a negligible race problem.

But while the migration will continue, it seems that for the foreseeable future the South will retain the mass of Negroes. They are free to move to utopia, but the majority evidently have no intention of going.

In the South the Negro is making good and it's typical of the southerner to speak with pride of the strides the Negro has made. That the Negro has it in him to double and treble his degree of uplift is accepted by southerners. It must be admitted in all honesty that a colored man has to do more to win respect than a white man, but it is equally true that he can win respect.

He is handicapped and afflicted in a merciless way by his slave history and conspicuous color, but he has already demonstrated his capacity to work his way. In this, for whatever reasons you wish to assign, the white man has helped and will continue to do so. As I have said, Alabama is not spending a third of its education money—$33 million—this year to retain the Negro in colonial bondage and degradation. We expect the Negro to go working his way.

But the South will not blend the races in its schools and elsewhere for a long time to come, and it can't be flatly predicted then. The patterns of segregation will alter with the Negro's advance—for example, there is not a segregated elevator left in Montgomery—but basically, there will be separation. And unless the Negro is presently more inferior than the Supreme Court has said, I expect that he will make his way in high style. We southerners wish him well.

The Class I Milk Price

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. BOW. Mr. Speaker, members of the Ohio delegation are gratified by the prompt action of the Department of Agriculture in accepting our suggestion for an immediate increase in the farmer's class I milk price. The decision announced yesterday may mean as much as $5 million additional income to Ohio dairy farmers in the months of May, June, and July. This is a badly needed adjustment at a time when the normal seasonal decline in prices has added to the difficulties dairy farmers are experiencing.

Immediately following our return from the Easter recess, those of us who represent rural districts met in the office of J. HARRY MCGREGOR to discuss the growing distress we had encountered in our dairy areas. Present in addition to Mr. MCGREGOR and myself were PAUL F. SCHENCK, WILLIAM M. MCCULLOCH, CLIFF CLEVENGER, CLARENCE J. BROWN, JACKSON E. BETTS, OLIVER P. BOLTON, A. D. BAUMHART, Jr., WILLIAM H. AYRES, JOHN E. HENDERSON, and the dean of our delegation, THOMAS A. JENKINS, who presided. This was the morning of April 10.

We called in representatives of the Secretary of Agriculture and presented the dairy problem to them, asking for immediate emergency action to suspend the seasonal decline in the Federal milk marketing orders in Ohio. Though precise amounts vary between areas, this request meant a 45-cent increase in the class I price of milk in the Cleveland-Akron-Stark County area served by farmers in my district, and corresponding amounts in the other areas. We presented at this time a telegram from the Ohio Milk Producers Federation in which the same request was made.

On April 13 the Department announced it would hold a public hearing in Columbus April 20 to consider the appeal.

Meanwhile we learned that the situation in Toledo, being near the Detroit area, was critical and that farmers there could not wait for the hearing procedure. When this special problem was presented to the Department, the Department responded with an immediate 65-cent increase for the Toledo area, effective April 16, to bring this area into a better relationship with nearby markets.

I have had extremely complimentary remarks concerning the conduct of the milk hearing in Columbus last Friday. The hearing officer permitted all interested parties to file additional briefs with the Department before midnight April 24. These were received, considered, and action taken on April 25.

To me this demonstrates that the Federal milk-marketing order system can function properly and effectively under emergency conditions. In an orderly fashion, complying with the law, the Ohio dairy farmers and the Republican Members of Ohio's congressional delegation were able to accomplish their objective in just 2 weeks.

On behalf of the delegation, I want to compliment the directors of the Dairy Division at the Department of Agriculture and Roy W. Lennartson, Deputy Administrator for Marketing Services, who must have spent many hours overtime in the past few weeks to take care of the many dairy problems, including those of Ohio.

It may be that additional adjustments will be needed in the various areas as this year's situation develops, and we intend to keep in close touch with our dairy farmers, the producers' associations, and the Department of Agriculture to take care of any new problems that may arise. Meanwhile we trust that the adjustments made will assure a continued orderly and ample supply of milk to all Ohio consumers and a measure of relief to the producers who have done so splendid a job in the past.

The Farm Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. MCVEY. Mr. Speaker, President Eisenhower's veto of the farm bill appears to have raised instead of lowered his stature as a statesman. Fear was voiced by many that he had dealt a stinging blow to the prospects of his party. Events that have transpired appear to have repudiated that theory. From all over the country have come messages of commendation and congratulation for the excellent courage he has shown.

There follow a few of the newspaper reactions to his veto:

It took genuine statesmanship and a high degree of political courage to veto a farm bill. * * * (President Eisenhower) deserves acclaim for disposing of a farm measure which was so full of contradictions and inconsistencies that it would have defeated all its own best purposes.—Seattle Times, April 17.

In placing what clearly are deep-felt convictions ahead of political expediency (President Eisenhower) may hold the allegiance of more voters than will now desert him.—Minneapolis Tribune, April 17.

It took unusual courage for the President to veto the farm-aid bill which he knew to be bad. But his reasons, as given in his veto message and his address to the country, are so persuasive that the Democrats will find it difficult to make capital out of his action.—Denver Post, April 18.

If Congress fails again to rise to the needs of the hour, the farmers, and the Nation at large, will know where the blame rests. They will know that the President has striven earnestly and conscientiously for a sound farm program; that the obstacles were raised by those, in Congress and out, who insisted on delaying action, on piling up contradictory clauses in a legislative monstrosity that would have been an administrative nightmare.—New York Herald Tribune, April 18.

President Eisenhower's veto of the farm bill was one of the most courageous acts performed by a Chief Executive in recent years. He showed rare independence and devotion to the Nation's well-being.—Richmond Times-Dispatch, April 17.

No one should have been surprised that the President vetoed the hodge-podge bill laid before him. * * * He took the only course that was honest and straightforward.—Memphis Commercial Appeal, April 17.

President Eisenhower's veto of the Democratic farm bill was good politics because it was honest politics. Progress toward a rational farm policy is delayed for a year. The cost must be assessed, in all fairness, against the Democrats. They delayed the enactment of a good farm bill until it was too late to execute its provisions, and produced instead the vote-buying monstrosity that deserved the veto it has received.—Chicago Tribune, April 17.

The veto was an act of statesmanship which raised Mr. Eisenhower higher in the estimation of thoughtful Americans than anything he has done since he became President.—Cleveland Plain Dealer, April 17.

Upon calm consideration we believe most of the Nation, including understandably restless and antagonistic farm elements, will conclude President Eisenhower was right.—St. Louis Globe-Democrat, April 17.

In his veto of the farm bill he remains the broad-gaged honest and courageous leader the American people thought he was. If he had taken any other course he would have repudiated all that he stands for in American public life.—Omaha World Herald, April 17.

This Eisenhower veto of the farm bill was 100 percent an act of courage and conscience.—New York Daily News, April 17.

Mr. Eisenhower's verdict was based on sound economic principles, and if Congress will now get busy on an honest effort to pass a workable farm bill, it can be had within a week.—Chicago Daily News, April 18.

The Dutch Hustle

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks, I would like to have inserted in the CONGRESSIONAL RECORD this article from Harper's magazine of April 1956. This article brings out the extreme importance of the family type farm and how the Dutch go about preserving it in their own country:

THE DUTCH HUSTLE

(By Wolfgang Langewiesche)

Dutchmen don't get excited over nothing. I was in an airliner over Holland, when the Dutch aboard started crowding each other at the windows: below us, green and shining, was a farm landscape that has only just recently come out of the sea. It is the first piece of a whole new province (a new state, we would say) that Holland is adding to itself: "Flevoland."

I went back later, by car, by boat, by Piper Cub, and looked into this landmaking operation. It's the pride of the Dutch. It's what makes their eyes shine.

The main method is this: you build an earthen dam from shore out into the shallow sea and back to shore, so as to fence in part of the sea. Then you pump the water out. You wait a few years for the rains to wash the salt out of the soil. Then you start farming. Such a piece of land—saucer-shaped, lying below sea level, is called a "polder." It's a necessary word, and not translatable. Nobody has polders but the Dutch. They have been making them for 500 years—small ones—and now, with big money and big machines, they make them big.

I drove out on a dike that is fencing off one future piece of Flevoland. You drive on the top of the dike and you do 60. We went out of sight of land, and still the road kept going. I thought: "This is big." You hold it against the American scale of things—Hoover Dam, TVA, Empire State Building—and it still is big. You hold it against the size of Holland—six Hollands wouldn't fill the State of Kansas—and it becomes colossal. It's as if we wanted to push the Gulf of Mexico back and build a second Texas.

We finally got to the capital of Flevoland, Lelystadt. Right now, it's just a wide place in the dike. There are a few dozen houses, a hospital, a school. Some of the dyke-builders live there. On both sides, all the way to the horizon, there's nothing but water. But never mind: the land is there. It merely happens to be covered with water. It will come out.

I went to the part where the land is out, and saw the opposite sight: a real island, one that is natural and has always been there. It has a lighthouse and small harbor—and all of it is now sitting in a sea of farmland—all newly made.

The whole thing is part of a great tradition. The Dutch have been pushing the sea back for a thousand years—and the sea the Dutch. Except for dikes, much of Holland would not exist. Some of it lies below sea level by as much as 15 feet. This much would instantly be drowned; some of it, at sea level, would be tidal flats. Some of it would be swamped by river floods once a year, other parts by an extra high North Sea tide 2, 3 times a century. Left to nature, half of Holland would be for the fish.

And this is what makes Holland Holland. Windmills, for instance; land below sea level doesn't drain. You have to keep pumping the rain out. The windmills do that—still do it, though most of the pumping now is electric, or diesel. And those wooden shoes? (You still see them quite a bit.) Why? Much of the soil is always wet, and wooden shoes are watertight and warm. You can't run in them—but then, a Dutchman is well organized; he starts early and has no need to run. Little boys who feel like running have a special Dutch boys' gesture: you take your shoes off and carry them both in your left hand, and run.

And canals—wherever you are in Holland, there's always a canal in sight; down the main street of town, or along the highway, or right through the farm. Naturally. To get the water off the land, you need ditches criss-crossing every field, about a hundred feet apart. These ditches drain into deeper ditches; those drain into canals, which run into bigger canals, and finally you come to the pumping station—windmill, diesel, or electric; there, the water goes up into the sea. This ditch and canal system has much to do with the looks of Holland. From the air it seems to be composed of innumerable tiny parcels—like a brick pavement. From the ground, you don't see all the canals, but you see one result: cows can't cross them, and so you see pastures full of cattle, and no fences. This leads to the tourist reaction: My, what well-behaved cows. Dutchmen are so used to having a canal around that a landscape without canals bothers them—doesn't look civilized. Wherever they have gone—the East Indies, South America—they have always found some excuse to build a canal. It's the Dutch touch in landscape architecture.

And the "dam" in Rotterdam, Amsterdam, and other place names: it means a dam with a sluice gate. When the tide is high, the gate is closed to keep the water from coming in. When the tide is low, the gate is open, so the country can drain. This was one way the early Dutch made sea-level land habitable, even before "polders."

HANDPICKED FARMERS

Flevoland, the future province, is simply the Zuider Zee dried up. It's man's country anyway. The North Sea broke in there over and over again. Now they are pushing it out once more. The Dutch are in no nervous hurry about it. They do the job polder by polder, each polder of about 120,000 acres, containing 2,000 farms, 10 villages, a town. Note the time scale: the Zuider Zee works were started in 1918. The first polder came dry in 1938. The second one—the one we saw from the airliner—came dry in 1942, is now being settled. The third one will come dry next year. The fourth and last one is scheduled to be ready before 1980, and even after that, there'll be 20 years of fine-point improvement. The dike-building outfits have jobs lined up from now to the end of the century. Behind them, the soil-conditioning crews, the road and bridge people, the house and barn contractors, all can keep moving on from job to job.

The new country, they call those polders. Never before in history have people had a chance to take possession of a country quite so new. The land comes out of the sea a dismal gray—barren, flat. But it comes with the main canals already dug; its soils already tested; all plans made. The officials know exactly where they are going to put the town, the villages, the orchards, the woods. Woods? Of course; children should have woods, and the Dutch think of everything.

But first the soil has to be brought to life. A few years' rain washes the salt out—but you have to see to it that the soil can drain. This is too big a job for the individual farmer. Government contractors move in with special machines. They dig those ditches, and they bury miles and miles of drainpipe underneath the fields.

And then they let the people come and take up homesteads, American style? No. The Dutch handpick their settlers, farmer by farmer. The new land must go to the most competent farmers; and they should be men who also will be useful citizens, who can run a cattle breeders' association, get the church going, generally take hold of the new country's civic affairs. An interviewer visits each applicant on his farm; looks the wife over, too. Confidential informants within the farm organization report on his record, his reputation, his personality. And when the Dutch have picked their man, they plant him as carefully as they would plant a tulip bulb.

They lay out the new country to look as much as possible like the old country. In planning the town, they see to it that the two main streets cross each other not squarely, but with a little jog. And they don't draw the streets quite straight; they give each a little dog leg. This avoids that American look—straight streets and avenues, crossing each other at right angles—that Europeans find so soul chilling. The countryside, too, is carefully antiqued—a curve in the road here, a little woods used as an accent there.

Having made the plans, the government builds the town—every house in it—the schools, the churches, the stores; the barns (prefab, but Old World looking) and the farm houses. And when the little trees are planted around the house, and the key is in the door ready to turn—then they let the farmer come. But he can't buy. He only gets a 12-year lease, renewable if he has been good.

The townsman, too, is hand-picked and hand-planted. They find a good hotel man, and lease him the hotel already built, with its name already written on the sign. The sociologists figure it takes one townsman for each 3 farmers, to teach and preach, doctor and vet, service the farm machines, run the stores. They know just how many photographers, shoe-store owners, television servicemen will be able to make a living, and just so many are planted. Nobody else can horn in because he couldn't get a place to live or work.

To the American, such all-powerful government control seems strange and rather horrible. It's a long way from Oklahoma. But then, it is now 67 years since Oklahoma had its land rush. Holland tried the American frontier style of settlement once—a hundred years ago. They had pumped dry a big lake—pumping by steam had just come in and made the project possible. They turned the land over to the settlers raw—no roads, no schools, no prepared civilization.

It did not work. People lived in sod houses. There were squatters and outlaws. There was cholera, children didn't learn to read. All this in orderly, well-kept Holland. "It took 3 generations to heal that sore." Perhaps this is not so odd. On the Amer-

ican frontier, it usually took several waves of comers to change a region from outright wilderness to full civilization; the original pioneers seldom saw the thing through; they moved on to pioneer elsewhere. Here, in tight little Europe, there was no place for them to move to.

For all the tight control, there's something American about the "new country"—because it is new. It attracts the people with get-up-and-go. It gives them a thousand chances to make a new start: new school, new church, new farmers' association, new garage, new hotel. This is one of the ingredients of the American atmosphere, and the tourist recognizes a familiar scent.

"The old country was more comfortable than here," said one man wistfully. "Here, everybody is always on the go; everybody is making money. * * *" He himself was, too. And an official said: "Wait till these people's children start marrying each other. It's going to be a high-powered new race.

COWS WITH COATS ON

"But why do all this?" I asked. "Does it pay?" As a straight business proposition, no. The land costs $1,500 an acre delivered raw, plus soil conditioning, ditches, roads. If a company tried to make land and then farm it, it would go broke. "But we draw a distinction," said a high-up Dutchman, "between private economy and public economy." The Government rents the land to the farmers at a loss. The country gains because the farmers' money goes round and round. Each guilder's worth of new farm production builds up, they figure, into seven guilders of new income all around the nation.

And what production Dutch farmers can get off a piece of land. They get four times the yield of wheat per acre that Americans get. They also use, per acre, perhaps four times as many workers. The Dutch go in for high-value products—seed potatoes, breeding cattle, tulip bulbs, cut flowers, out-of-season vegetables, and, of course, cheese, which they eat for breakfast. They work with great care. In fall and spring, Dutch cows out on the pastures wear coats, like Park Avenue poodles. I flew over a section of Holland where the farms were glassed over. You might be stodgy and call it greenhouses, but here they were so big, so many of them so close together that, from the air, seeing things as they really are, you have to call it a glassed-over countryside. So, you take a newly made acre, multiply it by 4 for big production, and then by 7 for the round-and-round effect, and landmaking does pay.

But, quite apart from all money angles, the Dutch want to keep the country part of their national life big and healthy. To many Europeans country life is something special, almost holy. They think that the best people are raised on farms; farm boys make the best soldiers. The country is morally good, the city dubious at best. The city is where a nation dies out; the country, where it is reborn. And so on. True or not, these ideas are strong, especially where German thought is influential. Germany has for a hundred years protected her farm life against the competition of American wheat and Argentine beef for just those reasons. Great Britain now sometimes wishes she had done the same. There's also the idea that a nation should be able to eat off its own land, come war, depression, trade restrictions, or what not. Holland decided on the Zuider Zee works in 1918—after 4 years of watching Germany and Great Britain trying to starve each other by submarine and blockade.

That is the background. Against this, the Dutch see cities, highways, industries gobble up land. Also, many Dutch farms have been subdivided too many times among too many sons, and have become too small to support a family decently. Farmers are looking for land and can't find it. Holland has been subsidizing the emigration of its own people—to any country where they can get in. That's a sad thing for a country to have to do. The farmer, the Dutch think, ought to have a chance in his own country, just as the engineer or the businessman has. Hence landmaking.

SLEEPERS AND DREAMERS

But the Dutch people need no such arguments. To them, landmaking is just simply good works. For the glory of God, for the dignity of man, for the future of your children—if you are Dutch, you build dikes.

And dikes are sacred. In the old days, if a man harmed a dike, they buried him right in the dike—and didn't wait to kill him first. Today, there are no keep-off signs on the dikes, no guards; they are not needed. When a new dike is built, further toward the sea, nobody thinks of tearing down the old one. The outer, active dike is called the "watchman"; the next one in, the "sleeper"; the oldest one, farthest from the sea, the "dreamer." Sleepers and dreamers still are important. They put a limit to the worst that can happen. They divide the country up into many small polders, so that Holland is like a ship with watertight compartments. The water has to fill one basin before it can attack the next dike. This takes time; and the very high floods don't last so long.

The thought of flood is always there. Almost anywhere in Holland, if you look around for a few minutes, you find some marks drawn on a house somewhere: this is how high the water came in such and such a year. The marks are always over your head: if it happened again right now, you would be swimming.

Floods come to Holland more from wind-push than from the tide. A northwest wind drives water into the North Sea through the hole between Scotland and Norway. The water can't get out except through the English Channel—very narrow. There is no room for a deep-down undertow by which the water could return northward: the North Sea is too shallow. So the water piles up against the Dutch coast—sometimes 15 feet above normal. Then comes the tide. And, if the wind shifts happen to hit the timing just right and the two water mountains, the wind-driven one and tidal one, really get moving—look out.

When a dike goes, it doesn't simply break; nor is it simply overtopped. The spray from the waves blows over the top; water runs down the landward slope and makes gullies; slowly, from the landward side, they eat into the dike. Once a low place is made and solid water begins to pour, there is no stopping it; it comes as a gigantic rapids, and that particular polder will now fill up. The waters rush slows down as it spreads, away from the break. To those who lived deep in the polder, away from the dikes, the great flood of February 1, 1953, came quietly. A child woke up and said:

"Mommy, there is water in the kitchen."

By that time, it was too late to flee to the dikes. For them the only high place was the roof. Then the roofs floated off with people on them. One family, that February night, floated across miles of open water. When their roof fetched up against an island, the wife and children were dead from exposure. An hour later, their dog landed, in a wooden box, blown by the same wind to the same spot. Now the man and the dog are back on the farm.

Eighteen hundred people were drowned that night. And the land, which Dutchmen love more than they love themselves, was terribly damaged. The salt got in the soil and killed everything, including trees that had been growing for 100 years. The sections that were hit are now absolute prairie. The salt got into the houses—all brick in Holland. Once bricks have soaked up salt water, they will be clammy ever after: You might as well tear the house down. The sea scoured up masses of sand and buried the soil under it.

But you know the Dutch: stubborn. I saw them work with power shovels, and draglines. They dig around in the sand until they find the soil. Then they pick the soil up and spread it on top of the sand. Square yard by square yard, acre by acre, farm by farm. The Government does it—and recovers part of the cost by a 30-year special assessment against the farm—a sort of mortgage.

"These farms are going to be better than they were."

Bad as it was, Holland has seen worse. In one night in November 1421, about 3½ percent of Holland's whole population was drowned. It was then that the Dutch really declared war on the sea. Since then, they have become virtuosos at working with water and mud and sand and sea currents.

They have developed special machinery: A barge that capsizes itself and dumps its load of clay, then rights itself—same idea as a dump truck. A mattress woven of willow branches—it's the world's biggest piece of basketry, being about half an acre. You float it to the job as a raft. Then you sink it, by weighing it down with rocks. It protects the bottom against the scouring action of tide currents. The suction dredge is a ship that sends a sort of elephant's trunk down to the sea bottom, and sniffles up sand, mixed with water—same idea as a vacuum cleaner. Then, through a long pipe, it dumps this sandy water in some selected place. The water runs off, but the sand remains: this is how they now build their giant dikes in the Zuider Zee: they pour them. It looks wonderfully effortless: just a few ships on the vast water surface, and, of course, no dust—everything floats and flows, and the dike comes into being.

Only the big bulk of a dike is sand, or any other earthfill that is handy. The sides are of a fancy watertight clay, which you find here and there on the sea bottom, if you know your way around. The sides of a dike are also armored with those willow mattresses. A layer of straw is often sandwiched in. Then the seaward side is paved with stones. Down the canal that's always there in Holland, there always comes a barge loaded with stones for some dike somewhere. Holland has no stones; they have to be imported, and a Dutchman can tell: this load came from Germany, this one from Norway, this one is Swiss.

In dike building or repairing, the great moment comes when its all completed but for a small gap. Through this gap the tides flow in and out as raging currents, sweeping away any earthfill you might shovel there or pour there. But four times a day, for a few minutes each time the water levels on both sides of the dike are even, and the current is slack. At that moment, they bring up a barge, loaded with rocks; they tow it into the gap and sink it: job completed.

THE MONSTER

For Holland the sea is a double-headed monster. It comes as flood, and it also comes as salt. "The devil, and the poison," say the Dutch. Salt in the soil kills plants two ways: Directly, and by making the soil pasty and airtight, instead of nice and crumbly. And salt keeps getting into Holland's soil. It comes up the rivers, much farther inland than people used to know. Salt water is heavier than fresh. It pushes inland as an undertow, underneath fresh water that is flowing into the sea. Then a ship comes and mixes the two. The poisoned water then sneaks into the canals, into the fields.

Locks don't keep it out. The world's biggest locks lead from the sea into the canal to Amsterdam Harbor. Every time a steamship passes through, a load of salt comes in

with it and spreads through Holland's inland waters. So the whole country's canal system must be continuously sweetened up with fresh water from the Rhine. And now even the Rhine is getting slightly salty. It's not enough to taste, but enough to worry the Dutch. Reason—deep coal mines in Germany strike salt water. They have to pump it out; it finds it way into the Rhine—"Europe's big sewer," as a Dutchman bitterly describes it. The Dutch are now getting ready to do a big persuasion job on Germany. It's quite a brainteaser, though. Just exactly how do you get rid of floods of salt water that spring up in the middle of a country?

But for Holland the biggest salt invasion is by seepage through the soil. It stands to reason: you've got land below sea level; the sea water will flow in if it can. Sometimes it seeps inland through layers deep underground, and from there upward into the soil. Then the yields get poor. The precious cows give less milk. On a century basis, the polder idea turns out to be not so good.

(We in the United States are inviting the same trouble on both coasts, where we pump up ground water for irrigation, and thus cause sea water to flow inland underground. But we still have time.)

The Dutch have done much thinking about this. And they have come up with a typical Dutch answer: they need a canal.

Here is the reasoning: you have to see to it that the water outside the polder, the water that's pressing to get in, is fresh and not salt. This means each polder ought to be surrounded by a fresh-water canal, in which the water level is kept high. This is the main new trick—apart from sheer size of their operations—that the Dutch have added to their art in this century. And the Zuider Zee works are a gigantic example of it. The first step of that project was a superdike that seals off the whole Zuider Zee from the open sea. The Dutch closed that one off in 1933. Then they waited 5 years, letting water flow out through the sluice gates, but never in. Slowly the Zuider Zee, fed by the River Issel, a branch of the Rhine, turned into a fresh-water lake. As it changed its water, it changed its name. Today, Dutchmen appreciate it if you call it the Issel Lake.

It's out of this fresh-water lake that they're now building their polders and getting their new land. When all the polders are in, the fresh-water lake will still survive as a system of broad waterways between the polders. And now they have their eye on two more spots where they think the same trick system will work—build a dam, develop a fresh-water lake, and then build polders into it. They think they can pump themselves up a couple of very nice little provinces. The first spot is the delta of the Rhine—the island country that was so hard hit in 1953. The second spot is a string of islands off the coast. These projects take us well past the middle of the 21st century.

You see again how big the time-scale is on which the Dutch do their geographical engineering. This may be why the whole thing has got so little attention. Everybody knows something of the sort is going on; but at any one time, everything you see looks like old news, slightly stale:

"Why," says the tourist, "I heard about all this when I was a child."

Yet the thing as a whole is terrific news, centurywise. It proves once more what may be the biggest new thing man has learned in this country: There's always more of everything! We don't need new continents to take over: there's more of everything right where we are; more food, more oil, more wood, more water, more jobs. Each time it seems incredible, but each time somebody comes and proves it's true. And now the Dutch come, right in the middle of tight, crowded small old Europe, and prove it is true even of land!

And don't think the Dutch have it easy, and that their country sort of invites land-making. Not so. All this time, Holland is sinking! The geologic evidence is conclusive: Holland is sinking under the sea at the rate of 6 inches per century. This does not discourage the Dutch.

Our Unsound, Dishonest, Inequitable Social-Security Setup

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. MASON. Mr. Speaker, I was one of the three members of the Ways and Means Committee that voted against H. R. 6000, the social-security bill, when it was approved by our committee in 1950. I was also 1 of the 14 Members of the House who voted "No" when the bill was finally passed. I opposed the social-security setup because I was convinced that the program was both unsound and dishonest, a Ponzi-type shell game sold to the American taxpayer as a plan to provide security in his old age.
